LIBRARY CONDITIONS.

The Library to be under the control of the Directors, who may withhold such books from circulation, as they may deem expedient.

Each Member shall be entitled to take from the Library, one folio, or one quarto, or two of any lesser folio, with the plates belonging to the same, upon signing a receipt for the same, and promising to make good any damage which may be sustained when in their possession, or to replace the same, if lost.

No person shall lend any book belonging to the Institute, except to a member, under a penalty of one dollar for every offence.

The Directors may permit other persons than members to use the Library. No member shall detain any book longer than four weeks, after being duly notified that the same is wanted by another member, under a penalty of twenty five cents per week.

On or before the first Wednesday in May all books shall be returned, and a committee of the Directors appointed for that purpose shall examine the Library and make a report of the condition at the Annual Meeting.

THE CALIFORNIA FARMER

And Journal of Useful Sciences.

VOL. 3.

SAN FRANCISCO, THURSDAY, JANUARY 4, 1855.

NO. 1.

The California Farmer

AND JOURNAL OF USEFUL SCIENCES.
PUBLISHED EVERY THURSDAY MORNING.
BY WARREN & SON.

Office in Masonic Hall Building, Montgomery street.
TERMS.—Eight dollars per annum, in advance; or delivered by carrier at one dollar per month. For a club of five new subscribers, we will send a sixth copy gratis.
A limited number of Advertisements inserted at fair rates.

AGENTS.

Messrs ADAMS & Co. at all their offices throughout the United States or Europe.
Messrs WELLS, FARGO & Co., at their offices throughout the Country.
Mr. O. H. HAMILTON, Travelling Agent for Sacramento City and County.
Messrs LANGTON & Co. for Downville, Foster's Bar, Good-year's Bar, Minnesota.
Messrs ADAMS & Co.—Humboldt Bay, Trinidad, Crescent City, Port Orford, Umpqua City, Scottsburg, and the entire northern coast.
Messrs LELAND & MCCORMICK—Crescent City, Port Orford, Uniontown, Eureka, and Backport.
SULLIVAN'S newspaper stand, No. 5 Post Office Building; RAIL-BALL'S, Noley Carriers Hall, Long wharf—San Francisco.
Shles & Dodge, Benicia, Mar. Howard & Chamberlain, Union City, and Mission San Jose.
A. Hummell, P. M., Columbia. I. Coffin, Mokelumne Hill.
Gen. M. M. McCarver, Mount Farm, O. T.
Dudley & Co., Napa City.
Hiram Downing, Gardiner & Kirk, Sacramento.
Baker & Hamilton, Taney & Roberts, Sonoma.
B. F. Finchley, Suisun.
A. H. Mordoch, P. M., Union, Humboldt Bay.
J. M. Thorburn & Co. New York City, N. Y.
Dr. Thomas J. Harvey, P. M., San Luis Obispo.
Crann, Rogers & Co., Yreka.
Parker & Roman.

We desire our Agents to report to us on the 1st of every month, the increase of names and the prospects, together with the amount due the office.

PLANT YOUR MOIST LAND.

The long continued dry season, and the prospect of its continuance, is a matter of serious moment to every cultivator of the soil.

It is now the month of January—a time when thousands of acres of high land should have been planted with grain, and if the present weather continues much longer, such lands cannot be planted at all—for experience begins to convince men that it will not do to plant grains upon high lands late in the season. Should we have rains within one month, these high lands can be planted to peas, beans, turnips, buckwheat, melons, and such crops, but not to grains like wheat and barley, for the dry, hot sun, will strike the grain during the season when it is in the milk, and a shriveled kernel and a consequent short crop, will be the result.

Plant then, your moist lands, for the risk of injury by reason of rains, is not so great as that of an entire failure on dry lands from want of rain. Again, then, we say, plant grain in all the lands you can now cultivate. If rain should come so as to enable you to plant your highlands within ten or fifteen days, do so by all means, but it is not safe to delay seeding the lowlands. A neglect to do so, may cost you your entire crop of grain—should rains come and "drown it out," you will be repaid by the benefit done the uplands which will then fitted for the seed. Plant your moist grounds then with grain without delay. We urge this step from a serious conviction that if the present dry weather continues much longer, its influence upon the value of breadstuffs in this State, will be one of deep import, and to be counted by millions of dollars.

We trust and hope our grain-growers, one and all, will not despair at the prospect. Take courage. Let county meetings be convened where an interchange of opinions upon this and other topics of interest to the farmers and State, may be had, statistical facts presented, and practical views expressed and much, very much, good may result therefrom.

Again would we urge upon every grain-grower throughout our State, to delay not the work of seeding their moist lands with grain. Set the plow immediately at work, and should the rains overtake you in the meadows, flee to the uplands where a rich harvest will then be sure to crown your industry and perseverance. Industry is ever sure of a reward—take courage then and plant.

THE man who to the utmost of his power augments the great mass of public or individual happiness, will, under every institution, be the happiest of men himself.

WINDMILLS—A HINT.

[For the California Farmer.]
SAN LUIS OBISPO, Cal., Dec. 13, 1854.

COL. WARREN: Enclosed I send an article on Windmilling, a subject that has not received all the attention it is worthy of. In many parts of California there is ample wind power for all the purposes for which steam or water power is generally used; while it must be cheapest. The great difficulty has been heretofore the irregularity or unsteadiness of the power; but if the annexed statement be correct, that difficulty has been overcome, and Mr. Halliday's name deserves to be registered with Franklin and Professor Morse. Now, for the price of a single horse, thousands in California can harness the wind and make it work as gentle, and do more of it than any horse living; besides the board of the horse is all saved. I am decidedly of opinion that it is necessary to be cautious how we tap those powerful veins or subterraneous streams of water that course beneath us, lest we might have too much of a good thing. San Jose Valley, for instance, might be rendered somewhat sickly, by having a superabundance of water exposed to the rays of a summer's sun; and there might be such a thing as a much larger stream than is wanted, bursting up through one of those artesian augur holes. Not that I would say aught against the artesian fever, that seems to be becoming prevalent—provided proper calculations are made as to future consequences, and provided also that wind power cannot be had. But where there is plenty of wind I would prefer pumping for irrigation from a common well or stream, so that I could stop it when I pleased, and make the same cheap horse do many other turns necessary to be done on a farm.

In the Scientific American there are some valuable articles on Windmilling. There is also an engraving of a mill and pump in this paper, all complete, which is offered for sale for \$30, boxed up and sent to order to any part of the world. And there should be a depot or manufactory for all such things in California.

Daniel Halliday, of Ellington, Ct., has invented and put in successful operation a self-adjusting windmill, which furls its own sails at the proper time, stops when the wind is too high, and starts upon its steady round again when it returns to the approximate degree of force. It has been in operation six months without requiring a hand to regulate the sails; has run fifteen days and nights consecutively without stopping; has drawn water from a well twenty-eight feet deep, and one hundred feet distant, forcing it into a reservoir in the upper part of a barn, in sufficient quantities for farm and garden irrigation, and cost but fifty dollars.

A word for the FARMER. Though I am not a farmer, I am the farmer's friend; and though not an editor, I am not a stranger to the business. I have heard long since, that it is the delight of some folks to find fault with others; while they are the least inclined to perfection or good works themselves. Some say they will not pray, because they pay a man to pray for them; and others pay an editor for his paper, and expect him to anticipate their views and wants, and write to please them; while they never write an article to please the editor, themselves, or any one else. Now, Colonel, you, as well as other editors, have some of those kind of subscribers, and, lest they be too hard on you, and become so rigid as bite off their noses to spite their face, suffer me to drop them a hint. It is not an editor's business to write all or even the greater part of what he gives wings to, but show his taste and wisdom in selecting from what others have wrote, or may write; and let those find fault that may, when they practically teach the better way.

As ever yours, T. J. HARVEY.

SUNFLOWER FOR FOWLS.

[For the California Farmer.]
SAN LUIS OBISPO, Cal., Dec. 29, 1854.

COL. WARREN: Dear Sir—I send you a slip cut from an eastern paper, which I am of opinion is worthy a place in the FARMER; and more particularly so, as domestic fowls are unhealthy in California, and I am hard to believe that the

climate, or the water, which is so peculiarly healthy for men and animals, should militate against the health of fowls—the cause must be in the food! And I can think of nothing coupled with so much promise as the Sunflower; it has been a favorite in our family, not only for fowls, but as an ornamental plant, long before the birth of my memory, and I intend it shall be in California, when I can obtain seed.

CULTURE OF THE SUNFLOWER.—A "Conestoga" correspondent of the Germantown Telegraph says:—"I do not think there is sufficient attention paid to the cultivation of this plant. The Sunflower is a native of South America, but is easily cultivated in any common soil, either by sowing the seed early in spring, or by slips or offsets from roots. It is now a common and well known production, having long since become naturalized throughout the United States. The manner of planting and cultivating it, is not dissimilar to that adopted in growing Indian corn, and its acreable product exceeds that of the most prolific cereals. The principal uses to which the seed of the Sunflower is ordinarily applied, are the manufacture of oil, for painting and burning, and the feeding of horses, sheep, bees and swine. The oil is clear, thin and inodorous when burnt, though of an agreeable taste. For painting, it is said to be preferable to any other oil now in use. As a feed for hens, it is highly prized. Being of an oily nature, it approximates more nearly to the character of animal food than any grain that can be fed to them, and supplies to a considerable extent a very efficient substitute for meat. The Sunflower requires good soil, and may be changed in the same manner as Indian corn, when grown on soils that are friable, rich and moist."

I have not seen a sick horse or horned animal in California, but what was the result of maltreatment, and they can stand even more maltreatment here than in any part of the world with which I am acquainted; all of which makes me more curious to know the cause of the fatality among domestic fowls. Can you or your numerous correspondents enlighten us on the subject?

As ever yours, T. J. HARVEY.

In answer to our correspondent's inquiry for information, in relation to the disease of fowls, we re-publish the following communication on this subject, from Dr. Phinney, which was published in vol. 1, No. 12, of the Farmer. We should be happy to hear from any one who can give us further information:

Messrs. EDITORS:—It may surprise you that a physician should undertake to prescribe for anything but human beings; but those of us who take an interest in our profession are apt to notice disease wherever we may see it.

The mortality amongst poultry has long attracted my attention, and, knowing their great value in this country, I was, out of mere curiosity, led to investigate the matter by repeated dissections of those that have died. I found they all had inflammation, and in most cases ulceration of the crops and bowels. This inflammation may exist for some time and attract little notice, but when ulceration has progressed so as to penetrate the crop or the bowels, the fowl dies almost instantaneously. Having ascertained this, I next wished to know what would cure such a state, and I gave with success sulphate of copper (blue vitriol) in doses of from one-twelfth to one-twentieth of a grain twice a day. The medicine may be made into a pill, with bread, and either fed to the chicken or forced down its throat. Hoping I may have given some useful information to the subscribers of your valuable journal, I remain, &c., J. B. PHINNEY.

INFLUENCE OF AGRICULTURE

Upon the General Interests of the People.

THE intrinsic and comparative importance of agriculture and kindred pursuits will be more justly appreciated, when the generosity of thinking men shall have duly considered its influence upon the Social, Civil and Pecuniary interests of the American people.

The cultivation of the soil is eminently peaceful, and tranquilizing, in its effects—conducting to the development of physical strength, to the promotion of health, and to the augmentation of happiness. Of course this is said in reference to those who know how to think, how to labor, and how to enjoy. But we can never realize the peaceful influence of rural employments, until we have been abroad, into the great busy world, to observe the fierce conflicts of antagonistic interests, the stern grappling of mind with mind, the overreaching love of gain, the petty tricks of trade,

the low resorts of meanness, or the hazardous schemes of reckless villany, which contaminate and curse the very atmosphere of "those places where men most do congregate" for the purposes of trade, traffic and hazardous speculation. From these great "sores upon the body politic," we turn to the home of the intelligent Farmer, or that of the enlightened, temperate and industrious artisan, and there find peace contentment and enduring happiness. Not everywhere, perhaps, for there are exceptions to all general rules, and sorrow and anxiety are common to all classes; but if the rule does not always hold good, other things, extraneous to these modes of life, must cause the difficulty.

The home of the farmer, where industry, directed by intelligence, seems thrift—where thrift secures plenty, and plenty brings contentment—where cheerfulness produces happiness, and joy springs spontaneously from an exuberance of gratitude to the Giver of mercies—there you may see the influence which a noble employment exerts upon the social interests of the people.

But we are not to stop here. From these fire-side sanctuaries goes out a redeeming influence, which is embodied in the civil laws and institutions of the State and of the Nation.

Virtue and vice are confined to no one class of mankind. But we are free to say that the virtues of patriotism, sincerity, integrity and practical honesty, are more congenial with rural pursuits than with any other. Law—what is it but an embodiment of a moral sentiment—an expression of the prevailing sense of right? Hence, the importance of having our civil laws emanate from a pure and wholesome public sentiment. And where shall we look for an influence, powerful, as an element of improvement—an influence, adapted to the genius of our social and political institutions, and the wants and emergencies of our civilization, if not among the independent cultivators of the soil? From those homes, where the virtues are not only taught but exemplified—array from the haunts of dissipation and profligacy—there must, we repeat, go out a redeeming principle, that shall purify the high and low places of Power, and scatter, broadcast, the blessings and blessedness of Truth, Equality and Justice.

But here we come in contact with a standing complaint—not altogether unfounded—and yet originating in a glaring fault; for which the industrial classes are themselves responsible. It is said, and perhaps truly, that the essential interests of Agriculture and the Mechanic Arts, have never, as yet, been duly represented in our National and State Legislatures; and that, while other interests have been duly protected, and encouraged, by special legislation, ours have been most shamefully neglected.

Admitted—and what then? Whose fault is it? The true answer to this inquiry places us in almost a ridiculous position. Let Ohio, as a sample of all the members of this great confederacy, answer it. Here we are, a State with more than a quarter of a million of farmers, and a host of mechanics—a large and overwhelming majority over all other classes combined. And we call ourselves the Sovereign People. We have under cultivation, nine millions, eight hundred and fifty-one thousand, four hundred and ninety-three acres of land, and nearly as much more yet unimproved. And still we claim that we are not fairly represented in the grand councils of the people, and complainingly assert that our educational and other interests are not properly cared for.

Whose fault is it? It is your own fault; you have neglected your own business. You have not qualified yourselves for high and responsible positions. You are conscious of the fact, and do not, as a class, feel competent take the keeping of your own interests and institutions into your own hands. You therefore select others to do this business for you; and still you complain of the unfaithfulness of your chosen servants! Whose fault is it? With your broad acres of fruitful fields—with markets at your doors, and prices that would make Jeshurun "grow fat and kick"—with the schoolmaster abroad, and in your midst—with a Press laboring to give utterance to the grand results of scientific investigations—with sons and daughters rising up around you, to call you blessed, and whose "eyes wait upon you" for useful knowledge, you still complain of neglect, and wait to be lifted out of the quagmire of voluntary degradation and despondence! This should not be so. And it is believed that the time is near at hand, when men and women engaged in the industrial avocations, will rise to the plane of a decent self-respect, and exercise a more comprehensive supervision of their own interests and affairs. It is our aim to aid, to the full extent of our ability, in bringing about so desirable a state of things. Let every friend of these great interests become a co-worker in this laudable undertaking.—Ohio Farmer.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SAN FRANCISCO, THURSDAY, JAN. 4, 1855.

SPECIAL NOTICE.

REDUCTION OF PRICE.

The heavy losses upon the Farming interests of the State the past year, the general depression of that interest, and the discouragements resulting to all, we know have prevented many who are engaged in Agriculture from subscribing to our Journal the past year. Feeling desirous to meet their wants as far as is in our power, we now offer the CALIFORNIA FARMER at SIX DOLLARS PER YEAR, PAYABLE ALWAYS IN ADVANCE.

We trust this effort on our part to meet such circumstances will be met on the part of those engaged in the cultivation of the soil with a corresponding feeling, and that all will do us service by sending in a goodly list of subscribers and the amount for the same. We have made the price thus low, that our subscribers and friends may at once send us the proof of their good will.

With this issue we publish THREE THOUSAND COPIES, and trust the FARMER will find a welcome reception. Inducements for the formation of clubs will be found under the proper head.

Clubs Formed—Premiums to Subscribers.

With the third volume, with the opening year, we would offer to our friends stronger inducements than heretofore to make up CLUBS for the FARMER. It will be seen by our "special notice," that we shall commence with a reduction of the price of the "Farmer." The price will now be six dollars per year, always in advance. No subscriptions received unless accompanied by the amount.

To those who are disposed to form CLUBS, when we can send all to one address, we shall send SIX COPIES for FIVE NAMES, TWELVE for TEN, and TWENTY-FIVE COPIES for the names and amount of twenty subscriptions.

To those, or any of our friends who will interest themselves, we believe this will be some satisfaction, besides promoting the cause of Agriculture. We hope to see good results to all from this proposition.

TO AGENTS.

We would ask of our Agents to whom we send the CALIFORNIA FARMER, to communicate with us and to remit full accounts to the close of the year. We shall send them extra numbers for distribution. We call their attention to the Reduction in price of our Journal; this we hope will give satisfaction to all, so as to enable our agents to enlarge our lists, and also afford an increased reward to them.

We can offer inducements to Agents in all the large cities as Carriers, and to Booksellers and Newspaper Stores also, for Papers in quantities.

THE CALIFORNIA FARMER.

We have many inquiries, daily, from our friends in the country, who write us, desirous to make up clubs for the FARMER, and send us produce for the amount. We always do our utmost to facilitate the cultivation of the soil, and we will assure our friends that if they will make up clubs of five, ten or twenty, they can send their Wheat, Rye, Oats, Barley, or specimens of extra quality, and we will allow them the full market price in the payment of the FARMER. Our friends that are in a hurry can send us the amount thus due, and add the coming volume, and we will forward receipts for the same. So send along your wheat and good products. We do not mean anything—but those articles that have a value, and we will take them.

SPECIAL AGENTS FOR THE FARMER, &c.

ALL the messengers of Adams & Co., and Wells, Fargo & Co., are duly authorized by us to receive subscriptions for the CALIFORNIA FARMER, and receipt the same; also, to receive orders for Fruit Trees, Seeds, &c., and any and all business with us. All such business committed to either of these messengers will be promptly responded to by us. WARREN & SON.

OAKLAND.

Our friends at Oakland are invited to call on MR. CHARLES STEWART, and subscribe for the CALIFORNIA FARMER; he is authorized to receive subscriptions and we will cheerfully add the farmer in his employment. We are willing to receive Wheat, Rye, Oats, &c., or any valuable products of first quality in payment, as we wish our friends to enjoy our paper, and conveniently too.

AGENTS WANTED.

We want Agents in all the Principal towns and cities, for the CALIFORNIA FARMER. To good, active and prompt men, we can offer good inducements. None need apply who cannot give guarantee of strict performance of duty.

Cotton and Wheat at Shanghai.

Among the many interesting facts gathered from our friend Dr. Green, of the U. S. steamer Mississippi, we present the following:

At the time of sowing their wheat, they scatter the seed of cotton also; the wheat grows and shades the cotton so that it does not appear and grow till the wheat is harvested, when it is carefully cultivated and a full crop obtained.

It should be understood that at Shanghai they universally plant in rows; they sow the seed in beds, and then transplant them. In this way they cultivate well between the rows, and the result is two crops—one of wheat and one of cotton.

We simply suggest this plan to our friends in California—and for planting wheat in drills, we most cheerfully recommend Gatlin's Grain Drill, manufactured by L. Henderson, of Santa Clara, advertised in our columns, and approved of by many of our best cultivators. May we not hope our cultivators will try the experiment?

WINDMILLS, DISEASE OF FOWLS, &c.—Ever pleased to receive from our friends communications upon subjects touching matters of interest connected with agriculture and home industry and comfort, we are pleased to call particular attention to the communications of our valued correspondent from San Louis Obispo. The subjects spoken of are important and we hope to hear frequently from the same source.

THE NEW YEAR.

ONE year since our craft was launched upon the ocean of public favor—one year since the CALIFORNIA FARMER was sent forth as the advocate of the Agricultural Interest of California. With a few zealous friends to support, who felt the necessity of such a journal, the CALIFORNIA FARMER was sent forth. Hope, earnest hope, inspired those who were its projectors, and confident that the cause it was pledged to advocate was WORTHY OF THE SUPPORT and encouragement of every well wisher of the best interest of our State, its proprietors felt sanguine of success.

That the cause it was pledged to maintain was a noble one, we rejoice to know is now beginning to be more fully and freely admitted. Agriculture and its kindred sciences now stand before the world as the great pillars that support and sustain our mercantile and commercial interests. The products of the soil fill the warehouses of the merchant, the world over. The products of the soil load the ships whose sails whiten every sea. The products of the soil fill the granaries that feed the hungry millions that cover the earth's surface. It is the product of the soil that meets us at our social board, at the morning, noon, and evening meal. It is the products of the soil that "garland our homes," that scatter the sweetest flowers and the richest and most luscious fruit in our path through life.

The bright flowers that spring from the earth, and the ripe fruit we pluck from the bending bough, are the mementos of the "early paradise" that will be again enjoyed upon earth when man recognizes the "true dignity" of man's first and best employment, the tilling of the earth. The flowers that bloom upon earth are esteemed as the purest emblem and the most fitting testimonial for the "Birthday," the "Bridal," and the "Grave"—the triune of life—where life should be purest and brightest—its advent to earth—the newly wedded life—and when it passes into the spiritual, the eternal life. The fruits of the earth are emblematical of man's labor—"As we sow so shall we reap;" if we sow sparingly, we shall reap sparingly; if we sow bountifully, we shall reap bountifully.

Like the flowers and fruits of this fair earth, we are the humble advocates of this noble science. We have endeavored to perform our duty to the best of our ability. We have endeavored to scatter flowers and fruits by their "type" with a liberal hand, by the various subjects we have laid before our readers during the past year. With the opening address of the CALIFORNIA FARMER, in its first issue, the following course of action was promised as the guide for the future; those who have been its readers will know how well and truly that course has been pursued; no better promise could we make than to reiterate the same at the opening of the present year:

"That which contributes most directly to the substantial happiness of mankind, that which really advances and elevates the science of Husbandry, of all pursuits the most productive; that which holds in constant revelation the purest comminglings of life and nature; that which is most honest and unaffected in its teachings, is the kind of information—the kind of literature or science which is received and cherished by a competent farmer. And this is the kind of information which we desire to communicate. To collect and present in agreeable portraiture the ever varying suggestions of science—to record the progressive developments of Agriculture, and submit them to the consideration of our California Farmers, is, or should be, the object of our work. This is at any rate the course we shall adopt. Eschewing all partyisms in politics, all the affectations of society, and all the cant of religion, we shall devote ourselves to the improvement of Agriculture, to the embellishment of Homes, and to the elevation of Human Character."

How well and how steadily we have pursued this course, we leave for our friends, for those whose interests we have advocated and upon whose justice we rely, to decide.

Avoid a thousand severe and trying discouragements we have endeavored to pursue our way, having an eye single to the cause of Agriculture and its kindred sciences; laying aside political, sectarian, or personal feelings, we have endeavored to perform our duty regardless of personal, physical, mental, or pecuniary suffering, and having a firm reliance on the excellence and nobleness of our cause; and with a firm faith in a kind Providence, we have been sustained and carried through all suffering to the close of one and the opening of another year, and with a confident hope that a brighter and a more cheering prospect is before us, and before those who are identified with the most valuable, most important interest of mankind—for so we have and shall ever esteem the cause of Agriculture.

The pledges we made at our commencement

were made upon the following conditions, and we believe we have redeemed in a good degree ours. We repeat those conditions and ask those who remember that pledge, if we have not done so—and we ask them in return, have others redeemed theirs as well? If we have come short, to whose account shall it be laid? The following were our words:

"But to redeem such a pledge, we must receive the liberal support of those who feel an interest in any of the departments of the science of Agriculture. In no country are there more intelligent farmers than in California, and it is from these that we expect a most essential support; not from subscriptions and advertisements alone, but from the innumerable and thrilling sources of information which are opened to individuals, and which when recorded and published, become of invaluable benefit to the masses.

"If the votaries of farming will take a little trouble upon themselves in affording this kind of support, we will engage to furnish a weekly journal that will be a credit to the cause, and an interesting visitant to every household in the Commonwealth."

Such have been our aims the past year—and with the same high purpose we pledge our best energies again as we present ourselves at the opening of this our New Year.

To the cultivators of the soil of California we appeal. To the merchant and the ship owner, to the manufacturer, the mechanic, the artisan, to all we appeal for their interest in behalf of our Journal for it is their cause we advocate. Each and all are identified with the great interests of "agriculture;" it is interwoven with every branch of trade and commerce, when prosperous it shines on all—when adverse fortune rests on it, it injures all, it affects the entire community and should ever be recognized and encouraged by an entire community. The past year has been one of uncommon disaster and depression upon this great interest and its influence now overshadows the land. But amid the clouds that darken the sky there is "one break of blue in the clouds" and to that we turn in hope. It is this: our people are now awake to the importance of a better recognition of these interests—and this will save our state. Subjects like the "settlement of titles" the importance of "permanent settlers" and an "increase of population"—are upon the public mind. The value of the agriculture of California is being felt and this is our main hope.

We tender our sincere and grateful thanks to those who have cheered and encouraged us in our efforts, labors and trials. We ask their kind indulgence and gentle judgment upon our short coming, and for the many errors we may have committed in our labors. We have tried to do some good and we will try to do more; we seek a kind and continued smile from every subscriber, and from all who have aided us by their word, pen, and subscription—renew and increase these, and this will renew and increase our strength and ability to labor, for that labor shall be given in truthful earnestness to make the CALIFORNIA FARMER worthy the patronage and support of every citizen.

To the Press, we owe much—for many of our "cotemporaries" we have a remembrance laid up in our hearts that shall never be forgotten. We remember kindness—that is all we wish to remember. We wish all our brethren of the Press success and will aid as we have an opportunity. We ask a kindly word now and then as we may deserve; for the cause we advocate we ask it, not for ourselves alone. Upon this our new year we tender to our friends, our patrons, our correspondents, our cotemporaries; to all we tender the best and kindest wishes of the season, and most earnestly pray that this new year may be to them a most happy one, that each and all may be "Blest in Basket and in Store."

Agricultural Influence at the Capital.

It is all-important that the interests of Agriculture should have a voice in our halls of legislation, and those who have this interest at heart should look to this matter in season, for the Agriculture of California should be kept before the minds of our people.

When at Sacramento a few days since, we had the pleasure to meet W. W. Stowe, Esq., the able representative of Santa Cruz. To this gentleman the cultivators of our State owe much, for his care of their interests the past year, and we rejoice to know he is again placed where he can so ably serve these interests and those of the State.

OUR PROSPEROUS COTEMPORARIES.—Surely and truthfully we wish our brethren of the Chronicle and Pioneer a most earnest "Happy New Year"—although we see they have already taken measures to secure it without the wish. Happy, happy may they be forever.

Steamer Combinations.

THE steamers upon the waters of the Sacramento river, and the San Joaquin, exert a great influence upon the mercantile and commercial business of California, but their influence upon the agricultural interests is also of great moment, and it is for this that we have so often presented the subject of "steamers" to our readers. Communications between portions of our State and the seaport, are like the arteries of the body, leading blood to and from the heart; disarrange them and the whole system is diseased;—and we have ever kept an eye upon these arteries, and wished to see the blood flow freely and purely from the heart to the extremities, and back again for purification. And when the "steamer combination" was formed, we approved, for we believed great good would result from it—and so it has. First, all the old and worthless boats were withdrawn, and none but the very best were placed in use; life and property were safe; speed, comfort and safety were the watchwords, the community seemed pleased, and the price then paid, (\$8,) though it seemed too high, was cheerfully paid, and it was only just—for it was like an insurance for safety to life and property. Then the combination had full power, full control. We then suggested that the company should meet the wants of the public and try the plan which we then proposed—(we now republish the article for reference)—for we truly believed it should have been done. But instead of this the price was increased, and it became a burden too heavy to be borne, and the consequence was new lines as competitors for public favor.

The agriculturists that travel upon our rivers are many—their name is not Legion, but it will be—and the cattle and other stock, grain, fruits, &c. is immense; the farmers travel, and they felt this heavy burden, for they were poor and needed consideration. The result has been just as we expected, just as we predicted. The Combination were not alive to the future consequences of their acts, and the burden became too heavy to be borne longer, and necessity has created the present lines that now compete for the trade and travel of our rivers.

Never had a company so glorious a chance for a splendid fortune, never had a company so fair a chance for public favor and approbation—but the Rubicon is passed, others are in that field to reap the golden harvest, and the public will decide who can serve them best. We ever regret to see such opportunities lost, but progress is the word, the deed is done, and now the field is open. We have enjoyed the courtesies of each and of all, and wish success and prosperity to all. We have uttered our own opinions fearlessly, but we cannot but ask the friends of our old favorite line and the stockholders to acknowledge that we were in the right in May last, and that our suggestions were those of the true friend.

[From the California Farmer of May 11.]

STEAMBOAT MONOPOLY.—It is most gratifying to us to note the promptness with which this great monopoly meet the wishes of their patrons: It is the best assurance that we were right in the views we advanced. The "high pressures" were supplanted this day (Monday) by the excellent steamer Wilson G. Hunt, Capt. Pool, and it was pleasant to make a trip upon this favorite steamer again and meet familiar friends. If any one doubts the benefit of this combination, let them visit Sacramento and look across the river and see a dozen old boats laid up, and then bear in mind the safety in travelling only upon the very best boats with ease, comfort, rapidity, and no racing. No reasonable man will wish to go back to the old unsteady and unsafe fashions again.

[From the California Farmer of May 11.]

A HINT FOR THE STEAMER COMBINATION.—What say you gentlemen; in these times, that men call so awfully dull, and when the bravest of our business men get the blues, and ready to steal away anywhere—would it not be a wise plan to offer an inducement to travel? Would it not be better to carry up river 200 passengers regularly and 200 down regularly at six dollars, than to average only 100 at ten dollars. The passage money would be thus increased \$200, besides the profits of berths and suppers. This is a matter of dollars and cents, gentlemen, and although we have always advocated No. 1 boats and fair liberal prices, yet now, in the present very depressed state of trade, if more money can be made to flow into your pockets, and the community be induced to travel more, and be made to feel that you do desire to accommodate it, is it not worth while trying? You know you hold the power—you can try it—if it don't work well, you can abandon it, for it must be as you say. There are many cases where persons will not travel in the boats if they can avoid it. We saw one person yesterday go to the telegraph office and do his business in that way, at an expense of \$7 or \$8, although he would much rather have had a visit had the fare been \$6 or \$8 even. Two others declined going on account of the cost—which with the expenses there, amount to about \$40. It bears heavy upon those who are compelled to travel,

and especially those whose business is so much crippled, or lost, that they have no \$40 a trip, and they content themselves by remaining at home. All this is lost to the company. We can only say, "A hint to the wise is sufficient."

The Homeless.

How the feeling heart is touched with sadness at the thought that a fellow being is homeless. How quick every generous impulse of our better nature is brought into requisition, that we may offer aid and sympathy to that creature who seems marked as unfortunate—as peculiarly so, for to be homeless is the darkest and most fearful of all evils than can befall the human heart.

How much effort has been made, how much sympathy has been excited in behalf of the destitute and suffering in all the relations of life; and how often do we see real duties of the household neglected by those who are in affluent circumstances, that they may go from house to house and call a gathering of co-workers to relieve those who need such aid. All this effort to relieve the suffering is well, for it is commanded of us to "feed the hungry," "clothe the naked," and "relieve the distressed." This tends to make wretched homes happier and brighter; but we would ask, if sometimes there is not too much a *show of charity*, a desire of outside display of good works, if many who are thus notorious at all "charitable meetings" have not by their desire to make themselves famous as charitable and benevolent, neglected their own homes? Does not every day's experience teach us that much of this display of charity, much of this love of fame is bought at a high and fearful price—the price of happiness in one's home?

Do we not often see that many of those little nameless comforts, those delicate attentions, those favors that cost nothing but reflection, are too frequently disregarded on account of the time wanted for charitable meetings and benevolent duties abroad? We rejoice to see the broadest humanity, the widest charity, for "it hideth a multitude of sins;" but when it is so broad that it leads those whom "God gave to man," to "neglect their own household," then they are indeed worse than an infidel, and the cloak of charity will not cover the sin.

The New Year has come upon us in a new land, and the prosperity of that land, and the families that shall make their dwelling place here, depends almost entirely upon those whose influence is so potent in the circle of home; and it is not those only who are poor or sick, or those who are orphans, or childless, or friendless, or alone in the world, that are homeless. But there are many who are surrounded by all that should make life desirable—wealth, kindred, troops of friends that we could number among the most destitute, abject, homeless souls that we have ever met. Some by nature have no heart for home, and neither wealth nor friends could make one for them. Others, have all its most sacred associations, yet they are forgotten and perverted, and the word "home" is but a word for fashion, frivolity and worldly pleasure; and its members seek in the world without for those blessings which can only be found within the sacred circle of home.

When home is thus perverted from a sacred to a common use, 'tis then we see its members out in the world pursuing some phantom that will ever elude their grasp. The head, whose duty it is to direct, may have a heart to make a home of peace and happiness for earth, a home where the heart can find solace and comfort in the hour of sorrow and sickness; and he flies to it as a bird to its nest, when the day is done; but if the "mate bird" is flown, if the nest is deserted, though weary ever so much, he will seek for rest in some other nest, so long as his own is deserted. But, when all he seeks is there, when the mate bird comes in graceful flight to court him to his own home, then the heart is prompted to perform all those nameless but priceless acts of kindness and affection due to loved objects, and these call out reciprocal response, and the altar of home is made to burn with a divine flame. But, when those who direct, labor in vain, when the head plans what the heart prompts, and the incense is laid upon the altar, when that altar is deserted for fashionable rounds of pleasure, and the most sacred of duties, and the most tender ties and the sweetest attentions are neglected or forgotten, 'tis then the affectionate heart feels widowed and bereft; 'tis then it turns away to seek in billiard rooms, or drinking saloons, or gambling houses, for some alleviations of sorrow; 'tis then the fond heart feels that it is indeed homeless, and there is no thought so bitter, for such a heart knows what home should be, what it might be, what they would make it; and woe be to those who fail to

take and garner the loving heart that clusters around the altar of home. O, woman, how mighty thy influence! how fearful thy responsibility! How many homes, once happy and blest, have been lost forever, broken up, loving hearts separated, parents and children estranged—all resulting from a neglect of those little attentions at first, which ever seem as a connecting link to bind fond hearts.

How potent are the little things of home, the slipper and the chair for father when he returns, the greeting at the door for the husband, the salute of the sister to a brother. The coldest heart can be subdued by affection, and the sinning, erring one, won back from error by love. Wives, sisters, daughters, remember, while you meet to plan deeds of benevolence and charity for the widow and orphan, for the destitute and homeless, remember that if the highest, holiest, purest duties of home have been neglected for "outward charity" or love of the world, there are those who should be nearer and dearer that may feel that there is such a thing as to be sheltered, clothed, fed, and riot in luxury, even, and yet be "Homeless."

It is not much the world can give,
With all its subtle art;
And gold and gems are not the things
To satisfy the heart;
But O, if those who cluster round
The altar and the hearth,
Have gentle words and loving smiles,
How beautiful is earth!

Legislative Ball at Sacramento City.

The dedication of the new State House (County Court House,) opened for the grand Inaugural Ball, in honor of the members of the Legislature, came off on Friday evening last, at Sacramento city. Without flattery to the citizens of that city, or to the managers, we can safely say it was one of the most splendid affairs, perhaps the very best, ever planned and carried out in California. Nothing could exceed the elegance of the whole affair. The magnificent suites of rooms, the delicious strains of music, the hundreds of richly dressed, beautiful women, and genteelly attired parties of gentlemen; the quadrille, waltz, schottische, mazourka and polka, were all culminated by a joyous spirit that was universal amid this vast throng; for it was estimated there were over one thousand present, of whom near four hundred were ladies.

The Senate and Assembly chambers, the galleries of each, with all the rooms attached, were furnished superbly, richly, draped and decorated in excellent taste. The refreshments, the admirable meat supper at midnight, and the grand banquet of cakes, jellies, creams, &c., at 2 o'clock A. M., were all so excellently got up and so finely carried out, that we may safely say they could not be excelled.

The dancing commenced at 9 P. M., and continued with unabated interest till 4 A. M. The only objections raised, that we heard, was the "jam"—there was not space enough to dance with comfort or grace in such a thronged assembly.

A very full attendance of the Senators and Representatives, and ladies and gentlemen from San Francisco, Benicia and other parts of the State, the Governor, Lieutenant-Governor, Senator Gwin, General Wool, officers of the army with ladies of their families, and many distinguished strangers was present. The whole affair was truly grand as a festive scene, and reflects the highest credit upon the citizens and managers, upon the "Queen City of the Plains," and the whole State.

The Storm.

The spell is at last broken, the flood gates of heaven are open, and the clouds have dropped their fatness. Sorrowing and distrustful hearts have been cheered, and the song of praise and gratitude has ascended to the giver of "the early and the latter rain," for the earth has been refreshed, and hope springs to life anew, and whispers of "seed time and harvest."

The rain storm, at the going out of the old year and the coming in of the new, was ushered in by a gale of great violence. Those who have been long residents in California have not known a gale of greater severity. It commenced a few minutes after midnight, and continued till morning. Several buildings were blown over, others unroofed, warehouses more or less injured. The shipping in the harbor also suffered material damage, for the rain fell in torrents a part of the time; and many believe that during the storm there were two shocks of an earthquake. Residents in various parts of the city remember that they felt the shake, and they feel assured that wind could not thus cause brick and stone to shake.

However much we may regret the injury done,

still the good that has fallen upon the Agricultural interests of our State, upon all the interests of California, is beyond calculation. So much good is perceptible, however, that men were smiling faces, and all seemed to know the good that would result from it.

Cone Burr of the Arbor Vitæ.

The Cone of the Arbor Vitæ of Calaveras weighs when full grown not more than from one and a half to two ounces avoirdupois and is two and a half inches long by one and a half broad. When fresh it is of a greenish brown color and as hard as a stone; but after eight or nine days from its falling, the lobes open and the seeds fall out with the least shaking. The seeds are nearly the size, shape and color as those of the common parsnips; one hundred and forty of them are contained in each burr.

This burr is a perfect Cone, and is most elegant in its proportions and appearance. The seeds are found between the lobes next to the stem of the burr, and are surrounded by a curious deposit of deep purplish gum which is nearly the same in its characteristics as the Gum Kino of druggists. This Gum is astringent, is readily soluble in water and stains cotton cloth of a deep purplish brown. Doubtless it will be found to possess valuable medicinal properties, and it certainly deserves a trial from California physicians. T. or M.

Essex Institute.

SALEM, Oct. 3d, 1854.

Messrs. WARREN & SON: We acknowledge the acceptable present of samples of Californian field seeds, viz: Wheat, Oats and Barley, illustrative of the products of your soil. The Essex Institute is a Society of Natural and Civil History, and Horticulture is recognised as a branch of the former of these.

The Herbarium of the Institute, contemplates the collecting and preserving all kinds of seeds, for future reference, as well as to mark the progress of horticultural experiment.

Your present becomes available at once, to such an Institution.

We would gladly avail ourselves of the promise in your Circular "to forward from time to time all important information and such new and valuable seeds &c. as can be safely transmitted."

Specimens of the seeds of the native plants: the cones, nuts, acorns, &c. &c. of native trees; the mosses and lichens, &c., found growing upon the trunks of forest trees, or of the orchard, would be very acceptable.

The latter when thoroughly dried could be used for packing other and larger seeds than those which require paper envelopes, and would not be injured by this use.

We hardly know what return to make to you for such and similar favors, but whatever is in our power or at our means, we should be most happy to supply.

With wishes for your success and prosperity we remain gentlemen, very respectfully, &c.

JOHN LEWIS RUSSELL, Curator
of Botany &c., to the Essex Institute.

FLOWERS, BRIGHT FLOWERS.—Among the many tokens of kindly remembrance we received of the "Happy New Year," and which add so much to the pleasurable scenes of "Home," was a handsome basket of Cut Flowers from the gardens of W. O. Walker Esq. on the Mission road. Mr. Walker's gardens are now so extensively stocked with every variety of plants and flowers that those who desire to supply gardens, or parlor conservatories may have their taste fully gratified and at a moderate rate. Mr. Walker has recently returned from a visit to the East, among the principal establishments there, and has brought a most extensive collection. His houses are well stocked and to these we refer our friends—if they will visit the gardens, they will see that we have only pointed the way to them. The gardens will speak stronger than our pen to all who love the beautiful.

ROUND VOLUMES.—Volume I. of the FARMER can be had at the Office neatly bound at \$7.50. Volume II. will be ready in a short time; and a complete volume, two volumes in one, will be ready with complete index about the 15th of the month—price of double volume \$12.50. This volume will be found of great value to send to the States as the best proof of the agricultural wealth of California.

Early Marriages.

I am a great advocate for early marriages. There is no check like matrimony for the errant propensities of young man-hood. Few live to what are called the years of discretion without losing one of their parents, and then the first home is lost. Then usually comes to the young

man the choice between the devil and the angel. If he prefer the latter, he will generally find her in the guise of a gentle wife.

I believe half the worthlessness, idleness, and unenergy of bachelorism are products of interference and prevention of early marriages.

An early marriage is not necessarily an imprudent one any more than the graybeard's last wedlock is a wise one.

The divine instincts of youth will guide us more correctly in the choice of a companion than our world-wisdom, that we in our corruption, call maturer judgment.

Neither are parental or guardian terrors always well founded.

A young man is objected to because he is poor; because he is quick, careless of opinion, inclined to delay harsh judgments—a disposition which prudent old ladies call recklessness; and which is as natural to generous youth, as scandal is to prudent old ladies.

A young man without positively fixed vices, who has three qualities, generosity of feeling, affluence and honor, may be safely trusted with the welfare of the woman he loves; my word for it, he will secure it more certainly than he who buys a wife for two carriage horses, a sofa at the opera, and an entrance into Mrs. Pangus's set.—*Donald MacLeod's Bloodstone.*

GAPES IN CHICKENS.—It is my aim never to publish anything which I have not thoroughly proved to be both true and useful; but as there has been so much guess work and humbug published upon the disease in chickens called the gapes, I will publish, if you think proper, my experience in that disease. I have lost over one hundred and fifty chickens with the gapes, in the course of the summer, and have dissected many—examined them thoroughly, and found nothing to justify the conclusion that the disease is caused by worms in the wind-pipe, throat or crop, as some writers pretend, nor have I found any remedy to cure or prevent the disease, in all that I have read. On the contrary I tried all the remedies published in the Cultivator, and many more, without any good effect. I do not believe that there ever was a cure performed by any remedy I have tried. But I have observed that they were not affected with the disease in the spring when the weather was cool, nor in the fall, but only in hot weather—that the most of them took the disease in the morning, after being brooded all night. I therefore concluded it was caused by too much brooding in warm weather. I procured a headless barrel which I set upon a grass-plot—took the chicks from the hen at a fortnight old; put them in and fed them, since which I have lost no more with the gapes. You are welcome to my experience. Let others try it.—*Cultivator.*

A MAGNIFICENT FARM AND FARMER.—A Vermont paper says: Among the conspicuous men in the Vermont Legislature is Mr. B. G. Brigham, of Fairfield. He owns and cultivates 1,300 acres of land. Among his barn-yard items are two hundred and twenty cows, twenty horses, and five yoke of oxen. In his dairy he makes butter only. The average yield of butter from the milk of each cow is one hundred and fifty pounds. Two huge "dasher" churns are set in motion by two "horse-powers," and the butter is "worked" by the old-fashioned "paddle." His stock of cattle consume about five hundred tons of hay annually. 20,000 lbs. of pork, 5,000 bushels of wheat, and from 400 to 500 bushels of corn, 1,000 bushel of oats, and from 1,000 to 2,000 bushels of potatoes, are among his early products. "The Man of Uz," in his best estate, could not do better than this. Mr. Brigham himself is got up with a breadth of beam, and in a style of magnificence proportionate to the extent of his possessions and agricultural products—he standing six feet four in his boots, and weighing, by one of Fairbanks' patent balances, 300 lbs. precisely.

A correspondent of the San Diego Herald writing from Fort Yuma, Dec. 14th, says: Lieut. N. Mickler and party arrived at this place on the 9th inst., and are at present encamped opposite the Fort, on the left bank of the Colorado. They were fortunate in having a rainy day just as they came upon the Desert, which furnished a plentiful supply of water. The survey of the Boundary Line will be commenced in a few days. Since the first survey was made in 1849, the mouth of the Gila has advanced to the westward about five or six hundred yards; so that a direct line from its junction with the Colorado to the initial point near San Diego, would not now touch the left bank of the latter river, but pass across the parade ground below Fort Yuma. The river is now quite low, and still falling. Few emigrants are passing at this time.

The Los Angeles Star has the following sad intelligence from Salt Lake: By the Salt Lake mail which arrived last evening, we have the *Deseret News* up to Nov. 30. The mail carrier reports that the Indians robbed the U. S. Mail on the route from Great Salt Lake to Independence. The robbers killed the men, destroyed all the letters and obtained about \$12,000.

THE SUNKEN TREASURE.—The Schooner Pilgrim arrived on Monday from the wreck of the Yankee Blade, bringing two more boxes of the sunken treasure, containing \$34,000. This makes over \$100,000 that has been recovered, leaving a balance of but little over \$60,000. Of this latter amount the pilot boat Daucing Feather which left Point Arguilla in company with the Pilgrim, has two additional boxes.

Horticultural Department.

PARKS AND PLEASURE GROUNDS
for the Farmer.

The present is a time of agricultural improvement and progress without a parallel in this country. Improved implements, improved stock, better cultivation, better fences and buildings, meet us everywhere in the country; and farmers are growing "rich," in the common acceptance of that term. We rejoice at this, and so must every man who feels a lively interest in our national welfare, because agriculture is our main stay. If it fails to prosper, we can have no prosperity. It is the produce of our farms—the fruits of farm industry—that animate trade and commerce, that build up cities and villages, construct railroads and canals, and cover our lakes and rivers and the broad seas with fleets of vessels. What a calamity—what an universal panic and prostration of business would the failure of even one crop over the whole country, bring upon us!

Agricultural progress and prosperity, then, are subjects that no man, whatever may be his calling, can regard with indifference; and the agricultural classes themselves, as a body, by their intelligence, industry, energy, and manly independence, command universal admiration and respect. These are our honest sentiments—not the fulsome flattery of a stump speech or holiday oration. Our sympathies are, and ever have been, and will be, with the tillers of the soil. Our own life, so far, has been spent in the country, and we have earned our bread by the cultivation of the soil. We can speak of both its toils and pleasures from actual experience. We know that some regard it as a vulgar and plodding pursuit, fit only for strong, rough, and uneducated men; but the number of those who think so are diminishing rapidly. Men of taste and intelligence, are now ambitious of being agriculturists; and schools and colleges for training the sons of farmers, are beginning to attract attention, and will soon work a change in public sentiment in regard to the respectability and importance of agricultural profession.

This brings us to the point on which we proposed to make a few suggestions, when we took up our pen. We wish to see the farmer's home—the farmer's life—made more attractive. Hitherto, as a general thing, the improvements which have been made are of the useful kind, having reference mainly to the supply of man's physical wants. Most of our farms must be regarded as mere manufacturing of food and clothing; very little has been done to gratify the intellect, taste, or feelings—the higher and nobler attributes of our nature. And this is one reason, beyond a doubt, why many young persons who have, by means of education, reading, and society, acquired a certain degree of refinement, become dissatisfied with agricultural life, and have sought the city. Intelligent, educated men, cannot surely remain satisfied with being mere growers of grain and breeders of stock—they must love their homes; and to merit their love and attachment, that home must possess something of beauty, for the love of the beautiful is an instinct of man's nature. A large portion of the population is continually on the move; the old home has no hold on their affections—or at least not enough to overcome the novelty of a new one. We see the population diminishing in the very heart of the finest agricultural district in America, where nothing is so much needed as human beings. It is at certain seasons impossible to procure laborers enough to do the work. This state of things is unfavorable to the perfect development of the country's resources, and equally unfavorable to the attainment of a higher and happier social condition.

It is not unreasonable, we trust, to expect, and even to urge, some reform on this point. Make home attractive; cultivate the taste, and feelings, and affections, as well as you do your fields. Why should a wealthy farmer, with his fifty, one, or two, or three hundred acres of land, content himself with a rod or two of door-yard, and a dozen of shade trees, shaped and managed after the precise fashion of a village plot? Why can he not, just as well, have a park and pleasure-ground of several acres around his house, broad glades of lawn, and groups of trees, separated from the cultivated portions of the farm by green hedges? This, with a well-stocked orchard and good ample kitchen-garden, would come up to our ideas of a country home; and it would be impossible for children to grow up in such a home without becoming attached to it, and having their tastes expanded, their feelings refined, or without appreciating the comforts and blessings of a country life. A rod or two of door-yard for a farm-house!—what a mockery! There is something incongruous in the very look of it that cannot fail to strike every observing person; it wants what the lamented Downing called "local truth" in architecture, which he explains in this way:

"Local truth in architecture is one which can never be neglected without greatly injuring the effect of country houses. And yet, such is the influence of fashion and false taste, and so little do the majority of citizens trouble themselves to think on this subject, that nothing is more common in some parts of the country, than to see the cockneyism of three-story town houses violating the beauty and simplicity of country life. In our own neighborhood there is a brick house standing in the midst of gardens and orchard, which has a front and rear pierced with windows, but only blank wall at the sides; looking, in fact, precisely as if lifted out of a three-story row in a well-packed city street, and suddenly dropped in the midst of a green field in the country, full of wonder and contempt, like a true cockney, at the strangeness and dullness of all around it. During a drive on

Long Island, last autumn, we saw with pain and mortification, the suburban villa of a wealthy citizen, a narrow, unmistakable 'six-story brick,' which seemed, in its forlornness and utter want of harmony with all about it, as if it had strayed out of town, in a fit of insanity, and had lost the power of getting back.

"To give an expression of local truth to a country house, it should always show a tendency to spread out and extend itself on the ground, rather than to run up in the air. There is space enough in the country; and because a citizen has lived in town, where land is sold by the square foot, and where, in consequence, he has to mount four pair of stairs daily, it is surely no reason why he should compel himself to do the same thing in the country. Indeed, economy in the first cost of a house (that is to say, the lessened expense of building two stories under the same roof and over the same foundation) is the principal reason why most country houses are not still more ample, extended, and rambling on the surface, than they usually are."

The same principle holds true in regard to the arrangement of grounds about country houses. "The cockneyism of three-story town house," is no more out of place in the country, than is the village door-yard before a farm-house.

But some careful farmer will ask us, "How can we afford to lay out parks and pleasure-grounds, and keep them in fine condition? It would cost us more than the whole labor of our farms. Only think of what an expenditure of money and labor this hedging, and planting, and mowing this pleasure-ground would involve. It would be all very well if we could afford it; but that we can not, and we must leave it to retired gentlemen who have made their fortunes in town, and come out into the country to spend them."

But we reply, You can carry out our plan without incurring a heavy expense. Hundreds of farmers in our own county of Monroe, can make such a park as we propose, without feeling the cost. Fence off, with Osage orange or buckthorn, at a cost of about twenty to twenty-five cents a rod, five to ten acres of land immediately around your dwelling. Seed it down, and it will produce good crops of hay. You can get plenty of young maples, elms, tulip trees, basswoods, ash, and other native trees, in the woods, which can be taken up and planted at leisure intervals in the fall, when farm labor is over, and early in spring, before it commences, and even during winter, in mild weather. Until the trees are well established, it will be necessary to cultivate the soil around them. It will not be necessary to cover the whole ground with trees, but merely to scatter them here and there in groups, and singly, to give it a park-like character which will distinguish it at once from cultivated fields. A little can be done now, and a little again, as leisure affords; and in a few years the work will show. Meantime the land is cropped profitably; for hay is always a paying crop, and an indispensable one. The ground nearest the house may be planted with some rarer trees—a portion of them evergreens. A small portion of the ground near the house might be separated from the main body of the park by a wire fence, or moveable hurdle fence, and kept mowed; and if embellished with a few flowering shrubs, and a few beds of flowers, all the better. But these, for economy's sake, can very well be dispensed with. When planting is finished, and the trees fairly established, the park might be pastured with sheep, as many parks are in Europe; and thus it would always have a closely cut surface without the expense of mowing, and the sheep would be an interesting feature in its scenery. When forest trees are not within reach, we would recommend the raising of them from seed, or small plants can be purchased at nurseries for \$2 or \$3 per hundred, which, with a couple of years' growth in nursery rows, will be fit for final planting out. Only go about it, and the means will not be wanting.

Those who wish to have a plan sketched out for their guidance, can procure it at a trifling expense, from Messrs. Mehan & Saunders, Messrs. Copeland & Cleveland, Mr. Munn, Mr. Leuchars, Mr. Hepp, Mr. Graef, Mr. Cook, and several other gentlemen who devote themselves to the practice of landscape gardening, and whose cards will be found in our advertising pages. We wish some of these gentlemen would favor us with their views on this subject. We desire to push improvements into the country; it must not remain, as now, confined to the precincts of cities and villages. But we must offer to country people practicable and inexpensive plans. We wish our agricultural societies would recognize the importance of the subject, and encourage some efforts by offering prizes. Their main object is to elevate the farming pursuit, and we know of no other way, at present, in which it can be done more effectually, in the older States, than by creating and fostering a taste for the embellishment of the homestead.—*New York Horticulturist.*

THE TULIP.

There is no spring flower in cultivation, that will rank with the tulip, in the general beauty of its form, the wealth and splendor of its colors, the endless variety and brilliancy of its tints, as they stand in bold contrast to each other in a single flower, or blend almost imperceptibly their hues; or in the cleanness, purity, and peerless elegance of its stem and leaf, in every stage of growth.

These are very high qualities to award to any plant, or flower, but the tulip claims and owns them all. Indeed, there is no floral display, no picture of a single spot of earth whatever in a northern climate, which can be made so perfectly beautiful—one which fills the eye with such intense fulness—as a bed of choicely-selected tulips. They are so easily obtained and propagated, that

the humblest cottager in town or country, can enjoy them; and it is said that the Spitalfields weavers of London, on little spots of earth, often enclosed in boxes, rear and exhibit, at the London Tulip shows, flowers of wondrous magnificence, admired by the nobility, and coveted even by royalty itself.

When the green leaf of the bulb has entirely faded, a few weeks after flowering, the functions of the plant, for the season, are suspended; it has gone to rest. Then is the time to take them up, and make selections for new beds. Those who admire tulips—and who does not?—should, if possible, select their varieties themselves, when in the height of their bloom. This is usually more satisfactory, when one knows what and how to select, than to leave the selection to the gardeners; who, although they may give you choice, rare, and new kinds, many of them at high prices, too, will not so much please you as some that are more common and long cultivated. In planting them, they should be so arranged in the bed that the colors should show in striking contrast, giving to it as bizarre an effect as possible. This arrangement of color in a tulip bed has quite as striking an effect as the individual character of the tulips themselves. We have known very common bulbs, by a tasteful method of planting, look more beautiful in the mass than the finest and most costly flowers when promiscuously thrown together. A Parisian sewing-girl, with a few parti-colored remnants, will, in a few hours, stitch together a more brilliant and attractive dress for the Boulevards, than the costliest robe got up for a court presentation. It is so with a tulip bed. The bulbs should not only be choice in themselves, but the arrangement of colors and sizes should be equally tasteful. Then, their effect is unequalled by any thing else that blooms.

There are several kinds of tulip, as the parrot, or fringed, the full rose tulip, and the semi-double. They are, however, all inferior to the upright, cupped, single flower, which, when right, is the only perfect thing of its kind, and the only one we should be anxious to cultivate.

Tulips sometimes suffer from being kept too long out of the ground. They should, after their summer drying, be put into the ground as early as the 1st of October—or if earlier, no matter. Fresh-rotted sod mold is the best covering for them. Three inches below the surface, is their proper depth in a moderately dry situation, and a light covering of clean litter should be thrown over them for the winter. When the frost is effectually out of the ground in the spring, this litter can be removed; they will then spring up, and flower strongly and beautifully. Planting should never be delayed till spring, if possible to get them down in the fall. Spring planted, they seldom bloom, and if they do, the flowers are small and less brilliant. A removal once in two years, is amply sufficient for their best propagation and show; and if left in the earth for three or four years, if they do not get too much crowded, and the beds are kept clean and rich, they will not harm. Indeed, their whole cultivation is simple and easy. Hyacinths may be treated like tulips, both in arrangement and cultivation; while crocus, narcissus, jonquils, daffodils, and the like hardy flowers, need less attention, and may stand for years unmoved, and bloom in great luxuriance, their only wrong tendency being to overcrowd, each other by multiplication.

Every body who has a piece of ground large enough, should cultivate a bed of tulips, and other bulbs, as opportunity offers.—*American Agriculturist.*

Grapes Ripening Earlier than Formerly.

Method of Cultivation more important than Climate.

In a recent conversation with Dr. Underhill says the New York American Agriculturist, of Croton Point, he informed us that both the Isabella and Catawba, are evidently ripening earlier, from year to year. Ten to twelve years since, the earliest bunches of Isabellas, were ready for market about the first of October. The past season they were equally forward on the 12th of September. This season has, however, been a remarkable one, and some allowance is to be made on that account; but last year, and the year before, the grapes were as mature about the 18th of September, as formerly at the end of that month.

Dr. U. thinks the Isabella may be cultivated much farther north than has generally been supposed, by reducing the amount of fruit to the vine, so that there may be a greater flow of sap, and by this means an earlier growth and maturity, secured. He thinks much more depends upon the method of manuring, pruning, and the general plan of cultivation, than upon climate, since they often ripen poorly even in Virginia and Maryland, when improperly managed, and yet, in the same season, ripen well in Massachusetts.

Who will make a good wife.—When you see a young woman who rises early, sets the table and prepares her father's breakfast cheerfully, depend upon it she will make a good wife. You may rely upon it that she possesses a good disposition and kind heart. When you see a young woman just out of bed at 9 o'clock, with her elbow upon the table, gasping and sighing, "Oh how dreadfully I feel," rely upon it she will not make a good wife. She must be lazy and morose. When you see a girl with a broom in her hand sweeping the floor, with a rubbing board or clothes line in her hand, you may put it down that she is industrious, and will make a good wife for somebody. When you see a girl with a novel in her left hand and a fan in her right, shedding tears, you may be sure that she is unfit for a wife. Happiness and misery are before you, which will you choose?

Valuable Extracts.

Profitable Farming.

Mr. Coming, in his address before the Connecticut Agricultural Society, says: Farmers will in future time come to understand that the earth and the air are both full of wealth to them. They will understand that the deeply bedded clay and the hard pan which is hidden far down in the ground are worth something more than merely to hold the world together. They will be found opening deep and broad drains, in the operation of which they will obtain valuable material for top-dressing on their upland, and at the same time make their lowlands of much greater value by relieving them of surplus water. They will discard the idea of cultivating much land with the use of a little manure, as requiring much labor and tending to penury. High cultivation, without fancy farming, will be in the way of the successful farmer of future time.

The importance of thoroughly pulverizing the soil will be better understood, and the value of the subsoil. Men who know little or nothing, by experience, about the use of plows, and other farming implements, and men who can understand no principle of science, will not much longer be trusted and credited in making and recommending such implements. Farmers will have all these things tested by science and by experiment. The plowman will also come under new orders. He will learn that his object is no longer to be the plowing over as much ground as possible in a day; but, to thoroughly plow and pulverize every inch of ground he goes over.

The conditions of respectability will be somewhat changed. The young man will not think it a dishonor to him to work on a farm. The young woman will no more think herself degraded by familiarity with the kitchen. Intelligence, industry, usefulness, will measure merit and establish a title to respect. These things we ought to consider now.

ADVANTAGES OF UNDER-DRAINING.—Waring, in his "Elements of Agriculture," states that the advantages of under-draining are many and important, and enumerates the following:

1. It entirely prevents drouth.
2. It furnishes an increased supply of atmospheric fertilizers.
3. It warms the lower portions of the soil.
4. It hastens the decomposition of roots and other organic matter.
5. It accelerates the disintegration of mineral matters in the soil.
6. It causes a more even distribution of nutritious matter among those parts of soil traversed by roots.
7. It improves the mechanical texture of the soil.
8. It causes the poisonous excrementitious matter of plants to be carried out of the reach of their roots.
9. It prevents grasses from running out.
10. It enables us to deepen the surface soil, by removing excess of water.
11. It renders soil earlier in the spring.
12. It prevents the throwing out of grain in winter.
13. It allows us to work sooner after rains.
14. It keeps off the effects of cold weather longer in the fall.
15. It prevents the formation of acetic and other organic acids, which induce the growth of sorrel and other similar weeds.
16. It hastens the decay of vegetable matter, and the finer comminution of the earthy parts of the soil.
17. It prevents in a great measure, the evaporation of water, and the consequent abstraction of heat from the soil.
18. It admits fresh quantities of water from rains, &c., which are always more or less imbued with the fertilizing gases of the atmosphere to be deposited among the absorbent parts of soil and given up to the necessities of plants.
19. It prevents the formation of so hard a crust on the surface of the soil as is customary on heavy lands.

SETTING HENS.—In setting hens, thirteen eggs are enough to give them; a large hen might cover more, but a few stronger, well-hatched chickens are better than a large brood of weaklings, that have been delayed in the shell perhaps twelve hours over the time, from insufficient warmth. At the end of a week, it is usual, with setting turkeys, to add two or three fowl's eggs, "to teach the young turkeys to pick." The plan is not a bad one; the activity of the chickens does stir up some emulation in their larger brethren. The eggs take but little room in the nest, and will produce two or three very fine fowls.—*Cultivator.*

A LARGE YIELD OF CORN.—The Elkton (Md.) Democrat says that at Battle Swamp, G. J. Fisher, Esq., has raised 1,600 bushels of corn, on a sixteen acre lot, in that neighborhood, which two years ago was a sedge field. The lot had guano applied to it three times in that period; the first application was 200 lbs., the second 150, the third 400 lbs., to the acre, making in all 750 lbs. The corn was a white gourd seed, planted two and a half and three feet apart, with four stocks in a hill, and matured early.

TO GET RID OF GRAIN WEEVILS.—The agriculturist who wishes to get rid of weevils has nothing to do but, as soon as he is aware of their presence to pitch the surface of some old boards and place them in his granaries; the pitch must of course be renewed several times in the year, in order to keep the insects away. The mere fumes of the pitch is disagreeable to the weevils and it will prove fatal if long inhaled.

Miscellany.

DOMESTIC DIALOGUE.

BETWEEN FARMER ASHFIELD AND HIS WIFE, MRS. DORCAS ASHFIELD.

(The following is principally taken from the Ohio Farmer. We substitute the name of our own paper for theirs.)

SCENE.—The living room of a neat and substantial cottage. TIME.—An evening in November. The farmer and his wife are seen sitting on opposite sides of the table; the farmer with the last issue of the CALIFORNIA FARMER, in his hand; while Mrs. Ashfield is engaged with her knitting work.

FARMER ASHFIELD.—Well, really, this is comfortable. Our crops, though somewhat lighter than usual, are all gathered in, the cattle and sheep are well provided for, and with a good shelter over our heads, and a supply of all the necessities, and many of the luxuries of life, we have, indeed, much to be thankful for. Our children, dear wife, owing to the lessons and examples of their excellent mother, are strongly attached to their humble home, and seem to be imbued with a love of those great moral principles, which constitute the best guarantee of happiness. For several years past, our labors have been well rewarded; we owe nothing that we cannot pay; and if we continue to be favored with health, I think we can reasonably expect our full share of enjoyment through the approaching winter.

MRS. ASHFIELD.—But then, you know that our children need, and must have a chance to obtain at least a good common education; and the girls are now at an age when they require such articles of dress and ornament as will enable them to appear as well as others in society. Reasonable indulgence, under proper direction, is no more than they are entitled to, and I think it will cause them to love home all the better.

FARMER ASHFIELD.—Yes, yes—I know it. But these indulgences, and these "articles of dress and ornament," as you call them, cost money; and this year we have less to sell than usual; and I thought of proposing to the school committee to employ Jim Gawky, who will teach our school for seven dollars a month, and hire him for only two months and a half, to save expense.

MRS. ASHFIELD.—Husband, how you talk! Hire Jim Gawky for two months and a half, to teach our children! That would be "economy indeed." Why, our John knows more than he does, and little Mary, young as she is, could learn nothing of such an ignoramus. I would rather knit stockings at sixpence a knot, than have our children deprived of the benefits of a good school, for at least four months. And a teacher fit to have the care of children as good as ours, ought to be paid liberally for his services.

FARMER ASHFIELD.—Well, I know there is reason in what you say; but the times are hard—the banks are breaking—taxes are high—and we have a long and hard winter before us. We must in some way reduce our expenses, or we shall not be able to lay aside a single dollar.

MRS. ASHFIELD.—There it is again! You are always for laying up something to guard against want in the future, and something for the children. This, as you very well know, I approve of, to a considerable extent; but if money is to be saved at the expense of education, or even the innocent enjoyments of life, then I say, let the money go, and let us live, as we go along, and enjoy the good of our labor.

FARMER ASHFIELD.—But we must economize.

MRS. ASHFIELD.—Certainly. But let us be careful not to become "penny wise and pound foolish." In other words, let us not, in our eagerness to add to what we already possess, rob ourselves and our dear children of the inheritance of knowledge, or deny ourselves those innocent and needful pleasures which afford us relief from the monotony of our mode of life, and prepare us for the more cheerful performance of our duties.

FARMER ASHFIELD.—Well, Dorcas, you talk like a book! You are generally in the right; but as it is my business to provide for the family, I must insist upon reducing our expenses, enough to make up for the loss of that bogus five dollar piece, which I took for three bushels of potatoes, and which is not worth a bungtown copper. Let me see. How many papers do we take?

MRS. ASHFIELD.—The Humbug Advocate, The Herald of Moonshine, the Mirror of Fashion, the Dollar Weekly, and the California Farmer.

FARMER ASHFIELD.—Too many, too many for these hard times! Some of them must be discontinued. The CALIFORNIA FARMER is the most expensive of any, and I think I will not renew my subscription for 1855. That will make up for the loss of those three bushels of pink eyes; and although I like the paper, I must contrive to get along without it.

MRS. ASHFIELD.—"Get along without it?" That would be a fine piece of "economy!" Because you have lost a five dollar piece, you think you must discontinue the only weekly paper published in the State, that is exclusively devoted to our interests, and the most elegant, most interesting, and most valuable publication we have ever had in the house!

FARMER ASHFIELD.—But it costs more than any other.

MRS. ASHFIELD.—(Laying aside her knitting work, and taking the paper from the hands of her husband, and spreading it upon the table,) so does a bushel wheat cost more than a bushel of turnips!

FARMER ASHFIELD.—Explain yourself.

MRS. ASHFIELD.—I will! Look at this—here, on this page, you have, besides the original matter

from the pen of the editor, some valuable articles on horticulture; the same concerning the arts and sciences; and a great variety of reading on all sorts of subjects. And here is the Farmer's Fireside reading! I sometimes think that the editor has looked in upon our own little cozy room, and made himself familiar with our affairs—and then, here is the Ladies' Department, and the Childrens, and Domestic Economy, and lots of choice sayings, and anecdotes for the boys to read and laugh at. And then, on the inside here is all the news we want—a world of information about cattle, horses, sheep, swine, &c., the Market Reports—and suggestions about the best way of doing things—why, how can we get along without it?

FARMER ASHFIELD.—But only think of the price. Five dollars don't grow on every bush.

MRS. ASHFIELD.—No—nor does the CALIFORNIA FARMER grow on every bush! I have wondered a thousand times, how the publisher could afford it at so low a price. Sooner than do without it, I would go all winter without new trimmings for my bonnet, and spin stocking yarn after the rest of the folks are in bed and asleep.

FARMER ASHFIELD.—I guess we can get along without your doing that. The price is the only objection; but let me see. O, I have just thought of a plan. The publisher of the FARMER offers his paper at a liberal discount to clubs. Tomorrow I will start out, with the prospectus he sent me, and urge ALL MY NEIGHBORS to subscribe for it! In that way I will save at least a dollar on our own subscription, and perhaps more. And besides, I think, myself, that such a paper will be of great service to all who read it.

MRS. ASHFIELD.—That is a first rate plan! And I can assure you, that if you were to spend a week in doing it, the boys and girls will cheerfully do all the work, and thank you a thousand times beside.

FARMER ASHFIELD.—I will do it!

MRS. ASHFIELD.—That's right. And when you send on a long list of names, don't forget to present my kind regards to the editor, and tell him that his arduous endeavors to benefit and entertain us, entitle him to our thanks and kind wishes, in addition to the "price" of his elegant and valuable publication.

Rome—The Eternal City.

AGES since, on the banks of the Italian Tiber, there was a little city of no importance politically or commercially—a city built by a second Cain, and peopled by David's band regathered "every one that was in distress, and every one that was in debt, and every one that was discontented." Their monarchy was trivial—their authority unacknowledged—their bravery of small account. A horde of men worse off than David's were—for he had one wife when he slew Nabal to get another; they had none at all, and with more justice than he, carried off all the sweet Abigails from their Sabine spouses, without perpetrating his crime upon their husbands. How they espoused these wives—how the earlier and later consorts of the Roman ladies warred and were reconciled, history relates. If we turn the leaves and overlook events that happened in the succeeding century or two, we shall find Rome—a state—exercising a wide influence upon her neighbors—possessed of an enriching commerce—"carrying war against the proud, and assisting the weak." We should find her career as mistress of the world, beginning—we should find stern laws following her invincible legions, and both pursuing their way north and south, east and west—we should find matrons of almost Spartan patriotism, youth prudent as well as bold and virtuous, and aged senators whose experienced minds were fully able to guide the rising state onward and upward,—all these joined to one another by the most sacred ties, and together forming a state of unparalleled importance.

It is characteristic of man, though he may not acknowledge it, to place a higher estimate upon qualities that he does not possess, than upon those which he finds in his own nature. Unless this were so, why should we see the most dissimilar often uniting in the closest friendship, as we do? Why should we find man, his body mortal, striving to make his deeds immortal? It is on account of this feeling of his heart. Because he is himself soon to die, he loves to dream of undying celebrity—he is fond of imagining that his wealth, his deeds, his talents, shall make so deep an impression upon mankind, that their fame shall be eternal. Thus was it with ancient Rome. The star of her empire had risen. Far and wide it shone in the noonday brightness of its stern and unyielding power. With the world almost wholly within the radiance of its beams—shining down upon all the former majesties of earth, and ignorant that a western horizon was as ready to receive it as an eastern had been to give it origin—who would have dared to proclaim within the universe of its dominion, or to whisper in a Cæsar's ear, of earth's constant changes. They called their power indestructible and their city eternal; but both at length were undermined. The republic gave way to the empire, and the golden sceptre of luxury took the place of the iron one that an Augustus swayed. Rome sunk, and her dominion was no more.

No. Though her temporal dominion ceased, and the foreigner usurped her power—still Rome was, and is, and ever will be, the "Eternal City." Not, indeed, in the sense in which Roman pride imagined—not with games and triumph—not in armies and fleets—but in and with the still, small voice of intellectual ability. Her Cicero yet lives in the eloquence of his orations—her Virgil and her Horace, yet breathe forth the inborn fire of the true poet—her Tacitus, still exists—a lucid and careful delineator of Roman wars and Roman

sages, and a narrator of the tyrannical times that "tried the souls" of free-born Romans. Her laws still form the basis of our own—her patriots an example the world should follow. Though unable to go forth conquering and to conquer with brave armies and unequalled generals—her historians still relate a Cæsar's victories—her writers tell of Carthage overthrown—of Greece bowing at her feet—of a world in submission to her decrees. The star of her dominion truly sank, but the sun of her fame rose to its zenith only to remain there forever. Time and the Fates might not grant eternal power, but they have bestowed upon her an undying renown—a substitute which nations will honor, if they do not fear—will respect, if they do not dread.—Omnibus.

Ladies' Department.

(From the Home Journal.)

Mrs. Judson—Fanny Forester.

A MINN more gifted, a temperament more sensitive, and a heart more wondrously tried by all that could bind the crown of thorns which shines brightest in heaven, never passed from the earth, we may well believe, than in the death of her, whose names (by which she is known to the world) we have here written. Of the two lives that she lived successfully, while a tenant of the fragile frame whose pulses are now still—the first, a brilliant and brief one of literary success, and the last a slow and painful martyrdom of sacrifices and sorrow—genius and an almost unparalleled sensibility deepened, a thousand-fold, the varied experience. Few will have ever gone to the right hand of God, we reverently feel, with more about which the angels will gather, to read the record in eyes tearful no longer. She was of that heavenly purity and self-sacrificing and humble goodness, which, it is the mystery of an inscrutable Providence should be selected for such trial on earth. To those who knew her, she was, in every sense, sainted; yet none who knew her well, and what she changefully suffered, would believe there was ever another lot so apparently deepened but to be filled with bitterness. Before saying the few words by which we would recall the points of her varied life to our readers, let us give one of the drops of agony wrung from this heaven-child while here on trial—a poem written for her mother's eye only, and, certainly the most manifest, first breath of a soul's utterance, that we have even seen in human language. It was sent to us some years ago, by one of our friends, under a seal of privacy which we presume is removed by her death. She wrote it while at Maulmain, the missionary station in India at which she had been left by her dying husband, Dr. Judson, when he embarked on a nearly hopeless voyage for health. At the date of this poem he had been four months dead, although it was ten days before the sad news was communicated to her.

SWEET MOTHER,

The wild south-west monsoon has risen
With broad, gray wings of gloom,
While here, from out my dreary prison,
I look as from a tomb—alas!
My heart another tomb.

Upon the low, thatched roof, the rain
With ceaseless pattering falls;
My choicest treasures bear its stains;
Mould gathers on the walls;—would heaven
'Twere only on the walls!

Sweet mother, I am here alone,
In sorrow and in pain;
The sunshine from my heart has flown;
It feels the driving rain—ah, me!
The chill, and mould, and rain.

Four laggard months have wheeled their round,
Since love upon it smiled,
And everything of earth has frowned—
On thy poor stricken child, sweet friend,
Thy weary, suffering child.

I'd watched my loved one night and day,
Scarce breathing when he slept,
And as my hopes were swept away,
I'd in his bosom wept—Oh, God!
How hard I prayed and wept!

And when they bore him to the ship,
I saw the white sails spread,
I kissed his speechless, quivering lip,
And left him on his bed—alas!
It seemed a coffin-bed.

When from my gentle sister's tomb,
Long since, in tears, we came,
Thou saidst, "How desolate each room!"
Well, mine were just the same that day—
The very, very same.

Then, mother, little Charley came,
Our beautiful, fair boy,
With my own father's cherished name;
But oh! he brought no joy—my child
Brought mourning, and no joy.

His little grave I cannot see,
Though weary months have sped
Since plying lips bent over me,
And whispered, "He is dead!"—Mother!
'Tis dreadful to be dead!

I do not mean for one like me—
So weary, worn, and weak—
Death's shadowy paleness seems to be
E'en now upon my cheek—his seal,
On form, and brow, and cheek.

But for a bright-winged bird like him,
To hush his joyous song,
And prisoned in a coffin dim,
Join Death's pale phantom throng—my boy,
To join that grizzly throng!
Oh, mother, I can scarcely bear
To think of this to-day!
It was so exquisitely fair,
That little form of clay—my heart
Still lingers by his clay.

And when for one loved far, far more,
Come thickly gathering tears,
My star of faith is clouded o'er,
I sink beneath my fears, sweet friend,
My heavy weight of fears.

Oh, but to feel thy fond arms twine
Around me once again!
It almost seems those lips of thine
Might kiss away the pain—might soothe
This dull, cold, heavy pain.

But, gentle mother, through life's storms,
I may not lean on thee,
For helpless, covering little forms
Cling trustingly to me—poor babes
To have no guide but me.

With weary foot, and broken wing,
With bleeding heart and sore,
Thy dove looks backwards sorrowing,
But seeks the ark no more—thy breast
Seeks never, never more.

Sweet mother, for thy wanderer pray,
That lotter faith be given;
Her broken reeds all swept away,
That she may lean on Heaven—her heart
Grow strong in Christ and Heaven.

Once, when young Hope's fresh morning dew
Lay sparkling on my breast,
My bounding heart thought but to do,
To work at Heaven's behest—my palms
Conjo at the same behest!

All fearfully, all tearfully—
Alone and sorrowing,
My dim eye lifted to the sky,
Fast to the Cross I cling—Oh, Christ!
To thy dear cross I cling.

Maulmain, August 7, 1850.

Of the hymns in human language for the soul only—few and holy and full of meaning as the commandments—this is one.

Our readers—those who have kept with us through years gone by—will remember our reception and first announcement of the writings of "Fanny Forester." She was at that time a schoolteacher in Utica, and with one or two intimate and most talented friends among her pupils. Knowing nothing of her real name, or her circumstances, we were exceedingly captivated by the off-hand brilliancy of her style, and its undercurrent of good sense never out of sight; and she and the friends she wrote of (and who wrote with her) became soon, to the public as well to us, the nucleus of a new kind of literary interest. It was the beginning of a new school of female authorship—immediate and familiar expression, made sacred and rose-colored by the personalness of woman. By writing as if she were talking, she secured the respect and attention that would be given to her presence. She embellished our journal for awhile, and then appeared as an authoress, with "Aderbrook" and other volumes.

We had never seen "Fanny Forester" till she came to New York with Dr. Judson, having devoted herself to missionary life, and about to embark with her husband for India, to share his exile of Apostle-ship and his many and dangerous cares. Looking upon her, we saw, at once, that it was a spirit which had already outgrown its frame—a slight, pale, delicate and transparent creature, every thought and feeling shining through, and every word and movement tremulous with fragility of mortal tenure. We said farewell with no thought that she would ever return—hardly a hope she would reach her far-off destination. She did arrive there, however. The poem above tells in deathless tears what was one hour of the years she suffered there. She returned, utterly bereaved and a wreck in health, two years since, and in the retirement of her mother's humble home, sank gradually to the grave.

Mrs. Judson, by her genius, is incidentally one of the world's memorable ones. To a religious class, also, of which her husband was a shining prophet, her memory will be dear. But there are those who look for bright ones among the pilgrims on the path of trial by the world unseen—the soul-sore and heart-wrung, with the higher sensibilities that are alive to an angel's scope of agony. She will be, by those, recognized and remembered. Sacred be the spot where rests what has so suffered and won!

AS AN evidence what the girls can do if they have a mind, a Cincinnati paper states that three years ago a poor orphan girl applied and was permitted to set type for that paper. She worked two years, during which time she earned \$200; and availing herself of the facilities the printing office afforded, acquired a good education. She is now an associate editress of a popular paper, and is engaged to be married to one of the smartest lawyers in Ohio. Such a girl is bound to shine, and eclipse tens of thousands who are educated in the lap of luxury and taught all the "accomplishments" of a boarding school. Such a wife will be a jewel to her husband, an ornament to society, and an honor to her sex and country.

CHEAP SOAP.—A correspondent of the Southern Banner, gives the following receipt for soap making, and adds that it would be worth one thousand dollars in the hands of a selfish person, and the world have to untie the purse string to get it, but here it is free gratis:

Take six pounds of potash,	75
Four pounds of lard,	50
One-fourth pound of rosin	25

All amounting to \$1 50

Beat up the rosin, mix all together well, and set aside for five days, then put the whole into a ten gallon cask of warm water and stir twice a day for ten days, at the expiration of which time, or sooner, you have one hundred pounds of excellent soap for \$1 50.

FROM THE EAST.

The Steamship Sonora, arrived Saturday night, bringing dates from New York to Dec. 5th—eight days later; and from New Orleans to Dec. 6th—seven days later. The dates from Liverpool are to Nov. 18th—three days later.

Congress met on the 4th of December. Mr. Atchison, of Missouri, has resigned his seat as President of the Senate. He has remained at home to secure his election, which is endangered by a coalition of the friends of Benton and the Whigs. Mr. Cass was chosen President pro tem. of the Senate.

Theodore Parker has been indicted for taking part in the Anthony Burns Slave Riot.

The Know Nothings gained a victory in New Orleans, on the 27th November, in an election for members of the Legislature.

Intelligence has been received from Lake Superior, that Dr. Kane's party, of the Advance, sent out by Mr. Crinnell, has discovered the bodies of Sir John Franklin and his companions. They were completely frozen and in a perfect state of preservation.

On December 5th, the steamer "Grand Tower" struck upon a rock near Cairo, and sunk in twenty-three feet water. The passengers were rescued with difficulty. The boat and freight is a total loss. The steamer "Pacific" was snagged and sunk on the 23d of the same month.

By a recent order from Washington, the enlistment of foreigners into the Marine corps, now stationed at the Charlestown Navy Yard, is to cease. It is believed that the same order has been sent to all our military posts.

Mayor Smith, of Boston, has been nominated for re-election by the Know Nothing party.

On the 4th of Dec. New York was visited by a heavy snow storm. At Rochester, snow fell to the depth of 30 inches in one day. On the Lakes a number of vessels were wrecked. A collision occurred on the Albany and Buffalo Railroad on the morning of Dec. 4th, owing to the snow falling so thickly as to obstruct the view.

The President's Message seems a very quiet, unsatisfactory document. The Town Talk makes the following synopsis; which gives a good idea of the production;

President Pierce is thankful for our national prosperity, and in that feeling we participate. He is in favor of non-intervention, or simply desires that the policy should be pursued of letting other nations alone, and insisting upon the same right for ourselves. He contents for the right of neutrals, the right of privateering which Prussia desired our Government to renounce, and comments on the reciprocity treaty with Great Britain in a congratulatory tone. The boundary line between Washington territory and the British possessions is in dispute, and he recommends the speedy adjustment of the question. The arrest of Consul Dillon is disavowed as any intended insult to France, and the latter Government has expressed much the same in relation to the Soule affair. Spain is treated very gently in the matter of her offensive action towards our Government. The abolishment of the tolls paid Denmark, by our ships passing through the sound, is advised. The treaty with Japan is referred to with considerable commendation. The assaults upon Mexico by hostile expeditions is condemned, and the fact stated that by them our troubled relations with Mexico have become more troubled. The river La Plata has been opened to us, but the Amazon remains closed. The old troubles with Great Britain in Central America remain unsettled, and is still a subject of negotiation. The Clayton treaty is found to have not accomplished the object for which it was entered into. The action of the Government in the Greytown affair is properly justified, and Mr. Borland and Captain Hollis vindicated.

Our Government appears to be in a very comfortable condition as regards finances. The receipts next year are expected to exceed our expenses \$15,000,000; he therefore recommends a reduction of duties on imports. Attention is called to the necessity of stringent laws to protect the records and papers of the Government from fraudulent use. The increase of the army on the frontier and the pay of the army officers is advocated; also the increase of the navy and the better discipline and improvement of seamen. Post office expenditures during the year ending June 30, \$8,710,907; receipts, \$6,055,586. No increase in its revenue hoped for. The Public Lands is the next topic. During the fiscal year, 11,070,935 acres have been surveyed. Brought into market, 8,190,017 acres; sold, 7,035,732 acres; receipts therefor, \$9,282,533. He opposes grants of lands for railroad purposes, and recommends that they be left entirely to private enterprise. He expresses a belief, also, that the excessive desire to realize large dividends from splendid railroad schemes, has been productive of bankruptcy to many in both fortune and character. He has no wish to augment this by encouraging hopes of sudden wealth, dependent on the action of Congress. He urges religious toleration, fealty to the Union, the reserved rights of the States, friendship towards other nations, economy in the administration of Government, determined defence by war when necessary, and ends with invoking the blessing of Almighty God upon the labors of the present Congress.

FROM EUROPE.—Nothing additional of importance seems to have happened in the Crimea. Sebastopol is not yet taken, and it seems problematical whether that fortress is really being besieged by the Allies, or whether the Allies are not in fact besieged by the Russians. A few more such victories by the Allies as have already taken place, and they would want men to enter and oc-

cupy the place, if even it were open and inviting.

The additional news from the Crimea relates chiefly to the engagement of the 5th November, which event appears to have been of a desperate and terrible character. Since then no operation of importance seems to have been attempted on either side.

THE ISTHMIUS.—During the last fortnight we have been favored with extraordinarily fine weather, for this season of the year, more resembling the dry weather of March and April than the rainy season. In consequence, the general health has been exceedingly good. The railroad works have rapidly progressed, and all look forward to its speedy termination.

Of late no outrages have taken place on the road. The Runnel's guard still continue to exercise the greatest vigilance; and in Aspinwall the police force, under Mr. Duckworth, preserve the greatest order.

There have been no local occurrences of interest during the past fortnight.—*Panama Star and Herald of the 14th.*

To Our Subscribers.

WITH the close of the year it is all important that we should call upon those who are indebted to us. Though the sums may be small from each, yet the aggregate is large and of moment to us, as we wish to fulfil our own obligations and improve our paper, thus giving back again more value to our readers.

We have forwarded our bills through Messrs. Adams & Co., and Wells, Fargo & Co.'s messengers, and we trust those to whom they are sent will cheerfully respond and aid us in the work we have before us.

Our agents will please distribute the extras we send them, and we trust our friends will peruse the circular which we re-issue the present week.

SPECIAL NOTICES.

Our New Office.—We invite our friends to our new office in the "Masonic Hall," on Montgomery street, opposite Le Court & Strong's. We can show them many wonderful specimens, such as are rarely seen, and we especially invite them to call and examine the various schedule and invoices we have to offer for sale. Trees, Seeds, Plants, Grains, Flowers, Lands, Inventions, Works of Art of all kinds, these we are happy to show, and can interest our friends if they will but call and see us. WARREN & SON.

Nailro Pines, Oaks, &c.—Cones of the Native Pines, Acorns from our Mountain Oaks, Seed of all our Mountain Shrubs, and of every species of Valuable Tree or Shrub; for these the full price will be paid, if satisfactorily labelled, classified and arranged, at the

Office of the "CALIFORNIA FARMER,"
Masonic Hall Building, Montgomery street.

Wanted.—All the varieties of California Clover Seed, for which the highest price will be paid at the

Office of the "CALIFORNIA FARMER,"
Masonic Hall Building, Montgomery street.

"A Thing of Beauty is a Joy Forever."—Why will people endure plagues on "the human face divine," or eruptions of any kind, when it is a fact so well known, that Dr. Guyssot's YELLOW DOCK AND SARSAPARILLA cleanses the skin from all impurity, removing Pimples, Sores and Blisters, leaving the affected parts as healthy, smooth and soft as the flesh of a babe. It is really priceless to all who wish the rosy beauty of childhood.

It cures all sores and poisonous wounds to discharge all infected matter, and eradicates every impurity from the system. It does its work mildly but effectually, giving conscious beauty and blooming health in the place of ugliness and soul-sickening disease.

SCORFULA, SYPHILIS, MERCURIAL COMPLAINTS, and a vast variety of other disagreeable and dangerous diseases are speedily and perfectly cured by the use of this medicine.

Purchasers will please be careful to ask for, and take none other but Dr. Guyssot's Improved Extract of Yellow Dock and Sarsaparilla. All others in comparison are worthless.

For sale at all the principal Drug Stores in the State. Park & White, Sole Agents, to whom all orders must be addressed. Office No. 94 Merchant street, 3d door above Montgomery. 13

OFFICIAL EDITION OF STATE LAWS.
FOR 1854.
LAW BOOK, NOW READY AND FOR SALE
AT
GEO. W. MURRAY & CO.'S,
MONTGOMERY BLOCK.

To the Readers of the California Farmer.

The annexed communication, with the names attached, has been kindly tendered to us. We would only ask of our friends to read and judge for themselves, as to the importance of the subject named therein.

We are deeply grateful for every testimonial of favor and encouragement in our labors, and we shall speak our mind more fully with the next number, in our "New Year's" wish to them.

We shall also add other names which were kindly tendered, and shall be heartily grateful for every approving word and token from every source.

TO THE FRIENDS OF

Agriculture, Horticulture, and Floriculture.

"KNOWLEDGE is power," is a truth nowhere more fully illustrated than in the field of your enterprise; and on no part of that field more important than in our State. In other States and different climates, the experience of ages is condensed into books; and the son inherits the practical knowledge of his father. Their books are their general guide, and their periodicals contain the result of their continued improvements. But with us the case is different. Here we have a climate to which the instructions of no book are adapted, a soil peculiarly unlike any to the development of which science has been applied, and almost an entire want of experience in any department. Here no father has learned more than a few of the first principles of agriculture, much less has he had time to transmit even the moiety he has learned to a son. Our first generation of agriculturists is yet in its merest youth.

If no books adapted to our circumstances are yet written, and no man has sufficient experience to write one; and if the periodicals published elsewhere entirely fail to meet our wants, we are shut up to a single choice between two courses—we must either grope our way in the dark, feeling and experimenting each for himself, for all those facts and principles which are peculiar to our soil, climate and productions, (and this will reach nearly the whole range of our operations) thus advancing by a process so slow as to be entirely unsatisfactory to every one; or we must sustain a periodical, which shall be a general reservoir for the reception and diffusion of the experience of all—an instrument whose column shall be a constant reflector of all the light which our thousand intelligent cultivators of the soil can elicit from their "watch and toil." Which shall be our choice, cannot admit of a question.

Such a periodical we find in our midst. The CALIFORNIA FARMER we believe capable of meeting our every want. The Messrs. Warren have evinced an energy in, and devotion to, the work which is worthy of all praise, and is a sufficient guaranty for the future. Shall the FARMER receive that countenance and encouragement it deserves? Will the growers of grain and vegetables, fruits and flowers, in this State, treat themselves to a weekly repast in the perusal of its columns, (the annual subscription price bears no comparison with the value of what you get,) and make an energetic effort to induce their neighbors to do the same? But even this will not be enough. No one man, nor company of men, from any one department of knowledge, or section of the country, can make the columns of the FARMER what they should be,—what they must be to answer their wants. It must combine the experience of every class, and represent peculiar characteristics of every part of the State. We ask, therefore, the attention of those whom we address to the furnishing of materials for the columns, as well as subscription to the "material aid" of the paper.

We say thus much because we deem it due to the present proprietors of the paper, and because we feel the deepest interest in the cause it advocates. We have no pecuniary interest in the CALIFORNIA FARMER, and yet we most heartily recommend it to the pecuniary, the statistical and the literary support of all who have at heart the real well being of our State—the development of her agricultural resources.

MARRIED.

On the 1st Jan., in this city, at Grace Church, by Right Rev. Wm. Ingraham Kip, Ferdinand C. Eiver and Sophie Mandell Congdon.

[As pretty birds from bough to bough
Make flight while sweetly singing,
So the young maiden, e'er that vow,
Fast round one heart is clinging:
'Tis then she says, no song or dance,
For others have I, never,
For from my heart shall brightly glance
The love that's "Evers" forever.]

Also, on the evening of the 1st, by the same clergyman, Frank Soule and Eunice Froeston Soule.

[Tis said, when heart meets kindred heart,
A tender vow they plight;
That kindred minds should never part,
But both in one unite;
But great the bliss that must control
That life, when "Soule" meets kindred "Soule."]

On the 25th Dec., in Marysville, Mr. John Lowery and Miss Bridget Cunningham.

On the 26th Dec., at Nevada, Thomas Wahwright Colbun, of Boston, Mass., and Miss Louise Elizabeth Mather, of Albany, N. Y.

On the 27th Dec., at the residence of Dr. Wm. M. Gwin, Hon. I. S. K. Ogden, Judge of the U. S. Court of the Southern District of California, and Miss Anna Keiger, of this city.

DIED.

On the 25th Dec., in this city, J. A. Nautre, formerly of New Orleans, La.

On the 21st Dec., in Marysville, John Fonton, aged 14 years.

On the 23d Dec., in Marysville, D. E. Rolle, late of Lawrence, Macon county, Ill., aged about 40 years.

On the 24th Dec., at Mud Springs, of typhoid fever, George C. Lunt, of Freeport, Maine, aged 24.

First Premium Daguerotypes.

R. H. VANCE just awarded the FIRST PREMIUM for the best Daguerotypes exhibited at the California State Fair. Mr. V. would be happy to wait upon any one wishing a PERFECT LIKENESS. The arrangement of his Rooms and Lights are superior to any in the State.
 Rooms—Near Building corner of Sacramento and Montgomery streets, entrance on Montgomery street, next door to Austin's. 16

Jewelry and Silverware.

OUR immense stock of WATCHES, JEWELRY, DIAMONDS and SILVER WARE, has been imported by ourselves, for a Regular Customer Trade, and is of the most costly and superior description, but owing to the depressed state of the market at present, we are disposing of them at New York prices.
HARRETT & SHERWOOD,
 City Observatory, 135 Montgomery street.
 N.B.—Quartz Jewelry of our own manufacture, at greatly reduced prices. 5

Gottling's Premium Grain Drill.

THIS excellent machine, which has gone into extensive use in the Atlantic States, is now for the first time offered to the Farmers of California. This Drill answers three desirable ends: the saving of labor; the avoiding of waste; and rendering the greatest return for capital expended.

Simple and durable in its construction, it rarely needs repairing, which, when necessary, the most ordinary mechanic can easily perform. For particulars see hand-bill accompanying the drill.

That this is the result of its operation the subjoined certificates will abundantly show:
 SANTA CLARA, Sept. 4th, 1851.
 I hereby certify that I used R. J. Gottling's Premium Grain Drill (the property of J. Henderson of this place), to put in seventy-five acres of wheat. The machine operated very satisfactorily: preferable to broad-cast sowing, in producing more bushels per acre with less labor; also in putting in all the grain evenly, not losing any, subject to the consumption of birds or squirrels. Result of eight acres, part of seventy-five acres, was seventy bushels per acre.
 LEMUEL ROBINSON.

SANTA CLARA, Sept. 7th, 1851.
 I hereby certify that I used R. J. Gottling's Premium Grain Drill (the property of J. Henderson of Santa Clara), to put in twenty acres of wheat. It was very much pleased with its operation, and consider it a great saving of labor, putting the grain in neatly—nothing liable to waste—visible the product for me was one-third more than the broad-cast sowing alongside in the same field.
 F. J. DAVIS.

SANTA CLARA, Sept. 11th, 1851.
 I certify that I used R. J. Gottling's Premium Grain Drill for the purpose of putting in ten acres of wheat, and can state with confidence that it takes less seed, and produces more bushels to the acre, with less labor than the broad-cast sowing. I would also state that I sowed broad-cast and drilled at the same time upon the same kind of land, and the yield was much greater upon the drilled ground. I give the Drill a decided preference to the broad-cast sowing.
 FELIX REINEY,
 S. HENDERSON, proprietor,
 and Agent for sale of Mills.
 13-1m

Downs' Revolving Clothes Rack.

THE Proprietor, Inventor and Patentee of this new and most useful and valuable Household Utensil, would ask the attention of the public to its invention.

The proprietor can offer to the citizens, to families, to hotels and all public buildings where "clothes drying" is required, this new and unique invention.

By this machine little or no yard room is required by clothes lines, either for a larger or smaller quantity.
 A single upright post in the centre of the yard or at one corner of it, and you have one hundred and twenty-five or two hundred and fifty feet of clothes line—the clothes are placed upon the lines in a small space, and then raised above the yard so as to leave the free use of the yard even while the entire quantity of clothes is drying. Not only is the space in the yard saved, but the clothes are beyond the reach of injury from those in the yard, and beyond the reach of pilferers also, as well as from dirt and dust.

This machine will be on exhibition at the Fair, where all can see it in operation.

The necessary documents have been taken out to secure the rights of the Patentee, and all persons are cautioned against any infringement.
 The following persons having seen it, will attest to its very great utility and value, and all who have seen it bespeak its praise. The inventor is permitted to refer to the following gentlemen, as to its merits: David Chambers, and Henry Haight, Esqs., and Warren & Co., who have examined the machine.
 The machines will be offered soon after exhibition at the Fair.
 Orders received at the SHOP of the Inventor, and at WARREN & CO.'S

Farms for Sale—Small Farms.

IMMIGRANTS AND OTHERS desirous of securing a valuable Tract of Land well located, are invited to visit the Salinas Valley, Monterey County. The property offered for sale is known as "Hill's Farm," near the Town of Salinas. The land is rich alluvial bottom, of the best quality, in proof of which the crops of '53 and '54 are submitted. The yield of barley in '53 averaged over 100 bushels per acre; the best giving 149 25-50 bushels per acre, and took the premium at the exhibition of '53 of a silver cup. The wheat crop of the present year is believed to be the best raised in the State, yielding 60 bushels per acre, and some as high as 85 bushels. The first premium awarded by the State Fair is given to the undersigned.

The facilities for sending to market are good, and the expense of putting produce in San Francisco from the Farm at present is but \$12 per ton. Two lines of stages pass daily from San Jose and Monterey; and steamboats from Monterey. Port Office, Store and Blacksmith shop in the village. For persons having small or large means it is thought to offer a good opportunity for settlement as any part of the country. Tracts of Land from 40 to 160 acres, will be sold for cash, and on time, or for Stock at cash value.
 For further particulars, apply to
J. BRYANT HILL,
 Postmaster, Salinas.
 or to **WADSWORTH & MIESGAES,**
 Brokers, 137 Front street, San Francisco.

HOTELS.

Rassette House.

SAN FRANCISCO, CALIFORNIA.
 THIS HOTEL offers inducements to persons visiting San Francisco, unequalled by any on the Pacific Coast. Gentlemen can be accommodated with single rooms, or families with suites of rooms.
 The House is entirely new, built of brick; all the rooms are furnished in a style of comfort hitherto unknown in the Hotels of California, and the House is capable of accommodating over five hundred boarders. 22-3m

Murray's Fifty-cent Western House.

CORNER OF SECOND AND D STREETS, MARYSVILLE.
 THIS HOUSE is entirely devoted to the wants of the travelling public and to all who will favor us with a call, entire satisfaction will be given. [17] R. J. MURRAY.

American Hotel

NAPA CITY, CALIFORNIA.
 L. A. & W. W. CHAPMAN, Proprietors.
 GOOD accommodations for families, and on reasonable terms. Saddle and buggy horses kept for hire. Horses kept on board, by the day or week, and well taken care of. 26

A Valuable Farming and Stock Ranch for Sale.

SITUATED in the County of Monterey, about one mile from the Mission of San Juan Bautista. Said Ranch consists of about one hundred and fifty acres of valuable farming land, running back to the hills, which are covered with clover and oats. The Ranch and hills are heavily timbered. There is also a stream of never failing mountain water, running through the entire place. Either for Agricultural purposes or for Stock Raising, this is certainly one of the best situations south of San Francisco.
 A good title will be given, it being Government land.—Price \$2,000.
 P.S.—The improvements upon said Ranch consists of a tolerable good Dwelling House, with lumber sufficient to erect a large one; also about twenty-five acres enclosed under a good fence.
 Address, ALEXANDER COOPER,
 San Juan Bautista, Cal.
 Refer to JAMES McMAHON, Esq., San Juan;
 AARON LYONS, Esq., Monterey City.
 6-3m

STEAMERS.

FLOURING MILLS.

Happy Valley Flour Mills,

Corner of First and Mission streets, San Francisco.

Encourage Home Industry and Home Production.

THE attention of dealers and consumers of Flour is respectfully invited to the Superior Article manufactured at the above establishment, from California Wheat at the growth of 1851, selected and prepared with the greatest care. These Mills have been in successful operation for nearly two years, during which time the proprietors have received such satisfactory assurances from those who have tested the quality of their Flour, that they can confidently recommend it as being fully equal to any brand in the market. Among the many evidences of the superior excellence of the Flour manufactured by them, the proprietors would direct attention to the substantial compliments received at the two last Annual Meetings of the State Agricultural Society, premiums have been awarded at both Fairs for the superior specimens of Flour from these Mills.

Domestic Flour.—A superior article for family use, manufactured from selected Wheat—a constant supply always on hand at the Mill, or at the Depot of the Proprietors, 35 Sacramento street.

A liberal allowance made to the trade.
J. N. BROOKS, Proprietors.
F. C. HALL,
 Wheat Purchased or Ground on the most favorable terms. 19

Flour! Wheat! Barley!!!

THE SAN JOAQUIN FLOUR MILLS, STOCKTON.—Are now completed and ready to grind Wheat and Barley in any quantities. The above Mills are not surpassed by any in the Atlantic States, having all the modern improvements for the manufacture of the finest Family Flour, and are capable of turning out 250 barrels per day.

A large fire-proof Warehouse for the storage of Grain, is attached to the Mill.
 Particular attention is called to the fact of Stockton being the depot for the supply of the Southern States, and therefore offers superior inducements to wheat growers to ship their grain direct to Stockton, for milling.

Liberal advances made on consignments of Wheat.
 For particulars as to terms, &c., apply at the MILLS—or to Messrs. PAIGE & WEBSTER, Union Block, corner of Battery and Union streets, San Francisco. 6

Premium Sheep for Sale.

THE fine Broad Tail Asiatic Sheep that attracted so much attention at the Fair are now offered for sale. Four full grown Bucks; handsome lambs, six months old. The subscribers will give all information and furnish the stock, acting for the owner. (12) WARREN & SON.

20,000 Fruit Trees.

COMMERCIAL NURSERIES, near the Artesian Fountain, in San Jose City.—The undersigned offers the above lot of fine Fruit Trees, consisting of Apple, Pear, Cherry and Peach. These trees have been introduced into this country from Geneva County, N. Y., by the undersigned himself, and are of the very best varieties known in New York; many of them are new kinds, and among the Apples are the best late varieties for keeping.

Orders for Fruit Trees of any kind may be left with WARREN & SON, who will give all needed information, will be promptly attended to. Orders can also be forwarded to the Nursery. In all cases, orders received at the Nursery will receive very prompt attention, where we should be glad to see purchasers.

Apple Trees, from three to six feet.....\$1 25
 Pear, Cherry and Peach, do.....1 50
 Large quantities will be offered at prices to suit the times and circumstances of the purchaser.
 GEO. W. LE VALLEY.

P. S. We can furnish Seedlings of the Fruit Trees, of reliable varieties, of more than fifty kinds, in lots to suit orders. 20

</

Varieties.

TRIADS.—Three things to love—courage, gentleness, affectionateness.
Three things to admire—intellectual power, dignity, gracefulness.
Three things to hate—cruelty, arrogance, ingratitude.
Three things to reverence—religion, justice, self-denial.
Three things to delight in—beauty, frankness, freedom.
Three things to wish for—health, friends, a cheerful spirit.
Three things to like—cordiality, good humor, mirthfulness.
Three things to suspect—flattery, puritanism, sudden affection.
Three things to avoid—idleness, loquacity, slipshod jesting.
Three things to cultivate—good books, good friends, good humor.
Three things to contend for—honor, country, friends.
Three things to govern—temper, impulse, the tongue.
Three things to be prepared for—change, decay, death.

GOLDEN RULES FOR THE GUIDANCE OF THE GREEN.—If you require a person to become security for you, don't ask the man who promised he would do anything for you when he knew you did not want anything done. If you happen to know an author, don't own it; one half of the world won't believe you, and the other half won't think much of it if they do. Don't say you never take suppers, excepting where you know they never give any. If you don't know what everybody else knows, you had better hold your tongue, and if you know something that everybody else knows, you had better hold your tongue, too. If you happen to say something in society which causes a painful sensation, you had better take a walk for five minutes. If you intend to do a good thing, don't change your mind; and if you possess a five pound note, don't change that. These, and a few other golden rules which we don't exactly remember, should be learned by heart, as they will prevent your appearing green, and other people looking blue.—Diogenes.

TURNPIKE ROAD IN SIERRA COUNTY.—A meeting of the citizens of Sierra county was held in Downieville on the 20th inst., for the purpose of building a turnpike road in that county. The following gentlemen were elected officers of the company, the capital stock of which was fixed at \$50,000—viz: R. H. Taylor, President; Gustavus B. Wright, Secretary; and B. M. Fetter, Treasurer. The books for subscriptions to the capital stock are to be opened at Marysville, Foster's Bar, Goodyear's Bar and Downieville, on the 5th of January, and a committee of three appointed to employ an Engineer to survey the route of the road.

A SHARP AFRICAN.—A friend of ours once had a good-for-nothing little black fellow, some twelve or fourteen years old, as a waiter boy, and after enduring his pranks and mischief for some year or so, was at length obliged to send him adrift to look after himself in the world. Not a great while after parting with little cuffy, his former master having occasion to go to Albany, met him on board the steamboat, where he was employed in the capacity of steward's assistant, and addressing him, he said: "Well, Tom, are you as bad as ever?" "O, no," answered the young rascal, with a grin that brought into bold relief every one of his white grinders, "I've got no bad examples now, sir."

AT a large fire, at a celebrated piano forte maker's, an instrument, worth two hundred guineas, was burnt; it was inlaid with mother-of-pearl, and other costly decorations. "Dear me," said a gentleman to the proprietor, "how was it they could not contrive to save that splendid instrument?" "Why," replied the proprietor, who, being insured, could afford the joke, "the reason was that the engines could not play upon it, I am told."

HAPPINESS is only evident to us in this life by deliverance from evil; we have not real and positive good. Happy is he who sees the day! said a blind man; but a man who sees clearly does not say so. Happy is he who is healthy! said an invalid; when he is well he does not feel the happiness of health.

POWER OF ASSOCIATION.—We all recollect the anecdote of a proud boy, who boasted that his father had a horse, when his companion, of poorer parentage, replied exultingly, "And my father has a horse and saw too."

Love flits into rhyme as naturally as peas into a pod—in fact, rhyme without love in it would be pods without peas, or in other words, mere husks without any marrow—fact.

It is a law which God himself has made, that the arrow which is shot from the persecutor's bow shall rebound and pierce the persecutor's heart.

The difference between a carriage horse and a carriage wheel is this—one goes best when it is tired, and the other don't.

When a man owns himself to be in an error, he does but tell you in other words that he is wiser than he was.

FAULTS committed in public should be publicly reprov'd.

HORTICULTURAL, &c.

To Fruit Growers in California.
HOVEY & CO., Seed and Nurserymen, No. 7 Merchants Row, Boston, Mass., invite the attention of Cultivators of Fruit in California, to their very extensive collection of Fruit Trees of all kinds, particularly of Pears; embracing every variety worthy of cultivation, to be obtained either in this country or in Europe. They offer for sale—
100,000 Pear Trees, of all the choicest kinds both upon Pear and Quince stocks, dwarf and standards;
50,000 Apple Trees, in 50 varieties;
25,000 Plum Trees, in 25 varieties;
20,000 Peach Trees, in 25 varieties;
Also, Quince and Cherry Trees; all varieties of the finest Grapes; 12 varieties Currants; 10 varieties Raspberries; 10 varieties choicest English Gooseberries; and 50 varieties Strawberries, including our Hovey's Seedling, which has not yet been equalled for size and productiveness.
Also, 100,000 Asparagus, and 20,000 Giant Rhubarb Roots. An immense collection of Ornamental Trees and Shrubs, Roses, Greenhouse Plants, &c., &c. Agricultural and Garden Seeds of every description, and of the best quality, constantly for sale. Catalogues gratis to postpaid applicants.
Messrs. HOVEY & CO. would remark that their mode of packing trees for California, has met with the greatest success, and they feel confident of being able to give satisfaction to those who may favor them with their orders.
Address, HOVEY & CO., No. 7 Merchants Row, Boston, Mass.

San Jose Nursery.
WE are prepared to supply the trade with the best varieties of Fruit Trees, Grapes, Vines, Roses, Plants, &c., in all their varieties, and are disposed to sell at a low price, that we may suit the times. Our Trees are cultivated with great personal care. Those who desire to make Nurseries and Gardens will do well to visit and ascertain for themselves our ability to supply what we advertise. Trees will be carefully labelled and packed for any season or distance.
The following Trees we offer this season:
Peach Trees, 44 varieties;
Pear do 54 do
Apple do 54 do
Plum do 15 do
Apricots 6 do
Almonds 2 do
Quinces do 2 do
Cherry do many do
Grapes, 12 do
Strawberries, 7 varieties;
Fig Trees;
Pineapples;
Walnuts;
Chestnuts;
Lemon Trees, very large;
Rose Acacias, } for hedges.
Osage Orange, }

In addition to our Fruit and Ornamental Trees, we offer ten thousand finest Roses, comprising more than one hundred varieties, all of the best known kinds. Our plants are too numerous to specify in an advertisement. Hoping visitors will come and see us, we refer them to our agent in San Francisco, Mr. A. DELABERGE, 121 Sanson street, where we shall have a collection of plants in the season as samples. The nursery is situated in the city of San Jose, immediately above the City Mills.
We are also permitted to refer to Warren & Son, who have examined our grounds, and who can testify of the character of our nursery, and who will receive and forward orders to us.
Every order promptly and speedily attended to.
81st L. PREVOST & CO.

Smith's Pomological Gardens.
Banks of the American River, two and a half miles from Sacramento city.
THE proprietor of the Gardens would respectfully invite all who are engaged in "Nursery and Gardening" to visit his grounds. He will be happy to show to them, ready for sale, this fall, as fine a collection of
Fruit Trees, Ornamental Trees, Grape Vines, Shrubs, Flowering Plants, and Green House Plants, as can be found in all the great Sacramento Valley.
The proprietor would call particular attention to his collection of Peaches, believing that the specimens exhibited by him in Sacramento and San Francisco markets have been unsurpassed in size, quality, or flavor.
The collections of Pear Trees will equal any in the country; these, with all the new varieties, will be offered this autumn.
The undersigned believes his collection worthy a visit to his grounds of all who are interested in Gardening and Oculandry. The subscriber will offer this autumn Five Tons Vegetables Garden Seeds, that have been raised upon his own grounds. These seeds have been grown with care and will be sold at wholesale for the present, at the Gardens.
Persons in want are invited to call upon us, and we will make reasonable terms.
Fruits, Bouquets, &c., will always be furnished at short notice at the Gardens.
The proprietor returns his thanks for the liberal patronage of the past, and hopes for a continuance of such favors.
10 A. F. SMITH, Proprietor.

The Pacific Loan and Security Bank.
MONEY will be received on deposit in sums of Ten Dollars and upwards, for which Certificates of Deposit will be issued, bearing date the first or fifteenth of the month, payable on demand, or at specified times, at the option of the depositors. If payable on demand, they will be without interest, unless the money remain on deposit one month, in which case they will draw interest of one per cent. per month, but no interest for fractional parts of a month. If deposited for specified times, certificates will be issued bearing one and a half per cent. per month interest for such time. Interest will cease at maturity; so that if depositors desire to continue their deposits after their certificates fall due, they must be presented for payment and renewal; otherwise interest ceases.
The money deposited is used only in loans guaranteed by us and in all cases amply secured by Mortgages, State, County and City Stocks, Merchandise, and other safe collateral, taken in the name of "MARRIOTT & WHEELER, Trustees for Depositors with Pacific Loan and Security Bank."
A register is kept at all times open to depositors for inspection, in which appear their names, the number of certificates of deposit issued, and the securities upon which the money deposited has been placed. Depositors thus not only have the personal security offered by all banks, but in addition have the benefit of knowing what disposition has been made of their deposit.

WICKERSHAM'S
Celebrated Patent Wrought Iron Farm Fence.
FOR sale—Wickersham's far-famed Patent Wrought Iron Fence, for enclosing and subdividing lands. It can be furnished at but little above the cost of ditching, and is much more preferable, because it does not require a heavy annual expenditure to keep it in repair; it cannot be destroyed by the fires which so constantly sweep over prairie and mountain, requiring the wooden fences to be renewed, nor carried away by flood from the overflow of the low lands; it is free from decay, which places it beyond comparison with wood or any other material now in use; it is valued the most highly where it has been tried the most thoroughly; it is light and graceful, yet strong, and cannot be broken down by horses or cattle. The testimony which has been given by those who have used it in the Atlantic States, is sufficient to recommend it to the farming public of California.
A complete model is now on exhibition at the State Agricultural Fair, at Mineral Hall, Bush street, near Montgomery, where a full description may be seen, with the testimony of those who have erected it in the Atlantic States.
Farmers are invited to examine this fence, as there has never been any of the same kind in this country previous to the arrival of this lot, and from its peculiar construction there is not the least doubt but that it will be extensively used in this State.
J. T. Heston has now on hand, and will be constantly receiving supplies from the manufacturer, which will enable him to fill orders at almost any amount.
For particulars address
J. T. HESTON,
At Warren's Agricultural Rooms;
Or, P. COGGINS, cor. Sacramento and Pike streets
October 8, 1854. 15

Artesian Well Boring.
WE would respectfully inform the public that we are fully prepared to take contracts in the above operations in a manner to guarantee satisfaction or no charge will be made.
SMITH & VAN DYKE having associated themselves with an old and experienced operator from the East, who challenges the world to compete with him in all the branches connected with the above business, are fully confident to guarantee success in all contracts that we may undertake, and warrant the work for one year. We have also implements for boring through stone to any depth, and all work done on the most reasonable terms.
For the satisfaction of those wanting anything in the above line, we would refer to I. C. Woods, of Adams & Co.'s Express; J. W. Osborn, Napa City; Rufus S. Ellis, of Haworth & Ellis; M. A. Sullivan, New Custom House; Wight & Co., 137 Jackson street, &c., &c.
We can do work cheaper than any other operators, for two reasons:
1st. Because we are prepared to work on a most extensive scale.
2d. Because we understand all branches connected with the above business, and are, therefore, able to work with certainty. All orders left at the What Cheer House will be promptly attended to.
SMITH & VAN DYKE, Contractors,
N. B.—We also refer to Warren & Son, publishers of the "California Farmer," who have seen and known the character of the work done. 7

MISCELLANEOUS.

COLLINS & CO.,
PRACTICAL HATTERS,
(PREMIUM HAT STORE.)
157 Commercial street, San Francisco.
THE undersigned would take this opportunity to return their thanks to their friends and the public generally for the very liberal share of patronage which they have received. They take pleasure in now announcing that they are determined that no one shall surpass them in the beauty, or finish, or quality of a Hat; that no gent shall wear a finer Hat than can be found at COLLINS & Co's Warehouse.
The proprietors of this establishment exert themselves to manufacture to order the latest styles and most approved patterns. The stock of HATS and CAPS, of every kind, now on hand, cannot be surpassed in this city.
17 COLLINS & CO.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!

Hurray for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE's who wishes PERFECT LIKENESSES? Because he has now the best arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.
2d. Because he has the largest light in the world, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.
3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.
4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.
5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.
All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.
Prices as reasonable, and work superior to any in the city.

Don't forget the place.
New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. 17

ADAMS & CO'S

CALIFORNIA AND ATLANTIC EXPRESS.

OUR Atlantic States Express will leave San Francisco on the 1st and 15th of each month, by the Pacific Mail Steamship Company's Steamers, and the Treasure crosses the Isthmus under the charge of a strong guard. The Treasure forwarded by us to the Philadelphia Mint, is always deposited there previous to that sent by any other conveyance. Our rates are lower than those offered by any other House, with the same security. We also forward Treasure on the 1st and 15th of every month to ENGLAND, by the F. M. S. Co.'s steamers to Panama, and from Panama by the West India Mail steamers.
We draw Bills of Exchange on any of our Houses in the following places:
Boston, New York, Philadelphia,
Baltimore, Washington, St. Louis,
Cincinnati, Pittsburg, Louisville,
New Orleans, London, &c., &c.
Also, payable at any of the following Banks:
Mechanics' and Farmers' Bank, Albany.
Alex. Mitchell, Fire and Marine Insurance Co., Milwaukee.
Commercial Branch Bank of State of Ohio, Cleveland.
Union City Bank, Utica.
Bank of Syracuse, Syracuse.
Bank of Auburn, Auburn.
Bank of Attica, Attica.
Rochester City Bk., Rochester.
Geo. Smith & Co., Chicago.
Michigan State Bk., Detroit.
Clinton Bank, Columbus, O.
In the NORTHERN MIXED EXPRESS, in our own name, always accompanied by faithful Messengers, to and from the following places:
San Francisco, Sacramento, Marysville,
Benicia, Grass Valley, Nevada,
Coloma, Placerville, &c.
Georgetown, Hangtown, Mormon Islands,
Greenwood, Shasta City, Auburn, &c., &c.
And every other part of El Dorado, Placer and Shasta counties. Through LANGTON & BRO.'S Yuba EXPRESS, to and from the following places: Yuba, Sierra and Nevada counties:
Long Bar, Deer Creek Crossing, Park's Bar,
Sierra's Bar, Bridgeport, S. Yuba, French Corral,
Kennelbar, Sweetland's, Hun's Ranch,
Union Bar, Hoyan's Digging, Barton's Bar,
Rosa's Bar, Cherokee Corral, Wombon's Bar,
Foster's Bar, Hess' Crossing, N. Yuba, Slane Range,
Winlow's Bar, Junction House, Nevada House,
Oak Valley, Frenchman's Bar, Empire Ranch,
Indian Valley, Bullard's Bar, Downieville,
Sleightville, Miners' Digging, Kinnika Creek,
Cox's Bar, Goodyear's Bar, and Emery's Crossing, Middle Yuba.

via Benicia in the SOUTHERN MINES, we run an Express in our own name, always accompanied by faithful Messengers, to and from San Francisco, Stockton, Sonoma, Mokelumne Hill, Colusa, Marysville, &c., by Brown's EXPRESS, from Stockton to all the Camps in the Southern Mines.
Our Bills of Exchange can be procured at, and Treasure forwarded to us for shipment, from any of the above places. In all of the above places we have Brick Vaults and Iron Safes for the security of Treasure entrusted to us, and on board of steamboats on any of the above routes, we have Iron Safes for the security of all valuable packages transported by us.
INSURANCE.—We have made arrangements for insurance to the extent of One Million Dollars, on any one shipment, and are empowered to insure for other parties on Gold Dust, Bars, Coin and Merchandise to and from New York and this city, by endorsements on Bills of Lading, at the time of shipment.
7 ADAMS & CO.

Boston Chipper Steel Plow,

Manufactured by Ruggles, Nourse & Mason.
THIS splendid Plow is made after the style and form of the famous Eagle Plow, so universally known. This form of Plow in all its parts has been considered the most perfect yet invented, having taken premiums in every State in the Union; also of the World's Fair.
The present Plow has been manufactured by Messrs. Ruggles, Nourse & Mason, with great care, and in the most finished style, of the very best steel, and may now be considered the highest finish and most complete Plow; and the undersigned wish the cultivators of California to call and examine the same at their place of business.
TREADWELL & CO.,

noma.
Dr. Thomas J. Harvey, P. M.,
San Luis Obispo.
Crain, Rogers & Co., Yreka.
Parker & Roman,
We desire our Agents to report to us on the 1st of every
month, the increase of names and the prospects, together with
the amount due the office.

PROTECTION OF GAME AND STOCK.

SAN MIGUEL RANCHO, Jan. 23, 1855.

EDITOR OF FARMER: As the time has now
arrived for the people of the State to call the
attention of their public servants to such objects
as shall conduce to the public good; and one of
most important laws that could be passed by the
present legislature; is an act for the Protection of
Game and Stock. It is a subject that has been
heavily upon my mind for several past years, and
the more I think about it, the more I am con-
vinced that something should be done. I am
aware the subject is not well understood by our
lawmakers. I have spoken to several members
elect upon the subject, and think they will give
it their support. Lest it should be neglected,
however, I have thought proper to address you
this letter, hoping you will call attention to the
subject. I will give you my idea of the matter.
I think the protection would be most effectual in
the shape of a bounty offered by the State upon
the heads of wild animals. The damage done to
stock and game by wild animals almost astonishes
one, when it is brought down to calculations.

Having been on some of the frontier farms, and
traveled in the country, and observed much in
relation to this subject, I will give you a few ideas
of the matter. I assert, without fear of contra-
diction, that there are more carnivorous wild ani-
mals than there are tame in Upper California.
Another fact is that they are always fat, and
neither eat grass, vegetables or grain; but live
wholly upon the flesh of such animals as have
been ordained for the use of man, viz.: cattle,
sheep, hogs, elk, deer, antelope, hares, rabbits,
turkeys, geese, ducks, chickens, &c. From a pro-
cess of reasoning, I would say the natural course
of things would make more carnivorous than of
all classes of domestic animals put together,
from this fact: they breed by pairs, never destroy
one another for food, neither are they preyed
upon by other classes of animals. The gramin-
ivorous animals generally breed singly, and are
preyed upon both by beast and bird. But let
that stand as it may, it is enough for me to say
that 400,000 wild animals are fed daily in Cali-
fornia, with that meat which should be protected
for the use of its citizens. Allowing two pounds
to be sufficient for the daily food of each animal,
the daily consumption would be 800,000 pounds;
and allowing the average weight of each animal
destroyed to be 100 pounds, ten pounds of which
is bones and uneatable even to those animals, and
another tenth, at least, of all destroyed is con-
sumed by the numerous flocks of vultures, buzz-
ards, crows, &c., it leaves only eighty pounds of
the animal slain for the stomach of the slayer—

summing up 10,000 animals sacrificed daily for
beast and bird. This may be rather large, as the
bear eats berries, acorns and bugs; the coyote,
wolf, wild cat, mice, squirrels, &c., when they
cannot get other things. But if you cut down
the figures to 2,000 yearly, you yet have 8,000
animals destroyed daily, or 2,920,000 yearly.

I am scared! I intended to have written on
several pages yet; but I am astonished at my own
figuring, and durst not write more to-night.
When I get over my astonishment I will finish
the subject. Yours truly,

JOHN M. HORNOR.

LONDON VEGETABLE MARKETS.

We have received from our attentive corres-
pondent at Liverpool, a copy of the London Jour-
nal, in which we find the following table, giving
an account of the kinds and quantities of vege-
tables sold at several of the markets in that city.
The article was prepared for the Morning Chroni-
cle, and we presume gives the amount sold for a
year, although it is not so stated in the returns.—
N. E. Farmer.

We present the annexed schedule from the
markets of London, that our readers may form
some conception of the value of the vegetable
markets of the great metropolis of the world.
Having wandered through these markets person-
ally, and having seen and been familiar with those
connected with them, and having visited many of
the grounds and seen the very crops while under
cultivation, we know these statements are reliable,
although they seem exaggerated.

By a reference to these statistics any one can
see the particular varieties most consumed. It
will be seen that the almost incredible number,
seventy-three millions, of cabbages, are consumed
in one year from their markets; eighteen million
heads of celery from one market alone; fourteen
millions of cauliflower and brocoli; and thirty
millions of asparagus. These are important data,
for in London agriculture is looked upon as of
some account, and we commend these facts to our
readers with the simple remark, that when these
facts are appreciated we shall ever have an inter-
est awakened. May we find it so here.

Cornish Garden Market, all of home produce:

Apples—350,000 bushels.
Pears—250,000 do.
Cherries—90,000 do.
Plums—250,000 half-sieves, or 93,000 bushels; three half-
sieves go to a bushel.
Gooseberries—140,000 bushels.
Currants—Red, 70,000 sieves; white, 3,800; black, 45,000, or
178,200 half-sieves; being the produce of 1,062,200 bushes, as 6
bushes on an average fill a sieve.
Strawberries—56,000 half-sieves, or 638,000 pottles; 11 pot-
tles go to a half-sieve.
Raspberries—30,000 sieves, or 22,500 bushels.
Walnuts—20,000 bushels, each 1 1/4 bushels, or 25,000 bushels.
Cabbages—16,000 loads, 150 to 200 dozen each, or 33,600,000
cabbages.
Turnips—10,000 loads, 150 dozen each, or 18,800,000 turnips.
Carrots—5,000 loads, 200 dozen each, or 12,000,000 carrots.
Onions—500,000 bushels.
Brocoli—including cauliflowers—1,000 loads, 150 dozen each,
or 1,800,000 heads.
Peas—135,000 sacks. A sack is two bushels.
Beans—50,000 do.
Celery—1,500,000 rolls of 12 each, or 18,000,000 heads of
celery.
Asparagus—400,000 bundles of 150 each, or 30,000,000 buds.
Eradice—150,000 scores.
French Beans—140,000 bushels.
Potatoes—63,000 tons.
Watercresses—21,000 hampers or 23,325 cwt., each hamper
being 1 1/4 cwt.

Borough Market. In all the returns "cauliflowers" are included under the head "brocoli."

Cabbages—8,000 loads, 200 dozen to a load, 16,200,000 cab-
bages.
Turnips—2,000 loads, of 200 dozen each, or 4,800,000 turnips.
Brocoli—1,576 loads, of 200 dozen each, or 3,782,400 heads of
brocoli.
Carrots—442 loads, 300 dozen each, or 1,571,200 carrots.
Potatoes—36,000 tons.
Peas—25,000 sacks.
Beans—10,000 sacks.
Currants—30,000 bushels.
Cherries—45,000 bushels.
Strawberries—15,000 bushels.
Gooseberries—35,000 sieves.
Apples—25,000 bushels.
Peas—10,000 bushels.

Spitalfields Market, all home grown:

Potatoes—55,000 tons.
Peas—50,000 sacks.
Beans—5,000 sacks.
Cabbages—5,000 loads, 200 dozen to a load, or 12,000,000 cab-
bages.
Turnips—2,000 loads, 200 dozen to a load, or 4,800,000 turnips.
Carrots—1,000 loads, 300 dozen to a load, or 2,400,000 carrots.
Brocoli—1,200 loads, 200 dozen to a load, or 2,400,000 heads.
Cherries—15,000 bushels.
Apples—250,000 bushels.
Pears—83,000 bushels.
Plums—15,000 bushels.
Gooseberries—31,500 bushels.
Currants—45,000 bushels.
Strawberries—12,000 bushels.
Raspberries—2,500 bushels.

It is a curious fact connected with this market, that whatever
produce is sent to it from Enfield, in Middlesex, is subject to
either rampage or market toll; an exemption granted to
Enfield, because, during the Plague, in 1665, vegetables and fruit
were sent almost exclusively from thence—of course at the risk
of the lives of all who ventured into the pest-stricken city.

Farrington Markets:

Potatoes—14,000 tons.
Peas—7,000 sacks.
Beans—7,500 sacks.
French Beans and Scarlet Runners—3,000 bushels.
Cabbages—3,500 loads of 200 dozen each, or 8,400,000 cab-
bages.
Brocoli—1,300 loads, or 5,200,000 heads.
Turnips and Carrots—700 loads, averaging 50 dozen a load,
or 504,000 turnips and carrots.
Onions—6,000 bushels.
Gooseberries—12,000 bushels.
Currants—5,000 bushels.
Cherries—12,000 bushels.
Plums—3,000 bushels.
Apples—35,000 bushels.
Pears—20,000 bushels.
Strawberries—450 bushels.
Watercresses—46,800 hampers, or 58,500 cwt.
There are also 60,000 flowers roots sold in a year.

AGRICULTURE IN NORTH CAROLINA.

We have before us (says the New England
Farmer) an address delivered by the Hon. Ken-
neth Rayner, of Hertford, before the North Caro-
lina State Agricultural Society, in October last.
Mr. Rayner was for several years a member of
Congress from that State, and was an active poli-
tician. We are glad to find that he has turned
his attention to the development of the agricul-
tural resources of the "Old North State," and
hope that through the influence of the State So-
ciety, thousands of the acres of sand and pine bar-
rens within her borders may be brought into a
state of beauty and fertility. Below are extracts
from the address, all we have room for at present:

EFFECTS OF SCIENTIFIC DEVELOPMENT.

It is our good fortune to live in an age of won-
derful invention, or startling scientific develop-
ment. It is emphatically the age of rapid pro-
gressive improvement. The striking peculiarity
of the knowledge of the age is its direction and
application to useful and practical ends; in min-
istering to the necessities, the comforts and lux-
uries of man. In fact it is the demand for that
species of knowledge, that is whetting invention,
stimulating ingenuity, and taxing intellect for its
mightiest achievements. Geology, mineralogy,
chemistry, botany, zoology, and natural philoso-
phy, are not now cultivated, as the mere avoca-
tions of intellectual research, or to satisfy the
philosopher's abstract thirst for knowledge; but
as the instruments by which man is to subdue
the material world to his control, and apply the
immutable laws of nature to the satisfying his
wants. A minute knowledge and classification of
primeval rocks, from the disintegration of which
the soil is composed—the deductions arrived at
from an acquaintance with the various strata and
fossil deposits of the crust of the earth—an ex-
amination of the constituent elements of all mat-
terial nature, their relations, affinities and repul-
sions for each other—an acquaintance with the
structure and vegetable physiology of plants and
trees and flowers; and the principle of their
growth, decay and reproduction—an understand-
ing of the peculiarities, habits and capacities of
animals, whether of the higher type or of crawl-
ing insects—the study of those laws of motion,
and physical forces, by which infinite wisdom
governs the boundless universe—all these branches
of knowledge are pursued with a vigor and ten-
acity unknown to the votary of ancient learning,
and to answer the purposes of practical utility.
They are made to serve the purposes, and direct
the course of the miner in his search for mineral
treasures in the bowels of the earth; and in ran-
sacking the coal-fields which nature has laid aside
in her great store-house for the use of man, after
the forests have fallen before a redundant popu-
lation. They afford data by which the physician
is enabled to minister to human suffering; by
which the manufacturer imparts the tints of
beauty to the fabrics; by which the enterprising
the edge of the implements of labor. They
direct the engineer as he drives his car careering
over the land—or propels his ship against wind
and current.

INFLUENCE OF RAILROADS ON AGRICULTURE.

One of the most striking manifestations of the
industrial enterprise of the age is in the struggle
man is now engaged in, with the obstacles pre-
sented by nature—in opening channels of com-
munication, in laying down the pathways of trade
and commerce, in pioneering the way for the iron
rail and steam-engine. The vast stores of the In-
dians of Peru dwindle into insignificance compared
with the hundreds of millions that have been ex-
pended in these monuments of human industry in
the United States, in England, in France; and
their march is onward towards the steppes of
Asia. In their construction man has achieved
victories over the elements, of which Archimedes
never dreamt. It was the boast of Napoleon, that
whilst Hannibal had scaled the Alps, he had
turned them—but the engineer has done more
than either of these great conquerors; he has
tunnelled them, not for the march of desolating
armies, but for the transit of the products of the
pursuits of peace—for the conveyance of the trav-
eler in comfort and safety beneath the roaring
avalanche above his head. And what are rail-

roads, but the veins and arteries, through which
the products of agriculture, either in their crude
state, or as fashioned in the workshop, circulate,
in seeking the market of commerce? Whilst rail-
roads are dependent upon the products of agricul-
ture, yet the two are inseparably identified in in-
terest. They act and react on each other. It is
upon the productions of the field and the work-
shop that the railroad must rely for the materials
of freight, the very means of subsistence—but
then again the construction of the railroad, by
the benefits conferred, in contiguity to market,
cheapening the cost of transportation, increased
convenience in procuring the comforts and lux-
uries of life, affords a stimulus to the land-owner,
to improve his land to its highest capability of
production; and as the products of the land are
increased, the railroad finds increased employ-
ment, and enhanced profits.

FARMERS, WRITE FOR YOUR PAPER.

We find in the Ohio Farmer a valuable article
on this subject, which we apply to our own case,
as follows:

It will not be thought an unwarrantable as-
sumption to say that the CALIFORNIA FARMER
is devoted to the great interests of AGRICULTURE,
and the arts which stand related to it. Its aims
are high, and its plan is comprehensive; em-
bracing not only what science has to do with
physical things, but those social and moral con-
cerns, which constitute the end, to be secured,
through the long series of efforts, and interme-
diate attainments, of a life-time. Agriculture is
rapidly assuming the form, and character—not
of a science, merely—but of a grand mode of
LIFE, of which all sciences, and all arts, and all
other callings, even, are but mere adjuncts. It is
not merely a source of wealth; it is the source,
from which the hungry are fed, the naked clothed,
and a supply drawn for all the drones of the
great social hive. Not only is it the foundation,
on which the lofty superstructure of our nation's
greatness is reared, but from its capacious con-
servatories are to be drawn forth all that can
render that greatness attractive. And about one
in ten, of those now engaged in this honorable
avocation, have learned the fact, that there is, in
California, a paper like this, now asking for a *pat-
ronage*, commensurate with its earnest endeavors
to aid in securing their unlimited prosperity.

We do not hesitate to say, that the physical
and intellectual labor required, to make this paper
what it is—or at any rate, what it ought to be—
is greater, by far, than that which is generally
bestowed upon any other publication, whether
weekly, or daily, in the State. The truth is,
neither one man, nor a dozen, can furnish the al-
most infinite variety required, to satisfy the va-
rious wants, and various tastes of our thousands
of readers. And it is for this reason, that we are
anxious to induce all, who are capable of doing it,
to write down their thoughts, and place them at
our disposal.

Of course, we could not agree, beforehand, to
publish all that might be sent to us; for the duty
of deciding upon the merits of articles, intended
for publication, cannot be neglected. But it is
presumed, that there are hundreds, and even
thousands, among the readers of the FARMER,
who are well qualified to write valuable commu-
nications for its columns, who seldom, if ever,
make the attempt to commit their thoughts to
paper. The sooner they set about it the better.

It may be said that Agriculture has a *Literature*
of its own. But as it derives its aid from
all departments of learning, much of that which
of right belongs to it, is yet to be gathered from
the great Republic of Letters, and rendered avail-
able in the work before us. Hence, nothing comes
amiss. Facts are wanted. Embellishments of
style are good enough, in their places; but plain
truths, told in a plain way, will better serve the
interests of our readers. Nor do we care half as
much about theories, or even the abstrusities of
science, as we do about the results of close obser-
vation. The best modes of cultivating the soil,
and rendering it productive, are, in our opinion,
to be discovered by the experiments of plain,
practical men. And we want the assistance of
such.

Without close observation, no one can be a suc-
cessful farmer. And there is not one in a hun-
dred, who carefully observes what is going on
around him, who is not capable of writing down
the results of his observations. These are the
very things we want, and were our friends, gen-
erally, to heed these suggestions, we should never
want matter for the ample columns of this paper.

In all sincerity and earnestness, then, we say
to our friends, WRITE FOR YOUR OWN PAPER.
Set about it at once; and keep on trying. Give
us the results of your experiments, whether suc-
cessful, or otherwise, and the substance of what
you have learned from observation.

Write for your own paper.—Because it is your

FROM THE EAST.

By the arrival of the steamer Sierra Nevada, at this port on Saturday evening last, we have New York dates to the 12th December, and from New Orleans to the 14th. We have intelligence from Liverpool to the 2d December, which was transmitted by telegraph to New Orleans.

The reports of the battle of the Inkerman are fully corroborated. The Russian force engaged is stated to have been seventy thousand, while that of the Allies did not exceed thirty thousand. The Russians are reported to have lost nearly fifteen thousand men in that engagement.

Reinforcements, at the rate of a thousand a day, are reaching the Allies. Forty thousand Turks have been ordered to the Crimea. The Russians are likewise receiving large additions to their forces. Everything seems to show that there will be much more and desperate fighting before Sebastopol, before either the fortress be taken or the allies compelled to withdraw.

Constantinople advices of the 20th Nov., are to the effect that thirty-two English transports were lost in the Black Sea, during a gale on the 14th November. The Prince and Sea Nymph foundered, and all on board were lost. The Sanspareil was driven ashore on "Fore Britania," and at the last accounts had five feet of water in the hold. The Agamemnon (screw ship-of-the-line) was also stranded, but after great exertions was got off. The Samson's machinery was badly damaged. The Retribution was saved by throwing overboard her lower deck guns. The Henry IV. and Pluto were totally lost. In addition to the above, three mail steamers were stranded.

Menshikoff informs the Emperor that the injury done Sebastopol by the besiegers will be speedily repaired. The garrison, he also says, is in a good condition for service.

The Allied troops continue to fortify their right flank in the strongest possible manner.

It was rumored at Kiel that a portion of the Russian fleet had left the Russian forts in the Gulf of Finland; and captured two British cruisers.

The Ozar's answer to the Prussian note expresses his willingness to treat for peace. England and France, it is stated, have come to the resolution that they will not now treat with Russia on the basis of the four points proposed by Austria, and in the first instance rejected by Russia, who now proposes to accept them.

The New York Courier and Enquirer states that the entire repeal of the usury laws in Great Britain was accomplished at the recent session of Parliament. The act by which this was effected is known as ch. 90, 17 and 18 Victoria, and is now in operation. It is now lawful in Great Britain to loan money at any rate of interest, and on any description of property real or otherwise.

On the 5th December, W. Taylor, (Whig,) of Tennessee, in the House of Representatives, gave notice of his intention to introduce a bill to modify or repeal the naturalization laws; and Mr. Soller, (Whig,) of Maryland, gave notice of a bill to prevent the enlistment of persons of foreign birth in the army and navy. Also, to prevent the emigration to this country of foreign paupers and convicts, and to increase the revenue of the government.

GEN. Whitefield, the pro-slavery candidate, is elected Delegate to Congress, from Kansas, by a majority of 1,900 out of 4,000 votes cast.

The Know Nothings re-elected their Mayor (J. V. O. Smith) in Boston by a majority of 1,253 over all others. In Worcester, the Know Nothings made a clean sweep, electing the Mayor and the entire Council. In Roxbury, also, the Know Nothings had a victory, electing James Ritchie for Mayor. In Lynn the same thing took place—Andrew Breed, Know Nothing being chosen. In Charlestown they met with a defeat—Timothy T. Sawyer, the citizens' candidate, having 358 plurality over the Know Nothing nominee.

The official vote in New York for Governor, gives Clark 309 plurality.

There is not one applicant for the Governorship of Deseret. It is supposed that Col. Steptoe will be appointed.

J. H. Adams has been elected Governor of South Carolina.

Messrs. J. W. Blodgett & Co., dry goods merchants, doing business in Pearl street, Boston, and probably the wealthiest house in the trade in New England, failed on the 11th December. Their liabilities are fully \$2,000,000.

The Navy Department despairs of hearing from the missing sloop-of-war Albany. It is generally thought that the ship and all of her crew have gone to their destruction.

The city of Columbus, S. C., was scourged by fire on the night of the 6th December. The loss is estimated at \$100,000.

The Indians in Western Texas are very troublesome. Five companies of Rangers are to let loose at them.

GOLD IN ARKANSAS.—We were shown recently a beautiful specimen of quartz rock, procured in Arkansas, which has been pronounced by old and experienced Californian miners, who have examined it, to be equal in richness to any of the gold-bearing quartz in the Eureka State. We understand the owner of it will have it analyzed by Professor Kiddell, and should it have the pure stuff in it, we may look for a rush to the Arkansas gold diggings.—N. O. Delta.

The schooner Julius Pringle, from Cocos Island, via Point Arenas, arrived at San Juan, Dec. 24th. Her Company express the fullest confidence in the success of their enterprise, having received additional information, on which they place the fullest reliance. The Pringle was to return to the Island immediately after procuring supplies.

FROM THE SOUTH.

FOREFATHER'S Day was celebrated at San Diego on the 22d ult., by a grand dinner at the house of Chas. H. Poole, Esq.

MILITARY.—Some 40 wagons and 100 mules had been dispatched with supplies for Camp Yuma. Thirty-five men, including carpenters, masons, and laborers, accompanied the train, which went out under the superintendence of Mr. D. B. Kurtz, to construct the new buildings which Maj. McKinstry is authorized by the Government to have erected at that point. Camp Yuma is now to become a permanent post.

NEW STAGE LINE.—Mr. J. W. Smith, agent of the California Stage Company, has been at Los Angeles for the purpose of making arrangements for the establishment of a tri-weekly stage line between San Pedro and San Bernardino via Los Angeles, San Gabriel, Lexington and San Jose. The stages and teams will be down in readiness to start the line by the 1st of February.

This is the commencement of the great overland stage route, by the way of Salt Lake City, which will be very soon established.

NEWS FROM THE GILA.—Our old friend and fellow citizen, Captain R. Sackett, arrived in town night before last, after three months absence on a prospecting tour on the Gila. He brings with him some most beautiful specimens of copper ore, upon which appear in no small quantities pure virgin gold and a great deal of gold fused with copper. The main body of the specimens before us are composed of the red oxide of copper, which, upon assay, give seventy-five per cent. pure copper, and for every one hundred pounds of ore one ounce and a half of pure gold. There is also a small ingredient of silver, the exact proportion of which has not been ascertained.

Captain S. informs us that he procured these specimens at a point about forty miles distant from the Gila River, and about eighty miles from Fort Yuma, on the Colorado.

It is estimated, that copper can be taken from these mines, smelted and delivered in New York at an expense of ten cents per pound; and this too, with a moderate investment of capital.—Los Angeles Star.

THE STORM IN EL DORADO.—The Miner's Advocate says that the storm on New Year's Eve was the most destructive ever known in that section of country. But altogether the most disastrous effects of the storm have been visited upon the flumes belonging to ditch companies. Our information on this point is incomplete, but we give such items as we have been placed in possession of:—Bradley, Berden & Co.'s flume across Mission Flat, (35 or 36 feet high,) and many rods in length, was blown to the ground; the rebuilding of which must cause a heavy expenditure, and require considerable time. We also learn that 170 feet of the main flume of this company on the Cosumnes was destroyed, which interrupts the supply of water in all the various arteries of the ditch. Two hundred and forty feet of flume, 36 feet high, on the main truck line of the Eureka Ditch, across Ringgold divide, was blown down. It was considered one of the most substantial portions of the entire work. Workmen were promptly dispatched to rebuild the flume, in a manner that will defy future storms, and will have it completed in the course of four or five days. The Eureka line suffered no other damage. The North Weber Ditch Company, (Messrs. Clapp, Tuttle & Co.) lost no less than 1,200 yards of flume in the neighborhood of New Town—a very serious disaster. A large portion of the Deer Creek flume, in this county and contiguous to the Sacramento line was destroyed. The Michigan Bar Company, in this county and south of the Cosumnes, lost, we understand, the greater portion of their flume. It is also rumored that the Notama Ditch Company lost their entire flume in the neighborhood of Prairie City, Sacramento county. The storm was very severe on Hydraulic works constructed by the miners. On Coon Hill, we learn that they were scattered in every direction. From all we can learn, the storm was general throughout the State; and if as severe elsewhere as in this county, a large amount of money will be required to repair the damage that has been sustained.

THE WINTER SNOWS.—From the up-river papers we learn that snow has fallen to a considerable depth over the whole interior districts. The Sacramento Union says that the horizon is now bounded by an unbroken snowy belt. Not only the summits of the range of the Sierra are buried in their wintry mantle, but the snow extends down to the tops of the lowest foot-hills. No green spot thereabouts will be seen again before the advent of the vernal season.

In the North, the Weaverville and Yreka trails are covered with snow to the depth of from three to five feet. Around the towns and claims in Placer county and other mining quarters the snow covers the ground to the depth of from six inches to three feet.

COLLISION ON THE STEAMERS "ECLIPSE" AND "NEW WORLD."—Both these fine steamers, says the Daily Statesman, (Sacramento,) started at the usual time on Sunday last from their respective berths at Sacramento. They proceeded very near together to a point a short distance below Sutterville, when the Eclipse was run against the bank, and in rounding off the rivals came in collision. The New World was not damaged any, but the starboard wheel of the Eclipse was so much injured as to compel her to return to Sacramento for repairs. The necessary repairs having been made, the Eclipse is now making her regular trips.

The shipments from the Atlantic ports for San Francisco, during the month of November, greatly exceeded the amount forwarded in the two previous months, and as a result, more ships have departed within that time than at any period since last winter. The number of ships which sailed in November was twenty-one, and of this fleet one vessel was from St. Johns, N. B., with an entire cargo of salt fish. The others were filled with the usual assortment of merchandise. Since the commencement of the present month, however, there has not been so much freight offering, owing probably to the stringency of the money market. Rates at Boston range from 35 to 40 cents per foot in clippers, and 30 and 35 cents in half clippers.

DEATH OF KING KAMEHAMEHA.—Dates from the Sandwich Islands of the 16th December, announce the death of King Kamehameha, who expired on the 15th ult. after a serious illness of five or six days, at the age of forty-one years and nine months. As soon as the news spread, the flags on shore and aloft were set at half mast, and places of business closed. Minute guns were fired by the various naval vessels in port. Prince Alexander Liholilo is now proclaimed King of the Hawaiian Islands, under the style of Kamehameha IV.

SOLIDIFIED MILK.—This highly esteemed luxury, we are pleased to learn, can be found at Bingham & Reynolds of this city. We called the attention of our readers to this subject some weeks since, and we felt a pleasure in knowing that it was a valuable article, when tested. We were grateful to the lady for the interest manifested and the information where the milk could be found.

THREATENED DIFFICULTIES.—There has been trouble brewing for some time past between the miners and farmers near Grass Valley. The miners express their determination to dig for gold on any mineral land, even though it be claimed for farming purposes. The farmers assert that when they claim United States land for farming purposes, the land becomes their property against all claimants except the Government. Both miners and farmers have formed associations, for the implied purpose of enforcing their demands by arms.

PIONEER BALL.—The Annual Ball of the Pioneer Society on Monday night, was a very pleasant affair. The weather out of doors was forbidding, rainy, muddy, and disagreeable. But this did not prevent a large company from assembling. The evening passed off agreeably, and to a late hour the company timed to the music, and the joyous dance went on.

THE SHASTA COURIER SAYS: Now that the miners are supplied with water from the recent rains, large lumps and big strikes are becoming almost too common in this country to warrant chronicling. We were shown by Mr. Tracy, of Adams & Co.'s express, a very beautiful specimen, weighing 23 ounces of pure gold. It was taken from the claim of Hoge & Co., on East Fork of Clear Creek.

The telegraph line between Columbia and Sonora was completed on Saturday, and was put in operation. So says the Clipper.

RAIN.—Rain fell copiously during the past week in Calaveras county. The miners are heartily rejoicing.

The shipment of treasure, Jan. 9, per Nicaragua Steamer Uncle Sam, amounted to \$642,000.

SPECIAL NOTICES.

Rev. Oalvary Presbyterian Church, on Bush Street—Rev. Dr. Scott, Pastor.—This Church will be opened for divine service, Next Sabbath, 14th inst.

DEDICATION SERMON in the morning, at 11 o'clock, by Dr. Scott. Services in the Evening at 7 o'clock.

* The public at cordially invited to attend. v3-2

Native Pines, Oaks, &c.—Cones of the Native Pines, Acorns from our Mountain Oaks, Seed of all our Mountain Shrubs, and of every species of Valuable Tree or Shrub: for these the full price will be paid, if satisfactorily labelled, classified and arranged, at the

Office of the "CALIFORNIA FARMER," Masonic Hall Building, Montgomery street.

Wanted.—All the varieties of California Clover Seed, for which the highest price will be paid at the

Office of the "CALIFORNIA FARMER," Masonic Hall Building, Montgomery street.

"A Thing of Beauty is a Joy Forever."—Why will people endure pimples on "the human face divine," or eruptions of any kind, when it is a fact so well known, that Dr. GUY'S YELLO DOCK AND SASSAPARILLA cleanses the skin from all impurity, removing Pimples, Sores and Blotches, leaving the affected parts as healthy, smooth and soft as the flesh of a babe. It is really priceless to all who wish the rosy beauty of childhood.

It causes all sores and poisonous wounds to discharge all infected matter, and eradicates every impurity from the system. It does its work mildly but effectually, giving conscious beauty and blooming health in the place of ugliness and soul-destroying disease.

SCROFULA, SYPHILIS, MERCURIAL COMPLAINTS, and a vast variety of other disagreeable and dangerous diseases are speedily and perfectly cured by the use of this medicine.

Purchasers will please be careful to ask for, and take none other but Dr. Guy's Improved Extract of Yellow Dock and Sarsaparilla. All others in comparison are worthless.

For sale at all the principal Drug Stores in the State. Park & White, Sole Agents, to whom all orders must be addressed. Office No. 94 Merchant street, 3d door above Montgomery. 13

MARRIED.

On the 4th Jan., by Justice Orrin Bailey, John Kennedy and Miss Mary Carille, both of this city.
On the 5th Jan., in this city, Senor Jose Pura y Alvarez, son of Gen. Alvarez, of Mexico, and Mademoiselle Adela Buides, of this city.
On the 3d Jan., in this city, Wm. J. O. Bryant and Mrs. Frances Campbell, both of this city.
On the 1st Jan., in this city, Benjamin P. Griffin and Mrs. Adelaide Gordon Griffiths, both of this city.
On the 1st Jan., at the Monte, Los Angeles county, John McCullum and Miss Melinda Crandall, both of Los Angeles.
On the 2d Jan., in Washington, Yolo county, Samuel Amherst, of Placer county, and Miss Sarah McDonald.

DIED.

On the 2d Jan., at Mokelumne Hill, S. D. Ball, aged about 40.
On the 4th Jan., in this city, Jonathan Fish, wife of Wm. H. Fish, aged about 52 years.
On the 2d Jan., in Sacramento, Mrs. Mary Jane Mouser, wife of Dr. S. M. Mouser, aged 27 years.
On the 2d Jan., in Sacramento, Mrs. Mary Ann Lardner, wife of F. S. Lardner.
On the 4th Jan., at the Flossner House, on the San Jose road, Honora, wife of Marcus Flossner, aged 23 years.
On the 6th Jan., in Marysville, James May Jones, of Reading, Pa., aged 35 years.
On the 6th Jan., in Marysville, Mrs. Josephine Chambers, (formerly Hickey), a native of Hannover, aged 41 years.

SAN FRANCISCO MARINE LIST.

MARKET REPORTS.

San Francisco, January 10, 1855.

THE rains have set the wheels of business in motion, although the full effects of good that has fallen upon the earth have not yet begun to be felt. Miners, farmers and merchants, all will and should rejoice. The miners are busy and doing well; the plow is at work, and everything looks cheerful and prosperous. The effect of the rain has caused Grain of all kinds to be much firmer. Wheat is now selling at 32 1/2c, and some of extra quality at a higher figure; Barley, 22 1/2c; Oats, 32 1/2c; and Potatoes 13 1/2c—other crops firm. Flour is firm and advancing; provisions abundant, some kinds firm.

OFFICIAL EDITION OF STATE LAWS.

FOR 1855.

LAW BOOK, NOW READY AND FOR SALE

AT

GEO. W. MURRAY & CO.'S,

MONTGOMERY BLOCK.

Our New Office.—We invite our friends to our new office in the "Masonic Hall," on Montgomery street, opposite Le Count & Strong. We can show them many wonderful specimens, such as are rarely seen, and we especially invite them to call and examine the various schedule and invoices we have to offer for sale. Trees, Seeds, Plants, Grains, Houses, Lands, Inventions, Works of Art of all kinds, these we are happy to show, and can interest our friends if they will but call and see us.

WARREN & SON.

MISCELLANEOUS.

Orleans Hotel.

Second, between Jani & K streets, Sacramento.
THE above Hotel, occupying a space of 85 by 150 feet, in the most central part of the city, built of brick and three stories high, offers inducements to travelers not surpassed by any establishment in the State.
The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.
The Table will be found at all times supplied with the choice of the market.
At the Reading Room can always be found the daily papers of the State and the latest dates from the Atlantic and Europe.
The Billiard Saloon is furnished with five excellent tables, superintended by a competent keeper.
The Bar will be supplied with the best Liquors and Wines.
The second and third stories of the building are set apart for Parlor, Family Rooms and Chambers, comfortably furnished.
We have also leased the large brick building corner of K and Front streets (formerly known as Sackett's Hotel) set apart for Lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.
The "Orleans" is also the Depot and Office of the California Stage Co., from which place Stages leave daily for all parts of the State.
v32 HARDENBURGH & CORSE, Proprietors.

For Sacramento and Marysville.

California Starch.
ATTENTION of the Public is invited by the subscriber to the Pure CALIFORNIA STARCH now manufactured by him. The quality of it consists in its strength, purity and whiteness. It can be triumphantly compared with any Starch manufactured in any part of our country and the proprietor challenges competition.
This new California product of "home manufacture" is offered in neat packages of six and ten pounds each, at a low rate. The trade supplied on liberal terms.
JOHN EVERDING, Manufacturer,
Water street, between Mason and Tyler,
North Beach, San Francisco.

Stock Wanted.
PERSONS having valuable stock, of known pedigree, will always find a market for the same by leaving a memorandum with us. We always have more or less stock on hand for sale.
WANTED IMMEDIATELY. Two or three fine Durham Bulls; six Short Horn Cows—extra; one entire Colt (Morgan Blood); a few fine Merino Rams.
Communications mail, post-paid, will be responded to promptly.
23 WARREN & SON.

THE SAN JOAQUIN FLOUR MILLS, STOCKTON.—Are now completed and ready to grind Wheat and Barley in any quantities. The above Mills are not surpassed by any in the Atlantic States, having all the modern improvements for the manufacture of the finest Family Flour, and are capable of turning out 250 barrels per day.
A large fire-proof Warehouse for the storage of Grain, is attached to the Mill.
Particular attention is called to the fact of Stockton being the depot for the supply of the Southern Mines, and therefore offers superior inducements to wheat growers to ship their grain direct to Stockton, for milling.
Liberal advances made on consignments of Wheat.
For particulars as to terms, &c., apply to the MILLS—or to Messrs. BAIG & WEBSTER, Union Block, corner of Battery and Union streets, San Francisco.

v3-1

Happy Valley Flour Mills,
Corner of First and Melius streets, San Francisco.
Encourage Home Industry and Home Production.

THE attention of dealers and consumers of Flour is respectfully invited to the Superior Article manufactured at the above establishment, from California Wheat of the growth of 1854, selected and prepared with the greatest care. These Mills have been in successful operation for nearly two years, during which time the proprietors have received such satisfactory assurances from those who have tested the quality of their Flour, that they can confidently recommend it as being fully equal to any brand in the market. Among the many evidences of the superior excellence of the Flour manufactured by them, the proprietors would direct attention to the substantial compliments received at the two last Annual Meetings of the State Agricultural Society, premiums have been awarded at both Fairs for the superior specimens of Flour from these Mills.
Domestic Flour.—A superior article for family use, manufactured from selected Wheat—a constant supply always on hand at the Mill, or at the Depot of the Proprietors, 35 Sacramento street.
A liberal allowance made to the trade.

A Valuable Farming and Stock Ranch for Sale.
SITUATED in the County of Monterey, about one mile from the Mission of San Juan Bautista. Said Ranch consists of about one hundred and fifty acres of valuable farming land, running back to the hills, which are covered with clover and oats. The Ranch and hills are heavily timbered. There is also a stream of never failing mountain water, running through the entire place. Either for Agricultural purposes or for Stock Raising, this is certainly one of the best situations south of San Francisco.
A good title will be given, it being Government land.—Price \$2,000.
P.S.—The improvements upon said Ranch consists of a tolerable good Dwelling House, with lumber sufficient to erect a large one; also about twenty-five acres enclosed under a good fence.
Address, ALFONSO COOPER,
San Juan Bautista, Cal.

California Wine.

We desire to keep before our citizens the importance of this subject—this truth cannot be kept out of sight, that *the vine is dying out in the old countries*. Every steamer brings us more and more confirmation of the statements we have made that California is destined to become a great vine growing country—it may be "the Vineyard of the World."

We most earnestly invoke attention to the facts that are constantly being developed touching this important matter. We desire to see the general prevalence of temperance, morality, and universal prosperity, and we feel convinced that the extensive cultivation of the Grape and the manufacture of pure wine will be the cause of the abandonment of *drum drinking* and the closing of those places that are now the haunts of vice, ruin, and degradation. California possesses a soil and climate for the growth of the Grape equal to any country in the world—and we do not hesitate to say, that within *ten years*, cargoes of wine will be frequently shipped from the port of San Francisco.

Cultivators of California! *Plant your Vineyards*. Begin now. Look to the condition and prospects of Europe, and learn a lesson. Commence in season and you will be wise. Whatever you do, *do well*. No better investment can be made than Planting a Vineyard.

The Grape Blight in Europe.

From numerous sources we learn that there is reason to fear an almost total destruction of the vineyards throughout the greater part of middle and southern Europe. The disease spread over the country nearly a month earlier the present season than in any former year, and the grapes being younger, were less able to resist the attacks. A recent correspondent of the *Evening Post*, under date of London, October 31st, thus writes in regard to the cause of the disease:

The first attack I conceive to have been from without, and to have fallen upon the leaves and fruit in the form of very minute and (to the naked eye) invisible spores or seeds, of a peculiar fungus or mycelium, formerly either unknown to, or not noticed by botanists, perhaps because its blasting and destructive powers were never before called into action. The vine being thus covered with these small fungi, the stomata, or breathing-holes, which are the lungs of the plant, have sucked in the spores, which have been thus introduced into the sap vessels, and on the fall of the sap, in the autumn and winter, have with it been carried into the very roots of the tree, as well as lodged in the sap vessels of the new shoots and old wood.

The following spring, on the rising of the sap—that juice being full of the seeds of the fungi—the disease has shown itself in the new shoots and in the bloom-heads, and every infected vine has, in course, spread ruin around it in every direction, the spores or seed-pots ripening rapidly, and shedding thousands and millions of spores, which, wafted by every breeze, settle on the neighboring vines; those which have escaped the first invasion of the disease now becoming its victims. Thus from year to year the evil goes on increasing, until the ruin and destruction become universal. The more frequently a vine has undergone the dire and weakening effects of the blight, the less capable does it appear of bringing its fruit to maturity—indeed, much of the bloom never sets.

After the most laborious experiments and investigations, in which I have had the assistance of clever and intelligent practical botanists and chemists, I cannot refer the first attack to anything but atmospheric influences and disturbances, causing an unhealthy state of the vines, thus rendering them a fit prey to this fungus, (the seeds of which are floating in the air,) unable to resist its insidious attacks.

It would require that I should write a volume rather than a letter, were I to give a complete history of my experiments. I see in my brother's present letter a confirmation of my own experiences as to the new shoots and bloom-heads absolutely bursting forth covered with oidium, and as to the unnatural exuberance as well as untimeliness of the shoots, which I also attribute to the peculiarities of the weather and seasons, and consider to be symptoms of the disease—indeed, symptoms not only dangerous, but harassing, as they tend to mislead—to create false and fleeting hopes, which, in a few weeks, must be dispelled by a sad reality.

A young shoot snapped off and exuding a drop of sap, that sap, falling on the ground, has been found full of the fungi. In order to elucidate my ideas of the progress of the disease through the shoots, wood, and roots of the vine, I beg leave to inclose a plate taken from drawings sent to me from Oporto, to which I have the pleasure to refer you.

A very few words will suffice to sum up the probable result of the progress of the disease in vineyards, unless some effectual and cheap remedy should be discovered easily applicable to vines so grown, (in hot or greenhouses several remedies have proved more or less successful,) or that certain atmospheric changes and improvements

should enable the vines to throw off the disease, viz: The quantity of wine produced must go on rapidly diminishing every season, and the vine must gradually be exterminated. The farmer, when he finds himself year by year laboring in vain in his vineyard, will root up his vines and turn his attention to the cultivation of other things, (as is already the case at Madeira,) for he will clearly see that while he waits for such a change as I have mentioned, his capital will be dwindled away, if rich, and if poor, his family ruined and starved.

The blight has now at length attacked Spain, and arguing from analogy, its course will no doubt be the same. Already has the French government wisely permitted the entry of all wine into France duty free; thus the small stocks of other countries will be drawn into France. It is not long since a very nice, delicate old wine, or good, stout young port wine, could be shipped for £18 per pipe on board; now the same wine could not be shipped under £38 to £40 if young, or £50 if old. The shipment this year, to the end of September, is considerably less than in 1853 to the same period. Consumption going on and production diminishing, the result is clear—enormous prices, which can only be limited by their rising so high as to lessen the consumption very greatly. I have the pleasure to draw your attention to Mr. H. Harris' prices, assuring you that his stock, both at Oporto and here, is of a very superior quality, consisting of old wines for bottling, 1847's (now very rare to be met with,) 1851's, and a variety of other classes of wines.

There cannot be a stronger proof of the impolicy of looking on when vines are rapidly rising, and there is no reasonable hope, indeed, scarcely a bare possibility, of any decline in price, than the fact, that those who have hesitated for the last few months, and now really require a supply, will have to pay fully £8 to £10 per pipe more, and my decided opinion is, that prices must continue to advance for a long period, even under the most favorable circumstances to which the most sanguine can look forward.

Your faithful, humble servants,
QUARLES HARRIS.

French Gardening Implements—Stone—Labor.

I SOMETIMES wonder that anything grows in France, the tools used in gardening and in agriculture are so unclean and unhandy. The hoe, an instrument of constant use, has a handle but two feet long, so that the hoer is obliged to bend into the very earth, in order to reach the object of his care. He thus has his back continually horizontal—a position as laborious and painful as it is degrading, for it gives to a man the appearance of a beast of the field, crawling on all fours. The French spade is even worse. The handle is straight, like the American hoe; it is not furnished with a hand-piece at the end, which at home is thought to increase its efficiency twofold. The tool is a monstrous misapplication of strength to labor, and, as might be supposed, performs very small days' work. In fact, the spade and the shovel are both one, whereas they ought to be as distinct as poker and tongs. The rake, an ornamental instrument at best, is furnished with nails in the place of teeth; but as it is often double, being a rake on both sides, it is a tolerably vigorous utensil. The water-pot, on the other hand, is a superior article. It is constructed on mechanical principles. The two handles—the carrying and the watering handles—form but one handle, passing along the top to the side. The gardener thus slides his hand from the one position to the other, and may hold a watering-pot in each. The wheelbarrow is an ill-built affair, and usually creaks. The mortar used in the construction of stone walls is the best in the world. In two hours it is harder than the stones it cements, and never, at any age, does it crumble to pieces. It is expensive, and even the wealthiest proprietors resort to the following expedient to diminish their consumption of it. At every twenty feet of the wall to be built, a fragment of it—say a portion two feet wide—is made with mortar, the rest is cemented with mud—the commonest mud, made upon the spot, with any earth that happens to be at hand. The whole wall is then faced with mortar, thus assuming a similar appearance in its whole length. The result is a wall that will last for centuries, there being no frosts powerful enough to upheave or disjoint it.

I said the mortar was stronger than the stone. No one who has ever seen French building-stone, in the neighborhood of Paris, can form even a remote idea of what it is. The mason snip it, shape it, edge it, as if each lump were a pineapple cheese. I have seen the adze penetrate a block as it would have penetrated a ripe water-melon. This quality, which adds to the facility with which it is adapted, is in no way disadvantageous. The stone will bear any weight, and never splits or chips of its own accord. With time its color changes from a rich cream color to a dingy brown, but a scrape every five years restores it. Its softness is in fact as great an advantage as malleability is to a metal; for while it is as easily fashioned as cheese, it is as durable as granite.

I told you that I once hired an old woman to weed a gravel path and strawberry bed. I am happy to state that this venerable creature is now well provided for. She and her good man are engaged as husbandmen upon a neighboring farm. They work twelve hours a day, steadily, and she performs the same labors, and quite as much labor as he. She digs, weeds, plants, "snatches" potatoes, trains grape-vines, mounts drays, ascends ladders, gets into trenches, sinks wells, like the veriest male of them all. I sat the other day upon a hay-cock of her making. She is richly brouzed, and her limbs—which she exposes with

an agricultural freedom—are gnarled and knotted to a degree quite unusual with her sex. The two are boarded and lodged by their employer, and the wages they get are proportionately reduced. Still, the smallness of the figure will astonish you as it did me. They earn, together, \$180 a year—being thirty cents a day for him, and nineteen cents a day for her. They lay by \$100 a year, and when they are too old to work, will be able to keep them out of the poor-house and avoid the hospital, even though saddled with sickness in addition to poverty.—*N. Y. Times*.

Autumn Plowing.

A CORRESPONDENT of the *New England Farmer* says: I am surprised at the remarks of our friend H. S. Perrin, of Orfordville, N. H., in relation to fall plowing. It appears to me that no farmer, however inexperienced in cultivating the soil of New England, can fail to see that fall or autumn plowing is a benefit to the soil. In the first place, Mr. P. thinks that one-fifth of the manure applied is lost; this I conceive to be an error in which many persons indulge, but I cannot for my life see how the fertilizing qualities of the manures can escape by the simple process of turning under what remains upon the surface, after the crops are harvested. I find that lands plowed in the fall is not so liable to drought as those plowed in the spring. Fall plowing also serves to destroy those insects which deposit their eggs in the ground, and in the spring rise up by thousands and destroy the crops. If Mr. P. will take two acres of land, side by side, plow one in the fall and the other in the spring, equally manure both, I think he will find the result to be in favor of fall plowing.

A NOBLE WOMAN.—The following interesting history of Miss Florence Nightingale, an English lady, who has lately gone out with some forty nurses to administer to the comfort and relief of the wounded soldiers in the East, is from the *London Examiner*:—

Miss Nightingale is the youngest daughter and presumptive co-heiress of her father, William Shore Nightingale, of Embury-park, Hampshire, and the Lea Hurst, Derbyshire. She is, moreover, a young lady of singular endowments both natural and acquired. In a knowledge of the ancient languages and of the higher branches of mathematics, in general art, science and literature, her attainments are extraordinary. There is scarcely a modern language which she does not understand, and she speaks French, German, and Italian as fluently as her native English. She has visited and studied the various nations of Europe, and has ascended the Nile to its remotest cataract.

She has a happy hope, which she adorns, and why quit all this to be a nurse? Her sympathy with the weak, the oppressed, the destitute, the suffering, and the desolate. She was the main support of an hospital in London for sick governesses, to which she devoted all her time and fortune. While her friends missed her at assemblies, lectures, concerts, exhibitions, and all the entertainments for taste and intellect with which London in its season abounds, she, whose powers could have best appreciated there, was sitting beside the bed and soothing the last complaint of some poor, dying, homeless, querulous governess. She had taken an interest in all philanthropic movements, and has spent six months of her time as a nurse for the care and reformation of the lost and infirm.

FLOWERS AND PERFUMERY.—Some idea of the importance of perfumery as an article of commerce may be formed, when it is stated that one of the large perfumers of Grasse, in France, employs annually 10,000 lbs. of orange blossoms, 60,000 lbs. of cassia flowers, 54,000 lbs. of violet flowers, 20,000 lbs. of tuberose, 16,000 lbs. of lilac flowers, besides rosemary, mint, lavender, thyme, lemon, orange, and other odorous plants, in like proportion. Flowers yield perfumes in all climates, but those growing in the warmer latitudes are, it seems, the most prolific in their odor, while those from the colder are sweeter. Though many of the finest perfumes come from the East Indies, Ceylon, Mexico and Peru, the south of Europe is the only real garden of utility to the perfumer. Grasse and Nice are the principal seats of the art. From their geographical position, the grower, within comparatively short distances, has at command that change of climate most applicable to bring to perfection the plants required for his trade. On the seacoast his cassia grows without fear of frost, one night of which would destroy all the plants for a season; while nearer the Alps his violets are found sweeter than if grown in the warmer situations where the orange tree and mignonette bloom to perfection. England, however, can claim the superiority in the growth of lavender and peppermint; the essential oils extracted from these plants grown at Mitcham, in Surrey, realise eight times the price in the market of those produced in France or elsewhere, and are fully worth the difference for delicacy of odor.

THE PLAINS OF CHALDEA.—Layard says that these plains produce some of the finest fruits in the world. A very delicious peach has lately been introduced into England, which has created a good deal of excitement among nurserymen. The plains, in the spring of the year, are covered with gorgeous flowers. Truffles grow there in great abundance, and are quite extensively used as an article of food.

The hanging gardens of Babylon, Layard says were no fiction. He has found pictured representations of them in his researches.

POULTRY YARD.

To MAKE HENS LAY PERPETUALLY.—We find the following in an English paper, and transfer it to our paper without vouching for its correctness.

Keep no roosters; give the hens fresh meat, chopped up like sausage meat, once a day—a very small portion, say half an ounce a day, to each hen—in winter, or from the time insects disappear in the fall till they appear again in the spring. Never allow any eggs to remain in the nest for what are called nest eggs. When the roosters do not run with the hens, and no nest eggs are left in the nest, the hens will not cease laying after the production of twelve or fifteen eggs, as they always do when roosters and nest eggs are allowed, but continue laying perpetually. If the above plan were generally adopted, eggs would be as plenty in winter as in summer. One reason why hens do not lay in winter as freely as in summer is the want of animal food which they get in summer in abundance in the form of insects.

NEW FEED FOR SHEEP.—Whilst I was at Geneva, I observed every one collecting carefully the fruit of the horse-chestnut, and on inquiry I learnt that the butchers and holders of grazing stock bought it readily at a certain price per bushel. I inquired of my butcher, and he told me it was given to those sheep in particular that were fattening. The horse-chestnuts were well crushed; something in the way, so I understood, that apples are, previous to cider being made. They are crushed or cut up in a machine kept solely in Switzerland for that purpose; then about two pounds' weight is given to each sheep, morning and evening. It must be portioned out to sheep, as too much would disagree with them, being of a very heating nature. The butcher told me that it gave an excellent rich flavor to the meat. The Geneva mutton is noted for being as highly flavored as any in England or Wales.—*E. D., in Agricultural Gazette*.

FEEDING POULTRY.—Professor Gregory, of Aberdeen, in a letter to a friend, observes:—"As I suppose you keep poultry, I may tell you that it has been ascertained that if you mix with their food a sufficient quantity of eggshells or chalk, which they eat greedily, they will lay twice or thrice as many eggs as before. A well-fed fowl is disposed to lay a large number of eggs, but cannot do so without the materials of the shells, however nourishing in other respects her food may be; indeed, a fowl fed on food and water, free from carbonate of lime, and not finding any in the soil, or in the shape of mortar, which they often eat on the walls, would lay no eggs at all with the best will in the world."

MECHANICS.—Mechanics are the palace builders of the world. Not a stick was hewn, not a stone is shaped, in the all lovely dwellings of the rich, that does not owe its beauty and fitness to the mechanic's skill. The spires that rise their giddy heights among the clouds, depend upon the mechanic's art for strength and symmetry; the thousands of noble ships that cover the seas of the world; the magnificent steamers that plow the Northern Lakes and Western Rivers; the swift locomotives that traverse through the States with the rapidity of lightning, are all the construction of that noblest of human beings—the mechanic.

Not an edifice for devotion, for business, for comfort, but bears the impress of their handiwork. How exalting is their calling—how noble their pursuit—how sublime their avocation! Who dares to sneer at such a fraternity of noble, high-minded men? Who dares to cast odium on such an eminent and patriotic race? Their path is one of glory, ambition and honor, and it is their own fault if it does not lead them to the highest fame and renown.

ANIMAL ATTACHMENT.—The Alabama Sentinel gives the following remarkable instance of animal attachment: Our young friend and townsman, Robert M. Waddell, informed us the other day of a rather singular instance of an attachment from a pig to a horse. Mr. Waddell, informed us that while leaving town and going to his work on the Alabama and Mississippi River Railroad, that near the edge of a town a pig some three or four months old, commenced following him on his horse, and continued to do so until he arrived at home, some twelve miles from town. As he would increase the speed of his horse, so would the little squealer increase his speed, and when he arrived at the Cahawba River and led his horse into the flat, the little pig boldly charged into the flat and took his position between the horse's feet. On arriving at home, and placing the horse in the stable, nothing would satisfy the pig but he must be admitted into the stable too. When he caught his horse and started off again, he shut the bars to keep the pig in the lot, but that would not do. The little squealer made a terrible noise, and nothing short of letting him out would do. He again commenced following his horse. Wherever the horse goes the pig will go; when the horse stops the pig stops. The pig will pay no attention to any other horse, nor even to any person. This is the most remarkable case of attachment existing between two animals of so distinctive species as is the horse and the hog, that we ever heard of, and is an incident well worthy the naturalist. Certainly it would be considered ominous by some, and were the attachment of the pig for Mr. Waddell instead of his horse, we predict that it indicated that he was not to suffer soon for bacon.

It is a sage infant who is intimately acquainted with his own parental relative.

Miscellany.

EXTRACT FROM "THE ANDES."
AN UNPUBLISHED POEM, BY C. W. D.

NO. IV.

WHEN first I reached this wondrous

Elevation, beyond the height that Humboldt's
Daring foot ever clomb, on Chimbabazo,
Confused, and dizzy, on the clouded world
Beneath, and the unfathomable heavens
I gazed, 'till thoughts unutterable, grand
And glorious, glow'd, star-like, in my heart,
And linked my exalted soul, with those
Mysterious harmonies, gifted vision
Sees, in nature's perfect plan.
Standing, as now, upon the mightiest
Monuments, that God has built on earth,
I think of man—his destiny, his doom,
How quick before the breath of Time, his works
Are scattered—whilst over the offspring
Of his busy mind,—striving impotent,
Against inexorable decay,—become,
At last, themselves, their own tomb-builders—
As central fires, that heat the lava up,
Are hid, extinguish'd in their very birth,
Alas! in air, the eagle leaves no trace;
Nor wounded wave, where pass'd the vessel's keel;
The vapor vanes, where the rainbow hung;
And his shadows, mirror'd in a brook;
Or meteor's scar, upon the brow of night—
Are emblems all, of vain, and transient man.

When gazing down three vistas measureless,
Where twilight dim, is lost in denser gloom,
Phantasmal worlds, grow from the formless thoughts,
That o'er me sweep; and when elon night reigns,
And the stars come up, from the depths of space,
Revealing, unasked, secrets of their birth,
And man's—the music of Eternity,
In broken echoes, trembles thro' the solemn night.
Forgotten are life's sad realities,
And the phantoms of unsubstantial dreams,
Crowd the glimmering visions of the mind.
'Tis here, one feels the vastness of creation:
The earth seems drifting down a shoreless stream,
Where other worlds are passing swiftly by,
And other systems, islands are, resting
On the smooth surface of an azure main.
Here too, one feels inscribed upon the heart
Anew, the records ages wrote, of Him
Who launched the bark, and guides its course, and told
Us of its final wreck.

The Art of Living with Others.

The fireside jars, the tea-table tempests, and the every-day laborings in too many family circles, are proofs that the art of living with others is imperfectly understood, and still more imperfectly practiced. The evolutions of patience and temper, the constant maneuverings of affections and jealousy, kindness and coldness, humility and pride, in the miniature precincts of a home, are worthy to be compared to the best examples of military tactics. The heart is ever prone to love, while the mind continually endeavors to assert its own supremacy, and domineer over every mind with which it is brought into contact. Thus arise the thousand differences which disturb the peace of families and wreck the highest hopes of earth. It is idle to argue the possibility of realizing a perfectly ideal state of social existence, but there is no harm in inquiring whether there are any methods of making the social relations more harmonious than now. For some of the thoughts here presented, we are indebted to an essay in the "Friends in Council," an anonymous volume, published by James Munroe, Boston.

In the first place, if people are to live happily together, they must not fancy that, because they are together, all their lives have been exactly similar, and that they are to be of the same mind for all the future. We are not to expect a single person to agree with us in all points, and we must not be vexed if we fail to drive our own tastes and opinions into those we live with. In order to live on intimate terms with any one, we must entertain a proper respect for him, and be willing in some instances to waive our own preferences when they conflict with those of our friends. Diversities, from the nature of mind itself, must arise, and we might as well complain, when gazing into the clear evening sky, "why all these stars; why not all one star?" as to find fault that every mind is not the exact correlate to our own. Easily derived from this general principle are the following rules: Never interfere unreasonably with others; never ridicule their tastes; never question and request their resolves; do not indulge in perpetual comment on their proceedings; avoid set topics of dispute, around which angry words fester till a rank quarrel breaks out; and do not hold too much to logic and suppose that every thing is to be settled by a sufficient reason. Dr. Johnson saw this clearly with regard to married people, when he said "wretched would be the pair above all names of wretchedness, who should be doomed to adjust by reason every morning, all the minute details of a domestic day."

If you would be loved as a companion, ignore all unnecessary criticism upon your associates. The number of those who have taken out judges' patents, is very large in society, and they all drive a most prosperous business. But no one chooses to live between the glasses of a microscope, even though a fool be looking in. One of the most vexatious kinds of criticism is that back-handed variety which commences with such introductions as these: "Had I been consulted," "had you listened to me," "you always would have your own way," and a legion of such like expressions which are not designed to soothe a perturbed spirit.

Another important rule is not to let familiarity swallow up courtesy. There is no place where real politeness is of more value than where we are apt to regard it superfluous. We ought never to trifle with the feelings of others, or to omit those

delicate attentions in daily intercourse which no lavish upon strangers and those whose favor we would win. It is proper to speak to our associates more plainly, but not less kindly than to strangers. Again, we must not expect too much from the society of our friends. They do not live for us alone, any more than we do exclusively for them, and we cannot command them at all times to do our pleasure. Hazlitt says—"In travelling along at night we catch a glimpse into cheerful looking rooms with light blazing in them, and we conclude, involuntarily, how happy the inmates must be;" but there is no Eden of happiness in those rooms. We have at all times need of forgiveness and that charity which covereth a multitude of sins.

Perhaps some objector to the spirit of these comments may say that some persons have such sour tempers and uncontrollable passions, that there is no living peacefully with them. But to cut off the causes of bad temper, is to make that temper what it should be. The lion undisturbed is as peaceful as a lamb. The unkindness and fretfulness which arouse anger, are as reprehensible as anger itself, and we question whether there is not more suffering in social life from these provocations than from anger itself. Calm self-possession and a pleasant impassiveness, are sovereign remedies for irritable dispositions, but when two sensitive persons are shut up together, and go on vexing each other with a reproductive instability, there is no end to unrest and misery.

A golden maxim in this golden art is that friends and relations should be careful when they go out into the world, or admit others into their own circle, they do not expose to the disadvantage of each other the faults of which they have gained a knowledge in intimacy. Nothing is more common than this, and whether it proceeds from carelessness or maliciousness, it is alike ungenerous and unpardonable. The weakness of a person ought never to be learned from his bosom friends. We should shield them from the public view as religiously as we hide our own.

We might go on citing little rules and precautions without number, but if the great principle of love and good will to all mankind were the ruling power in life, all these would be needless. To live happily with others we must first learn to live happily with ourselves. He who rules his own spirit well, can so adapt himself to the shifting phases in the life of his friends as never to be drawn into harshness, never to do violence to the feelings or tastes of those who are bound to him by the sacred ties of friendship and love.

The great law of social life is "Do unto others as you would they should do to you." Study in all things to conciliate, and cherish continually that charity and forgiving spirit which you would have exercised toward you. Cheerfully acknowledge merit in others, and in turn you will always receive that kind consideration which you desire. When you cannot consistently praise, by all means remain silent, unless there be a manifest wrong, deserving censure.

As a general rule it will be found that our greatest sources of unhappiness are within ourselves, and if we fail to live harmoniously with others we shall act more wisely to set about correcting our own faults than to pick flaws in their character. Make the fountain pure and the stream will flow clearly along, even though it must pass dark forests, lonely chasms, and rough shores.

Hard Work.

Mr. A.—"Good morning, Mr. B.; I called to see if you wanted a clerk. I should like to put my son into your store for a while."

Mr. B.—"Indeed, I thought you needed him on your farm."

"So I do need him—but I don't want my children to have to work as hard as I have to—digging and delving. I tell you it's too hard; I'm fairly worn all out."

"Ah! but you look more hale and hearty than the most of us, and yet you must be quite as old."

"Yes, I am turned of 70. But I grow lame and stiff, and its all from hard work."

"Over 70? And I am but 60, and my partner's younger still—yet see our gray hairs."

"Well, well—something in families about that, may be. But do you want my boy?"

"No sir."

"Why not?"

"Because you want to put him here to live easy, and he'll be good for nothing, as clerk or merchant either, in that way. We merchants have to work hard if we would gain anything; and we have to work a great many more hours in a year than you do."

"Yes, yes, more hours perhaps—but the work isn't half so hard. Here you are in a cool room in summer and a warm one in winter, we are exposed to heat and cold, wet and dry."

"I know it looks so to you. But now do you go into a room and spend all one long day walking it from side to side, dodging this way and that, and see if long before night you do not want to get out of your prison; see if you are not tired enough before supper time to be glad to sit down in the evening with your family and your newspaper. But no, you must go back to your prison, and dodge and jump all the evening harder than ever. And when bed-time comes, you must post books."

"Oh, tell it all on your side. But suppose it is so—you make money, and when old age comes on, you can retire from business and live easy."

"Not a whit better than you can. I thought as you do once, and tried it. I thought I could give up the confinement and labor, and only over-see. But this did not give me ease or leisure; so I got a head clerk and 'retired,' as you call—and what was the result? Why, I failed. And what did you and everybody else say? Why, I had

quit work and tried to be a gentleman, and no wonder he smashed—it was good enough for him—he might have kept to work like other folks."

"I know such things were said, but we didn't know you heard of them! But now just look at the poor farmer's crops this season—half dried up. Just think of such losses after all our labor."

"Yes, and the day laborers too, who are out of employment in consequence of the unfavorable season, will all fall upon me to knock off 'just a little of their store accounts, because everything they buy of the farmer comes so high—and I must do it too, or be 'such a stingy tight Jew' they'll never go there to trade again," to say nothing of those that go off without paying at all."

"Well, I suppose merchants do have losses as well as farmers. But it seems as if you didn't have half so many vexations—showers coming up—tools breaking—cattle in the corn, and what not."

"Vexations! You know nothing about it. Come here and wait upon ungoverned children—try to satisfy an old woman that a ten cent calico won't fade—lower the price of a pair of shoes or a plug of tobacco to suit an Irishman—find something nice enough for a fashionable young lady—grave enough for a quaker—gay enough for a darkee—stylish enough for a dandy—and can't suit one of them till they have looked somewhere else—and you may fold up and pile up your goods to be ready for the next unsatisfactory set. Mr. B., you know nothing about vexations. No wonder we grow bald and grey before our time."

"And so you are sure merchants have the hardest of it. But I don't know what to do with my boy. He thinks farming to hard, and he don't like to go to a trade—feels—well, I don't know."

"I know, my friend. You have taught him to feel that a trade is too low, and farming too hard, and now he is half spoilt for being successful in anything."

"I wish I could get him into a bank with a salary—he'd like that. I tried hard for it last week; but they ask such an awful sum for bonds; I don't see what that's for."

"Mr. B., you sometimes pray for yourself and your children, 'Lead us not into temptation'—but here you are, trying to get your only son into a situation where the temptations and the facilities for dishonesty are so great that those best acquainted with the business find it necessary to put every one under heavy bonds before he can be trusted with it. Now, my good friend, take my advice and keep your son with you. He need not 'dig and delve' as hard as you say you have done, and make such haste to be rich, for you have made a large property; but learn him to work reasonably and take the comfort of it as he goes along; not put off enjoying it till old age. That is the secret of happiness. 'A little with contentment is great gain;' just as good as great wealth."—Pittsfield Cultivator.

Ladies' Department.

Little Charlie.

We pick up the following reproof to careless mothers, from Fanny Fern. It is one of the most touching leaves that has dropped from her pen:—

"I am one of that persecuted class, denominated 'old maids.' By going quietly about the world, taking care not to jostle my neighbors, or hit against any of their rough angles, I manage to be cheerful, contented and happy. In my multitudinous migrations, I have had some opportunity to study human nature. Lately, I have become a temporary inmate of a crowded boarding house. My little room has already begun to look quite home-like. The cheerful sun had expanded the fragrant flowers I love so well to nurture; my canary trills his satisfaction in a gayer song than ever; and my pictures, books and guitar, drive 'dull care away,' and beguile many a pleasant hour. And now, my heart has found a new object of interest. I've noticed on the stair case, and in the hall and lobby, a lovely child, who seemed wandering about at his own sweet will; sometimes sitting wearily on the stairs, almost asleep; then loitering at the kitchen door, watching the operations of the cook; then peeping in at the half-open doors of the different apartments. As by a rule of the house 'no children are permitted at the table' it was some time before I could ascertain who claimed this little stray waif. One morning attracted by the carol of my canary, he ventured to put his little curly head inside my door. He needed little urging to enter, for he read with a child's quick instinct, his welcome in my face. An animated conversation soon ensued about birds, flowers, and pictures—his large blue eyes growing bright, and his cheek flushed with pleasure, as story followed story, while he sat on my knee. At length I said to him, 'Charlie won't mamma be anxious about you, if you stay so long?'

"Oh, no," said he, "Lizzie don't care."

"Who is Lizzie?"

"Why, my mamma! She don't care if I'm only out of the way. Lizzie made me this pretty dress," said he, holding up his pretty embroidered frock; "but Lizzie don't know any stories, and she says I'm a bore. What is a bore?" said the sweet child, as he looked trustingly in my face.

"Never mind, now," said I tearfully; "you may stay with me whenever you like, and we will be very good friends."

The dinner bell sounding, a gaily dressed young thing vociferated, in a voice anything but musical, "Charlie! Charlie!" When I apologized for keeping him, she said, carelessly, as she rearranged

her bracelets, "O, it don't signify, if you have patience with him, he's so tiresome with his questions. I've bought him heaps of toys but he never wants to play, and is forever asking me such old fashioned questions. Keep him and welcome, when you like, but take my word for it, you'll repent your bargain!" and she tripped gaily down to dinner. Poor little Charlie! Time in plenty to adjust all those silken ringlets; time to embroider all those little gay dresses; time to linger till midnight over the last now novel; but for the soul that looked forth from those deep blue eyes, no time to sow the good seed—no time to watch lost the enemy should "sow tares."

From that time Charlie and I were inseparable. The thoughtless mother, well content to pass her time devouring all sorts of trashy literature, or in idle gossip with her drawing room companions. The young father, weary with business troubles, contenting himself with a quiet "good night," and closing the day by a visit to the theatre or concert-room. Poor Charlie, meanwhile, put to bed for safe keeping, would lie hours, tossing restless, from side to side, with nothing but his head, as he innocently said to me. What a joy to sit by his side, and beguile the lonely hours! There I learned to understand our Saviour's words "For of such is the kingdom of heaven." In his clear, silvery tones, he would repeat after me, "Our Father," asking me the meaning of every petition; then he would say "Why don't you tell Lizzie? Lizzie don't know any prayers?"

One night I sang him these lines—

"Sweet fields beyond the swelling flood,
Stand dressed in living green;"

he raised himself in bed, while the tears trembled on his long lashes, and said, "O, sing that again—it seems as though I saw a beautiful picture!" Then, taking my guitar, I would sit by his bedside, and watch the blue eyes droop and grow heavy with slumber, as I sang him to sleep. And so, whose duty, joy and pride it should have been to lead those little feet to Him who biddeth "little children come," was indolently and contentedly bound in flowery feathers of her own weaving, unmindful that an angel's destiny was entrusted to her keeping.

Little Charlie lay tossing in his little bed, with a high fever. It is needless to tell of the hold he had upon my heart and services. His childish mother, either unable or unwilling to see his danger, had left me in charge of him—drawn from his side by the attractions of a great military ball. I changed his heated pillows, gave him the cooling drink; bathed his feverish temples, and finally, at his request, rocked him gently to quiet his restlessness. He placed his little arms carelessly about my neck, and said meekly, "sing to me of heaven." When I finished, he looked languidly up, saying, "Where's Lizzie? I must kiss Lizzie!" and as the words died upon his lips his eyes drooped, his heart fluttered like a prisoned bird, and little Charlie was counted one of the heavenly fold. As I closed his eyes, and crossed the dimpled hands peacefully upon his little breast, his last words rang fearfully in my ears—"Where's Lizzie?"

The Kitchen.

We give to intellect, to morality, to religion, and to all the virtues, the honor that belongs to them. And still, it may be boldly affirmed, that economy, taste, skill and neatness, in the kitchen, have a great deal to do in making life happy and prosperous. Nor is it indispensably necessary that a house should be filled with luxuries. All the qualifications for good house-keeping can be displayed as well on a small scale as on a large one. A small house can be more easily kept clean, than a palace. Economy is most needed in the absence of an abundance. Taste is as well displayed in placing the dishes on a pine table, as in arranging the folds of a damask curtain. And skillful cooking is as readily discovered in a nicely baked potato, or in a respectable Johnny-cake, as in a nut-brown sir-loin, or a brace of canvass-back. The charm of good house-keeping is in the order, economy, and taste displayed in attention to little things. And these little things have a wonderful influence. A dirty kitchen, and bad cooking have driven many a one from home, to seek for comfort and happiness somewhere else. Domestic economy is a Science—a theory of life, which all sensible women ought to study, and practice. None of our excellent girls are fit to be married, until they are thoroughly educated in the deep, and profound mysteries of the kitchen. See to it, all ye who are mothers, that your daughters are all "accomplished" by an experimental knowledge of good house-keeping.

To BOIL RICE.—Rice is one of those vegetables which is easily injured by poor cooking, and may be made really unpalatable by a little over-boiling. Rice should be carefully looked over, and thoroughly washed in two or three waters. The kernel will then have a pearly lustre. It should be put into boiling water in which a little salt has been thrown, and allowed to boil fifteen or seventeen minutes. The water should then be drained off—and the kettle set back from the violent heat of the fire—when it has steamed in this way about fifteen minutes, it will be perfectly soft, of snowy whiteness, and each kernel will retain its individuality, and not be lost in one solid mass of paste. A pint of rice may be boiled in three quarts of water.

ONE reason why we see so few agreeable in conversation is, that almost everybody is more intent upon what he himself has a mind to say, than upon making pertinent replies to what the rest of the company say to him.—Rochester.

WHEN poverty comes in at the door love leaps out of the window.

paper, sacredly devoted to your interests; and it is for your interest to sustain it. It is the medium through which much valuable information is communicated to you. Your families are benefited by a perusal of it, and your actual profits are enhanced by its influence. It is not the instrument of the petty demagogue, nor the organ of the unprincipled politician. It does not come to you and yours, loaded with moral contamination, or redolent with the odor of sleek-faced villany. It is the farmer's paper, and you ought to write for it.

Write for your own paper.—Reeause, if others contribute their thoughts for your benefit, you ought so far to observe the golden rule as to do the same for them. As the saying is, "you are nobody's fool." You can write, if you try. Or if you are not qualified to do it, now is the time to begin. You can tell neighbor Jenkins how you contrived to raise a fine crop of corn, notwithstanding the drouth; or how you fixed your barn and stables, to make them so snug and comfortable. Why not tell ten or twenty thousand Jenkinses all about it? They will do you as good a turn.

Write for your own paper.—Because, by doing so, you will assist in the work of enlightening the minds of your fellow-laborers, and raise yourself to the high position which God and Nature designed you to occupy. If you would be respected and honored, by your fellow-men, you must qualify yourself for extensive usefulness. By listening to these suggestions, you will throw into a common fund a vast amount of useful knowledge; and in the very act of doing it, you will become better and better qualified, to discharge the weightier obligations of men, and citizens of a free and progressive country. Here is a school for mutual improvement, where all may become at once, both teachers and pupils.

We shall continue to indulge the hope, that our new volume, which commenced on the first of January, will be greatly enriched by the contributions of a host of intelligent correspondents. Such favors, with those already engaged, will render the FARMER a Model Paper. This will not only afford the proprietor a great deal of satisfaction, and encouragement, but will doubtless gratify and please the thousands of its readers. As the spirit saith unto the churches—"WRITE."

SPECIAL NOTICE.

REDUCTION OF PRICE.

The heavy losses upon the Farming Interests of the State the past year, the general depression of that interest, and the discouragements resulting to all, we know have prevented many who are engaged in Agriculture from subscribing to our Journal the past year. Feeling desirous to meet their wants as far as is in our power, we now offer the CALIFORNIA FARMER at SIX DOLLARS PER YEAR, PAYABLE ALWAYS IN ADVANCE.

We trust this effort on our part to meet such circumstances will be met on the part of those engaged in the cultivation of the soil with a corresponding feeling, and that all will do us service by sending in a goodly list of subscribers and the amount for the same. We have made the price thus low, that our subscribers and friends may at once send us the proof of their good will.

With this issue we publish THREE THOUSAND COPIES, and trust the FARMER will find a welcome reception. Inducements for the formation of clubs will be found under the proper head.

Clubs Formed—Premiums to Subscribers.

With the third volume, with the opening year, we would offer to our friends stronger inducements than heretofore to make up CLUBS for the FARMER. It will be seen by our "special notice," that we shall commence with a reduction of the price of the "Farmer." The price will now be six dollars per year, always in advance. No subscriptions received unless accompanied by the amount.

To those who are disposed to form CLUBS, when we can send all to one address, we shall send SIX COPIES for FIVE NAMES, TWELVE for TEN, and TWENTY-FIVE COPIES for the same number of twenty subscriptions.

To those, or any of our friends who will interest themselves, we believe this will be some satisfaction, besides promoting the cause of Agriculture. We hope to see good results to all from this proposition.

TO AGENTS.

We would ask of our Agents to whom we send the CALIFORNIA FARMER, to communicate with us and to remit full accounts to the close of the year. We shall send them extra numbers for distribution. We call their attention to the Reduction in price of our Journal; this we hope will give satisfaction to all, so as to enable our agents to enlarge our lists, and also afford an increased reward to them.

We can offer inducements to Agents in all the large cities as Carriers, and to Booksellers and Newspaper Stores also, for Papers in quantities.

THE CALIFORNIA FARMER.

We have many inquiries, daily, from our friends in the country, who write us, desirous to make up clubs for the FARMER, and send us produce for the amount. We always do our utmost to facilitate the cultivator of the soil, and we will assure our friends that if they will make up clubs of five, ten or twenty, they can send their Wheat, Rye, Oats, Barley, or specimens of extra quality, and we will allow them the full market price in the payment of the FARMER. Our friends that are in a remote area can send us the amount thus due, and add the coming volume, and we will forward receipts for the same. So send along your wheat and good products. We do not mean anything—but those articles that have a value, and we will take them.

SPECIAL AGENTS FOR THE FARMER, &c.
ALL the messengers of Adams & Co., and Wells, Fargo & Co. are duly authorized by us to receive subscriptions for the CALIFORNIA FARMER, and receipt the same; also, to receive orders for Fruit Trees, Seeds, &c., and any and all business with us. All such business committed to either of these messengers will be promptly responded to by us. WARREN & SON.

OAKLAND.

Our friends at Oakland are invited to call on MR. CHARLES STEWART, and subscribe for the CALIFORNIA FARMER; he is authorized to receive subscriptions and we will cheerfully all the laborer in his employment. We are willing to receive Wheat, Rye, Oats, &c., or any valuable products of first quality in payment, as we do wish our friends to enjoy our sheet, and conveniently too.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SAN FRANCISCO, THURSDAY, JANUARY 11, 1855.

THE PRESENT LEGISLATURE.

The present session of our Legislature will be one of great importance to our State, and of more moment to our people than any preceding one. Our citizens, the whole people, are alive to the importance of immediate action upon all matters that affect the public interest.

The great Pacific Railroad; the great Wagon Road over the Plains; Birehes Stage Route for the conveyance of passengers from Salt Lake; Adams & Co.'s new express route; the line of Telegraph from New York to San Francisco; new steamers; new mail facilities—all these are evidences that the people are waking up to a realizing sense of the importance of some immediate and positive action for the welfare of California. The many questions of minor importance must be laid aside for those that affect the present prosperity of California. And it is not the great questions alone that are now being presented; there are others, though not so prominent, yet of importance enough to affect the prosperity of thousands, that now present themselves. They spring up before us, all over our State, like the boulders of quartz rock, and to many may appear as valueless, who know them not, or know not the value they contain; but they will be found to contain within them much of the "pure gold," only requiring to be brought to the action of the light of scientific and truthful mind, and there will be found in many of these subjects, exhaustless wealth, whose influence is as boundless as any of those other themes that now engross the public mind, and to which we allude in the opening of this subject.

The particular subjects to which we now allude are those matters that affect the Agricultural districts, and interests which are connected with the thousands of families who have established themselves in our State, and have become its permanent citizens. To these we would call the particular attention of our legislators.

That the Agriculture of California is of vast importance to this State, all must readily admit; and that the great number of people now engaged in it should have a due portion of the attention of legislative thought, will be readily yielded; and we believe that there are the present year, in both houses, those who see the necessity of giving this "right arm of the State" a just portion of regard. At the present moment those engaged in Agricultural pursuits are laboring under great embarrassments; many of them by reason of circumstances over which they had no control; others for want of a just and true conception of the business in which they were engaged, and all for want of a proper co-operation, and concert of action and knowledge of what was most needed to make so grand an enterprise prosperous.

What is needed now by those who have all at stake, is that protection and encouragement from the State, so absolutely necessary to save them from further danger and loss; such laws as shall "protect," such "bounties" as shall encourage. Wild beasts destroy the labors of thousands, and reckless and lawless men destroy much more. Millions of acres of wild lands, besides our vast tule lands, remain uncultivated for want of that encouragement which should be given, and which could be made a source of wealth to our State. Laws relating to enclosures, stray cattle, settlement of lands, security of titles, and many other important themes, to which it is not necessary for us to revert, but which the wisdom of our legislators make them the better judges.

Thousands of our best and most worthy citizens of this State, those who have permanent homes, are now in deep anxiety, pondering upon the future, and they turn to the action of the Legislature for relief from some of the difficulties which surround them. We trust they will not look in vain. Most earnestly would we commend this great interest to the consideration of the legislators of California. We shall from time to time make it our special duty to lay before them, through the columns of our journal, the thoughts and wishes of those who are identified with the Agriculture of our State, and we now particularly desire of each and all to make known their wishes upon the most important matters and we will communicate them.

PROFITABLE SEASON.—The Calaveras Chronicle says that the Filibuster Mining Company, at the close of the season, find that they have cleared \$22,500 out of their claim in the Moquelumne river.

Agriculture vs. Railroads.

We have received from I. C. Woods, Esq., copies of the Chief Engineer's Report of the Pacific and Atlantic Railroad Company—or more directly the San Jose Railroad Company. This Report should be in the hands of all our citizens and should be carefully preserved by all, for it will most materially affect the interests of all.

All "Internal Improvements," railroads, river steamers, sailing vessels, stages, expresses, all means of communication with the interior of a State, all means of bringing the products of the soil from the extremities of a State to the seaport, and of conveying the manufactures and the commercial products of the metropolis to the interior, in return, must ever tend to the general prosperity of the people of that State. It needs no argument from us to prove this, for all the facts of the past—the history of railroads prove it, in almost every instance; and they prove this also, that however much other interests are affected, no interest in the country is so much or so directly affected, and that too prosperously, as that of Agriculture.

The pamphlet before us is full of important data, and is worthy an attentive perusal. The establishment of such a railroad would enhance the value of real estate, call into market thousands of acres of land now waste, increase the products of the soil by an increase of cultivation, and yet at the same time it would increase the price of every article produced. Railroads and all other means of improvement and intercourse tend as surely to a healthy action, as the flowing of the blood in the veins of the body; the centre (the heart) sends the blood coursing through all the system, imparting health and strength—so these means of communication between city and county. We hope no impediment will interfere to interrupt its commencement and speedy completion. We feel confident that tens of thousands of acres of now uncultivated and waste land will be brought into market and made a source of wealth and prosperity to our citizens and to the State. Besides the impetus it will give to labor, it will increase the value of the products of the soil, as well as the soil itself, and no class of our citizens will be more benefitted by the railroad than the farmers of the valleys connected along the entire route.

The Agricultural interest will be benefitted by internal improvements, and we trust our farmers will bear this in mind; and those who may be so fortunate as to have escaped the disasters of the past year, and have means, can have no safer investment than this railroad, nor a way in which a greater return can be had for the amount invested. We believe it will pay a greater per cent. than any railroad in our country.

Commence with the Year.

Those who intend to engage in the cultivation of the soil, most surely should be desirous of making themselves acquainted with the leading features of a business that so materially affects their prosperity.

The CALIFORNIA FARMER will present, from week to week, matters of importance to every cultivator of the State. It will contain the practical results of some of our best farmers, and their suggestions; also, the seasons of planting, the condition and success of crops, with all important matters of interest, abroad and at home.

We trust every one of our subscribers will feel so deep and true an interest in the cause as to prompt them to remember how important it is to Agriculture to aid the publication of a journal devoted to their interests, and we hope no other word need come from us to induce those indebted to us to remit at once, and also to remit for the new year, and to induce their friends to do the same. We wish all to understand that we cannot send our paper, unless we have pay in advance—for this reason, we have reduced the price. We therefore hope our wishes will be complied with at once, and that our friends will commence with the new year.

OUR PAPER ABROAD.—Believing our paper will convey very important intelligence upon local matters and such as will interest those connected with California, we invite those who wish to have our paper forwarded to their friends upon the coast, or in the Atlantic States, to send us six dollars and it will be mailed to each address they shall direct. Messrs. Adams & Co. and Wells, Fargo & Co. will receive subscriptions at any of their offices and forward to us.

Snow.—There is a deep snow lying on the mountains in Sierra county. Several men have been severely frost-bitten, and it is supposed that one man froze to death.

[For the California Farmer.]

Moral Bearings of Agriculture.

MESSRS. EDITORS: Some one of your correspondents, a few weeks since, wrote a short article upon the moral bearings of Agriculture. He seemed to me to have given only an introductory and I have been anxiously looking for him to pursue the subject. But he is so slow in his movements and it is so uncertain whether his design would cover all the ground, I venture, even at the risk of being regarded as an intruder, to express a thought or two upon one branch of his subject.

The whole civilized world acknowledges the "dignity of labor" and accords to the cultivator of the soil a place second in rank to no other. He who cultivates the soil comes so near direct and personal co-operation with Nature's God, that the thought of wrong from him, or an immoral act in his life can scarcely be entertained. And yet I fear that recent developments indicate a want of clear conception of moral right, on the part of some members of the honorable profession of which I am now writing.

The cultivation of grains and grasses for ordinary consumption, the growing of fruit trees for market or fruits for the table, or the culture of flowers, to refine our better nature, each has a proper rank assigned it, and all should be above conflict with that moral law which demands such treatment to the neighbor as would be desired from him. Now we wish to propound a few questions to certain gentlemen of this profession, who we fear have not given some of their recent acts due premeditation.

First. Suppose, gentlemen, (for you will know yourselves without being named,) you had come to this State to live, and were attempting, with limited means, to sustain your family by cultivating a small piece of ground, in nursery; and after some two or three years of toil and privation, you had just matured your first growth sufficiently for the market, and upon their sale, at a fair price, were depending the discharge of indebtedness already incurred for the sustenance of your family, as well as means to procure food for them in the future, and to prosecute your legitimate and honorable business. But just at this moment, a man of your own business, worth his tens of thousands and able from his ample purse and broad acres to flood his own market, comes from a different portion of the State, with "an immense stock" and advertises "the first sale of the season"—"the largest sale of the season,"—"the third semi-monthly sale," &c. &c.; and then and there throws upon the market a large lot of trash, (such as would ruin the credit of any regular nurseryman in a few years,) and sells it at prices at which you cannot afford. Would you think that man morally right?

Second. Is it right for you gentlemen, to send your flaming handbills, your immense, gilded card-boards, and your enticing advertisements all through the country, announcing, "Apples, 50 varieties; Peach, 15; Pear, 20; Cherry, 12; Plum, 6; Grape, 14," thus calling farmers from their homes, 5, 10, or 20 miles distant, to your sale, and then present them with less than a tithe of what you promised them?

Third. Is it right for you to bring trees into auction here, from which you have taken so many roots (for grafting) that you know (if you understand your business) they are ruined, for at least one whole year, and then as you hold them up, under the auctioneer's exciting hammer, declare "they will bear you fruit this very year," when if they live at all it will take them a whole year to recover from the shock received by the loss of their roots?

But we pause for a reply before propounding a few more questions. We do not ask you whether this course is your "lawful right," or whether "it is the way others do," or whether you will continue it;—you are in a business which has to do with moral right,—with the prosperity or adversity of your neighbor. Is it right for you thus to proceed, in order to "close out" (with a few extra thousands) "and go home in the spring"? Is it MORALLY RIGHT?

Yours very truly,

GOLDEN RULE.

Sacramento, Jan., 1855.

NOTE.—The above communication we have received from the highest authority; it comes from our sister city, and treats upon a subject of great moment to all who are engaged in the legitimate business of nurserymen. We are very glad to receive the communication from such a source. We have often heard severe complaints of these trash sales, from not only those engaged in the business, but from those who come from a distance as purchasers, and many who buy have after reflection confessed the folly of their pur-

chases. We are aware that all such sales very seriously injure all regular trade. It seriously injures the purchasers also, for no purchaser ever commenced buying who did not increase his purchases beyond his intentions, and buy much that he did not intend to and did not need—they will always buy lots for the sake of getting one or two of a variety they desire, and such lots are generally intentionally arranged of two or three good with three times the number of worthless; and thus hundreds of lots are forced off, involving the purchaser in the cost of the trees and the cost of setting them out, the majority of which are not worth the setting, and can never result in anything but loss and disappointment. Such purchasers will have their own way and must learn by experience. In our intercourse with such we have ever found *they did not wish any advice, for "they always know best,"* and they never found they were mistaken until it was too late to rectify the error.

We do not see as there is any way to rectify the difficulty complained of. We have "licensed auctioneers," they want business and will sell all that is given to sell, for they want their commissions—and we don't blame them. And the seller—well, we cannot say we blame him either, for if he has got a "lot of trash on hand, that nobody will buy at private sale," and he is pushed for money, the man should sell it at auction! and it is to be expected that the poorer it is the more it should be trumpeted. "Good articles praise themselves." We think a great portion of the blame that is attached to such sales and the injury that arises from them, is to be laid directly to the account of those who attend and countenance such sales, for as the old adage has it,—"Where the carcass is, there will the crows be," and it generally turns out that all such sales are mere skeletons or carcasses.

We wish our remarks to be very clearly understood. We do not mean to say that all public sales are sales of trash, for there are executors' sales, sales made for the true and lawful purpose of closing business, shippers' sales, and the like; but we allude to the kind of sales that are mere clap-nets, made by parties who neither know or can describe what they are selling, nor do they know or can describe its name or character—sales made expressly to get rid of trash. It is such sales, sales of the same character as those to which our correspondent alludes, that are an injury to a whole country, and they will always have an injurious result, both pecuniarily and morally, and we hope will be looked upon with the contempt they deserve; this is the most effectual remedy.

We hope to hear from our friend again.—En.

[For the California Farmer.]

Regulations with regard to Fences.

COLUSA Co. Dec. 23, 1854.

Messrs. Editors: Some months ago I saw a correspondence in your paper, proposing to shut up the stock during certain seasons of the year, or at least to give each county a right to make its own regulations with regard to fences—but I have heard nothing of the matter since.

I think the following extract from Allen's "American Agriculture" to be worthy of consideration: "In many countries which have a dense population and little timber, as in China and other parts of Asia, Italy, France, Belgium, Holland, and all other parts of Europe, fences are seldom seen. In certain sections of the older settled portions of the New England States also, a similar arrangement prevails. This is especially the case over the wide interval of bottom land which skirts the Connecticut river, where periodical inundations would annually sweep them away. Wherever this system is adopted, cultivators proceed without obstruction, and a great saving is made, not only in their original cost, but in the interest, repairs, and renewal; all the land is available for crops; no weeds or bushes are permitted to send their annoying roots, or scatter their seed over the ground; no safe border is made for mice, rats or other vermin; the trouble and expense of keeping up bars and gates are avoided; and a free course is allowed by the conceded roads or by-paths, for the removal of crops and carrying on manures, and the necessary passing to and fro in their cultivation. These are important advantages, which it would be well for every community to consider, and secure to the full extent of their circumstances. The inconveniences of this arrangement are trifling. When cattle or sheep are pastured in Europe, where fences are wanting, they are placed under the guidance of a shepherd, who with the aid of a dog, will keep a large herd of cattle in perfect subjection within the proper limits.

"In the unfenced parts of the Connecticut Val-

ley, (where extensive legislative powers reside in separate towns, which enables each to adopt such regulations as best comport with their own interests,) no animals are permitted to go on to the field until autumn, and the crops are required to be removed at a designated time, when each occupant is at liberty to turn on to the common premises, a number of cattle proportionate to his standing forage, which is accurately ascertained by a supervisory board."

Would not such a plan suit portions of this State? I hope the legislature will consider the question. Such a law would do no harm; if the people did not want it, they would reject it.

Yours, &c., W. S. GREEN.

NOTE.—The suggestion of our correspondent is worthy of consideration, and we feel assured our legislature will take all such matters into consideration.—En.

Bounty for Destroying Wild Animals.

We call attention to the valuable communication of J. M. Horner, Esq., one of our earliest and most extensive cultivators. The name of Horner, is identified with the early agriculture of the State, and to him and to E. L. Beard, Esq., the firm of Beard & Horner, were accorded the credit and honor of being the largest and most influential cultivators in California; and we may say that the number of acres they have cultivated and the crops they have raised, have been the largest ever produced by any one firm in the world.

We are glad to receive communications from such sources, for it is an assurance that an interest of the right kind is being felt for agriculture. We trust the appeal to our legislators will be cheerfully met, and not only this subject, but every subject that affects this great interest will receive the prompt attention of our Legislature. We also trust that other large cultivators, those who have interests at stake, will communicate with us and thus present their views, and we will most cheerfully lay them before the people, for in this way great good to all will be accomplished.

Populousness of China.

EVERYTHING relating to China is of moment, and its history is of great importance to us. Let us learn the great features of that mighty and populous nation, and we shall know the character of those that are to be affected and moulded by our institutions. Our institutions and our laws must be kept inviolate, and while we teach obedience to them, we must so exhibit them to this and to every nation, as to win a reverence for them.

The tens of thousands, and we may say the hundreds of thousands of the Chinese, that will flock to our country may be influenced for good and become a benefit to the nation, if we will but throw a proper safeguard around our great "bulwark of liberty," our constitution, and the laws necessary to protect and preserve it.

We never need fear for our country so long as we are true to it ourselves; and the opening of the vast territories of China and Japan will prove a blessing to us, if we will only seek for the good that is offered by this opening. The agricultural knowledge and wealth, alone, is beyond price, and this should interest us all.

We take the following article upon the populousness of China from the N. Y. Tribune:

An exaggerated estimate of the density of population in China has got possession of the public mind. This comes from adopting without sufficient examination the census of 1812, which makes the population 362,000,000. According to this same census the province of Kiang-su has, on an area of 44,500 square miles, a population of 38,000,000, wanting a fraction—that is, 850 and one-third to a square mile. The same density of population would give to Illinois the enormous number of 44,000,000, and to France 176,000,000. Virginia, which is certainly not surpassed in fertility by China, taken as a whole, would, at the same rate, have 55,000,000! Can any one believe in such astonishing populousness? From A. D. 1393 to the present time there are more than a dozen censuses referred to in Chinese authorities, the lowest of which makes the population only 21,000,000, while the highest goes up to 362,000,000. Why disregard utterly the lowest and receive undoubtingly the highest? The truth is, none of the censuses can be depended on—for, when compared together, they are so inconsistent with each other, and so at war with what we know to be the condition and capabilities of the Empire, that we are forced to reject them all. Considerable portions of China are known to be mountainous and unproductive. Even the census of 1812 makes the population of one of the largest of the eighteen provinces only fifty-one to the square mile, while the aggregate of the nine Eastern provinces, with an area of about 500,000 square miles, is made to average 458 to the square mile. Now, if we take an area of the same size in the heart of Europe, selecting its most fertile and populous countries—France, Belgium, Holland,

Hanover, Austria, Lombardy—we find the population of the whole is not quite 78,000,000. Yet the population of the same area in China has, according to the census 230,000,000, making the population three times as dense, as in the very garden of Europe. In regard to Chinese agriculture, Barrow, one of the best authorities on China, who traveled in the country before the great agricultural improvements, and consequent increase of population in Europe, says that, "as horticulturists, they may perhaps be allowed a considerable share of merit, but on the great scale of agriculture they are certainly not to be mentioned with many European nations." He says, further, that the careful cultivation is mostly in the vicinity of cities and towns, and that much of the open country is infested with robbers, thinly inhabited and poorly cultivated. The testimony of Davis is to the same effect, and so is that of Williams. The land, then, cannot feed and clothe the vast population of the books. Evidently the census must be rejected, and we are left to form our estimate of the populousness of the country as we do that of other countries where no trustworthy census has ever been taken. Malte Brun estimates the population at 150,000,000, and that is probably high enough.

Chinese authority is not of much value. It is often of a piece with a statement gravely made by one of their greatest statesmen, that the closing of the Chinese ports "would stop the supply of rhubarb, and thus cause the English and other outside barbarians to die of constipation!"

The population of Chinese cities is over-rated. Canton, for instance, is put down in most of the books at a million and a-half, and never lower than a million. Yet the number probably does not exceed half a million. One may walk round the walls (which enclose two-thirds or more of the inhabitants) in less than two hours. The number of people crowded into a given area in China is not so large as in the cities of Europe and America—for, though the streets are much narrower, the houses are much lower, seldom more than a story and a half, and without cellars. In these low houses (most of which are shops with lofts overhead for families) it is impossible to stow away a quarter of the number often found, from cellar to garret, in the lofty houses of our cities.

AGRICULTURE OF THE STATE.—In relation to agriculture, Governor Bigler's message contains the following:

The products of the year 1854 are generally believed to be amply sufficient for the supply of the home market. I have no data before me, upon which to base an estimate of the amount of corn and oats produced. Of wheat not less than three millions of bushels have been raised, and more than four million of bushels of barley. Of potatoes, more than will suffice for home consumption have been produced; such is also the case as regards vegetables of all kinds, the yield during the year having been unusually large.

In the southern counties, the grape and pear crops have been exceedingly abundant, and other fruits extensively and profitably cultivated. I am also assured that extensive preparations are there being made for the manufacture of wine of various qualities and flavor.

In fifteen counties, being less than one half of the State, the beef cattle number three hundred and twenty thousand, four hundred and seven, (320,407.)

The number which arrived within the last year by the overland route, is as follows:

Through Noble's Pass, twenty-four thousand and twenty, (24,020); Beckwith's, ten thousand one hundred and fifty-one, (10,151); Gila route, nine thousand and seventy-five, (9,075); Sobera Pass, five thousand one hundred and six, (5,106); Carson River route, twelve thousand nine hundred and ten, (12,910); whole number, sixty-one thousand, four hundred and sixty-two, (61,462).

ORLEANS HOTEL, SACRAMENTO.—This large and fine Hotel at the capital is now full to overflowing. The proprietors, Messrs. Hardenburg & Corse, are ever attentive to the wants of their patrons, and by the appearance of pleasure in those we meet there, there can be no doubt they are "at home," and fare well too. The restaurant connected with the Hotel is A No. 1; a poor appetite will surely be tempted to eat, and a good one is sure to be satisfied! A spacious reading room, with papers from all sections of the State, affords interest to the patrons of this hotel. A large, pleasant, and handsome billiard room attached, affords recreation. Birch's famous and successful line of coaches makes its principal office at this Hotel, affording great convenience to the public. The "Orleans" is the grand centre, we may say the "exchange," where "men most do congregate," and such hotels, conducted with the energy of the Orleans under its present proprietors, are of public benefit.

J. O. DUNCAN.—Every generous mind will rejoice to see clouds break away from the horizon of a fellow being's existence, and to rejoice in the prosperity of his brother man. Men should ever strive to build up—not pull down—and when they thus act, confidence will be restored and prosperity shine upon our land. We do rejoice to know that "Duncan's Museum" is again to be opened, and its enterprising proprietor on the way to prosperity and again in good health.

To the Readers of the California Farmer.

THE annexed communication, with the names attached, has been kindly tendered to us. We would only ask of our friends to read and judge for themselves, as to the importance of the subject named therein.

We are deeply grateful for every testimonial of favor and encouragement in our labors, and we shall speak our mind more fully with the next number, in our "New Year's" wish to them.

We shall also add other names which were kindly tendered, and shall be heartily grateful for every approving word and token from every source.

TO THE FRIENDS OF

Agriculture, Horticulture, and Floriculture.

"KNOWLEDGE is power," is a truth nowhere more fully illustrated than in the field of your enterprise; and on no part of that field more important than in our State. In other States and different climates, the experience of ages is condensed into books; and the son inherits the practical knowledge of his father. Their books are their general guide, and their periodicals contain the result of their continued improvements. But with us the case is different. Here we have a climate to which the instructions of no book are adapted, a soil peculiarly unlike any to the development of which science has been applied, and almost an entire want of experience in any department. Here no father has learned more than a few of the first principles of agriculture, much less has he had time to transmit even the moiety he has learned to a son. Our first generation of agriculturists is yet in its merest youth.

If no books adapted to our circumstances are yet written, and no man has sufficient experience to write one; and if the periodicals published elsewhere entirely fail to meet our wants, we are shut up to a single choice between two courses—we must either graze our way in the dark, feeling and experimenting each for himself, for all those facts and principles which are peculiar to our soil, climate and productions, (and this will reach nearly the whole range of our operations) thus advancing by a process so slow as to be entirely unsatisfactory to every one; or we must sustain a periodical, which shall be a general reservoir for the reception and diffusion of the experience of all—an instrument whose columns shall be a constant reflector of all the light which our thousand intelligent cultivators of the soil can elicit from their "watch and toil." Which shall be our choice, cannot admit of a question.

Such a periodical we find in our midst. The CALIFORNIA FARMER we believe capable of meeting our every want. The Messrs. Warren have evinced an energy in, and devotion to, the work which is worthy of all praise, and is a sufficient guaranty for the future. Shall the FARMER receive that countenance and encouragement it deserves? Will the growers of grain and vegetables, fruits and flowers, in this State, treat themselves to a weekly repast in the perusal of its columns, (the annual subscription price bears no comparison with the value of what you get,) and make an energetic effort to induce their neighbors to do the same? But even this will not be enough. No one man, nor company of men, from any one department of knowledge, or section of the country, can make the columns of the FARMER what they should be,—what they must be to answer their wants. It must combine the experience of every class, and represent peculiar characteristics of every part of the State. We ask, therefore, the attention of those whom we address to the furnishing of materials for the columns, as well as subscription to the "material aid" of the paper.

We say thus much because we deem it due to the present proprietors of the paper, and because we feel the deepest interest in the cause it advocates. We have no pecuniary interest in the CALIFORNIA FARMER, and yet we most heartily recommend it to the pecuniary, the statistical and the literary support of all who have at heart the real well being of our State—the development of her agricultural resources.

[From the Telegraph.]

WRITTEN FOR A YOUNG LADY.

O tell me not of faithful hearts,
That ever bent so kind and true,
The constant bliss that love imparts,
The buoyant hopes forever new.
O tell me not of days gone by,
When all my thoughts were not my own,
But let their memory ever fly,
As all my happiness has flown.
Speak not the name that once to me,
Was dearer than all other names,
For now it only grief can be,
And thus my injured heart inflames.
O tell me then, where is the balm,
To soothe this troubled heart of mine,
The peaceful fountain which can calm,
And quell these thoughts that would repine.
'Tis not among the mortal things
That dazzle in the giddy dance,
Nor can the dulcet strains of song,
The joys of one short hour enhance.
'Tis not where fabled gayest plumes,
Adorn the beautiful and fair,
For even there the heart assumes
The happiness it does not wear.
But reason is the shield of might,
That can these burning thoughts subdue,
Reason the never failing light,
To work the way we should pursue.
Then let my thoughts be firmly placed,
On useful and substantial things,
Till every passion is effaced,
That poison to my bosom brings.

"BIMELECH," said Mr. Slow, solemnly extending his arm like a pump handle, "you are now old enough to understand the words of wisdom—being eleven and a half, in other words half past eleven—and I wish to advise you never to interfere with nobody, nor to interfere with nothing that don't belong to you. Shut yourself up like a good eagle in your pocket book, and don't get spent in too much concerns for others. If people are inclined to go to ruin, let 'em go if they're a mind to—what business is it of your'n? Let 'em fight it out. Why should you risk your precious head in trying to save theirs? When you trade allers look to your side of the bargain and leave the one you are trading with to look after his. If he gets bit 'taint your fault. Take keer of number one is scripiter, the real golden rule, and he that acts unto it can never die poor. Never have anything to do with sympathy. Sympathy doesn't pay. 'Taint worth one per cent. But if you must be sympathetic because its popular, be sure before you begin that it ain't agoin to cost you anything, and then praps 'twill do to invest in it. Nobody never lost anything by not being generous, so lay by for yourself what folks expect you to give to poor people and other vagabonds, and when you are old 'twill not depart from you. You will have something to count on to make you happy, pay your doctor's bills, confound a hospital, and buy a grave stone full of exalted virtues. Be careful, Bimelech; allers look arter the main chance and beware of sympathy."—Boston Post.

AFTER A WEDDING.—"I like to tek weddings," said Mrs. Partington, as she came back from a neighboring church, where one had been celebrated, and hung up her shawl, and replaced the black bonnet in the long-preserved band-box. "I like to see young people come together with the promise to love, cherish and nourish each other. But it is a solemn thing, is matrimony—a very solemn thing—where the pasture comes into the chancery, with a surplus on and goes through with the ceremony of making 'om man and wife. I declare I shall never forget how I felt when I had the nuptial ring put upon my finger, when Paul said, 'with my goods I thee endow.' He kept a dry-goods store then, and I thought he was going to give me all there was in it. I was young and simple, and did not know till arterwards that it only meant one calico gown in a year. It is a lovely sight to see the young people plighting their troth, and coming up to consume their vows."

AN HONEST PRAYER.—A chaplain of the Indiana Legislature, a man with a right appreciation of what is meek and meekly, whether in high station or low, thus prayed at a recent opening session of his charge: "And, O Lord have mercy on our legislators. Be with them and bless them, even if they know thee not. Spare their lives and teach them to glorify thy name. Hasten them to their homes where they may direct their attention to good works and general usefulness among their families and neighbors. May the people resolve to keep them there, and in future elect men of sound morals and temperate habits, so that good may hereafter result from legislation. Save the good people of the State from the disgrace which must follow if the same should come here to make laws. Hear us, Lord, and grant our prayer.—Amen.

We had rather do anything than acknowledge the merit of another, if we can help it. We cannot bear a superior or an equal. Hence ridicule is sure to prevail over truth, for the malice of mankind, thrown into the scale, gives the casting weight.—Hazlitt.

A DUTCHMAN related a misfortune in the following manner: "Hans, he bit himself with a rattlesnake, and was sick into his bed for six weeks in the month of August, and his cry was 'vater! vater!' and he could eat nothing till he could stand upon his elbow and eat a little tea."

HORTICULTURAL, &c.

GARDEN SEEDS.

Growth of 1854.

FRESH and GENUINE, per "Express."—Just received and constantly arriving—
500 lbs. Yellow Onion Seed,
100 " Red " "

Branch store, P. street, cor. Third.
17-1

Smith's Pomological Gardens,
Banks of the American River, two and a half miles from Sacramento City.
THE proprietor of the Gardens would respectfully invite all who are engaged in "Nursery and Gardening" to visit his grounds. He will be happy to show to them, ready for sale, this fall, a fine collection of
Fruit Trees, Ornamental Trees, Grape Vines, Shrubs, Flowering Plants, and Green House Plants,
as can be found in all the great Sacramento Valley.
The proprietor would call particular attention to his collection of Peaches, believing that the specimens exhibited by him in Sacramento and San Francisco markets have been unsurpassed in size, quality, or flavor.
The collections of Pear Trees will equal any in the country; these, with all the new varieties, will be offered this autumn.
The undersigned believes his collection worthy a visit to his grounds of all who are interested in Gardening and Orcharding. The subscribers will offer this autumn Five Tons Vegetable Garden Seeds, that have been raised upon his own grounds. These seeds have been grown with care and will be sold at wholesale for the present, at the Gardens.
Persons in want are invited to call upon us, and we will make reasonable terms.
Fruit, Bouquets, &c., will always be furnished at short notice at the Gardens.
The proprietor returns his thanks for the liberal patronage of the past, and hopes for a continuance of such favors.
A. P. SMITH, Proprietor.
10

To Fruit Growers in California.
HOVEY & CO., Seed and Nurserymen, No. 7 Merchants Row, Boston, Mass., invite the attention of Cultivators of Fruit in California, to their very extensive collection of Fruit Trees of all kinds, particularly of Peaches; embracing every variety worthy of cultivation, to be obtained either in this country or in Europe. Large quantities will be offered at prices to suit the times and circumstances of the purchaser.
GEO. W. LE VALLEY,
P. S. We can furnish Scions of the Fruit Trees, of reliable varieties, of more than fifty kinds, in lots to suit orders. 20

MISCELLANEOUS.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!

Harris for Vance's new Daguerrean Gallery! Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE'S who wishes PERFECT LIKENESSES? Because he has now the best arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.
2d. Because he has the largest light in the world, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently-arranged lights.
3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.
4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.
5th. Because he has of late, after much experimenting in thought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.
All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.
[?] Prices as reasonable, and work superior to any in the city.
Don't forget the place.
New Building corner of Sacramento and Montgomery streets; entrance on Montgomery, next door to Austin's. 17

COLLINS & CO.,
(PREMIUM HAT STORE.)
157 Commercial street, San Francisco.

THE undersigned would take this opportunity to return their thanks to their friends and the public generally for the very liberal share of patronage which they have received. They take pleasure in now announcing that they are determined that no one shall surpass them in the beauty, or finish, or quality of a Hat; that no gent shall wear a finer Hat than can be found at COLLINS & Co.'s Warehouse.
The proprietors of this establishment exert themselves to manufacture to order the latest styles and most approved patterns. The stock of HATS and CAPS, of every kind, now on hand, cannot be surpassed in this city.
17 COLLINS & CO.

ADAMS & CO.'S

CALIFORNIA AND ATLANTIC EXPRESS.
OUR Atlantic States Express will leave San Francisco on the 1st and 15th of each month, by the Pacific Mail Steamship Company's Steamers, and the Treasure crosses the Isthmus under the charge of a strong guard. The Treasure forwarded by us to the Philadelphia Mint, is always deposited there previous to that sent by any other conveyance. Our rates are lower than those offered by any other House, with the same security.
We also forward Treasure on the 1st and 15th of every month to ENGLAND, by the P. M. S. S. Co.'s steamers to Panama, and from Aspinwall by the West India Mail steamers.
We draw Bills of Exchange on any of our Houses in the following places:
Boston, New York, Philadelphia,
Baltimore, Washington, St. Louis,
Chincinnati, Pittsburg, Louisville,
New Orleans, London, &c., &c.
Also, payable at any of the following Banks:
Mechanics and Farmers' Bank..... Albany
Alex. Mitchell, Fire and Marine Insurance Co..... Milwaukee
Commercial Bank of State of Ohio..... Cleveland

The Pacific Loan and Security Bank.
MONEY will be received on deposit in sums of Ten Dollars and upwards, for which Certificates of Deposit will be issued, bearing date the first or fifteenth of the month, payable on demand, or at specified times, at the option of the depositors. If payable on demand, they will be without interest, unless the money remains on deposit one month, in which case they will draw interest of one per cent. per month, but no interest for fractional parts of a month. If deposited for specified times, certificates will be issued bearing one and a half per cent. per month interest for such time. Interest will cease at maturity; so that if depositors desire to continue their deposits after their certificates fall due, they must be presented for payment and renewal; otherwise interest ceases.
The money deposited is used only in loans guaranteed by us and in all cases amply secured by Mortgages, State, County and City Stocks, Merchandise, and other safe collateral, taken in the name of "MARRIOTT & WHEELER, Trustees for Depositors with Pacific Loan and Security Bank."
A register is kept at all times open to depositors for inspection, in which appear their names, the number of certificates of deposit issued, and the securities upon which the money deposited has been placed. Depositors thus not only have the personal security offered by all banks, but in addition have the benefit of the securities taken and guaranteed by us, and the facility of knowing what disposition has been made of their deposit.
FREDERICK MARRIOTT,
ALFRED WHEELER,
No. 98 Merchant street, San Francisco. 19

THEODORE PAYNE. SQUIRE T. DEWEY,
THEODORE PAYNE & CO.,
REAL ESTATE AND STOCK AUCTIONEERS.
OFFICE AND SALES-ROOM CORNER CALIFORNIA AND MONTGOMERY STREETS.

THEODORE PAYNE AUCTIONEER.
Messrs. PAYNE & CO. respectfully inform the public that they have established themselves as above, for the purpose of transacting the
Real Estate business, in all its branches,
For the conducting of which they esteem themselves peculiarly qualified, by having given it their special attention for over two years past, and made themselves familiar with all questions affecting title, &c., &c.
They will give their especial attention to the public sales of estate, by Administrators, Assignees, Receivers, Mortgagees, &c., carefully complying with the terms of law.
A Register for Property, at either public or private sale always open at their office 20 6m

To Farmers and Gardeners.

WICKERSHAM'S
Celebrated Patent Wrought Iron Farm Fence.
FOR sale—Wickersham's far-famed Patent Wrought Iron Fence, for enclosing and subdividing lands. It can be furnished at but little above the cost of ditching, and is much more preferable, because it does not require a heavy annual expenditure to keep it in repair; it cannot be destroyed by the fire which as constantly sweep over prairie and mountain, requiring wooden fences to be renewed, nor carried away by flood from the overflow of the low lands; it is free from decay, which places it beyond comparison with wood or any other material now in use; it is valued the most highly where it has been tried the most thoroughly; it is light and graceful, yet strong, and cannot be broken down by horses or cattle. The testimony which has been given by those who have used it in the Atlantic States, is sufficient to recommend it to the farming public of California.
A complete model is now an exhibition at the State Agricultural Fair, at Musical Hall, Bush street, near Montgomery, where a full description may be seen, with the testimony of those who have erected it in the Atlantic States.
Farmers are invited to examine this fence, as there has never been any of the same kind in this country previous to the arrival of this lot, and from its peculiar construction there is not the least doubt but that it will be extensively used in this State.
J. T. HESTON has now on hand, and will be constantly receiving supplies from the manufacturer, which will enable him to fill orders at almost any amount.
For particulars address—
J. T. HESTON,
At Warren's Agricultural Rooms;
Or, P. COGGINS, cor. Sacramento and Pike streets
October 8, 1854. 15

Artisan Well Boring.

WE would respectfully inform the public that we are fully prepared to take contracts in the above operations in a manner to guarantee satisfaction or no charge will be made.
SMITH & VAN DYKE having associated themselves with an old and experienced operator from the East, who challenges the world to compete with him in all the branches connected with the above business, are fully confident to guarantee success in all contracts that we may undertake, and warrant the work for one year. We have also implements for boring through stone to any depth, and all work done on the most reasonable terms.
For the satisfaction of those wanting anything in the above line, we would refer to I. C. Woods, of Adams & Co.'s Express; J. W. Osborn, Napa City; Rufus S. Eells, of Hawthorn & Eells; M. A. Sullivan, New Custom House; Wight & Co., 137 Jackson street, &c., &c.
We can do work cheaper than any other operators, for two reasons:
1st. Because we are prepared to work on a most extensive scale
2d. Because we understand all branches connected with the above business, and are, therefore, able to work with certainty.
All orders left at the West Clear House will be promptly attended to.
SMITH & VAN DYKE, Contractors.
N. B.—We also refer to Warren & Son, publishers of the "California Farmer," who have seen and known the character of the work done. 7

COTTON IN CALIFORNIA.

WE place before our readers the following letter from Col. P. B. READING, of Cottonwood, upon the culture of cotton. It has appeared in some of our journals, and was addressed to Judge Heydenfeldt. The arguments are forcible and lucid and cannot but carry conviction to the mind of the reader, of the ultimate success of this great staple production of this State.

Col. Reading is so well and favorably known, and his influence in favor of everything that tends to advance the interests of the State, so well understood, that his statements will carry weight wherever and whenever presented. We trust they will not only turn the attention of the cultivators of the soil to the importance of the subject treated, but also cause our legislators to consider how and in what manner they can so legislate as to give encouragement to, and assist forward to a speedy introduction of, this and other new and important products into the State. We trust the public will hear often from Col. R. and other public spirited men, upon such subjects as may be presented from time to time.

We also append a letter from Judge Heydenfeldt, to the editors of the Sacramento Union, in which Judge H. refers to the "sample of cotton which has been deposited in the office of the Secretary of the State," and to this we also refer with pleasure.

BENICIA, January 10th, 1855.

Messrs. Editor: I enclose you for publication a letter from Col. P. B. Reading, containing an account of his experiments in raising cotton. The sample of the raw material which accompanied the letter, I have, through the permission of General Deuver, deposited in the office of the Secretary of State, for the inspection of those who are interested in the progress of our agriculture.

I will add, for the information of those unacquainted with cotton planting, that one hand, besides raising an annual supply of provisions, can easily cultivate ten acres in cotton. This would give a crop of four thousand pounds, which at the average price of ten cents, would pay \$400 to the hand, which is above the average of the uplands of the South. In the lower latitudes of our State, I have no doubt that this production would be nearly doubled. Considering how far north this experiment was made, its success is surprising, and I think the results of the future, will stamp Col. Reading as one of the truest benefactors.

Respectfully,

S. HEYDENFELDT.

COTTONWOOD, Shasta County, Dec. 1st, 1854.

DEAR SIR: Aware of the interest you take in the development of the agricultural resources of our State, I embrace the opportunity of presenting you with a specimen of cotton raised by me on my ranch in the Upper Sacramento Valley, Shasta county, lat. 40, 22, 23. It is the product of the common black seed of Mississippi. I have

cultivated the plant successfully for the past three years. The two preceding crops were irrigated, the last was not, and I have found but little difference in favor of the former.

I planted in the alluvial soil of the Sacramento River, generally about the 10th of April. From the 1st to the 15th of August, the bolls commenced opening, and continued until after the frost.

On examining the staple, you will find it in texture finer and more silky than the upland cotton of Mississippi and Alabama, equally as strong, but somewhat shorter. It should be taken into consideration, however, that the same kind of seed has been cultivated on the same soil for three successive years. This, you are aware, tends to deteriorate the plant. Cotton planters prefer to change the seed every second year.

From my experience in three years cultivation, the plant will, I believe, under ordinary culture, produce about 400 lbs. of clean or ginned cotton to the acre, which is equal to the uplands of the Southern Atlantic States.

You will bear in mind the latitude of my ranch, being nearly within one and a half degrees of the Oregon line.

I am, very respectfully,

Your obedient servant,

P. B. READING.

To Hon. Solomon Heydenfeldt.

FATTENING ANIMALS.

There are certain principles which apply to the feeding of all animals, which we will briefly notice.

1. The breed is of great importance. A well bred animal not only affords less waste, but has the meat in the right places, the fiber is tender and juicy, and the fat is put on just where it is wanted. Compare the hind leg of a full-blooded Durham ox, and a common one. The bone at the base of the tail extends much further in the former, affording more room for flesh, and the thigh swells out of convex or circular shape; while in the common ox it falls in, dishing and hollow. Now the "round" is the most valuable cut, and is only found in perfection in high-bred stock. The same is the case over the whole body. So well do eastern butchers understand this that their prices are regulated by the breed, even where two animals are equally fat. They know that in a Durham or Hereford ox, not only will there be less offal in proportion to weight, but the greatest quantity of meat will be where it brings the highest price when retailed, and will be of a richer flavor, and more tender fiber. The same is the case with hogs. A large hog may chance to make more meat on a given quantity of food than a small one, but the meat of the first will be coarse and tasteless compared with the other; and in the east, flavor and tenderness, greatly regulate prices. Consequently, moderate sized, short-legged, small-headed hogs, always, in the long run, beat large breeds out of favor. In preparing for a market, "fashion and taste" must be as much considered by the farmer as by the tailor. This one fact is at present revolutionizing the English breed of sheep. The aristocracy always paid high for small Scotch and Welsh mutton; but the great consumers, the mechanics, preferred large fat joints. The taste is now changed. In Manchester, and other such cities, these large joints have become unsaleable; and all the efforts of the breeder are now turned towards small breeds maturing early, with comparatively little fat. According to late writers, the large Leicester and Cotswolds are going quite out of fashion. When we give \$3,000 for a Durham bull, it is not that his progeny are "intrinsically" more valuable to that amount, but the increased value and the fashion together, make up the difference. And it is thus, that while Durhams and Herefords are preferred for ships and packing, Devons are high in repute for private families. The joints are smaller, but the meat has a peculiar richness, probably found in no other kind of stock; and the proportionate waste is said to be less than any other breed. Thus in the London market, the Scotch Kyloes, and then the Devons, (the former even smaller than the latter) bring the highest price, because preferred by the aristocracy. So in Dublin, spayed heifers are sought for. But the breed also regulates the profit. There is nothing more certain than that one kind of animal will fatten to a given point on much less food than another, and as fattening our stock is only another mode of selling our grain and grass, those animals are to be preferred which come to maturity soonest, and fatten on the least food. The difference in hogs is very great and important. While some breeds must be fed two, or even three winters, others are full grown and fattened, at ten months old; and the difference in profit is enormous. We cannot go into particulars, but the following rules may be considered as applying to all: An animal may be expected to fatten

easily when it has fine bone, and fine soft elastic skin, with thin or silky hair; the head and legs short, the "barrel" large, but chest and lungs small; and when it is quiet, sleepy, and easy in temper. An unquiet, restless, quick-tempered animal, is generally a bad feeder, and unprofitable.

2. Much depends in fattening on outward and mechanical management. Fat is carbon, or the coal which supplies the body with heat. If we are exposed to cold, it is burnt up in our lungs, as fast as it is deposited by the blood; but if we are kept warm, by shelter or clothing, it is deposited throughout the body, as a supply on hand when needed. Warm stables and pens are a great assistance in fattening, and should never be neglected. So also quiet and peacefulness are important. Every excited action consumes some part of the body which has to be supplied by the food, and detracts from the fat. In the climate of Michigan, warm stables, regular feeding at fixed hours, and kind treatment, with perfect cleanliness, save many a bushel of grain. Animals fed at irregular times are always uneasy and fretting.

3. Ground and cooked food, fatten much more profitably than raw food. Mr. Ellsworth found that hogs made as much flesh on one pound of corn ground and boiled to mush, as on two pounds raw unground corn; though the first did not fatten quite as rapidly, as they could not consume as much food in the twenty-four hours. By grinding and smoking, ten hogs will each gain 100 lbs. in weight, on the same food that five would do if it were raw.

4. A change of food helps in fattening. Thus an ox fed entirely on corn and hay, will not fatten as fast, or well, as one which has roots, pumpkins, ground oats or buckwheat, &c., fed to it at regular periods. The latter may contain intrinsically less nourishing matter than the corn, but the change produces some unknown effect on the stomach and system, that adds to the capability of depositing fat. The best feeders change the food very frequently, and find that they make a decided profit by so doing. Salt should be given with every meal to cattle—say an ounce a day. It preserves the appetite and prevents torpor of the liver to which all fattening animals are subject. This torpor, or disease, is to a certain extent conducive to fat; but carried too far, the animal sinks under it.

5. In cattle the skin should be particularly attended to. A fat animal is in an unnatural state and consequently easily subject to disease. Taking no exercise, it has not its usual power of throwing off poisons out of the system; and if the skin is foul, the whole labor is thrown on the kidneys. It is found by experience that oxen, regularly enried and cleaned daily, fatten better and faster than when left to themselves; and if the legs are pasted with dung, as is too often the case, it seriously injures the animal.

6. Too much rich food is injurious. The stomach can only assimilate a certain quantity at once. Thus an ox will prosper better on 30 lbs. of corn and 30 lbs of cob ground together, daily, than on 40 lbs. of ground corn. These mixtures are also valuable and saving of cost for hogs when first put in the pen. If an animal loses its appetite, the food should at once be changed, and if possible, roots, pumpkins, or steamed hay, may be given.

7. Oxen will fatten better if the hay or stalks are cut for them, but care must be taken not to cut too short. An inch in length is about the right size for oxen, and half or three-quarters of an inch for horses.—*Farmer's Com.*

AGRICULTURAL IMPLEMENTS.

JOHN RAYNOLDS, in a communication to the Concord Farmer's Club, says—Agriculture, being the mother of the arts, and the chief reliance of civilized man for the means of subsistence, and its operations having been, in a great degree, dependent upon the application of muscular strength, it has naturally followed that man's inventive genius has been more or less engaged, during the last half century, in the improvement of machinery, and all the implements of farm husbandry.

In our country this spirit of improvement, this constant striving for something better, has perhaps been more apparent than in any other part of the world, and has been attended with better and happier results. One of the evidences of this is, that during the last year one hundred and fourteen patents have been granted for agricultural implements, twenty-seven of which were for harvesters, power reapers, mowers, &c.

Agricultural organizations and cattle shows, serve to awaken the attention of farmers to the necessity of employing all the aids which mechanical skill and invention can supply, and thereby increase the demand for that skill; and every aid which the latter can contribute to the success or prosperity of the farmer, is so much contributed to its own.

I believe it is now generally conceded, by most good farmers, that horse power and labor-saving machines may be introduced with advantage and profit. The farmer and agricultural implement maker are mutually bound together by the strongest ties of interest, and the same stimulus which promotes the advancement of the one, operates equally to the advantage of the other. It is this stimulus which has brought to so high a state of perfection the various kinds of machinery and implements now employed on the farm.

The plow is the most important implement used on the farm, and great improvements have been made in this article within a few years, especially in the draft, and in its adaptation to subsoiling. The double, or sod and subsoil plow, as it is called, I consider one of the best implements now in use, and I think that my farmer who has witnessed its operation, cannot but be convinced of its great utility and importance.

Another indispensable implement upon the farm, and one of great utility, is the harrow. This naturally follows the plow, and perhaps ranks the second in importance. There are many forms of this implement. Having occasion to purchase one recently for my own use, I have examined somewhat carefully their various merits, and have come to the conclusion that there are none in use better than the square and improved hinge harrows.

The roller I consider a very valuable article, especially on light soil. Among the advantages to be derived from its use, are, that on sowing down to grass, it smoothes the land by forcing sods and small stones into the soft ground, pulverizes the lumps of earth, and by pressing the light, loose soil around the seeds sowed, they will be more likely to germinate; by making the earth compact, also, at the surface, insects will be in a measure deprived of their shelter. Rollers are constructed of both wood and iron, and are made in from one to six sections. For common use, I should select one made of wood, with two sections of about two and a half feet each, and about three feet in diameter.

The horse rake, in its various forms has proved itself of great service. With a good mowing machine and a good horse-rake, it would seem that the laborious task of haying, might be converted into a pleasant amusement.

There are many other implements which have been recently introduced, and which promise to be valuable aids to the farmer. Among these are the reaper, horse-drill, horse-hoe, &c.

Valuable improvements have also been made in many of the smaller and more common implements, such as shovels, forks, hoes, &c. It is probably safe to say that double the amount of labor can be performed, in a given time, with such tools as we now have at command, than with those used in by-gone days.

The whole subject of farm implements, in all its various bearings upon the labors of the farm, is, or should be, one of much interest to every farmer. No farmer or mechanic can perform a good piece of work without good tools, therefore parsimony in this matter is bad economy.

In no way can a farmer contribute more to his pleasure, comfort, or success, than by a liberal and judicious expenditure for implements.—*N. E. Farmer.*

TO MAKE A COW GIVE DOWN MILK.

The inquiry in the American Agriculturist, "what will make a cow give down her milk?" reminded me of an incident in my own experience.

We have a fine cow, which goes by the name of Whitey, on account of her color. She gives a large quantity of milk, and of superior quality. Her only fault is, that she is rather too intelligent, and knows too well how to look out for her own interests. She is evidently in favor of bovine rights, and has no idea of submitting, against her judgment, to the control of man and woman. She can let down the bars of the pasture very nicely, if there are no precautions taken to prevent it; and if the fence is not "legal," she does not consider it worthy her regard. She understands the mysteries of latches and hooks; and, if she has a calf to look after, she knows very well how to retain a sufficient portion of her milk for its nourishment.

Bridget had been with us several weeks, and I had always given her particular instructions to treat the cow gently, and never strike her. One day she came to me, and said that Whitey would not give down her milk. She had tried for some time and could not get a "sup." I had known the cow so long, that I had learned if she was coaxed with a bucket of delicacies, she would for a time forget her calf, and not refuse to yield her milk.

"Take the milkmaid's hand; while in regular cadence Into the sounding pail the foaming streamlets descended." So I told Bridget if she would "slop" the cow

she would have no difficulty. She went out, and shortly after returned.

"How have you succeeded this time?" I inquired, expecting her to show a pail of foaming milk.

"Oh, ma'am," she answered, dolorously, "I stopped her all about the barn-yard, and could get nary a drop."

"Stopped her about the barn-yard? What does she mean?" I said to myself. I inquired into the matter, and found she had been "bating" the cow.

"Why did you do that?" I asked. "I have often told you never to strike her."

"But you said, ma'am, if I would stop her, she would give down her milk."

So poor Whitey had a beating, and Bridget had no milk, because I had used an expression which I had frequently heard, but which she entirely misunderstood. If I had told her to give the cow a "mash," she would probably have known what I meant.

After suitable explanations, Bridget tried a third time, and with much better success. She prepared some food which the cow liked, and as Mooly was not slapped, she stood still, and gave down her milk. Bridget wisely concluding that the way a cow's heart, as to a child's, is through the mouth.—*American Agriculturist.*

BEST VEGETABLE FOR MILK COWS.—A correspondent of the Northern Farmer, says: "The vegetable which I wish to recommend as the best, all things considered, for milk cows in winter, is white flat turnips. Some perhaps, will object to the turnip, because it will affect the taste of the milk and butter. So it does if fed raw; this can be avoided by boiling. For each cow boil half a bushel of turnips soft; while hot, add five or six quarts of shorts, which will swell and you will get the full worth of it. A mess like this fed to a cow once a day, will produce more milk of a good quality, than any other feed at the same cost. Turnips fed in this way do not taint either the milk or butter. One thing in favor of turnips as feed for cows is, they can be sown in August, or as late as the first of September. I sowed some as late as September last year, which were very fine. Turnips are also very profitable feed for pigs, when boiled in the same way as for cows."

SPECIAL NOTICE.

REDUCTION OF PRICE.

The heavy losses upon the Farming interests of the State the past year, the general depression of that interest, and the discouragements resulting to all, we know have prevented many who are engaged in Agriculture from subscribing to our journal the past year. Feeling desirous to meet their wants as far as in our power, we now offer the CALIFORNIA FARMER at SIX DOLLARS PER YEAR, PAYABLE ALWAYS IN ADVANCE.

We trust this effort on our part to meet such circumstances will be met on the part of those engaged in the cultivation of the soil with a corresponding feeling, and that all will do us service by sending to a goodly list of subscribers and the amount for the same. We have made the price thus low, that our subscribers and friends may at once send us the proof of their good will.

With this issue we publish THREE THOUSAND COPIES, and trust the FARMER will find a welcome reception. Inducements for the formation of clubs will be found under the proper head.

Clubs Formed—Premiums to Subscribers.

With the third volume, with the opening year, we would offer to our friends stronger inducements than heretofore to make up CLUBS for the FARMER. It will be seen by our "special notice," that we shall commence with a reduction of the price of the "Farmer." The price will now be six dollars per year, always in advance. No subscriptions received unless accompanied by the amount.

To those who are disposed to form CLUBS, when we can send all to one address, we shall send SIX COPIES for FIVE NAMES, TWELVE for TEN, and TWENTY-FIVE COPIES for the names and amount of twenty subscriptions.

To those, or any of our friends who will interest themselves, we believe this will be some satisfaction, besides promoting the cause of Agriculture. We hope to see good results to all from this proposition.

TO AGENTS.

We would ask of our Agents to whom we send the CALIFORNIA FARMER, to communicate with us and to remit full accounts to the close of the year. We shall send them extra numbers for distribution. We call their attention to the reduction in price of our journal; this we hope will give satisfaction to all, so as to enable our agents to enlarge our lists, and also afford an increased reward to them.

We can offer inducements to Agents in all the large cities as Carriers, and to Bookellers and Newspaper Stores also, for Papers in quantities.

THE CALIFORNIA FARMER.

We have many inquiries, daily, from our friends in the country, who wish to make up clubs for the FARMER, and send us produce for the amount. We always do our utmost to facilitate the cultivation of the soil, and we will assure our friends that if they will make up clubs of five, ten or twenty, they can send their Wheat, Rye, Oats, Barley, or specimens of extra quality, and we will allow them the full market price in the payment of the FARMER. Our friends that are in a rearer can send us the amount thus due, and add the coming volume, and we will forward receipts for the same. So send along your wheat and good products. We do not mean anything—but those articles that have a value, and we will take them.

SPECIAL AGENTS FOR THE FARMER, &c.

All the Messengers of Adams & Co., and Wells, Fargo & Co., are duly authorized by us to receive subscriptions for the CALIFORNIA FARMER, and receipt the same; also, to receive orders for Fruit, Trees, Seeds, &c., and any and all business with us. All such business committed to either of these messengers will be promptly responded to by us. WARREN & SON.

OAKLAND.

Our friends at Oakland are invited to call on MR. CHARLES STEWART, and subscribe for the CALIFORNIA FARMER; he is authorized to receive subscriptions and we will cheerfully all the farmer in his employment. We are willing to receive Wheat, Rye, Oats, &c., or any valuable products of first quality in payment, as we wish our friends to enjoy our sheet, and conveniently too.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SAN FRANCISCO, THURSDAY, JANUARY 18, 1855.

Reader!

Do you feel an interest in the permanency of California? Do you desire to see an increase of population—more families coming to our shores—more houses built—more farms cultivated—more manufactories and workshops reared? Do you wish to see the mechanic, merchant, and farmer, cheerful, contented and prosperous? Do you wish to see churches and schools established, and the whole population under an influence that speaks only for good?

If you wish all this, then you must take measures to effect it, and the first step is, to enlighten the people in the old States as to the real condition, prospects, resources and capabilities, of California.

When the people of the old States are correctly informed upon these matters, then we shall have an increase of population and of the right kind too. We shall have eastern families, and the most intelligent—we shall have more "homes" built—more farms cultivated—and better too. We shall have our manufactories, workshops, and warehouses—and they will be made prosperous. The increase of families, will demand churches, schools, lyceums, and lecture rooms, and these in turn will enlighten and make our people prosperous and happy.

But reader, you ask, how shall this be done? We answer as before, by conveying the true kind of knowledge to those we desire shall come here. This can be easily done by our citizens feeling and evincing a true interest in the welfare and permanent prosperity of California. By a constant correspondence abroad, revealing to the distant friend or friends all that shall tend to show our condition and prospects. Show them the immense advantages possessed by our State over every other in her mineral and agricultural resources. Tell them of the salubrity of our climate and our productions—of our contiguity to China and Japan, and the islands of the sea, from whence the wealth of so many merchant princes have been derived. Above all fail not to tell them of our climate—a more beautiful and healthy one, the sun shines not upon.

Should the reader of these lines find no time to write these and kindred descriptions, we humbly suggest that an easy and safe way is now placed before him, by which they can send all these facts and many more, to their friends in any State of the Union. It is simply by sending to each friend a copy of the "CALIFORNIA FARMER," by each steamer. It ever has been and ever will be, our aim to present these important facts in all their forms from week to week, so that our journal shall not only prove an interesting family visitor wherever found, but also a true exponent of the truest and best interests of our State, the home interests of California. We therefore ask all who desire to spread such information, to use their influence to extend the circulation of this one sheet, so that these truths may become widely known.

California vs. New York Grain Market.

THAT one may form a true estimate of the value of grain in California, or the price it will soon command, the value in the eastern markets should serve as some guide.

For this purpose we place before our readers the simple data per last steamer from the east, of the price of wheat and flour of the best quality, in the New York market,—best Geesec white wheat, \$2.45 per bushel. Allowing the bushel to weigh 60 lbs., it is over four cents per pound. Best brands of flour, \$11.25 and \$12.00.

This is the present price there, and with the market firm and largely increasing exports to foreign markets, can it reasonably be expected that flour will be sent to California from the east?

The present advance in grains in California is a real and immediate benefit to the producer, and a permanent gain to the State. It keeps our money at home instead of going abroad, and thereby adds so much to the wealth of our State. We consider the true policy of the farmer and grain grower to be, to hold their produce themselves if possible. The signs indicate a further advance before long. We do not need foreign flour and wheat. Let us use our own products, and keep our money at home. The higher the prices we pay for our own products—the better; for, as the farmer—the producer—prosper, so will all other interests thrive and prosper. These are our sentiments, because it is a well known fact that when the farmer receives high prices for his products, he is in return,

liberal in his expenditures. His homestead is then improved. The house is added to or in some way remodelled. His fences renewed—carriages and improved agricultural implements bought—and luxuries indulged in—all of which expenditures go directly to aid and give impulse to the mechanical and commercial community, through whose hands it is again passed into the pockets of the other branches of industry. Thus are we one and all benefited by the high prices obtained by the farmer for his crops.

We wish our citizens generally, would regard the interests of agriculture with a more enlarged view, and not consider it an isolated interest, for it is not; but is rather one so closely allied with the interests of all as to seriously affect all.

Farmers! think of this—when you think more highly of your calling, and give to it that dignity and importance to which it is entitled, then, and not until then, will others be led to a proper estimate of its character.

Artesian Wells.

"DEEP ARTESIAN WELL.—George H. Beach, Esq., of Marysville, has dug a well 210 feet without striking water. He was about abandoning the experiment, but the citizens there propose to raise \$1,000 more to continue it until water is obtained. We hope they will not let such an enterprise fail for the want of a little money, as if water is reached and flows in sufficient quantities, the city and each of its inhabitants will be benefited twenty times the cost of the well."

We clip the above from one of our exchanges, and, ever feeling a deep interest in all that appertains to this subject, we have made some inquiry, and learn that there is a prospect of finding water. The party that commenced the well, Messrs. Smith & Van Dyne, bored some 100 feet, and were then superseded by other parties, who, it seems, have also abandoned it for a time. This is to be regretted, for such efforts should never cease. Perseverance is the word, for the water is below. It is always best, however, for those who begin, to continue the work, and we hope Messrs. Smith and Van Dyne will be called upon to take up the work again and finish it, for these gentlemen are much esteemed and well qualified for the work, having been very successful in securing good wells for a large number of persons in various portions of our State.

Marysville will, we trust, soon boast of having as fine wells as San Jose, and we know the citizens are ever ready for public enterprise that shall benefit the mass of the people, and what enterprise more worthy than that which shall give them "pure water."

Yuba county has done much to show her capabilities and resources in horticulture and floriculture; and with "artesian wells" she will become a perfect garden. That Marysville will rapidly improve in the beautiful science of floriculture, we feel assured, for we learn with much pleasure that the ladies have taken the matter in hand, and are determined that every cottage home shall have its garden, thus using their influence to make their homes more beautiful. This is as it should be, for too long have dwellings of California looked desolate without a garden, and thousands of neat and pretty cottages, with a very little care and expense, can be made to become not only beautiful, but more valuable; and if the ladies take the matter in hand, the work will surely be done.

Tea in Ohio.

We copy the following from our exchanges and make the inquiry of our own readers—If Tea can be cultivated successfully in Ohio, why can it not be cultivated in California? The soil and climate, the atmosphere, seasons, temperature—all are much more congenial and favorable than Ohio, and we suggest to our readers to ask themselves and neighbors the question we propound. We wait a reply.

"The horticulturists of Southern Ohio, are among the most enterprising and successful in the country. They have brought the grape to a perfection no where else equalled. Their wines, 'Sparkling Catawba,' &c., are widely exported. The culture of tea has attracted attention. It is stated in the Cincinnati Columbian, that a number of Chinese are now engaged in that pursuit, in the neighborhood of that city."

The Sacramento Valley Railroad Co., has petitioned the council of that city for the right of running cars by steam through the city to the levee; also, for an exemption from taxation on such property as they may own within the limits of the city. The Union learns that the grading, filling, &c., from Sacramento to Negro Bar, have all been sub-contracted by the original contractors, and that the parties are only awaiting orders from the directors to begin operations. The latter will probably not move until the city council acts upon their petition.

[For the California Farmer.]

PROTECTION OF GAME AND STOCK.

SAN MIGUEL RANCHO, Jan. 9th, 1855.

Messrs. Editors:—Upon mature consideration and calculation, I am constrained to stick to my former figures, and would sooner double them than take one head therefrom.

I recollect, about six or seven years ago, when I was doing only a small business at farming and unable to protect my stock. I was robbed yearly of some 600 head of pigs and chickens, and I never thought that there were more than six coyotes concerned in the robbery. At that rate 100 head per year, was devoured by each animal, and a scant supply it was too.

I am informed by one of our frontier rancheros, that he has known 15 cows destroyed by one grizzly bear. What the number of smaller delicacies devoured by his bearship to fill up his year supply was, was not known. Bruin was afterwards killed, and eight inches of clear fat was cut from his ribs, proving conclusively that he had lived on the "fat of the land." Some of the large rancheros have from 500 to 700 head of calves alone, destroyed yearly. It may be asked, why do they not kill off the wild animals from their farms? Should they make such an attempt, their efforts would meet with about as much success as would a traveler encamped on the banks of the Sacramento in the month of August, in an attempt to exterminate the mosquitoes. Should they succeed in killing thousands even, their places would be speedily supplied by new recruits from the mountains and valleys.

If we value pigs, lambs, chickens, rabbits and hares worth only one dollar each—colts and calves, four dollars each—elk, deer and antelope, two dollars each, and of each an equal quantity, the average value of each animal at the time is was slain, would be near two dollars, and the sum of \$5,840,000 would be the actual value of one year's supply of meat for the wild animals. By destroying these wild animals we should add at least two thirds of this amount to the taxable property of our State the first year. The second year's revenue would be the same, with the increase of the animals saved from the first added—the colt with the year's growth, would be worth twenty dollars; the calf ten; the pig with its increase, five; the lamb, elk, deer, and antelope, five each; the chicken, rabbit and hare, with their increase, two each; making an average value of each head to be six dollars one year after their preservation from the jaws of the destroyer. The second year would present an increase of wealth to the State of \$17,520,000 saved the first year with the second year's increase thereon, and \$5,840,000 saved from destruction the second year, making the sum added to the wealth of the State at the end of the second year \$23,660,000, and \$40,880,000 would include the first year with two years increase thereon—\$23,660,000 would be the savings from the second year with one year's increase, and \$5,840,000 saved the third year, summing up \$70,380,000 added to wealth of the State at the end of the third year, by the destruction of the wild animals.

A few more years at these rates, and none will deny the ability of California to supply not only herself, but Oregon, and some of the eastern States if necessary, with beef, instead of importing, as she now does, 100,000 head of the various kinds of stock yearly at an average cost of \$30 per head, making \$3,000,000 at least paid by her citizens for stock which can be raised here at less expense than in any other quarter of the world with which I have become acquainted, provided the wild animals are destroyed.

Our Legislature has wisely passed laws to prevent man from killing game at certain seasons, but unwisely left the wild animals, who destroy ten times the quantity that man would, to help themselves undisturbed. Laws are justly passed to prevent man from stealing and robbing, and yet the wild beasts are permitted to enter my enclosure and destroy my horses, cattle, sheep, hogs &c., with impunity. Laws are enacted to prevent man killing his brother man, but none are passed to protect our lives and property from wild animals. The cases are of frequent occurrence where our citizens have fallen victims to these wild and savage beasts. A Mr. Torrey was killed by them on the San Joaquin. In the Santa Cruz Mountains and other sections of the State have our citizens been attacked and killed by them, while "assaults with intent to kill," are of almost daily occurrence, yet in no instance has any of our county sheriffs ordered out a "posse" to arrest the murderers; neither has the governor offered a reward for their apprehension. I do not suppose Gen. Estell has even one of these precious rogues confined at Corte Madera, notwithstanding

their numerous murders and crimes. No, they are not men, but animals, and consequently are not amenable to our criminal or civil laws.

I thought of saying much more upon this important subject, but not wishing to intrude myself too much upon your valuable space with the discussion of one subject, I will leave it to work out its own salvation in the hands of others.

Your fellow laborer in the cause of agriculture,
JOHN M. HORNER.

An Indian Mummy.

To the Editor of the California Farmer:

DEAR SIR: During my recent geological explorations in Washington Territory, I visited an Indian graveyard, on the claim of Capt. Russell, Shoalwater Bay, where my attention was called to the body of an Indian in an extraordinary state of preservation. It was enclosed in a small covered canoe, inside a larger one; the outside canoe in a state of decay, showing the great length of time that had elapsed since its burial.

It was very evident that the body had not been disturbed since its interment.

Full reliance may be placed in any statement Capt. Russell may make on the subject.

Respectfully,
JOHN EVANS,
U. S. Geologist.

At the invitation of Capt. Russell, we have examined the body of the Indian he has brought from Shoalwater Bay, Washington Territory, and have full confidence in the veracity of his statements. The remarkable preservation of the specimen renders it an object of great interest and value, as it illustrates far more impressively to the mind than any written description the great veneration of the Indians for their dead, and gives a singular insight into the habits and religion of a tribe now lost.

The mode of preservation is unknown. No traces of any embalming material were found, and the viscera exist, though in a shrunken state, in their natural situations. Last change of climate, introduction of larvae, or other accident, should occasion decomposition, we recommended Capt. Russell to cover the body with an arsenical preparation and apply a coat of copal varnish, which has been done without materially altering the original aspect of the specimen. The materials which lined the canoe have been removed to dry them and replaced as nearly as possible in their original layers. Among them were found remains of two skeletons, one being of a child, the other of a youth; some bits of bone, said to be Indian money, and a roll of leather marked with the holes of stitches and metal buttons.

The body has been replaced as nearly as possible as it was first discovered.

ARTHUR B. STOUT, M. D.
HENRY M. GRAY, M. D.
CHAS. W. BRINCK, M. D.

San Francisco, Jan. 11, 1855.

MR. WARREN: Dear Sir—I have read the paper signed by Doctors Stout and Gray, and likewise seen the Indian mummy referred to in their statement. I consider it an object of great curiosity, and well worthy of the most careful preservation, inasmuch as the encroachments of our christian civilization will soon change the habits of the aborigines of this portion of the American continent, and their ancient arts and manners and religious rites be obliterated.

The habits of preserving remarkable persons, in the aboriginal tribes of the N. W. Coast, have been long known, but perhaps no specimen of their mummies has before been presented to civilized communities. It is possible the preservation may be effected by the simple process of desiccation, or exposure to smoke after great emaciation of the body. But the human body will often be preserved in a similar way to this mummy by long exposure to dry winds—and as there is no appearance visible of any especial art having been applied to preserve the body, it may have been the result of accidental circumstances. However it may have been effected, the body is an object of great interest in several points of view, and should be preserved as a scientific curiosity in an ethnological point in particular.

I would say more on this subject if I had time, and I beg you to excuse these very hasty and undigested remarks. I was sorry that I could not accept your invitation to be present at the opening of the body, but I was highly gratified at the examination of its exterior aspects. I hope the high-minded gentlemen of the Legislature will make appropriations to found an Academy of Science, to encourage the intellectual progress of this State—and attached to it make ample provisions of fire-proof rooms for the preservation of all such objects as these, that they—together with all fossil remains found on this slope

of the American continent—may be garnered up for the instruction and benefit of posterity. This ought to be done very early in the history of this Commonwealth, and no time would be more suitable to begin the work than during the present Legislature. Very respectfully,

Yours,
C. F. WINSTON.

San Francisco, Jan. 13, 1855.

Commerce of Shoalwater Bay.

THE annexed statement has been carefully prepared by Capt. Russell, of Shoalwater Bay, at the request of Government. It shows the importance and value of the trade that is springing up in that quarter and finding its way into our ports; this is but the beginning. Capt. Russell is one of our early and most enterprising shipmasters, and his energy, perseverance, and trials among the Indian tribes in that quarter, would form a romantic history. He has accomplished much, as will hereafter be shown:

COMMERCE OF SHOALWATER BAY FOR THE YEARS 1850-'51-'52-'53 AND '54.

* This vessel lay 15 days off the mouth of the river, waiting for a pilot—last topped in a gale and was piloted in by the schooner Enterprise.

Combination Again.

WE have often spoken of combinations and their influences, and have seen them beneficial to a people, and have seen them otherwise. We now have upon our mind a new and useful combination—one that, as far as it has developed itself, has most generally proved useful, and is highly approved of by our entire community. We allude to the Sacramento Stage Company, under the control of their able and efficient president and manager, Jas. Birch, Esq. The whole operations of this company have been completely successful from the beginning. Although having control of many extensive routes—absolute power, as it were—that power was most wisely used, not to "make a pile" to-day, and lose it to-morrow; but with a wise foresight, a looking to the future, this company met the wants of the public, sought to win their approbation and confidence by a generous and liberal course, and, instead of advancing the price, they reduced it, and by such means they have won golden opinions, made sure the confidence of all, completely remedied all fear of opposition, and secured for years a control that in itself is a princely fortune.

It is gratifying to recall such instances of wise policy, and it is but just that praise should be bestowed where it belongs—to the able president of the company, Jas. Birch, Esq., this honor belongs, under whose wise policy this company has made sure of success to themselves, and credit and reputation to all concerned—their company and the public.

THE "ORIENTAL."—We have received the first numbers of the "Oriental," a Chinese journal, edited by Rev. Wm. Speer, and published by Whitton, Towne & Co. in the English and Chinese languages.

We esteem this a valuable publication, useful alike to our citizens, to the State and to science, history and truth. It is just what is wanted to enlighten the public mind upon many subjects connected with this interesting nation, and there could not be found a period of time so

appropriate as the present for such a paper, or a person so well qualified to conduct it as its present editor. Everything connected with it seems peculiarly providential and happy, and we trust a liberal community will duly appreciate and generously sustain it. We want light upon everything connected with the history, manners and customs of this mighty nation; and in our own sphere of action we know that the influence and interest of Agriculture will be greatly advanced by the knowledge we shall derive from this nation. We make the following extracts from this paper, of matter of much interest:

THE CHINESE TALLOW TREE.

A very curious and valuable, yet hardy plant, well known in China, and found along the whole coast, from Macao to Shanghai, is the *Kau-muh*, or tallow-tree, known to botanists as *Stillingia schifera*. It is one which may be grown probably with success in the climate of California. Frequent notices of it are found in the journal of Martini and other Jesuit missionaries, as well as in more modern works. The following account is compiled from a description by Dr. S. W. Williams in the Chinese Repository. To it we only add that the oil is sometimes also expressed, by means of two pieces of wool, brought together with great power by a lever to which a buffalo is attached.

The leaves of this specimen of the Euphorbiaceae family resemble in shape and contour those of the aspen or *populus tremula*, but are smaller, and without that expansion in the leaf-stalk so remarkable in that favorite tree. To those who are not acquainted with the aspen we may say that the leaves are rhomboidal, or like the diamond panes of glass in the cottager's window. They are of a pale and delicate green, and have two corners of the rhombus or diamond rounded off. There is something light and elegant about its aspect, whether it meets you in the diffusive form of a bush, or whether it rises to the height and consideration of a tree. The spikes of flowers, which terminate the branches, are thin and pliant, and remind us of the barren flowers in some of the anemoneous family, such for example as the poplar and the aspen. Being small and of greenish yellow, they do not attract the eye at first, but when looked at with a love for nature, there appears something extremely neat and interesting in their figure. Upon this spike the flowers are ranged in clusters, consisting of five, six, or more individuals. Each minute cluster is beset in a small involucre or ruff of about five leaves or sepals, and is adorned on each side with a little knob or kidney-shaped gland.

The fruit is a drupe, or nut, surrounded with a fleshy covering. This covering splits into three valves when the nuts are ripe, which turn back in the shape of rays, and expose the white nuts in their centre. The nuts have that additional vesture so noteworthy in the euphorbiaceae family, which in consistence and color resembles tallow, and burns freely when ignited, though held at a distance from the flame. The shell is hard and the nut oily, both of which kindle and burn with great readiness.

This beautiful as well as highly useful tree is one that vouches for the goodness of the Creator, who, while He drives around us the curtains of night, that the burden may be taken from our eyes, has afforded to inventive man various means to enlighten the gloom and cheer the melancholy of darkness.

The common way of obtaining the materials for this light is, to put the ripe nuts into water, which, in the process of boiling, melts the sebaceous part, but gives it up when cool in the form of a crust floating upon its surface. This is to be sure an easy method, and one, like many other Chinese methods, that does not require much art or chemical skill to conduct it.

Belgium Agricultural Society.

THE first National Agricultural Exhibition of the Central Society of Agriculture, was held in Brussels on the 23d, 24th, and 25th of September. The exhibition was much superior to any exhibition of cattle before held in Belgium. The competition for stock, was confined in Belgium; but for implements, to the world. We observe that an American plow received a commendation. Another year will, probably, witness a large display of American implements, as the demand for them for the Continent is on the increase.

The exhibition of 1854, took place in the centre of the city, in a building called St. Etablissement du Renard, well covered and lighted by numerous windows in the roof. The building is divided by walls and columns, into ten compartments, all in communication with one another. The length is about one hundred yards, and breadth eleven. All the articles except pigs, were exhibited in the compartments. The pigs alone were placed outside in the court before the building.

The inside and outside were decorated with flags, flowers, evergreens, &c. The city was at the same time celebrating the anniversary of the revolution which separated Belgium from Holland. The competition was opened for breeding cattle, horses, breeding sheep, pigs, poultry, rabbits, implements, and agricultural machinery.

20,000 francs (\$4,000) for the animals; and 3,000 francs (\$600) for the implement department, were offered in premiums. The competition was for the animals of the country alone; but for machinery it was open to any competitors from any country. The transport by rail in Belgium, was free of expense; and in order to encourage foreigners to exhibit implements, the same advantage and free entrance into Belgium, and a free return of machines to be exhibited, were offered to them.—*Jour. of N. Y. Ag. Soc.*

To the Readers of the California Farmer.

THE annexed communication, with the names attached, has been kindly tendered to us. We would only ask of our friends to read and judge for themselves, as to the importance of the subject named therein.

We are deeply grateful for every testimonial of favor and encouragement in our labors, and we shall speak our mind more fully with the next number, in our "New Year's" wish to them.

TO THE FRIENDS OF

Agriculture, Horticulture, and Floriculture.

"KNOWLEDGE is power," is a truth nowhere more fully illustrated than in the field of your enterprise; and on no part of that field more important than in our State. In other States and different climates, the experience of ages is condensed into books; and the son inherits the practical knowledge of his father. Their books are their general guide, and their periodicals contain the result of their continued improvements. But with us the case is different. Here we have a climate to which the instructions of no book are adapted, a soil, peculiarly unlike any to the development of which science has been applied, and almost an entire want of experience in any department. Here no father has learned more than a few of the first principles of agriculture, much less has he had time to transmit even the moiety he has learned to a son. Our first generation of agriculturists is yet in its merest youth.

If no books adapted to our circumstances are yet written, and no man has sufficient experience to write one; and if the periodicals published elsewhere entirely fail to meet our wants, we are shut up to a single choice between two courses—we must either grope our way in the dark, feeling and experimenting each for himself, for all those facts and principles which are peculiar to our soil, climate and productions, (and this will reach nearly the whole range of our operations) thus advancing by a process so slow as to be entirely unsatisfactory to every one; or we must sustain a periodical, which shall be a general reservoir for the reception and diffusion of the experience of all—an instrument whose columns shall be a constant reflector of all the light which our thousand intelligent cultivators of the soil can elicit from their "watch and toil." Which shall be our choice, cannot admit of a question.

Such a periodical we find in our midst. The CALIFORNIA FARMER we believe capable of meeting our every want. The Messrs. Warren have evinced an energy, in, and devotion to, the work which is worthy of all praise, and is a sufficient guaranty for the future. Shall the FARMER receive that countenance and encouragement it deserves? Will the growers of grain and vegetables, fruits and flowers, in this State, treat themselves to a weekly repast in the perusal of its columns, (the annual subscription price bears no comparison with the value of what you get,) and make an energetic effort to induce their neighbors to do the same? But even this will not be enough. No one man, nor company of men, from any one department of knowledge, or section of the country, can make the columns of the FARMER what they should be,—what they must be to answer their wants. It must combine the experience of every class, and represent peculiar characteristics of every part of the State. We ask, therefore, the attention of those whom we address to the furnishing of materials for the columns, as well as subscription to the "material aid" of the paper.

We say thus much because we deem it due to the present proprietors of the paper, and because we feel the deepest interest in the cause it advocates. We have no pecuniary interest in the CALIFORNIA FARMER, and yet we most heartily recommend it to the pecuniary, the statistical and the literary support of all who have at heart the real well being of our State—the development of her agricultural resources.

Planting Trees.

As the season for transplanting trees now demands our attention, a few practical hints derived from experiment may not be without profit to the interested. The inquiry is frequently made by our friends, "How do you transplant a fruit tree to make it live? I cannot make half my fruit trees live."

In the first place, it is very easy to make a fruit tree live, if you understand how. Many persons imagine that there is but little difference between the planting of a tree and a stake; until they are taught by two or three lessons of disappointment. A case in point will show that knowledge is indispensable to success.

A farmer not more than thirty miles from the city of Boston, had an orchard of trees to plant, and wishing to have them live and thrive, employed or engaged the services of an experienced gardener to transplant his trees. The gardener prepared the soil, and set out on the first day ten trees only, (the trees were of large size for nursery trees,) out of one hundred and twenty-five which were to be planted. The owner of the trees was sadly disappointed, at nightfall, in finding "but ten trees out of the lot, set out," and more so at the price charged by the gardener (two dollars and fifty cents per day) for his work. Accordingly he discharged him, and concluded to set out the trees himself. Now mark the result.

Ten years afterwards, the same man was at work in the same orchard, when a gentleman riding past, stopped to examine the trees. After attentively looking at them for a few moments, he asked the owner why he did not plant the whole orchard at the time he planted this row of large and thrifty, full-bearing trees near the wall, which were large and vigorous, the others being small and spindling; observing, "had you planted your whole orchard at that time, you would have been much benefitted thereby." "These trees," said the owner, "were all planted at the same time; but I employed a competent gardener to plant out the ten that you admire, while the rest were put out by myself, because I thought him too slow, and charged too much; but if I had given him his price—yes, even doubled it, for ten days, I should have been greatly the gainer; for, of these ten trees, any one of them would have more than repaid the whole expense." The stranger smiled as he observed, "I am the gardener who set out those trees for you; and I thought you would learn, sooner or later, that it required more knowledge to set out an apple tree, and to have it grow, and bear well, than it did to plant a post; or, in other words, that whatever is worth doing at all, is worth doing well."

To set out, or transplant a fruit tree, with the expectation of having the same live and thrive, requires only a little care and a little knowledge; but that little constitutes the whole matter, and is all important.

The following method has been successfully pursued by myself for some considerable length of time, and I think, can be adhered to with a good degree of confidence, as to a favorable result.

First, the hole for a moderate sized tree, should be made of from three to five feet in diameter, and of sufficient depth to receive all the roots and rootlets, without cramping or bending the same; give them, as nearly as possible, their original position and inclination. It is better to deprive the tree of a portion of its roots, than to cramp or bend them. Place the tree in the same position in the hole that it occupied in the nursery, but not too deep. Many inexperienced persons lose their trees from too deep setting, and do not know the true reason. A tree should be set no deeper than when in its original position in the nursery. If any of the roots are bruised or broken, saw or cut them off smoothly with a sharp knife; balancing the tops by removing the largest shoots.

Use good food compost as a manure in setting out and fill in finely pulverized mold closely about the roots. To make sure there are no hollows around the roots, it is best to use the hand to induce the fine earth around the small fibrous roots, gently shaking the tree until it becomes quite firm of itself. Any neglect at this stage of transplanting is an error, which will be sure to be seen in the after-growth of the tree.

As a general thing, I have not used water in transplanting trees, and do not recommend its use, except when setting out quite a large tree; then I use water—say one pintful when the tree is partly set out, or the hole a little more than half filled up with earth. I wait until the water has dried in or become absorbed, before filling up, but never make a "mud pudding" by throwing in the earth immediately after the water. I have found, by experience, that too frequent watering applied to the surface tends to harden the earth, and proves injurious to the tree. In frosty locations, if you fear lifting of the tree, a small mound rising in the fall around the stem of the tree will remedy this evil. Remember to remove this earth in the spring.

In very wet, black soil, such as lands bordering upon meadows where there may be annual overflows of water, a quantity of stones placed upon the bottom of the holes before setting the trees will be beneficial, and often of much consequence to the future thrift of the tree. Again in very gravelly or rocky soil, it is best to dip out—say one or two cart loads of the earth, and remove it; filling its place with rich garden mold; and our word for it, you will be much benefitted thereby. True, there is some labor attending this operation; but you are planting a tree, perhaps, for future generations, the fruit of which you may never taste; but they who come after you will bless the

labors of your hands, while they regale themselves with the fruit of your industry.

By attending to the above general hints, you can ensure to yourself not only a pleasant shade tree, but a profitable bearer; and if so you will be of our mind (so far as fruit trees are concerned,) that when the tree is transplanted well, "it is done, if well done;" if not, why you will, soon find it out—*The Soil of the South.*

Cuttings of Fruit Trees.

CUTTINGS, says the Albany Cultivator, should be made in autumn after growth has ceased, or early in winter—they may be preserved by fastening them in a box by slats running across, and then placing the open side of the box downwards with its contents in the bottom of a pit dug for the purpose, on a dry spot of ground, and burying it with earth. The slats keep the cuttings from coming in contact with the earth below, and they are preserved in a proper moist condition. Or, they may be packed in slightly damp moss in a large box, placed in a cellar. Very early in the spring they should be set out. Every cutting should be cut off just above a bud at the upper end, and just below one at the lower end. Taken off closely to the old wood, with a base attached, they are more sure of growth. They should be set out in a trench, in a rich mellow soil, which is to be packed or trodden closely about them as the trench is filled, and afterwards a mellow surface made by drawing on a little more earth. The length of the cutting should be eight inches to a foot, and two-thirds to nine-tenths buried. Shading the cuttings of any deciduous trees, (including all fruit trees,) is of little or no advantage, but it is important to keep the ground uniformly moist: if this is done by watering, the surface should be preserved from crusting or cracking by mulch. This is the mode of raising quince trees, currants and gooseberry bushes, grapes, &c., but will not answer for the larger fruits generally, in the Northern States—it is cheaper to bud and graft than to procure the few which may be obtained among many failures in this way.

On Planting Shrubberies.

If there is one thing more than another, which adds to the embellishment of the grounds, it is the proper distribution of small trees and flowering shrubs around the homestead. It is not quantity which constitutes the charm, as in nine cases out of ten, double the number is planted that should be. Every plant should have enough space to keep it from crowding down others; and to this end, before ever a shrub is set out, the nature, size, and habit of growth of each kind, as far as possible, should be ascertained. Without this, there is danger of placing those most dwarf and conspicuous farthest from the eye, while the strong growing are placed nearly at the outside. Another frequent error is to plant single specimens on the lawn far too near the edge. This arises from want of perception as to what the effect will be, when it has arrived at its full growth. There should always be, if the lawn is of any size, at least two feet of grass intervening between the shrub and walk.

Another essential is color and time of flowering, for a great deal can be done in giving effect, by a judicious distribution of colors, so that no two plants having the same color, and opening at the same time, should be planted side by side. The general character of the shrub or tree may also be taken into the account; whether dense and compact as in the Lilacs; thin and drooping as in the Forsythia viridissima; or upright as in the African Tamarisk. Some look best trained to single stems as miniature trees, which may be interspersed among the others, as the thorns and Enonymas or spindle tree.

If the whole is being newly made, a thorough preparation of the soil is amply repaid by the future growth of the shrubs, as once planted nothing further than top dressing and digging can be performed. If the soil is naturally wet, it should be drained, as but few shrubs will succeed in such a place. It should then be well spaded up two spades deep if possible, working in any quantity of leaves or decayed vegetable matter, as the very best manure for such a purpose. Except the soil be nothing better than clay, such a preparation will answer, with perhaps a barrow load of good soil to some of the choice kinds of shrubs. If it is composed solely of clay, as much loose, friable stuff of any kind, street earth, sand, saw-dust, tan and the like, should be worked in. In addition to this every plant should receive some good soil for the roots to commence work in.

In forming the outlines of the shrubberies, all stiff and formal figures and sharp angles should be avoided; choosing the circle, and the multitudinous undulations of which it is susceptible, as the grand fundamental principle to work by.

Having proceeded thus far, that is, having got all in readiness, a quantity of stakes of various lengths should be stuck in various directions, to ascertain the most conspicuous positions from the windows, walks, &c., in which to place any striking object, choosing only those for this purpose that have a uniformly beautiful habit of growth. Having these all planted, the remainder can be filled up with whatever is intended to plant. Towards the outside, enough room can be left between the shrubs, to grow a few summer flowers, which help to enliven the whole, and by choosing the hardy perennial kinds, with here and there a batch of annuals, the whole is in perfect harmony. —E. Sanders in Country Gentleman.

Gas Tar in Horticulture.

A discovery which is likely to be of great advantage to Agriculture, has just been reported to Agricultural Society, at Clermont, Ohio. A gardener whose frames and hot-houses required painting,

decided on making them black, as likely to attract the heat better, and from a principle of economy, he made use of gas tar instead of paint. The work was performed during the winter, and upon the approach of spring the gardener was surprised to find that all the spiders, and insects which usually infested his hot-house, had disappeared, and also that a vine which for the last two years had so fallen off, that he intended to replace it by another, had acquired fresh force and vigor, and gave every sign of producing a large crop of grapes. He afterwards used the same substance on the posts and trellis-works which supported the trees in the open air, and met with the same result, all the caterpillars and other insects completely disappearing. Galvani's Messenger states that similar experiments have been made in some of the vineyards of the Gironde, with similar results.

Forest Trees.

At a recent sitting of the French Academy of Sciences, held in the city of Paris, M. Chevaudier developed a portion of the results of five years' study and experiments upon the *manuring of forests*, and the augmentation of their annual yield. This question has an interest in France, which can hardly be understood in America, where the difficulty is rather to clear the ground of its woody growth, than to stimulate it to greater fruitfulness. M. Chevaudier commenced his experiments in 1847, believing it as possible to assist trees in their growth, as flowers, grass, and animal plants. Why could not art interfere to restore to the soil the mineral substances withdrawn from it by the roots of the trees, and by them conveyed to their trunks and branches. Because woods spring up of themselves, and appear to flourish without the aid of man, was it not nevertheless probable that a system of amelioration of the soil might urge them to a more luxuriant vegetation? The great difficulty in the way of such attempts was the length of time necessary to devote to them.

When Franklin wished to convince his fellow citizens of the good effects of plaster of Paris upon a soil deficient in lime, he simply sprinkled in the midst of a meadow, a quantity of powdered plaster, tracing several words in huge letters. A few weeks afterwards the lime had sunk into the soil, but the words traced upon the meadow stood out from the rest by the richer color and the double height of the vegetation. But in order to convince one's self in sylviculture, that such or such a manure, or substance acts favorably or otherwise, study for whole years, and application of the system to a very large extent of land, were indispensable. After five years' steady devotion to this especially, M. Chevaudier communicated the substance of his discoveries to the Academy. He commenced his experiments by choosing among the substances that their cheapness rendered accessible, such as could restore to the soil the elements of the azote or salt withdrawn from it for the support of the forest. As sources of azote, he employed the salts of ammonium; as sources of mineral substances, he used wood ashes, which contain the whole mineral portion of the wood before its combustion. He also tried lime, the salts of potash and soda, the phosphate of bone lime, plaster, and the sulphate of iron; and earthy substances, the residue of factories, or salts of potash and soda, (oxy-sulphure of calcium,) which had already been, and with advantage, tried in the valleys of the Vosges.

It would be impossible to describe the tabular view drawn up by M. Chevaudier, which gives the individual history, and the bill of health of five thousand five hundred and thirty subjects—pines, cedars, oaks, beeches, larches, etc., etc. I have only room for the general conclusions, which may be divided into four categories: 1st. Substances whose fertilizing effect was more or less marked. These were, the oxy-sulphure of calcium, the chlorhydrate of ammonia, plaster of Paris; wood ashes, sulphate of ammonia, lime, non-calcined bones and pondrette. 2d. Substances whose fertilizing effect was slightly marked, or doubtful. These were, the carbonate of coagulated blood, calcined bones, an equal mixture of nitrate of potash, non-calcined bones, sulphate of iron, and carbonate of lime, and an equal mixture of nitrate of potash and non-calcined bones. 3d. Substances which seemed to have no effect at all—the carbonate of potash, the nitrate of soda, and seasalt. 4th. Substances which seem to have had an injurious effect—the sulphate of iron, and equal mixtures of sulphate of iron with lime. The residuum of soda and potash works, known by the name of oxy-sulphure of calcium, generally supposed to be utterly useless, has been proved, by M. Chevaudier's experiments, to be the most wonderful substance ever employed for fertilizing purposes. It augments the growth of forest trees over one hundred per cent. In the neighborhood of soda-works, there are huge piles of it, the accumulation of years. At Marseilles it is thrown into the sea, while there are, throughout the department, vast pine plantations upon which it might be applied with great advantage.

LARGE OR SMALL SEED POTATOES.—By an experiment carefully conducted at the North American Phalanx, the following results were obtained:

1. Large whole seed, 29 lb 14 oz., produced 154 lb.
2. Large potatoes cut in halves, 15 lb 15 oz., produced 124.
3. Large potatoes cut in quarters, 7 lb, produced 98 lb.
4. Medium potatoes, whole, 19 lb 3 oz., produced 146 lb.
5. Medium potatoes cut in halves, 9 lb 6 oz., produced 88½ lb.
6. Medium potatoes cut in quarters, 4 lb produced 67 lb.
7. Small potatoes whole, 9½ lb, produced 115 lb.
8. Small potatoes cut in halves, 6 lb, produced 81 lb.

The percentage of small potatoes to the seed used, was greatest in the quartered large potatoes. Repetitions of the experiment have all been in favor of large uncut potatoes for seed.

Valuable Discovery of Gum.

A few weeks ago we noticed the discovery of great fields of gypsum, and great supplies of gum arabic, at the head waters of Red Brazos, by the expedition of Captain Marcy. Since that period, the Washington Star has published some correspondence of Thomas L. Drew, Superintendent of Indian Affairs, and Dr. Shumard, physician to the expedition, describing the gum. Dr. Shumard says, in relation to it, "This gum, for which I propose the name of gum mezquite, is believed to occur in inexhaustible quantities, and will no doubt prove a valuable source of revenue to the State of Texas, New Mexico, and the adjacent Indian territory, besides affording employment to the different tribes of Indians now roving upon the plains, many of whom would no doubt be glad to gather and deliver it to the different frontier posts for a very small compensation."

The mezquite tree, from which this gum is obtained, is by far the most abundant tree of the Plains, covering thousands of miles of the surface, and always flourishes most luxuriantly in elevated and dry regions. The gum exudes spontaneously in a semi-fluid state from the bark of the trunk and branches, and soon hardens by exposure to the atmosphere, forming more or less rounded and variously colored masses, each weighing from a few grains to several ounces. These soon bleach, and whiten upon exposure to the light of the sun, finally becoming nearly colorless, semi-transparent, and often filled with minute fissures. Specimens collected from the trunks of the trees were generally found to be less pure and more highly colored than when obtained from the branches.

The gum may be collected during the months of July, August and September; but the most favorable period for that purpose is in the latter part of August, when it may be obtained in the greatest abundance, and with but very little trouble. The quantity yielded by each tree I found to vary from an ounce to three pounds; but incisions in the bark not only greatly facilitated its exudation, but causes the tree to yield a much greater amount. As it is, a good hand will probably be able to collect from ten to twenty pounds in a day. Were incisions resorted to, probably double the amount may be obtained."

Mr. Drew says respecting it, "The remarkable similarity of taste, appearance, and mucilaginous qualities of this gum to that of gum arabic, induced Dr. Shumard, to make some experiments, the result of which proving satisfactory, he caused some twenty pounds to be gathered, which was brought home on his return some ten days past."

Upon diluting one ounce of this gum in two ounces of cold water, I had a fine glutinous paste, which I have used in sealing envelopes and other packages. I have also caused it to be mixed with starch in the application to linen, and in both instances have no hesitation in saying that it is equal to the article for which it must soon become a popular substitute. In its first form, the Indian Department, you will perceive, is permitted the privilege of its first official use. It will be seen that its adhesive or glutinous qualities cannot be excelled, as I have sealed up the box with it and will use it on the outward envelop."

Our constant readers will remember that we have oftentimes urged travelers and exploring geologists to search for a few natural products in our forests, asserting while we did so, that new gums, resins, substitutes for gutta percha and India rubber, might be discovered. The new gum is the first fruits of such explorations, and perhaps, by the Rider process of vulcanizing gutta percha, it may be adapted for making water-proof fabrics. Not one tithe of the natural riches of our country have been developed yet.—*Scientific American.*

How to Cure Hams.

The following are the recipes for curing hams, furnished by the competitors to whom premiums were awarded for hams exhibited at the Maryland State Fair, held at Baltimore the past week.

No. 1.—For 1,000 lbs. of meat, which has hung for several days after killing, take 3 pecks of Liverpool salt, 1-2 lbs. saltpetre, 3 pints of molasses, 3 lbs. brown sugar, and 1-4 lb. cayenne pepper. Mix these ingredients together and rub the mixture on the meat well and thoroughly, both on the skin and flesh. Let it lie in the salt for about 5 or 6 weeks, hang up, and smoke with green hickory wood. J. CARROLL WALSH.

No. 2.—For 1,000 lbs. meat, take 1-2 bushel fine salt, 1-2 gallon best molasses, 3 lbs. brown sugar, 2-12 lbs. saltpetre, pounded very fine, mix all the ingredients together in a large washing tub, and rub the meat therewith until you absorb the whole quantity; the meat must be taken out of the cask once a week and rubbed with the pickle it makes; the two first times you take it out add at each time a plate full of alum-salt; it ought to remain in pickle 5 or 6 weeks, or according to the size of the meat. W. H. MARRIOTT.

No. 3.—To 1,500 lbs. of pork take 1-2 bushel G. A. salt, 1-4 bushel fine salt, 2 lbs. saltpetre, 4 lbs. brown sugar, 1-2 gallon sugar house syrup, 1-4 lb. Cayenne pepper, well mixed and thoroughly rubbed on, especially about hocks, packed away in a box or cask, with opening for brine to pass off, turned in 3 weeks, and at end of sixth week hung up and smoked with green hickory wood. Middlings, shoulders and hams all cured by same recipe. Mrs. GEO. Y. WORTHINGTON.

We may judge of men by their conversation towards God, but never by God's dispensations towards them.

Miscellany.

[ORIGINAL].
WASHINGTON.

BY SAMUEL NEWTON.

A STAR burst on the gloom of years;
It came as with its meteor light,
To soothe a nation's doubts and fears—
To vindicate, of men, the right.

Before that meteor star up sprung,
The world seemed void of law or ruth;
But lo! its rising glory clung
Honor and freedom, right and truth.

It passed, but nevermore can fade
The memory of its peerless light,
The dazzling glory it displayed
When in its splendor, beaming bright.

Before it came, all was dismay;
No light, to bless the nations, shone;
Now a world hails, of hope, the ray,
That sprung to birth with Washington!

[From the Boston Cultivator.]

A Legend of the Red Men.

A TRADITIONAL TALE.

A LITTLE over a century ago, there dwelt on the shores of the St. Lawrence a bold and warlike tribe of Indians called the Chippeways. They were noted for their kindness and hospitality to strangers, their great prudence and judgment in battle, with the influence they exerted over the surrounding tribes. Wayunga was their chief. He was a bold and warlike man, possessing all the virtues of a savage race, and but few of the virtues that are commonly found lurking in the bosom of the untutored Indian. He had a fair and lovely daughter, the only remnant of a once numerous family, and she was the ideal of perfection! Possessed of a kind and loving heart, she won the affections of all her race. When the dark brow of her father was clouded, when the strange whisperings of revenge came forth from his, inmost soul, would she hasten to his side, there to comfort and console him. She would point him toward the spirit land, where dwelt her sainted mother, and where her kind brothers and loving sisters were at rest. Then would the brow of the old man soften, and the tears of sorrow would trace each other down his furrowed cheeks. Motioning Niona from him, he would sit for hours in silent meditation, while strange feelings of calmness and revenge were struggling for the mastery of his bosom.

These were Niona's hardest trials, during which she would wander forth, and on the rugged banks of the Oswegatchie, would she seek for the wildest flowers, that she might twine them into a wreath for her father. At other times she would sit upon the same grassy mound that overlooked her native village, and muse upon the past scenes of her countrymen. Once, their hunting grounds extended from the great St. Lawrence back to the Mohawk river, now they are encompassed on all sides. What once contained thousands of acres had been reduced to hundreds. The hunting grounds of her father vanished before her eyes as a mist before the summer's sun, and need I say that fair Niona wept—wept not for herself, but for her own loved people.

Days and months passed by, and still there was no change; save that Niona's cheek grew paler, and her father grew more sorrowful. Day after day they went forth upon their hunting excursions, and at night returned heavily laden with the spoils of the chase; one in which all would be engaged, even the women and children. Great preparations were being made. Food was prepared and placed in their respective sacks. Arrows were pointed and bows were tried. Knives were sharpened, and tomahawks examined preparatory to use. All being ready, each repaired to his humble roof, to pass the remainder of the night in rest or revelry, as they respectively chose.

At the earliest dawn the little village was awake and stirring. All seemed joyful, save Niona, and she, for the sake of her father, would fain be so. At his permission she was allowed to remain at home, while all the rest went forth in high anticipations of pleasure and success. How well they succeeded we know not, for tradition does not inform us, but this we do know, that they had a different enemy to cope with than those of the beasts of the forest.

Upon a little mound that projected itself far into the forest, had Niona built a bower, and with her own hands twined the myrtle and ivy, and planted the wild rose that bloomed at earliest spring. During her lonely hours would she seek this favored retreat, to pass away her time in solitude, and thither had she retired so soon as her father's company had passed the borders of the village. For sometime she was occupied in arranging the different flowers and vines that crept around this bower of maiden innocence, and at last she broke forth into the following strain:

THE INDIAN MAIDEN'S SONG.

The flowers are sweetly blooming,
The hills and valleys o'er;
Their fragrant sweets are shedding—
For me they bloom no more!

My home is on the mountain,
My spirit's on the sea;
I drink from out the fountain
That flows near yonder tree.

I wander in the forest,
And pluck the flowers of spring;
I cull from them the sweetest,
And to my father bring.

He smiles upon his daughter,
Though age is on him now,
I see that pride is wrinkled
With scorn upon his brow!

His warriors they are fading,
His kindred swept away,
I am his only living—
He smiles alone for me!

Scarcely had her voice died away on the still air, when she was aroused by the confused murmur of distant voices. Supposing that her father had forgotten something, or abandoned his object, she was about to rush out and meet him, when upon a second thought she resolved to await his arrival. She had not long to wait, for on their turning an angle round the hill so as to avoid the village, they burst upon her sight. A party of seven or eight hundred Algonquians, one of the most powerful tribes then inhabiting a large tract of land lying west of Albany, actuated by feelings of resentment, had sworn the extirpation of the Chippeway nation.

Niona, knowing the purport of their visit, watched with intent interest their proceedings. After having discovered all that it was necessary, she crept stealthily out from her hiding place, and with eager steps sought her father's company. Knowing the direction they had taken, she had but little difficulty in following them, though it was through an unbroken wilderness, so dense in many parts as scarcely to admit the rays of the sun; but her heart was bold, and she knew that the safety of her people depended on this undertaking. Swiftly she flew over the broken ground, nor did she falter in her course, till she saw the smoke ascending from her father's fires, which had been kindled to prepare their noonday meal. This was about fifteen miles from their village, and at the head of a large body of water, and known as the Black Lake.

The sun had already sunk far in the western horizon before Wayunga and his warriors were prepared to return and meet their foes. With five hundred able men, well armed and experienced in the art of war, Wayunga felt confident of success. In a short speech he told them of their sufferings, how their hunting grounds had been taken from them, and how they had been driven from the burying grounds of their fathers, never to visit them more! Had you seen the fearless scorn impressed on their dark features as he spoke, you would have said, it had its effect; whether it had or not, the sequel will show.

Darkness had long since encompassed the face of the earth, before they reached the skirt of wood bordering their village on the west. Here they separated, and all that were too old and infirm to engage in the approaching contest, were ordered with their women and children, to seek shelter on the dark waters of the St. Lawrence. Wayunga, rising to the summit of a knoll, saw in the distance the flames of fire and smoke ascending from their village.

"Now," said he, turning to his warriors, "is the time for revenge; while engaged in their drunken debauchery they will become an easy prey. Spare none, for the spirit of a loved wife and murdered children, call to me for revenge!"

With stealthy and noiseless tread they approached the smoking ruins of their village which they a few hours before had left in seeming security. When within about twenty rods of the enemy, they arose, gave the war-whoop and plunged into the ranks of the Algonquians, who, though taken by surprise, soon rallied, and like brave men withstood the charge. Now commenced a dark and bloody scene! The swift winged arrows of death, sped like lightning from side to side, and the tomahawk gleamed wildly in the midnight air, while the groans of the dying were mingled with the shouts of the assailants as they pressed closer upon their foes. The forms of dusky warriors were stretched along the earth, and beside them lay the reeking scalps of each murdered victim.

The voice of Wayunga was heard cheering and shouting to his braves, and his form was seen in the thickest part of the fight, where his arm, though palsied with age, dealt death to every blow.

The Algonquians are unable to withstand so fierce a charge, and fall back to gain protection of the hill, where, aided by the darkness, they are again permitted to form and once more advance to the bloody affray. In this encounter the chiefs met; for an instant they confront each other, and then Omega the Algonquian chief thus speaks:

"Wayunga is a coward; he is as a wild deer that flees when no one approaches, and hides when there is no need of fear. He is afraid to meet his foes!"

"Omega lies; he is a serpent that lays in the path of the brave; he hisses with his forked tongue, and the Great Spirit is angry with him. Wayunga soars like an eagle, and is not afraid to meet the hissing serpent—he will meet him here!"

The next instant their tomahawks gleamed through the air, but Wayunga was too quick for his antagonist, and with one heavy blow he laid the dying chief at his feet, and in a moment his scalp was dangling by his side, yet reeking with gory blood.

The death of their chief was the last blow to the Algonquians, and they fled with dismay. Of eight hundred warriors who left their homes with the full determination to extirpate the Chippeway nation, but two hundred ever returned; the rest perished on that memorable night. But Wayunga, though victorious, paid dearly for his victory. Twelve score of the bravest warriors had fallen, and many more had received severe and fatal wounds.

Again 'tis morning, but how unlike the joyous one of the previous day. Distracted mothers and sorrowing daughters are flying from side to side, and searching for their fallen friends. Niona presides as a guardian spirit ministering to the wants of the wounded braves, and cheering the broken-hearted mourners. A group of dark forms are

seen by the side of the valley, where, with tearless eyes and stained hands, they are preparing the last resting-place for the dead. Friends and foes are placed in the same pit, and their bloody weapons are laid by their sides. No prayer is raised for the departed ones, but the Great Spirit is invoked, and then the earth is piled high over their bloody forms.

Wayunga never built his village again, but with the rest of his tribe went farther west, where with his daughter he passed the remainder of his days in peace and quietude, being persuaded that he had his revenge. The descendants of that tribe are now beyond the Rocky Mountains, where, with fondness they still cherish the remembrance of Wayunga and Niona, his lovely daughter.

Young Men and Woman of the Present Age

We commend the following from the Springfield Republican. Read, reflect and practice accordingly:—

There are subjects which, to touch upon with point and candor, would give pain and offense, and which need touching upon in the exact proportion that such pain would be given. Our only wish, in speaking of "our young people," is to excite a profitable course of thought, and to do good. So far as our observation extends, the young men of our acquaintance do not at all appreciate the age in which they live, or the duties which are soon to devolve upon them. We meet them in the street, we see them at church, we talk with them across the counter, we come in contact with them in occasional conversation, and the principal impression left upon us is a nicely fitting coat, a clean pair of boots, easy manners and a contented frame of mind. We go into their rooms, and find a novel, which they declare to be very good or very stupid. The Bible is out of sight, and the history and the book of travels are not upon their tables. If we speak of politics, they "don't care anything about politics, and are not posted;" if of religion, they think "it pretty much as a man thinks;" if of any great question agitating the world abroad, they don't pretend to keep track of foreign affairs. As for thoroughly digested and well informed views of the literature of their own language, they have none. Notions they have in plenty—opinions with them are scarce.

This condition of things grows out of a mistaken idea of life and its true ends. Business is the one subject that rises above everything else. On this, they are well informed. Here, they are perfectly at home, and it is this establishment in their minds of what was intended to be secondary and subsidiary, as the grand end of life, which prostitutes their energies, and dwarfs their whole being. God never made mankind with the intention that selling dry-goods, and counting money, and digging potatoes, should be the great ends of its pursuit. These are all simply the means of sustaining animal life, and securing personal and social necessities and comforts. A true manhood is the grand object of life,—that development of the intellect and the heart, that symmetrical and sturdy growth of character, which makes a man a man, which lifts him above the accidents of fortune, and give him power, influence, self-reliance, intelligence, energy, and, above all, a feeling of equality and self-respect, worth more than all the wealth of the Indies.

Tried by the standard suggested by this view, how many of our young men are men or are growing to be men? We leave it for them to answer how, in the time to come, when they take the place of their employers, they are fitted to meet the responsibilities of society. What kind of tone do they propose to impart to their own circle? What beneficent movements are they to lead in, and be the supporters of? These are serious questions which they are now deciding in their everyday life and pursuits. Society is to be in future what you, young men and young women, make it. Shall it be frivolous, shallow-mannered, and shallow-hearted, or shall it be intelligent, high-toned, pure and ennobling, as becomes true manhood and true womanhood?

We are aware that there are discouragements in the way. We are met with the statement that there is no use in trying to get into good society unless you have money. We answer that society that measures its members by money is not good society, and is not worth getting into, and would be a curse to you if you were to go into it. Make your own society good, and then you will have good society. What to you are those poor specimens of humanity who estimate your importance by the corpulence of your purse? They do not call for a thought—and if you have true self-respect, you will not give them one. Tom Carlyle maintains the opinion that every man, by a law of nature, will find his own level, and he is right. You cannot miss it. We can select young men in Springfield who imagine that no one thinks of them, and who, in pursuing their schemes of self-improvement, think they are unobserved. Public opinion knows and measures them all, and their good name is abroad. When they come to make an independent movement for themselves, they will meet it. The world is coming more and more, every day, to estimate men for what they are, and what they do and can do.

We are led to these remarks by the advent of that time of year when self-improvement is more easily pursued than any other, and when schemes for this object are usually devised and consummated. What are you going to do the coming Fall and Winter? Are you going to form reading and debating clubs? Are you going to form circles for cultivation in composition? Are you going to lay out for yourself, or under the advice of friends, a course of private reading? Or are you only calculating on some private whist parties, or a few public cotillon parties? These

are questions in which we feel a greater interest than we can express, for we know, and can but profoundly feel, that upon their decision depend the future usefulness, respectability and happiness of many a young man and woman.

Ladies' Department.

Mr. Jefferson and his Daughter Martha.

In the superb new work soon to be issued by the Appletons, under the title of the "Republican Court, or American Society in the Days of Washington," by Rufus W. Griswold, we find an interesting letter from Mr. Jefferson to his eldest daughter, addressed to her when she was at school, in Philadelphia. This daughter was afterwards married to the Hon. Thomas Mann Randolph, of Tuckaboe, who became Governor of Virginia. Dr. Griswold says of her:

"ANNAPOLES, Nov. 18, 1783.

Martha Jefferson was born on the twenty-seventh of September, 1772, and was therefore now a little more than seventeen years of age. John Randolph said she was "the sweetest young creature in Virginia." Mr. Adams, to whose care she had been entrusted some time in Paris, refers to her with the most affectionate expressions; and Mrs. Smith, the daughter of Mrs. Adams, says, "delicacy and sensibility are read in her every feature, and her manners are in unison with all that is amiable and lovely." While Miss Jefferson, in 1783, was at school in Philadelphia, boarding with Mr. Trist, (grandmother of Mr. Nicholas P. Trist, who is now the husband of the grand-daughter of Mr. Jefferson,) her father addressed to her the following letter, which has never hitherto been published and is very interesting as an illustration of his domestic character, and his views of the education of women:

MY DEAR PATSY: After four days' journey, I arrived here without any accident, and in as good health as when I left Philadelphia. The conviction that you would be more improved in the situation where I have placed you than if still with me, has solaced me on my parting with you, which my love for you has rendered a difficult thing. The acquisitions which I hope you will make under the tutors I have provided for you will render you more worthy of my love; and if they cannot increase it, they will prevent its diminution. Consider the good lady who has taken you under her roof, who has undertaken to see that you perform all your exercises and to admonish you in all those wanderings from what is right, or what is clever, to which your inexperience would expose you—consider her, I say, as the only person to whom, since the loss with which Heaven has been pleased to afflict you, you can now look up; and that her displeasure or disapprobation, on any occasion, will be an immense misfortune, which, should you be so unhappy as to incur by any ungoverned act, think no concession too much to regain her good will.

With respect to the distribution of your time, the following is what I should approve:—From 8 to 10, practice music. From 10 to 1, dance one day and draw another. From 1 to 2, draw on the day you dance, and write a letter next day. From 3 to 4, read French. From 4 to 5, exercise yourself in music. From 5 till bed-time, read English, write, &c. Communicate this plan to Mrs. Hopkinson, and if she approves of it, pursue it. As long as Mrs. Trist remains in Philadelphia, cultivate her affection. She has been a valuable friend to you, and her good sense and good heart make her valued by all who know her, and by nobody on earth more than me. I expect you to write to me by every post. Inform me what books you read, what tune you learn, and inclose me your best copy of every lesson in drawing. Write also one letter every week, either to your Aunt Eppes, your Aunt Shipwith, your Aunt Carr, or the little lady from whom I now enclose a letter, and always put the letter you so write under cover to me.

Take care that you never spell a word wrong. Always, before you write a word, consider how it is spelt, and, if you do not remember it, turn to a dictionary. It produces great praise to a lady to spell well. I have placed my happiness on seeing you good and accomplished; and no distress which this world can now bring on me would equal that of your disappointing my hopes. If you love me, then, strive to be good under every situation, and to all living creatures, and to acquire those accomplishments which I have put in your power, and which will go far towards ensuring you the warmest love of your affectionate father.

P. S. Keep my letters and read them at times, that you will always have present in your mind those things that will endear you to me."

An admirable portrait of Miss Jefferson strongly resembles her illustrious father, and justifies the traditional fame of her graceful beauty.—N. Y. Evening Post.

To make deaf persons hear the piano forte, the instrument should be opened, and a rod of deal wood provided about half an inch thick, three-quarters wide, and long enough to reach from the bridge of the sounding board to the mouth of the deaf person. If one end of this rod be made to rest firmly on the bridge, and the other end be held firmly between the teeth, the softest sounds will, it is said, be distinctly communicated.

IDLENESS is a disease that must be combatted; but I would not advise a rigid adherence to a particular plan of study. I myself have never persisted in any plan for two days together. A man ought to read just as inclination leads him; for what he reads as a task will do him little good.—Johnson.

FROM THE EAST.

By the arrival of the P. M. S. John L. Stephens, at this port on Saturday last, we have dates to the 20th December from the Eastern States.

The weather was intensely cold in the eastern and middle States, on the 20th ult.

It was expected that passengers from New York by the 20th January, would come through from Aspinwall to Panama by railroad.

It is stated that the sudden closing of navigation has locked up about 180,000 of corn and wheat in the Welland Canal.

In the Senate, on the 19th Dec., Mr. Broadhead's resolution for sending a steamer to the Arctic seas in search of Dr. Kane, was adopted.

The correspondent of the Herald says:—"The Pacific Railroad bill having been again postponed by Mr. McDougall until the second week in January, will probably be taken up at that time; but it will not pass. When it has become perfectly apparent that the Railway Bill must fail, the delegation are prepared to bring forward, and urge the immediate passage of a bill to make a Wagon Road across the Plains, and to protect it by Military Posts.

Dr. H. H. Toland has been appointed Surgeon of the Marine Hospital at San Francisco, in the place of Dr. McMillen, who resigned in favor of the new appointee.

Post Master General Campbell has notified the Pacific Mail Steamship Company, that unless they will give a weekly mail service to California for the sum of \$750,000 per annum, the same they now receive for semi-monthly service, he will use all his influence to get the contract repealed by Congress at its present session. Present appearances are that the company will not yield to this demand.

The House, on Mr. Latham's motion, adopted an amendment appropriating \$225,000 in the Indian Appropriation Bill for California Indian purposes—to remove the Indians, settle and civilize them.

Governor Pense, of Texas, has issued a proclamation again, offering the contract to construct the Mississippi and Pacific Railroad to responsible bidders.

The ship-of-war Albany has been heard from at Carthage, on the 10th November—all well. This, however, only adds slightly to the hopes of her safety, as, without accident, she would still have been home long ere this.

Lieut. Col. Steptoe, U. S. Army, has been nominated to the Senate as Governor of Utah, in place of Brigham Young. He is already at Salt Lake City, in command of a detachment of U. S. troops, destined for service in California or Oregon.

The celebrated abolitionist, Wendell Phillips, has been indicted in Boston, charged with resisting the U. S. Marshal, at the time of the rendition of the slave Burns.

Louis Napoleon has offered the directors of the Collins' line, in cash, £450,000 sterling, or \$2,250,000 for their three steamers, or \$750,000 for any one of them. Should Congress conclude to change the contract now existing between the U. S. Government and the line, then it is understood the company will prefer selling their ships to running them at losing rates.

In New York, on the 20th ult., a fire broke out on Broadway, consuming the City Assembly Rooms and Christy and Wood's Minstrel Hall. Among the other sufferers were McKinstry's Carriage manufactory, Lyon's Powder Depot, Duscombe's Saddlery, the building formerly known as Mitchell's Olympic, Mix's Coach Factory, &c. The fire extended through to Crosby street. A hall was in progress in the Assembly Rooms when the fire broke out. One man is known to have been killed, and several ladies are said to be missing. Six firemen were killed by the falling of a wall, and a policeman named Patrick McVay, and fourteen other persons, were seriously injured from the same cause.

Destructive fires occurred in Philadelphia on the night of the 14th December, destroying property to the amount of half a million. The firemen were kept at work all night, there being four fires raging nearly at the same time in different sections of the city. The most extensive of these broke out about 11 o'clock at night, in a large brown stone building on Chestnut street above Fifth, the property of Geo. Edward, from which it spread to Fifth street on the east, and Minor street on the north, destroying property to the amount of \$430,000, about one-half of which was insured. The fire would in all probability have been confined to the building in which it originated had the walls been of the proper strength. As it was the walls fell out and launched a flood of fire upon the adjoining buildings, which were much lower, causing the fire to spread to the extent it did. Another destructive fire occurred in the same city on the morning of the 18th December, which destroyed the workshop or factory belonging to the House of Refuge, valued at \$65,000.

On the night of the 19th ult., as the steamer Washington was on her voyage from New York to Bremen, when in the English channel, between Dover and Calais, she was run into by a brig with such force that it buried its bowsprit in her hull, and made two immense holes, but which were fortunately high above her water line. The officers did not lose their presence of mind; and the first thing done was to post a watch near the boats, armed with loaded pistols, to shoot any one who should try to seize upon them without an order from the captain, who was himself suspended on ropes above the water for four hours, superintending the repair of the damage that had been done. It is not known what became of the brig, as she instantly disappeared in the darkness.

It is said that the election in Kansas for Delegate to Congress, was entirely controlled by residents of Missouri. Gov. Reeder of that Territory, says in his message:—

"It may be very desirable for gentlemen to live among the comforts of the States, with all the accumulated conveniences and luxuries of an old home, and make an occasional expedition into our territory, to arrange our affairs, instruct our people and public officers, and control our government; but it does not suit us, and I much mistake the people of this territory if they submit to it. One thing I am certain of, that having sworn to perform the duties of the office of governor with fidelity, I shall renounce or resist it in friend or foe, and without regard to the locality, the party, the faction, or the ism from which it comes."

FROM EUROPE.

By the West India mail, news from Europe is four days later. From the seat of war we have dates to the 22d November. On the 13th the Russians made a sortie, in which they were repulsed with a loss of 400—the French lost only 40. On the night of the 21st an encounter took place between a Russian party and the English rifles, in which the latter had the advantage. The last St. Petersburg dispatch is to the 24th. It states that up to that date no change had taken place. The siege was progressing, and fire of the besiegers slack. The Duke of Cambridge and Sir De Lacy Evans had left the army, invalided.

Messrs. Petro, Brassy & Co., the railroad contractors, had undertaken to lay down a railroad from Balaklava Bay to the siege works, for the purpose of bringing up ammunitions, provisions, &c., the whole to be executed by them and handed over to the government at cost.

The loss of the allied fleet in the late storm is less than was reported. The stranded vessels were burnt to prevent their falling into the hands of the enemy.

Omer Pacha is forthwith to enter Moldavia with 68,000 men. Achmet Pacha, with 30,000, will occupy Balaklava. The *avant garde* of 5,000 men had already entered Dobroutscha.

On the 2d, a treaty of alliance was signed at Vienna, by the Plenipotentiaries of Austria, England and France. The effect of this will be that Russia will be compelled to keep a large force to act on her frontiers towards Bohemia, Gallacia and the Danubian Provinces.

SPAIN.—The Paris correspondent of the London Times says:—"A telegraphic dispatch from Madrid, of the 28th, announces that Espartero has been named President of the Cortes, and General O'Donnell first Vice-President. I have reason to believe that a well laid scheme has been formed to employ all means good and bad, to overthrow Espartero in favor of O'Donnell. Should the plot succeed, Narvaez would be proclaimed Dictator under the nominal government of the Queen."

FROM AUSTRALIA.—We have advices from Sydney to the 12th October. The Sydney Empire says that there are now unmistakable signs of a general and apparently permanent reduction in the rates of wages, both with reference to the mechanic and the workman.

The return of gold exports from Sydney from January 1st to September 30th, of the present year, shows a falling off compared with the same period in 1853, of 224,130 oz. 2 pwt. 12 grs. The value of the gold exported during the same period in 1853, at 65 pence per ounce, was £1,371,347 18s. 4 1-2d., and in 1854, for the same period only £651,049 19s. 11 1-2d.

FROM OREGON.

The steamer Columbia, which arrived Tuesday from Portland, Oregon, brings accounts of the loss of the steamer called the "Southerner," formerly the old "Isthmus." She struck on the bar at the mouth of Columbia river, and although backed off, was found so badly strained that she could not go in. She was put to sea, though leaking badly, and headed for Puget Sound, but to prevent foundering was beached about 60 miles above Cape Flattery. Some apprehensions are entertained for the safety of those on board. They were all landed to the number of thirty, on a part of the coast where the Indians are very hostile. The mails and freight are a total loss.

A new steamboat called the "Jenny Clark," has been launched at Milwaukee, by Messrs. Ainsworth, Kamm & Co. She is 118 feet in length, 18 feet beam, and 4 feet depth of hold, with a stern wheel, very light draught, and has been built expressly for the Portland and Oregon city trade.

A salt spring has recently been discovered near St. Helens. The water has been analyzed by Dr. Panton, and found to contain a large quantity of pure salt.

There had been quite a fall of snow in Oregon, which gives the people a chance to sleigh-ride, and sportsmen a fine opportunity to hunt deer, bear and other game. The snow in the timber is about a foot deep.

A fire occurred at Portland on the night of the 18th ult., destroying the buildings belonging to the Portland Milling Company.

In relation to trade, the Oregon Times, Portland, says it has nothing new to report. Everything is dull, and but little merchandise has been sold. Coffee and raw sugars have somewhat declined in price. Salt still firm at 4 1-2 to 5 cents. But little produce has come in during the week, farmers still holding on, trusting there will soon be an advance.

The Oregonian remarks: Business is said to be improving throughout the country. Several gentlemen from up the Willamette valley have assured us that money is becoming plenty. The farmers are sending their surplus produce to the southern mines and receiving a fair price for it. It seems to be the opinion of those best informed, that the Rubicon is passed with Oregon, so far as its financial interests are concerned. Let our farmers and mechanics produce more and purchase less, and Oregon will be all right.

The Standard publishes a letter from the missionary in charge of the Colville Indians, by which it appears that the Indian difficulties had been fomented by a man named Carry, employed as Indian Interpreter by Governor Stevens.

MUD GEYSER NEAR FORT YUMA.—An officer of the U. S. Army, at one time stationed at Fort Yuma, described in our presence (says the Chronicle) a wonderful spring, or Geyser, of hot mud, about sixty miles south of Fort Yuma. The spring is situated on a vast plain, which extends eighty miles south from the Gila. The soil of the plain is a dry mud, which was apparently at one time the bed of a lake, or sea. The landscape is of the most dreary, barren and monotonous character. The Geyser covers fifteen or twenty acres. About the edges there is a warm, soft mud, with pools of water here and there. In the centre the mud bubbles like boiling Indian pudding, and a great body of steam is constantly rising, and is visible at a great distance. The mud and muddy water are frequently thrown more than a hundred and fifty feet high; and at these times the Geyser often makes a rumbling noise, distinct from that of the fall of the mud.

THE Southern Californian Extra, received by the Coliah, reports great excitement at Los Angeles, consequent on the receipt of a respite from hanging in favor of Brown for the murder of Clifford, while the sentence of Alvitre, who was likewise condemned to be hung, was ordered to be carried out. At the latest accounts, Alvitre had been hung by the sheriff, and the mob were breaking down the jail with the intention of performing the same service for Brown.

On Sunday last, the Calvary Presbyterian Church, on Bush street, was dedicated. The Rev. Wm. A. Scott, D. D., is pastor, who also preached the dedication sermon in the morning.

During 1854, about 2,800,000 oranges were imported to this city. Of these probably three-fifths (1,680,000) were sent to the interior, and two-fifths (1,120,000) eaten here. Estimating our population at 60,000, that would give only eighteen a piece to man, woman and child in San Francisco.

WE would call attention to the advertisement of Southwick & Co. in another column. The Dairy is well known in Sacramento, and the scheme is recommended by reliable citizens.

SPECIAL NOTICES.

Native Pines, Oaks, &c.—Cones of the Native Pines, Acorns from our Mountain Oaks, Seed of all our Mountain Shrubs, and of every species of Valuable Tree or Shrub; for these the full price will be paid, if satisfactorily labelled, classified and arranged, at the

Office of the "CALIFORNIA FARMER," Masonic Hall Building, Montgomery street.

Wanted.—All the varieties of California Clover Seed, for which the highest price will be paid at the

Office of the "CALIFORNIA FARMER," Masonic Hall Building, Montgomery street.

Our New Office.—We invite our friends to our new office in the "Masonic Hall," on Montgomery street, opposite Le Count & Strong's. Trees, Seeds, Plants, Grains, Houses, Lands, Inventions, Works of Art of all kinds, these we are happy to show, and can interest our friends if they will but call and see us.

"A Thing of Beauty is a Joy Forever."—Why will people endure pimples on "the human face divine," or eruptions of any kind, when it is a fact so well known, that Dr. Guyssot's Yellow Dock and Sarsaparilla cleanses the skin from all impurity, removing Pimples, Sores and Blisters, leaving the affected parts as healthy, smooth and soft as the skin of a babe. It is really priceless to all who wish the rosy beauty of childhood.

It cures all sores and poisonous wounds to discharge all infected matter, and eradicates every impurity from the system. It does its work mildly but effectually, giving conscious beauty and blooming health in the place of ugliness and soul-sickening disease.

SCROFULA, SYPHILIS, MERCURIAL COMPLAINTS, and a vast variety of other disagreeable and dangerous diseases are speedily and perfectly cured by the use of this medicine.

Purchasers will place be careful to ask for, and take none other but Dr. Guyssot's Improved Extract of Yellow Dock and Sarsaparilla. All others in comparison are worthless.

For sale at all the principal Drug Stores in the State. Park & White, Sole Agents, to whom all orders must be addressed. Office No. 94 Merchant street, 3d floor above Montgomery. 13

MARRIED.

On the 9th Jan., in this city, by Rev. Mr. Wynn, Wm. Branch and Miss Ellen Welch.

On the 15th Jan., in this city, by Rev. Frederick Buel, Mr. John Green and Miss Amanda J. Nichols, all of this city.

On the 12th Jan., in this city, by Rev. Mr. Moorhake, Dr. Med. Helmsman and Miss Margaretta Strubbin, both formerly of Switzerland.

On the 8th Jan., in this city, by Rev. Wm. Speer, Mr. Henry Lapman and Miss Sarah Blaudel, both of New York.

On the 11th Jan., by R. Rev. Bishop Alenany, Jno. A. Landers, of Sacramento, and Dornie Watson, of this city.

On the 12th Dec., at Hoboken, N. J., A. C. Messer, Esq., of San Francisco, and Miss Isabella S., second daughter of Chas. Idell, Esq., of Hoboken.

On the 18th Dec., in New York, George A. Van Bokkelen, of San Francisco, and Miss Mary P. Miller, of New York.

On the 11th Jan., in Benicia, George Watson, of San Joaquin Valley, and Miss Maria C. Raven, formerly of Copenhagen, Denmark.

DIED.

On the 10th Jan., in this city, Edward Lechlen Lindsey, aged 17 years, son of the late Capt. Lindsey, of Holmby Town.

On the 7th Jan., in Columbia, George A. Covert, aged 32 years, a native of South Carolina.

On the 6th Jan., in Todd's Valley, A. L. Carson, of consumption.

On the 6th Jan., in Los Angeles, Mr. John Foster, formerly a member of the Los Angeles Rangers.

On the 12th Jan., in Jackson, T. E. Johnson, aged about 30 years, formerly from Arkansas.

SAN FRANCISCO MARINE LIST.

ARRIVALS.

JAN. 10.—Clipper ship Flying Fish, Nichols, Boston, 113 days, with cargo.

Schr. Matthew Vassar, Dulge, San Pedro, 8 days; 6 tons corn.

JAN. 11.—Clipper ship Raren, Hinson, New York, 124 days, via Rio Janeiro 84 days, with 3500 bags coffee.

JAN. 12.—Schr. Kalana, Canby, Hilo, 23 days; produce.

Schr. J. R. Mansfield, Clark, Alton River, 7 days; lumber.

Schr. Adeline, Hutton, Bodega, 1 day; produce.

JAN. 13.—Steamship John L. Stephens, Pearson, Panama, 1 days, with passengers, mails, &c.

HOWARD, BOBRADALE & CO.,
Wholesale Dealers in Drugs, Medicines, Paints, Oils,
Camphene, Perfumery and Fancy Articles,
Corner of J and Sixth streets, Sacramento.
WE would respectfully announce that we have opened a
new Drug Store at the above place, where Physicians,
Druggists and Merchants will find a large and well selected
stock of all articles in our line, and at prices that would suit the
times. Our goods are all fresh and pure, having received them
by recent importations.
Orders from the country respectfully solicited. 13-1

California Starch.
ATTENTION of the Public is invited by the subscriber to
the Pure CALIFORNIA STARCH now manufactured by him.
The quality of it consists in its strength, purity and whiteness;
it can be triumphantly compared with any Starch manufactured
in any part of our country and the proprietor challenges com-
petition.
This new California product of "home manufacture" is of-
fered in neat packages of six and ten pounds each, at a low rate.
The trade supplied on liberal terms.
JOHN EVERDING, Manufacturer,
Water street, between Mason and Tyler,
North Beach, San Francisco 14

Stock Wanted.
PERSONS having valuable stock, of known pedigree, will
always find a market for the same by leaving a memor-
andum with us. We always have more or less stock on hand
for sale.
WANTED IMMEDIATELY. Two or three fine Durham Bulls;
six Short Horn Cows—extra; one entire Colt (Morgan Blood);
a few fine Merino Rams.
Communications mail, post-paid, will be responded to
promptly. 23
WARREN & SON,

HOTELS.

Orleans Hotel,
Second, between J and K streets, Sacramento.
THE above Hotel, occupying a space of 85 by 150 feet,
in the most central part of the city, built of brick and
three stories high, offers inducements to travelers not surpassed
by any establishment in the State.
The ground floor is set apart for Dining Room, Reading
Room, Billiard Room and Bar Room.
The Table will be found at all times supplied with the choice
of the market.
At the Reading Room can always be found the daily papers
of the State and the latest dates from the Atlantic and Europe.
The Billiard Saloon is furnished with five excellent tables,
superintended by a competent keeper.
The Bar will be supplied with the best Liquors and Wines.
The second and third stories of the building are set apart for
Parlor, Family Rooms and Chambers, comfortably furnished.
We have also leased the large brick building corner of J and K
and Front streets (formerly known as Sackett's Hotel) set apart
for Lodging Apartments, which are furnished in a superior
manner, which, added to the Hotel, will afford ample accommo-
dations.
The "Orleans" is also the Depot and Office of the California
Stage Co., from which place Stages leave daily for all parts
of the State. 13-2
HARDENBURGH & CORSE, Proprietors.

Rassette House.
SAN FRANCISCO, CALIF.
THIS HOTEL offers inducements to persons visiting
San Francisco, unexcelled by any on the Pacific Coast.
Guests can be accommodated with single rooms, or fami-
lies with suites of rooms.
The House is entirely new, built of brick; all the rooms are
furnished in a style of comfort hitherto unknown in the Hotels
of California, and the House is capable of accommodating over
five hundred boarders. 22-3m

Murray's Fifty-cent Western House.
Corner of Second and D streets, MARYSVILLE.
THIS HOUSE is entirely devoted to the wants of the
travelling public and to all who will favor us with a call,
entire satisfaction will be given. (17) R. J. MURRAY.

American Hotel
NAPA CITY, CALIFORNIA.
L. A. & W. W. CHAPMAN, Proprietors.
GOOD accommodations for families, and on reasonable
terms. Saddle and buggy Horses kept for hire. Horses
kept on board, by the day or week, and well taken care of. 26

A Valuable Farming and Stock Ranch for Sale.
SITUATED in the County of Monterey, about one mile
from the Mission of San Juan Bautista. Said Ranch consists
of about one hundred and fifty acres of valuable farming land,
running back to the hills, which are covered with clover and
oats. The Ranch and hills are heavily timbered. There is also
a stream of never failing mountain water, running through the
middle place. Either for Agricultural purposes or for Stock
Raising, this is certainly one of the best situations south of San
Francisco.
A good title will be given, it being Government land.—Price
\$3,000.
The improvements upon said Ranch consists of a toler-
able good Dwelling House, with lumber sufficient to erect a
large one; also about twenty-five acres enclosed under a good
fence.
Address: ALEXANDER COOPER,
San Juan Bautista, Cal.

the "Bay State Lower Mills," which grain always be found
at our store, No. 49 K street. Also, fresh ground Buckwheat
and Graham Flour, fresh ground Corn Meal, Middlings, Bran,
and ground Barley, &c., which is disposed of at the lowest price.
Barley, Wheat and Grain Ground to Order. 13-1

Happy Valley Flour Mills,
Corner of First and M Streets, San Francisco.
Encourage Home Industry and Home Production.

THE attention of dealers and consumers of Flour is respect-
fully invited to the Superior Article manufactured at the
above establishment, from California Wheat of the growth of
1894, selected and prepared with the greatest care. These Mills
have been in successful operation for nearly two years, during
which time the proprietors have received such satisfactory as-
surance from those who have tested the quality of their Flour,
that they can confidently recommend it as being fully equal to
any brand in the market. Among the many evidences of the
superior excellence of the Flour manufactured by them, the
proprietors would direct attention to the substantial com-
plaints received at the two last Annual Meetings of the State
Agricultural Society, premiums have been awarded at both
Fairs for the superior specimens of Flour from these Mills.

Domestic Flour.—A superior article for family use, manu-
factured from selected Wheat—a constant supply always on
hand at the Mill, or at the Depot of the Proprietors, 35 Sacra-
mento street.

A liberal allowance made to the trade.
J. N. BROOKS, } Proprietors.
F. C. UALL, }

When Purchased or Ground on the most favorable
terms. 19

Flour! Wheat! Flour!
THE SAN JOAQUIN FLOUR MILLS, STOCKTON—Are
now completed and ready to grind Wheat and barley in
any quantities. The above Mills are not surpassed by any in
the Atlantic States, having all the modern improvements for
the manufacture of the finest Family Flour, and are capable of
turning out 250 barrels per day.
A large drop-proof Warehouse for the storage of Grain, is
attached to the Mill.
Particular attention is called to the fact of Stockton being the
depot for the supply of the Southern Mines, and therefore offers
superior inducements to wheat growers to ship their grain di-
rect to Stockton, for milling.
Liberal advances made on consignments of Wheat.
For particulars as to terms, &c., apply at the Mills—or to
Messrs. PAIGE & WEBSTER, Union Block, corner of Battery
and Union streets, San Francisco. 6

Premium Sheep for Sale.
THE San Joaquin Tall Asiatic Sheep that attracted so much
attention at the Fair are now offered for sale. Four full
grown Bucks; handsome lambs, six months old. The suber-
bity will give all information and furnish the stock, netting for the
owner. (18) WARREN & SON.

Varieties.

"LET ME IN."

BY FLORENCE PERCY.

When the summer evening's shadows
Veiled the earth's calm bosom o'er,
Came a young child faint and weary,
Tapping at a cottage door;
"Wandering through the winding wood-paths,
My worn feet too long have been,
Let me in, O gentle mother,
Let me in!"

Years passed on,—his eager spirit
Gladly watched the flying hours;
"I will be a child no longer,
Finding bliss in birds and flowers;
I will seek the lands of pleasure,
I will join their merry din;
Let me in to joy and gladness,
Let me in!"

Years sped on,—yet vainly yearning,
Murmuring still the restless heart—
"I am tired of heartless folly,
Let the glittering cheat depart;
I have found in worldly pleasure
Nought to happiness akin,
Let me in to love's warm presence,
Let me in!"

Years fled on,—the restless spirit,
Never found the bliss it sought;
Answered hopes and granted blessings
Only now as dreams brought;
"I am tired of earth's vain glory,
I am tired of grief and sin,
Let me in to rest eternal,
Let me in!"

Thus the unquiet, yearning spirit,
Tantalized by a vague unrest,
Knocks and calls at every gateway,
In a vain and fruitless quest;
Ever striving some new blessing,
Some new happiness to win,—
At some portal ever saying,
"Let me in!"—Portland Transcript.

"Monopolization of Breadstuffs, the greatest oppression," is the heading to a communication in the Boston Cultivator, which continues: "And why? because it falls most heavily on the poor and laboring classes, who are forced to obtain their daily subsistence by the sweat of their face. At present, it is a problem which puzzles the greater part of the community (which it is not easy for the politician to solve) to explain why such high prices on breadstuffs should continue and increase, when such abundance has been raised the present season? If the crops have fallen short in a few of the States, owing to the drought, yet they have been abundant east, west, north, and south. It is evident it is not the scarcity of the article that causes the present high prices. Then what is it? I am incompetent to answer the question, but will venture to express an opinion. It is this: the affluent merchant and large capitalist are buying up and keeping the 'staff of life,' that they may, by and by, fill their coffers at the expense of the poor laborer and mechanic. 'These things ought not to be so,' but how shall they be remedied? This question is as hard to answer as the preceding, in regard to the increasing high prices of provisions. It cannot be ruled while human nature remains as it is, except there could be a law passed by the Executive, that prices should not exceed a certain ratio. In this land of professed Republicanism, is not Aristocracy springing up and growing luxuriantly all over the Union? IGNORAMUS!"

The Portland Advertiser gives an account of a mammoth lumbering establishment recently completed by C. S. Clark & Co. of that city, on the St. Francis River, Canada East. These mills, it is said, will saw in a season (working day and night) 20,000,000 (twenty million) feet of long lumber, and two trains a day will be required to get the lumber to Portland, whence it will be shipped to all parts of the world. To accommodate this business the proprietors have leased a large wharf in Portland, capable of allowing ten vessels to load at one time.

"The baby is sick, my dear." "Well, give it castor oil. Dennis, bring up the castor oil." "It's all gone, sir—dill a drop is left." "Gone! why we have not yet opened the bottle." "Sure you have had it every day, and I have seen you use it myself upon your salad." "Why, you scoundrel! you don't mean to say I've been eating castor oil every day during the salad season?" "Sure you have, sir." "Did you not see the bottle was labelled castor oil?" "Sure and I did, sir; and didn't I put it in the castor every day?"

BAD WISDOM.—A little girl, about five years old, one day heard a preacher praying most lustily, till the roof rang with the strength of his supplication. Turning to her mother, and beckoning the maternal ear down to a speaking distance, she whispered, "Mother, don't you think that if he lived nearer to God, he wouldn't have to talk so loud?"

REPUBLICAN PRINCIPLES.—An Irishman about to enter the army was asked by one of the recruiting officers, "Well, sir, when you get into battle will you fight or run?" "By my faith," replied the Irishman, with a comic twist of countenance, "I'll be after doin', yer honor, as the majority of ye does."

Buss, to kiss; rebuss, to kiss again; pluribus, kiss without regard to sex; sillibus, to kiss the hand instead of the lips; blunderbuss, to kiss the wrong person; omnibus, to kiss all the persons in the room; erubuss, to kiss in the grave-yard or in the dark; buss the boiler, to kiss the cook!

Smith's Pomological Gardens.

Banks of the American River, two and a half miles from Sacramento city.

THE proprietor of the Gardens would respectfully invite all who are engaged in "Nursery and Gardening" to visit his grounds. He will be happy to show to them, ready for sale, this fall, as fine a collection of
Fruit Trees, Ornamental Trees, Grape Vines, Shrubs, Flowering Plants, and Green House Plants,
as can be found in all the great Sacramento Valley.

The proprietor would call particular attention to his collection of Peaches, believing that the specimens exhibited by him in Sacramento and San Francisco markets have been unsurpassed in size, quality, or flavor.

The collections of Pear Trees will equal any in the country, these, with all the new varieties, will be offered this autumn. The undersigned believes his collection worthy a visit to his grounds of all who are interested in Gardening and Orcharding. The subscriber will offer this autumn Five Tons Vegetables Garden Seeds, that have been raised upon his own grounds. These seeds have been grown with care and will be sold at wholesale for the present, at the Gardens.

Persons in want are invited to call upon us, and we will make reasonable terms.
Fruit, Boquets, &c., will always be furnished at short notice at the Gardens.
The proprietor returns his thanks for the liberal patronage of the past, and hopes for a continuance of such favors.
A. P. SMITH, Proprietor.

To Fruit Growers in California.

HOVEY & CO., Seed and Nurserymen, No. 7 Merchants Row, Boston, Mass., invite the attention of Cultivators of Fruit in California, to their very extensive collection of Fruit Trees of all kinds, particularly of Pears; embracing every variety worthy of cultivation, to be obtained either in this country or in Europe. They offer for sale—
100,000 Pear Trees, of all the choicest kinds both upon Pear and Quince stocks, dwarfs and standards;
50,000 Apple Trees, in 50 varieties;
25,000 Plum Trees, in 30 varieties;
20,000 Peach Trees, in 25 varieties;
Also, Quince and Cherry Trees; 40 varieties of the finest Grapes; 12 varieties Currants; 14 varieties Raspberries; 10 varieties choicest English Gooseberries; and 50 varieties Strawberries, including our Hovey's Seedling, which has not yet been equalled for size and productiveness.

Also, 100,000 Asparagus, and 20,000 Giant Rhubarb Roots. An immense collection of Ornamental Trees and Shrubs, Roses, Greenhouse Plants, &c., &c. Agricultural and Garden Seeds of every description, and of the best quality, constantly for sale. Catalogues gratis to post-paid applicants.

Messrs. HOVEY & CO. would remark that their mode of packing trees for California, has met with the greatest success, and they feel confident of being able to give satisfaction to those who may favor them with their orders.

Address, HOVEY & CO., No. 7 Merchants' Row, Boston, Mass.

San Jose Nursery.

WE are prepared to supply the trade with the best varieties of Fruit Trees, Grapes, Vines, Roses, Plants, &c., in all their varieties; and are disposed to sell at a low price, that we may suit the times. Our Trees are cultivated with great personal care. Those who desire to make Nurseries and Gardens will do well to visit and ascertain for themselves our ability to supply what we advertise. Trees will be carefully labelled and packed for any season or distance.

The following Trees we offer this season:
Peach Trees, 44 varieties;
Pear do 44 do
Apple do 54 do
Plum do 15 do
Apricots 6 do
Almonds 2 do
Quinces do 2 do
Cherry do many do
Grapes 12 do
Strawberries, 7 varieties;
Fig Trees;
Pomegranates;
Walnuts;
Chestnuts;
Locust Trees, very large;
Rose Acaciae, } for hedges.
Orange Orange, }

In addition to our Fruit and Ornamental Trees, we offer ten thousand finest Roses, comprising more than one hundred varieties, all of the best known kinds. Our plants are too numerous to specify in an advertisement. Having visitors will come and see us, we refer them to our agent in San Francisco, Mr. DELABONE, 121 Sansome street, where we shall have a collection of plants in the season as samples. The nursery is situated in the city of San Jose, immediately above the City Mills.

We are also permitted to refer to Warren & Son, who have examined our grounds, and who can testify of the character of our nursery, and who will receive and forward orders to us. Every order promptly and speedily attended to.
L. PREVOST & CO.

Golden Gate Nursery.

Corner of Folsom and Fourth streets, San Francisco. OFFICE—No. 170 WASHINGTON STREET.

THE attention of the public is requested to a large collection of the flowering Plants, now for sale at this Establishment, embracing the most extensive assortment in the State; among which may be found—
Camellia Japonica, in seventy varieties;
Perpetual blooming Roses, of all the classes;
Moss and climbing Roses, do do;
Fuschias, a choice collection; Heliotropes, in variety;
Rose and Lemon Geraniums;
Lemon-scented Verbenas, Flowering do, Arbutus, Azaleas, Oleanders, Passifloras, Honeysuckles, Carnations, Dahlias, Bulbos Ratis, &c., &c.; and a general collection of Greenhouse plants and ornamental shrubbery.

Catalogues for 1855 will be ready on the 1st of December, and will be forwarded on application.
Orders for any part of this State, will be promptly attended to, on application to D. Nelson, No. 170 Washington street—or to the proprietor. (7-3m) W. C. WALKER.

Fruit Trees! Fruit Trees!

WE have for sale at our Nursery at the Mission San Jose—
Five Thousand large Apple Trees: two thousand of them of extra size. Many of them will bear fruit the next year.
Two Thousand Peach Trees, choicest kind—large and handsome trees.
Pear Trees on the Quince as well as Pear.

Fifteen Hundred Cherry Trees from two to four feet high. Grapes, Fig, Quince, Apricot, Nectarine and Almond Trees in less quantities. All the above we guarantee to quality, and we warrant them what they should be, and will sell at prices to suit the times.

Apple Trees from \$1 00 to \$2 50
Peach, Pear, Cherry, 1 50 to 2 50
Extra sized trees in proportion.
BEARD & LEWELLEN, Mission San Jose.
Orders with Warren & Son, corner of Montgomery and California streets, will be promptly attended to. 18 6m

20,000 Fruit Trees.

COMMERCIAL NURSERIES, near the Artesian Fountain; also, in San Jose City.—The undersigned offers the above lot of fine Fruit Trees, consisting of Apple, Pear, Cherry and Peach. These trees have been introduced into this country from Genesee County, N. Y., by the undersigned himself, and are of the very best varieties known in New York; many of them are new kinds, and among the Apples are the best late varieties for keeping.

Orders for Fruit Trees of any kind may be left with WARREN & Son, who will give all needed information, and will be promptly attended to. Orders can also be forwarded to the Nursery. In all cases, orders received at the Nursery will receive very prompt attention, where we should be glad to see purchasers.
Apple Trees, from three to six feet, \$1 25
Pear, Cherry and Peach, do. 1 50
Large quantities will be offered at prices to suit the times and circumstances of the purchaser.
GEO. W. LE VALLEY.

P. S. We can furnish Scions of the Fruit Trees of reliable varieties, of more than fifty kinds, in lots to suit orders. 20

Gold Dust and Exchange purchased at current rates. 12

The Pacific Loan and Security Bank.

MONEY will be received on deposit in sums of Ten Dollars and upwards, for which Certificates of Deposit will be issued, bearing date the first or fifteenth of the month, payable on demand, or at specified times, at the option of the depositors. If payable on demand, they will be without interest, unless the money remain on deposit one month, in which case they will draw interest of one per cent. per month, but no interest for fractional parts of a month. If deposited for specified times, certificates will be issued bearing one and a half per cent. per month interest for such time. Interest will cease at maturity; so that if depositors desire to continue their deposits after their certificates fall due, they must be presented for payment and renewal; otherwise interest ceases.

The money deposited is used only in loans guaranteed by us and in all cases fully secured by Mortgages, State, County and City Stocks, Merchandise, and other safe collateral, taken in the name of "MARRIOTT & WHEELER, Trustees for Depositors with Pacific Loan and Security Bank."

A register is kept at all times open to depositors for inspection, in which appear their names, the number of certificates of deposit issued, and the securities upon which the money deposited has been placed. Depositors thus not only have the personal security offered by all banks, but in addition have the benefit of the securities taken and guaranteed by us, and the facility of knowing what disposition has been made of their deposit.

FREDERICK MARRIOTT,
ALFRED WHEELER.

No. 98 Merchant street, San Francisco. 19

THEODORE PAYNE. SQUIRE F. DEWEY.

THEODORE PAYNE & CO.,
REAL ESTATE AND STOCK AUCTIONEERS.
OFFICE AND SALES-ROOM CORNER CALIFORNIA AND MONTGOMERY STREETS.

THEODORE PAYNE AUCTIONEER.

Messrs. PAYNE & CO. respectfully inform the public that they have established themselves as above, for the purpose of transacting the

Real Estate business, in all its branches, for the conducting of which they esteem themselves peculiarly qualified, by having given it their special attention for over two years past, and made themselves familiar with all questions affecting titles, &c., &c.

They will give their especial attention to the public sales of estate, by Administrators, Assignees, Receivers, Mortgagees, &c., carefully complying with the terms of law.
A Register for Property, at either public or private sale always open at their office. 20 6m

To Farmers and Gardeners.

WICKERSHAM'S

Celebrated Patent Wrought Iron Farm Fence.

FOR sale—Wickersham's far-famed Patent Wrought Iron Fence, for enclosing and sub-dividing lands. It can be furnished at but little above the cost of ditching, and is much more preferable, because it does not require a heavy annual expenditure to keep it in repair; it cannot be destroyed by the fires which so constantly sweep over prairie and mountain, requiring wooden fences to be renewed, nor carried away by flood from the overflow of the low lands; it is free from decay, which places it beyond comparison with wood or any other material now in use; it is valued the most highly where it has been tried the most thoroughly; it is light and graceful, yet strong, and cannot be broken down by horses or cattle. The testimony which has been given by those who have used it in the Atlantic States, is sufficient to recommend it to the farming public of California.

A complete model is now on exhibition at the State Agricultural Fair, at Music Hall, Rush street, near Montgomery, where a full description may be seen, with the testimony of those who have erected it in the Atlantic States.

Farmers are invited to examine this fence, as there has never been any of the same kind in this country previous to the arrival of this lot, and from its peculiar construction there is not the least doubt but that it will be extensively used in this State.

J. T. Heston has now on hand, and will be constantly receiving supplies from the manufacturer, which will enable him to fill orders to almost any amount.
For particulars address
J. T. BESTON,
At Warren's Agricultural Rooms;
Or, P. COGINS, cor. Sacramento and Pike streets
October 8, 1854. 15

Artisan Well Boring.

WE would respectfully inform the public that we are fully prepared to take contracts in the above operations in a manner to guarantee satisfaction or no charge will be made.

SMITH & VAN DYKE having associated themselves with an old and experienced operator from the East, who challenges the world to compete with him in all the branches connected with the above business, are fully confident to guarantee success in all contracts that we may undertake, and warrant the work for one year. We have also implements for boring through stone to any depth, and all work done on the most reasonable terms.

For the satisfaction of those wanting anything in the above line, we would refer to Thomas Fallon, San Jose; Rufus S. Pells, of Haworth & Ellis; M. A. Sullivan, New Custom House; Wright & Co., 137 Jackson street, &c., &c.

We can do work cheaper than any other operators, for two reasons:
1st. Because we are prepared to work on a most extensive scale.
2d. Because we understand all branches connected with the above business, and are, therefore, able to work with certainty.

All orders left at the What Cheer House will be promptly attended to.
SMITH & VAN DYKE, Contractors.
N. B.—We also refer to Warren & Son, publishers of the "California Farmer," who have seen and known the character of the work done. 7

MISCELLANEOUS.

COLLINS & CO.,
PRACTICAL HATTERS,

(PREMIUM HAT STORE.)

157 Commercial street, San Francisco.
THE undersigned would take this opportunity to return their thanks to their friends and the public generally for the very liberal share of patronage which they have received. They take pleasure in now announcing that they are determined that no one shall surpass them in the beauty, or finish, or quality of a Hat; that no gent shall wear a finer Hat than can be found at COLLINS & Co.'s Warehouse.

The proprietors of this establishment exert themselves to manufacture to order the latest styles and most approved patterns. The stock of HATS and CAPS, of every kind, now on hand, cannot be surpassed in this city.

17 COLLINS & CO.

San Francisco ahead of the World!

Ever on, on pace with the Age and Times!

Hurrah for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE's who wishes PERFECT LIKENESSES? Because he has now the best arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has the largest light in the world, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses do well to call before sitting elsewhere, and judge for themselves.

Prices as reasonable, and work superior to any in the city.

Don't forget the place.

New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. 17

ADAMS & CO.'S

CALIFORNIA AND ATLANTIC EXPRESS.

OUR Atlantic States Express will leave San Francisco on the 1st and 15th of each month, by the Pacific Mail Steamship Company's Steamers, and the Treasure crosses the isthmus under the charge of a strong guard. The Treasure forwarded by us to the Philadelphia Mint, is always deposited there previous to that sent by any other conveyance. Our rates are lower than those offered by any other House, with the same security.

We also forward Treasure on the 1st and 15th of every month to England, by the P. M. S. Co.'s steamers to Panama, and from Aspinwall by the West India Mail steamers.

We draw Bills of Exchange on any of our Houses in the following places:

Boston, New York, Philadelphia,
Baltimore, Washington, St. Louis,
Cincinnati, Pittsburg, Louisville,
New Orleans, London, &c., &c.

Also, payable at any of the following Banks:

Mechanics' and Farmers' Bank Albany.
Alex. Mitchell, Fire and Marine Insurance Co. Milwaukee.
Commercial Branch Bank of State of Ohio Cleveland.
Utica City Bank Utica.
Bank of Syracuse Syracuse.
Bank of Auburn Auburn.
Bank of Attica Buffalo.

the amount due the office.

(For the California Farmer.)

THE MOON AND VEGETABLES.

COLUSA Co. Jan. 6, 1855.

Messrs. Editors: There is, perhaps, no
demonstrative question or principle, which
has been so long in dispute, as that of the influence
of the moon on vegetables. Some people, if they
happen to plant a crop of turnips, or other roots,
by the light of the moon and they turn out bail,
take it for granted at once, that it is caused by the
moon; others laugh at the idea, but never try it
themselves.

Now this is a question which can be easily
settled forever, if all our farmers who are not
prejudiced either way, will but sow their seed
both on the increase and decrease of the moon, and
make a report of their results to the CALIFORNIA
FARMER, we shall see the question fairly settled.
I therefore hope that our farmers will very
generally make the trial. It will cost them but
a few hours work at most, and you, Messrs. Edi-
tors, the trouble of reading their communications,
and reporting the result of the experiment, which
task would be pronounced "no trouble at all" by
men of your stamp, who never hesitate at time or
expense in forwarding the interests of the farm-
ing community. W. S. GREEN.

We publish the above communication, with
pleasure, and shall always be glad to hear from
our farmers upon any and every subject touching
agriculture. Although some farmers might ridi-
cule the idea of the moon's influence upon vegeta-
tion, or its results upon the seed, or crop, yet if
they will but carefully investigate the subject, it
will be no loss to them—good will result from
every investigation of this science if the result is
not as first anticipated, benefit will come in some
other form by some new discovery, for earnest,
hard seeking for truth, will not end in mere
"moonshine."—ED.

FIRST HORNED CATTLE IN AMERICA.—The
first horned cattle brought to America, were im-
ported by Columbus, in 1492. In 1750, the best
diary farms in Rhode Island, contained upwards
of 100 cows, and sold 13,000 lbs. of cheese, be-
sides butter, huddocks, and calves. On one farm,
73 cows made 10,000 lbs. of butter in five months.
Two acres of good land, sustained one cow. The
present number of cattle in the United States,
may be estimated at 20,000,000.

WEIGHTS OF GRAIN, &c.—We are indebted to
our friend, Col. Buckner, for the following list of
weights of grains, &c., per bushel, regulated by
the laws of Kentucky: Wheat, 60 lbs.; corn,
shelled, 56 lbs.; potatoes, 60 lbs.; beans, 60 lbs.;
clover seed, 60 lbs.; oats, 33 1-3 lbs.; cornmeal,
50 lbs.; bran, 20 lbs.; barley, 48 lbs.; onions, 57
lbs.; buckwheat, 52 lbs.; salt, 50 lbs.; flax seed,
56 lbs.; hemp seed, 44 lbs.; rye, 56 lbs.; timothy
seed, 45 lbs.

A PLACE FOR EVERY TOOL.

BY S. EDWARDS TODD.

"In vain the search;
Nor hoe, nor spade, in its own place is found."

EDWARDS.

EVERY body, who is any body, likes to see sys-
tem and order displayed in the various operations
of the farm; and even the most careless and neg-
ligent, admire, and approve the practice of him
who has an appropriate place for every tool, and
who strenuously insists on keeping them there.
"A place for every thing, and every thing in its
place," is a maxim coeval with the art of printing
for aught I know; and we find, many times, that
those who often insist on having this precept
carried into practice, come the farthest short of keep-
ing this precept; and in time lost, patience tested,
and the many hindrances which results there-
from, they are often obliged to suffer a mortifying
penalty.

Ask Mr. A. where he keeps his hand saw, or
his augurs, or pick, crowbar, &c. "Well, let me
think—where did I use them last? Look in the
wood house. If they are not there, look in the
carriage house; and if they are not to be found
there, let us see if they are not some where about
the barn, or in the stable."

Mr. B. says, "I usually keep my tools either at
the house, or barn, or in the path that leads from
one to the other. When I am done with a tool,
it is thrown in the path that leads from the house
to the barn; and it generally gets carried to one
place or the other."

There being generally, such a destitution of
order in reference to keeping tools in their appro-
priate place, it is deemed a matter of no impropri-
ety to speak of the order and arrangement, in the
disposition of the various tools of the work shop,
and farm, which is practised by a young farmer,
not a hundred miles distant from the residence of
the writer.

Ask him, for instance, where his hand saw is;
or his drawing knife; or his augurs; or any other
tool you may need, and the unhesitating reply is,
in such a part of the shop, hanging on such a pin,
or nail, or standing, or lying in such a corner, or
on such a shelf. There hang the augurs, each one
in its appropriate place; and on the premises,
they are allowed no other place. There hang a
half dozen saws; and if one of them is taken
down but for a moment's work, its first and last
resting place is, its own peg. There is a drawer
with an apartment for screws, one for rivets of a
half dozen different sizes, one for washers, one
for bolts of all sizes, one for nails of different sizes,
and so on. In one corner is a shallow box-shelf,
where are a lot of carriage bolts, and other bolts,
and where every thing in the bolt line is kept, in
case of a break down. There hang a number of
extra plow handles, in case one should be broken
in seed-time, a half day need not be spent, in go-
ing several miles to have it repaired. Extra pieces
of harness, pieces of worn out or broken tools,
hang on nails on one side of the shop, where at a
glance of the eye, any thing that is wanted to re-
pair a break down, can be had, without tumbling
over a whole box full, to find something, which,
perhaps, may not be there. There hang a variety
of useful little articles, instead of being tumbled
into a box where they can never be found when
needed. There hang the chains, (not on the fence
any where on the plantation) in that corner.
There the beetle and wedges are kept. Are there
any extra plow points about the shop?—you will
find them up stairs in such a place, and no where
else. Every one who assists about his barn and
stables, understands that this shovel when not in
use, must stand in that corner. The manure fork
must be kept here. That fork and that shovel,
in the feeding-room must always stand in this
end of the box, where feed is mixed. This fork
must be left on the mow, and when not in use,
the end of the handle must be rested on the bal-
der, so that one always knows, even in the dark,
where to find the fork, to throw down fodder.
That harness and that collar, belong on that horse,
and they must always be hung on that hook.
When the halters are taken off the horses, each
halter is hung on its appropriate hook. A score
of other little things, which are generally thrown
here and there by the majority of people, have
their own place, and will always be found there,
when not in use.

Where there are a large number of workmen
and boys to use the tools, it is just as easy and
far more important, to keep them in one place, as
where there is but one or two individuals to use
them. Let it be understood by each one, that
every tool must be returned to its proper place,
immediately. When an auger or chisel is needed
ten or twelve rods from the shop, let it be return-
ed without delay. It will require but one minute
to travel ten rods; and if one is in haste at such
a time, one or two minutes will make no material
difference in the work of a day; if it were like to

do so, who could not work one or two minutes
later at night to redeem those lost moments?
And, besides, when tools are laid down here and
there, thinking to return them when it is more
convenient, they are often forgotten, and scores of
minutes are lost in search for them, even when
one is in the greatest haste. There is always a
great satisfaction when one needs a certain tool,
in having the assurance that the hand can be laid
directly on it, even in the dark.

Those farmers who succeed best in their opera-
tions, are noted for their strict adherence to sys-
tem and order; and those who set at naught all
order and system, are always in a hurry—never
know where to find any thing—never have a
place for any thing, except somewhere on the
farm—and they never accomplish but little in
comparison to what they might, were system and
order their watchword.—Country Gentleman.

INQUIRY AND OBSERVATION.

It is not expected that the farmer shall have
an exact knowledge of the construction of the
trees and plants which he cultivates with so much
care, or of the anatomy and physiology of the
animals which he rears. He cannot learn the
precise habits of the insects which destroys his
crops—their periods of coming and retiring—or
the office which it is designed they shall fill in
economy of nature. Yet a general knowledge of
the laws which govern them, and a constant ob-
servation of their habits, will invest us of much
of the repugnance felt towards them, and lead us
to a profound contemplation of the wisdom and
goodness of the Great Architect of all.

We plant the seed, and behold the germ springs
to the light and air. What wonderful operations
are still carried on? The tree assumes the most
stately, as well as graceful forms—the buds, the
leaves, blossoms, and fruit appear, surpassing in
beauty all art of the most skillful hands. It fur-
nishes fuel, shade, fragrance, sustenance, and of-
tentimes protection against summer heats, or
winter winds, and always beauty to the landscape.

But the farmer too often stands in the midst of
his trees, his plants and flowers, of his corn, and
grass and grain, which he has caused to grow,
and looks upon them as the result of a mere me-
chanical operation. He overlooks that wonder-
ful and mysterious agency which prepares the
food, diversified as it is, and sends it to the furth-
est bud and leaf of a monarch of the forest, or the
minutest tendril of the tiny vine. He plows, be-
cause it is easier to plant and hoe in a loose soil,
forgetting that, in a fine till, there are millions
more months to receive the food which the plant
requires than in a compact soil; that these open
months catch fertilizing substances from every
passing breeze, and drink them in from the cool-
ing dews and genial showers. He forgets that
the sand which he applied to the clay land, has
found potash in the soil, become soluble, been
taken up by the roots of the plant, carried to its
utmost extremities, and now covers the straw of
his wheat-field, with a delicate and beautiful enat-
ing of sand, or enamel, which gives it strength to
stand erect, and thus present its seeds to the in-
fluences of the sun and air, and bring them to
perfection.

While he reaps, shall he not inquire how this
came, and compare it with another field, which
fell to the ground and failed to perfect its grain?
Will he not investigate these causes and thus ac-
quire more knowledge of the operations of nature,
and more power over his crops?

By an accurate knowledge of the times when
insects appear, and the kinds of plants on which
they prefer to feed, the time of planting and sow-
ing may be varied, so that it may be possible to
escape their ravages in some degree in this man-
ner; or, as their period of existence is often very
brief, we may learn their time of retiring to a
winter home, and destroy them there by late
plowing or other means. The season of their
coming and retiring, the food they require, and
the length of time they remain, being accurately
understood, will, at least give us a power over
them we do not now possess. But this is not all
we gain. This knowledge admits us to some of
the secrets and wonderful operations of irrational
life, and thus leads us, by successive steps,
"through nature up to nature's God."

The rose bug, for instance, has received its
name from its annual appearance coinciding with
the blossoming of that plant, and this fact may
operate as a note of preparation against its rava-
ges; and so it may aid us against the caterpillar,
cankerworm, currenoid, and beetles. The latter
insect sometimes prove exceedingly destructive.
The discovery was made by a gentleman, that
they visited and defoliated his cherry trees in the
night. When this habit was known, they were
shaken down and destroyed in large numbers, and
the trees thereby saved. This fact was learned
by reference to a work on insects, and will illus-
trate what it has become too fashionable to con-

demn as "book farming," as if facts recorded in a
book or newspaper were not as valuable as though
declared by the tongue. To be consistent, the
scuffer at "book farming," should reject many of
the best practices of the farmer now, because Vir-
gil wrote of them; or Cato, or Columella, or Je-
thro Tell, commended them.

The insect race has its part to fill in the great
plan, and that part is undoubtedly an important
one. We accuse them of encroachments when
they select, as their favorite food, the plants we
are cultivating for our own pleasure or profit. It
may be, that in their deliberations and conven-
tions, if they hold any, they look upon us as the
aggressors. They feed on the common bounty as
well as ourselves, enjoy their brief existence and
die. Our domestic animals do the same; but we
make them subservient to our purposes, and are content.
We have not yoked the insect race to our imple-
ments for practical purposes; but having this de-
cided advantage of them, the possession of reason,
it is the part of wisdom to study their habits with
patient care, until we become as well convinced
of their usefulness, as we are of that of the ox and
cow, and that an intelligent Being placed them
here for our good.

Many of the beetles live on plants not only of
little use to man, but some of them poisonous,
and in a state of decay often offensive; they are
therefore to be reckoned among our friends.
Some live on the juices of animals, and by this
means destroy a great number of noxious insects.
Others are of service in the arts, affording us the
costly cochineal, scarlet grain, lac and manna.
Dragon flies and some others, subsist upon plant
lice, and thus become our active protectors.

THE TEA OF ASAM.

Mr. A. H. DANFORTH, a missionary at Gowa-
hati, Asam, under date of July 6th, 1854, writes
to the New York Recorder, an interesting account
of the productions of Asam, particularly that of
tea. He says:

It is generally expected that communications
from missionaries will relate to the religious in-
terests of the field in which they labor; but a few
lines occasionally, respecting the physical aspect
and productions of the country may not be unin-
teresting to your readers.

Asam has but recently come under British
rule; hence its resources have as yet scarcely be-
gun to be developed. The exports of the natives
are very limited. There is but little enterprise
among them. Europeans, however, are entering
the province; and with a sufficient amount of
capital and labor expended here, Asam, for the
real value of her productions, would not be found
behind the best provinces in India. The coal
mines have been worked a little, and some at-
tempts at cultivating indigo have been made, but
as yet with little success. There are two large
lac factories, which are doing good business.
Some ten or twelve hundred maunds (eighty
pounds each) of India rubber were manufactured
last year. But the article which is destined to
distinguish Asam, is the tea. The plant is in-
digenous to the soil, and the climate, being very
damp, is peculiarly favorable to its growth.

There is any quantity of land suited to its cul-
tivation; hence it opens an inviting field for
speculators. The amount of capital necessary to
be invested and the tardiness of the first return,
are the most serious difficulties in the way. The
seed must be sown and carefully cultivated for
five years, before the first crop can be realized.
After that the profits are very great. There are
now five or six factories, and several more in con-
templation. The principal establishment is that
of the Assam Company. This company was
formed in 1839, with a capital of £500,000. But
after a few years, by some mismanagement, it
was near breaking down. It, however, recovered
itself, and is now one of the most flourishing cor-
porations in the East.

Every variety of tea is manufactured, and all
from the same tree. The green is cured in cop-
per kettles, which, with a little different process
in the operation, gives the green shade and the
peculiar flavor. The different varieties of black
tea are owing simply to the age of the leaf when
plucked. Sometimes from one stem are taken
four or five different kinds of tea. The tea, when
picked, is first exposed to the sun for a few hours,
until it is wilted, when it is thrown into a hot
kettle, or caldron, and stirred until it is dry; but
during the process it is occasionally taken out,
and given a peculiar half twist and half roll, with
the hand, which only those accustomed to it un-
derstand. The tea, when thoroughly dry, is sifted
through a succession of sieves. The first is very
coarse, and retains only the coarsest kind of tea.
The second is a little finer, and retains the finest
quality; and so on, till we come to the finest
sieve, which admits only the finest of the leaves,
and is, of course, the best quality. The leaf is
then put into boxes lined with sheet lead, and is
ready for the market.

SPECIAL NOTICE.

REDUCTION OF PRICE.

THE heavy losses upon the Farming Interests of the State the past year, the general depression of that interest, and the discouragements resulting to all, we know have prevented many who are engaged in Agriculture from subscribing to our Journal the past year. Feeling desirous to meet their wants as far as in our power, we now offer the CALIFORNIA FARMER at SIX DOLLARS PER YEAR, PAYABLE ALWAYS IN ADVANCE.

We trust this effort on our part to meet such circumstances will be met on the part of those engaged in the cultivation of the soil with a corresponding feeling, and that all will do its service by sending in a goodly list of subscribers and the amount for the same. We have made the price thus low, that our subscribers and friends may at once send us the proof of their good will.

Inducements for the formation of clubs will be found under another head.

Clubs Formed—Premiums to Subscribers.

With the third volume, with the opening year, we would offer to our friends stronger inducements than heretofore to make up CLUBS for the FARMER. It will be seen by our "special notice," that we shall commence with a reduction of the price of the "Farmer." The price will now be six dollars per year, always in advance. No subscriptions received unless accompanied by the amount.

To those who are disposed to form CLUBS, when we can send all to one address, we shall send SIX COPIES for FIVE NAMES, TWELVE for TEN, and TWENTY-FIVE COPIES for the names and amount of twenty subscriptions.

To those, or any of our friends who will interest themselves, we believe this will be some satisfaction, besides promoting the cause of Agriculture. We hope to see good results to all from this proposition.

TO AGENTS.

We would ask of our Agents to whom we send the CALIFORNIA FARMER, to communicate with us and to remit full accounts to the close of the year. We shall send them extra numbers for distribution. We call their attention to the reduction in price of our Journal; this we hope will give satisfaction to all, so as to enable our agents to enlarge our lists, and also afford an increased reward to them.

We can offer inducements to Agents in all the large cities as Carriers, and to Bookellers and Newspaper Stores also, for Papers in quantities.

THE CALIFORNIA FARMER.

We have many inquiries, daily, from our friends in the country, who write us, desirous to make up clubs for the FARMER, and send us produce for the amount. We always do our utmost to facilitate the cultivator of the soil, and we will secure our friends that if they will make up clubs of five, ten or twenty, they can send their Wheat, Rye, Oats, Barley, or specimens of extra quality, and we will allow them the full market price in the payment of the FARMER. Our friends that are in business can send us the amount thus due, and add the coming volume, and we will forward receipts for the same. So send along your wheat and good products. We do not mean anything—but those articles that have a value, and we will take them.

SPECIAL AGENTS FOR THE FARMER, &c.

ALL the messengers of Adams & Co., and Wells, Fargo & Co. are duly authorized by us to receive subscriptions for the CALIFORNIA FARMER, and receive the same; also, to receive orders for Fruit Trees, Seeds, &c., and any mail all business with us. All such business committed to either of these messengers will be promptly responded to by us.

OAKLAND.

Our friends at Oakland are invited to call on MR. CHARLES STEWART, and subscribe for the CALIFORNIA FARMER; he is authorized to receive subscriptions and we will cheerfully all the farmer in his enjoyment. We are willing to receive Wheat, Rye, Oats, &c., or any valuable products of first quality in payment, as we do wish our friends to enjoy our sheet, and conveniently too.

CABBAGES.—There are more ways to cook a fine cabbage than to boil it with a bacon side, and yet few seem to comprehend that there can be any loss in cooking it, even in this simple way. Two thirds of the cooks place the cabbage in cold water and start it to boiling; this extracts all the best juices, and makes the pot liquor a soup. The cabbage head, after having been washed and quartered, should be dropped into boiling water, with no more meat than will just season it. Cabbage may be cooked to equal broccoli or cauliflower. Take a firm sweet head, cut it into shreds, lay it in salt and water for six hours. Now place it in boiling water until it become tender—turn the water off, and add sweet milk when thoroughly done—take it up in a colander and drain. Now season with butter and pepper, a glass of good wine, and a little nutmeg grated over, and you will have a dish little resembling what are generally called greens.

ASPARAGUS.—This delicious vegetable, is not yet appreciated in the up country of the South. Tie the stalks in small bundles, and drop them into boiling water, with a good portion of salt—ten or fifteen minutes boiling is enough. Place some slices of soft toast in a deep dish, and take the asparagus up on the toast; saturate the whole with sweet butter, and pepper to taste.

CABBAGE AS IS CABBAGE.—The Yreka Herald says that Mr. Cyrus H. Pickens of Hmrc Creek Ranch, five miles above the mouth of Senti River, informed us that he raised from a piece of ground less than one acre, thirty tons of cabbage. Some of the largest heads weighed 45 lbs. The seed was sown the last of May or the first of June. Mr. P. thinks if the seed had been sown early, he would have had "some cabbage."

EXTENSIVE MINING OPERATIONS.—Under the above caption, the Marysville Express says: We have just learned with much satisfaction that the ditch running from Dry Creek in this county to Park's, Barton's and Rose's Bars, an undertaking by Messrs. McQueen & Whiteside has been completed. A new impetus will thus be given to mining operations in those rich, gold-yielding districts. The work was finished on last Saturday.

Any one may do a casual act of good nature; but a continuation of them shows it a part of the temperament.—Sterne.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SAN FRANCISCO, THURSDAY, JANUARY 25, 1855.

What can our Legislature do to Relieve our State from its present Embarrassments?

THE State can provide a fund for the passage of emigrants to our shores—an Emigrant Company, the object of which shall be to induce the better part of those citizens that desire to come, to make California their permanent home, and to induce families to emigrate. Many would come, but are prevented for want of the means, and Government could aid readily and the result of such a population would in a brief time add to the wealth of the State more than double the cost of the aid rendered.

We would have a bounty tendered to families. The man that brings a good wife should have a bounty; her passage should be free; and our State should not let this matter go too long. The emigration plan only can save this State from greater embarrassments and worse depression, and it will be a patriotic act in the members of our Legislature to give this matter their earliest attention.

We are much grateful to see the Senator from San Francisco acting promptly. We trust he will set his face as a "flint" against all opposition to these important measures, and not cease until they are accomplished. We trust most earnestly he will "know nothing" else but Emigration! Emigration!! until our our State is again prosperous and happy, and to him will be the honor of moving first in the matter.

The plan of a bounty, we like, and every good wife that comes is worth a bounty. Meeting a friend a few days since, who spoke of this plan—"Yes," said he "that is right; every citizen of California that goes home, should not come back without a wife. I am going home soon, and if I can win a bounty, I will bring one—and, finally," said he, "I will bring one any how."

Agricultural Legislation.

THERE can be no better evidence of the prosperity of a State than to see its Representatives earnest in their efforts to awaken the industry of the people.

We have noticed with great satisfaction, that thus early in the session, there is a willingness, nay a determination, on the part of many of our working representatives, to bring forward bills that are most intimately connected with the active industry of our citizens. This looks like progression. It speaks well for our State, and shows that we have men who are not so altogether absorbed in politics as to forget the interest of their constituents or the paramount good of the State.

Questions touching railroads, emigration, tule lands, and agriculture in general, these and kindred interests, must demand, and we feel confident will receive, the attention of our Representatives in both branches of the Legislature.

As conductors of the Organ of Agriculture in California, we feel proud to see the regard paid to this noble science by those who have expressed favorably their interest in its behalf; and most gratefully do we acknowledge the favors shown us in the courteous reception of our Journal by the entire Senate, and the liberality shown it in the Assembly.

We shall strive to our utmost to do our duty to this science, and hope, to be esteemed justly worthy the kindness extended us; for while we advocate this cause we shall ever do it with an eye single to its permanent prosperity.

When the political horizon has cleared, we shall, as opportunities offer, present subjects which we trust may be considered worthy the thought and attention of those who speak and act as the representatives of the glorious Eureka State.

SOLIMFEN MILK.—We cannot urge too strongly the virtue of this most excellent commodity, to our citizens, for it has been repeatedly tried and has never failed to give entire satisfaction. We refer our readers to the advertisement in our columns of Messrs. Bingham & Reynolds, who are the importers. The recommendations are genuine and to be relied on. To steamboat owners, hotel keepers and others who may unexpectedly want milk, this article is beyond price. We say to all, try it.

FAVORS RECEIVED.—We are under obligations to our delegates in Congress, for repeated favors, particularly to Hon. M. S. Latham, for public documents and papers of value and interest, relating directly to questions touching the real interests and to the advancing the permanent welfare of our country.

The Mummy.

THE recent discovery of the Indian Chief, so remarkably well preserved—found, as it will be seen by referring to the statements of Dr. Evans, U. S. Geologist, at Shoalwater Bay, Washington Territory, by Capt. C. J. W. Russell,—will prove a matter of the greatest moment to our citizens and to all who feel any interest relative to the earlier history of our State, to the aborigines of California, or to the manners, customs or religion of the Red man, or to aught that appertains to science. It not necessary for us to speak a word in behalf of this present wonderful specimen of preserved humanity, for the certificates of such men as those whose names appear will be a certain guarantee that the present "mummy" is indeed a reality. We would call the attention of our citizens to it; they can now have an opportunity of judging for themselves.

Capt. Russell, upon whose firm the mummy was found, is one of the early settlers and traders of California. His life is full of incident, enough to make a romance. Capt. R. has made many voyages from Washington Territory to this port, was the pioneer in the "oyster trade" from him we received the reports published from thence, and all his statements can be relied upon.

We have taken an interest in this "Indian Chief," that it might be brought before the public as a matter of the history of earlier times, and which should be of interest to us now. We trust our citizens will take sufficient notice of it to show they value all that belongs to California, and thus induce those who appreciate, to carry forward measures that shall retain in our State this specimen, and all others, for the establishment of a museum under the patronage of the State.

This celebrated Chief will be on exhibition at the office of the CALIFORNIA FARMER. See advertisement.

WELLS, FARGO & Co.—Improvement is the order of the day, and ready, onward, the watchwords of this able, efficient and widely known Express and Banking House. The daily increasing business which crowns their efforts is the surest evidence of the faithfulness and dispatch with which all business matters are transacted, and of their influence, prosperity and popularity. Their office in this city has recently been enlarged by appropriating the entire floor of the building to their use, thus adding several fine rooms. For architectural beauty, solidity of structure, commodious apportionment and elegance of finish, this building has few superiors in the United States. Col. Pardee, under whose superintendence this House has advanced to its present commanding position, is we are happy to learn, fast recovering from the serious injury recently sustained from a fall into one of those villainous man-traps that disgrace our city.

When such firms as Wells, Fargo & Co., or Adams & Co., are matters of remark, it is too frequently the case that their influence is only conceived in a circumscribed form as express men, letter carriers, &c., completely losing sight of the fact that the business of each of these Houses amounts to a sum almost beyond the conception of the community in general—that its aggregate would swell far beyond the banking capital of many of our large cities, and may be reckoned by millions of dollars. The immense sums annually expended in the ordinary business transactions of their several offices—diffused among hundreds of our most active and intelligent young men—cost of office rent, horses and carriages, freights and travel upon steamers and stages, &c., we must not forget, for it is this general diffusion of business and money which tells immensely for the prosperity of California. And again, what would our merchants and business men do without such Houses? Such facts and inquiries reveal at once their importance, and we rejoice to see that their prosperity is commensurate with their deserts.

WILSON G. HUNT.—This favorite steamer was handsomely complimented on Monday evening last. A large and valuable freight and a very full list of passengers, numbering over three hundred, gave a very lively and pleasant time of it up river. Among the passengers were many of our Senators and Representatives, with a goodly array of the prominent citizens of San Francisco, on their way to the capital to note the progress of the Senatorial election. The weather was remarkably pleasant—passengers very agreeable—a goodly group of the fairer part of creation—and the prospect of a quick trip—these all gave a zest to the feelings which caused a very agreeable and pleasing sensation as the supper bell announced the adjournment from the decks and

saloons to the table. We confess our own appetite was craving, but there was enough and to spare, three tables being spread most liberally. Capt. Poole with his usual courtesy yielded the chair to the honorable the President of the Senate, Gov. Purdy, who was assisted by the able commander of the Antelope, Capt. Van Pelt, at the opposite of the table, and the honors of the repast were faithfully performed. A very large number of ladies were at the tables—so many that we vain believe Capt. P. must be an especial favorite, for no commander can make greater efforts for the comfort and pleasure of his passengers than the commander of the fleet and most comfortable steamer W. G. H. But amid all this numerous and happy group, we must not forget one who is always "round," having an eye to the real pleasure of all friends alike—we mean our friend Baldwin, everywhere—on the Confidence, Antelope, or Hunt, here, there, everywhere—just the same; his cheerful smile comes to you like the ripe side of a golden pippin, and he, kind fellow, with his hat just so, is indeed like the pippin, (peeping) out from the verdant boughs (bows) above. The W. G. made a splendid trip, much to the satisfaction of her numerous passengers, and arrived at the Levee City at 12 1-2 o'clock in good time.

CONGRATULATORY.—We clip the following kind notice of our journal, from the California Express. Coming as it does from a press which has ever been a bold and able advocate of every measure presented which has for its object the advancement of the farmer's interest and the prosperity of our State generally, we feel doubly grateful.

AGRICULTURE.—We notice with pleasure that the Senate of this State has passed a resolution ordering two copies for each Senator, of the CALIFORNIA FARMER. This is an exceedingly well conducted journal, containing a vast fund of solid information in regard to the most important of all the branches of human industry; and our Legislators do well to instruct themselves from this and every other source, in the great interests of the State.

We are also indebted to that excellent family journal, the Golden Era, for the flattering mention it is pleased to make of our efforts and success in the cause in which we are engaged. It says:

THE CALIFORNIA FARMER.—We are indeed gratified to observe that this most excellent agricultural journal is beginning to work itself into that support, and favor with the public which it has ever merited. It has reached a circulation of 3,000 copies, which at once establishes it upon a firm and prosperous basis. Its editor, Col. WARREN, is a thorough agriculturist, both practically and theoretically, and the interest which he has for the past five years evinced in this important branch of our State industry, entitles him to the warmest patronage of our farmers. The terms of the paper have been reduced to \$6 a year, and \$3.50 for six months.

To those friends in the Legislature who have manifested such an interest in forwarding this important branch of industry to this State, we would likewise return our sincere thanks.

THE DAIRY PRIZE.—Messrs. Southworth & Co. appear in our columns with an advertisement for a Raffle. The Grand Prize announced is a Dairy of one hundred and twenty-two cows, with milk carts, cans, &c., together with the entire business, good will, &c., of the proprietors—the past income of which is stated at \$1,000 per month. In many of these raffles it is indeed a lottery—more blanks than prizes—and often the parties utterly irresponsible. There are some cases, however, where there is every show of fairness, and a good chance for a prize if "luck will have it." In this present Raffle, we feel called upon to say that we know the proprietors personally—we know the dairy, the stock, the customers and business, and it is all it is represented to be. The names of those gentlemen attached to the advertisement are also additional assurance that the Raffle will be conducted fairly. The dairy is adjoining our own residence, one we have occupied for nearly two years past, and the lands offered as prizes are really valuable and of high character—they are fit for cultivation and will soon increase in value. Whoever shall win the grand prize and shall take that business, has his fortune made at once, for we should esteem the income worth more than estimated. We know the property, and to those who desire any information, we should be happy to give it. Tickets are selling rapidly, and the drawing will take place in about six weeks; parties wishing tickets can be furnished by us.

TO CORRESPONDENTS.—We received several valuable communications too late for insertion this week, which will appear in our next. The specimens accompanying those from Humboldt and Sacramento, were in good order, and we shall make further mention of them.

CALVARY PRESBYTERIAN CHURCH was dedicated to the service of God on Sabbath morning, January 14th, by a sermon by the pastor, Rev. Dr. Scott, from Exodus 15th chapter and 2d verse: "The Lord is my strength and song, and he is become my salvation; he is my God, and I will prepare him an habitation; my father's God, and I will exalt him." The Rev. Wm. Speer and Rev. Frederick Buel, assisted and took part in the exercises, which were of a solemn and interesting character. The church was crowded to overflowing, some 2000 persons being present.

The pews of the church were sold in part, at public auction on the evening of the 22d inst. A large number of ladies and gentlemen were in attendance and the bidding was quite spirited. Fifty pews were sold in all, the aggregate value of which exceeded the sum of \$37,000. The first and second choice brought \$200 each. Fourteen pews valued at \$1,000 each, were taken at premiums of from \$200 down to \$25 each—two sold for \$1,200 each; seven for \$1,100 do.; two for \$1,050 do.; one for \$1,035; one for \$1,025; two for \$1,010 each. Seven were sold for \$950, \$910, \$810, \$850, \$825, \$810, \$710, each; and the balance ranged from \$650 to \$260 do. The total sale of the pews was sufficient to cover the first cost of the church edifice, leaving unsold about one hundred pews down stairs and fifty up stairs, to be sold or rented hereafter as may be deemed advisable.

STATE OF TRADE IN SAN FRANCISCO.—We make the following extract from the Price Current's review of the market for the week ending Jan. 23d:

"The demand from the interior has been almost nothing, and the complaint of the absolute stagnation in business, prevails not only here but throughout the entire State.

The fact is that there is no money to be had. The miner is idle for want of water, the last rains having proved of but little benefit; and until the dust begins to be taken out in large quantities, we may expect no stir of any kind in trade.

The traders in the mountains cannot effect sales except on credit, and under such circumstances, prefer holding their goods. The city merchants meet with no demand, and consequently cannot sell. Everything is dull to a degree, and the tendency to speculation which was beginning to manifest itself in some articles, is rapidly dying out.

We do not, however, look upon this state of affairs as by any means permanently injurious to any interest of the State. Every such lull causes parties to economize more and more, and places trade on a surer and more certain basis. In a short time business will revive, and the experience gained in periods of depression such as the present, will be turned to account. Meanwhile we have to await the chances of the season."

PLAGIARISM.—We do not wish to complain of our neighbors or say they are not justly courteous, but we do wish to ask our friends of the Statesman and of the State Journal, of Sacramento, whether it is "just the thing" for them to take "statistical tables" or original matter, and neglect to give the usual credit. We find the tables of the "oyster trade," and the report upon the "Indian Mummy," as published by us from original letters and documents, in the columns of these cotemporaries, and no mention made of the source from whence they came. Was it not so neighbors?

ERRORS WILL HAPPEN.—In the article headed "Reader," in our last week's paper, third paragraph and fourth line, the compositor caused us to say, "we shall have eastern families, and the most intelligent." It should have read, "we shall have entire families," &c., thus materially altering the phase of the paragraph, for it should never for a moment be supposed that agriculture has any sectional lines.

WEATHER AT SACRAMENTO.—Mr.—what is his name?—the oldest inhabitant, of Sacramento, says he never saw, since the settlement of that great city, such weather as was experienced for some two weeks previous to the 20th. It was a facsimile of a cold, drizzly, down-east spell of weather, the kind that makes everybody's nose blue, and sours the disposition and riles the temper—in fact a rare east wind.

SOMETHING FOR THE CURIOUS.—Ariel Hutton, writing an eastern exchange paper, says: "I have a hen of rather large size, of what particular breed I know not, of what is called a patridge-color, which has laid two extremely large eggs. They were blown, to discharge their contents, and within each of those eggs was another egg, the size of those laid by small hens, covered with a shell apparently as hard as is usual. The outside egg of both contained a yolk, and white. One of these, I gave my friend, Rev. Zadock Thompson, of Burlington; the other is before me, and measures in circumference, the longest way, 8 3/4 inches, and the shortest way 7 1/8 inches. It may be seen at any time at my study at Hyde Park."

From Shoalwater Bay.

We cheerfully give room (says the Oregon Weekly Times,) for the following communication from Capt. C. J. W. Russell, of Shoalwater Bay. It will be found an interesting description of a journey lately performed by him while assisting to open a trail from Shoalwater Bay to Olympia, as also for the purpose of exploring the country lying between these two points. Capt. Russell is an enterprising and energetic man, and our readers may depend upon his account of that section of country as being correct:

SHOALWATER BAY, W. T., Sept. 3, 1851.

Mr. Editor: Knowing the interest that you take in the welfare of Emigrants who annually arrive in these Territories by thousands, and, thinking that perhaps I might be able to assist them also, by showing them where they can obtain goods and animals, I have taken the liberty of writing you an account of a journey which I have lately been upon for the purpose of opening a trail from Shoalwater Bay to Olympia, and to explore the country to the Northwest. It has appeared strange to me that the people of this country have not entertained curiosity enough to visit the different portions of the Territory for exploration purposes. At present, many portions of the Territory are as little known as the interior of Africa.

In the North-east corner of this bay, a river, called the Willapa, empties its waters—one of the most healthful streams I have ever seen. I had previously arrived at the conclusion that there must be an abundance of excellent prairie land at the head of this river, which would be eagerly taken by immigrants if they only knew of its existence in that locality. My belief was based upon reports of the Indians; and Dr. James G. Cooper, who was formerly connected with the Northern Pacific Railroad Survey, and myself, had already made preparations to explore it, and were on the point of leaving, when we were much surprised, on the 7th July, to learn that a party (Edward D. Warbass, Michael Shafer, Christian Giesy, Andrew Roundtree, Joseph Knight, and an old Canadian half-breed named Pearsall Langley, as guide) had arrived in the bay, who had come from the Cowlitz Landing by the identical route that we had intended to have taken. They left the Cowlitz Landing on the 7th July, and arrived at the head waters of the Willapa on the 10th, where they made a canoe, in which they descended to the bay, which they reached on the 17th—having been ten days on their journey. They told us that it was their intention to return immediately, and Dr. Cooper and myself concluded to accompany them.

After packing up a few provisions, we pulled in a skiff up to the house of a Mr. Woodward, who lives upon the north bank of the Willapa, some 18 miles from its mouth. There we found the rest of the party, who had left the bay before us. A party of Indians who had come through with them and stopped here, had, from some unknown cause, left for their homes; but the old guide still remained.

Early in the morning of the 18th, having been joined by Seth Bullard, Daniel Bush, H. K. Woodward and Wm. Cushing, we proceeded four miles further up the river, to the house of Mr. Job Bullard, who kindly loaned us a horse to carry our blankets and provisions. At half-past ten o'clock we commenced our journey, on foot, and at night encamped in the woods, on the north branch of the Willapa, having traveled about twenty miles since leaving Woodward's. Here may be considered the head of steam navigation on this river.

July 19th.—At six, in the morning, resumed our journey, and by night had traveled ten miles further to the eastward, and reached what we called Elk Prairie, from the great number of elk that appeared to make this prairie their home. These these animals had roamed unmolested by man for many years. The country, for miles around, was crossed and recrossed with their paths, many of which were as well beaten as any Indian trail in the country. Mr. Warbass and party killed five of these animals in one day, while on their way down, the smallest of which would have weighed one thousand pounds each. Here we met our runaway Indians, who were engaged in smoking and drying the meat of a number of elk which they had killed. Bears were also very numerous here, as well as wolves, the latter of which kept up such a howling during the night that we could scarcely sleep. This place, for the sportsman, is a perfect elysium. According to our guide, not a living soul had passed through this portion of country for more than thirty years—the tribe who formerly occupied it having long since become extinct.

July 20th.—Early in the morning we left this beautiful prairie, and crossed a low range of hills that divides the waters of the Willapa from those of the Chehalis, and encamped upon the Wahoe Prairie, nineteen miles to the eastward of Elk Prairie.

July 21st.—At six, started for the Boisfaut Prairie, which was ten miles distant. The whole of the country intervening had been burned over two years before, and was now covered with fallen timber. Here our troubles commenced, for we had to cut through and around many of the fallen trees to enable our horse to pass; and, with the severest labor, we only accomplished four miles of the distance when night overtook us, and we had to encamp. To make our situation still more unpleasant, all of our provisions had been exhausted, save a piece of bread about two inches square, which we drew lots for. Mr. Roundtree had, the day before, started for the Boisfaut Prairie, by way of the Chehalis river in a canoe, for the purpose of getting a party to cut through from the opposite side and meet us; and we were

anxiously looking for him, but the night passed away and nothing was seen of him.

July 22d.—Early in the morning we commenced work again, and kept at it until late in the afternoon, when suddenly we heard a faint "halloo" in the distance, which was answered by three cheers from our party; and in a short time we had the satisfaction of seeing Mr. Roundtree and an Indian making way towards us with some provisions that had been prepared and sent by his mother. "God bless the ladies!" came from my heart—a sentiment that was responded to by all of the party. In a very short time we had consumed all of the food that had been brought, and then went to work with renewed courage. At night we encamped within four miles of Boisfaut Prairie, without either provisions or water. In the neighborhood were large numbers of gooseberries, apparently as large as the largest English gooseberry, that is so highly prized in the States. These might be made a source of great profit to any person who would collect and preserve them. Before going to sleep, I noticed an immense fire to the westward of us that was burning fearfully. It had evidently proceeded from a small one which we had built at noon. Since my return to the bay, I have learned that all the dead timber through which we had cut, had been consumed, leaving a large tract of country perfectly cleared and ready for cultivation.

July 23d.—About ten in the forenoon we reached the Boisfaut Prairie, and were received in the kindest manner by the inhabitants, who threw open their doors and bade us welcome. In a short time their tables were covered with good old farmer's fare, which we did ample justice to. All of the settlers, Mr. Roundtree and his excellent lady in particular, were under a great obligation to their kindness and hospitality—may prosperity attend them in all their undertakings.

This prairie is occupied by nine families who have a large quantity of stock, and some of the finest farms in the country.

In the morning, Dr. Cooper, Mr. Knight and myself started for Puget's Sound—the remainder of the party went to the Cowlitz Landing from whence they returned home. After traveling about fifteen miles, the principal part of which was through prairies of a gravelly nature, we arrived at the house of Mr. Lewis H. Davis, who treated us with great attention and kindness. We stopped here until one o'clock when we left and proceeded on six miles farther, passing through three more prairies, making eleven in all that we had passed through since morning. These were all very gravelly, and many of them we were told were overflowed in the winter. It being near night and feeling very tired, we stopped at the house of a Mr. Coster, whose lady furnished us with an excellent supper and bed, both of which were very acceptable.

At seven in the morning we proceeded on through a very gravelly country, that produced but a scanty crop of grass, for upwards of ten miles, when we stopped and rested half an hour at the house of a Mr. Goodhall, and then continued on and had got within eleven miles of Olympia when night overtook us. We then stopped at a house kept by a mulatto named Bush.

All the afternoon we had been traveling through prairies covered with mounds from two to ten feet in height. They were composed of gravel, with stones from a few inches to a foot in diameter between them. They are scattered about in every direction, some of them with such regularity that they appeared to be the work of art. They had, undoubtedly, at some remote period been formed by the action of water.

In the morning we got horses and rode the rest of the distance to Olympia, which we reached about nine in the forenoon of July 25th, having traveled a distance of one hundred and ten miles since leaving Shoalwater Bay. We rested here a day and a-half when we separated—Dr. Cooper, who is a perfect gentleman, going to Steilacoom, and Mr. Knight going to Fort Walla Walla, two hundred miles in the interior, to meet his family, who were on their way to this country from Missouri. This last is an old gentleman over 60 years of age, who crossed the plains last year, since which time he has been looking for a location for a number of families who are coming with his own. He was the first man who drove a team through the north pass of the Cascade mountains, and for perseverance and energy would serve as a model for many younger men.

I have heard it said that nothing attaches men more to each other than traveling together, and I found it to be so in this case, for I parted from my companions with regret, and the bright hopes they have of the future I hope will be realized.

May every good upon them rest,
And every blessing be possessed,
That ever will seek for those we love,
From earth below or heaven above.

The rest of my journey I had to perform alone.

CHINA.—Latest advices state that the Imperial army have lately been successful in the North, and the progress of the rebellion checked. In the South, the Insurgents have also been beaten by the Imperialists, who are rapidly acquiring confidence. The Chilian bark Caldera, Capt. Rooney, bound from Hong Kong to San Francisco, was captured, plundered, and burned by pirates in the China Sea on the 6th October. Her crew and passenger saved. There are numerous accounts of desperate engagements between piratical fleets and vessels of the British squadron, in which the pirates were summarily handled.

The vital knot of the nervous system is not bigger in size than a pin's head. Upon this tiny speck depends the life of the nerves, which is the life of the animal. Whatever portion of the nervous system remains attached to it, lives; while that which is separated immediately dies.

To the Readers of the California Farmer.

The annexed communication, with the names attached, has been kindly tendered to us. We would only ask of our friends to read and judge for themselves, as to the importance of the subject named therein.

We are deeply grateful for every testimonial of favor and encouragement in our labors, and for every approving word and token from every source.

TO THE FRIENDS OF

Agriculture, Horticulture, and Floriculture.

"KNOWLEDGE is power," is a truth nowhere more fully illustrated than in the field of your enterprise; and on no part of that field more important than in our State. In other States and different climates, the experience of ages is condensed into books; and the sun inherits the practical knowledge of his father. Their books are their general guide, and their periodicals contain the result of their continued improvements. But with us the case is different. Here we have a climate to which the instructions of no book are adapted, a soil peculiarly unlike any to the development of which science has been applied, and almost an entire want of experience in any department. Here no father has learned more than a few of the first principles of agriculture, much less has he had time to transmit even the moiety he has learned to a son. Our first generation of agriculturists is yet in its merest youth.

If no books adapted to our circumstances are yet written, and no man has sufficient experience to write one; and if the periodicals published elsewhere entirely fail to meet our wants, we are shut up to a single choice between two courses—we must either grope our way in the dark, feeling and experimenting each for himself, for all those facts and principles which are peculiar to our soil, climate and productions, (and this will reach nearly the whole range of our operations) thus advancing by a process so slow as to be entirely unsatisfactory to every one; or we must sustain a periodical, which shall be a general reservoir for the reception and diffusion of the experience of all—an instrument whose columns shall be a constant reflector of all the light which our thousand intelligent cultivators of the soil can elicit from their "watch and toil." Which shall be our choice, cannot admit of a question.

Such a periodical we find in our midst. The CALIFORNIA FARMER we believe capable of meeting our every want. The Messrs. Warren have evinced an energy in, and devotion to, the work which is worthy of all praise, and is a sufficient guaranty for the future. Shall the FARMER receive that countenance and encouragement it deserves? Will the growers of grain and vegetables, fruits and flowers, in this State, treat themselves to a weekly repast in the perusal of its columns, (the annual subscription price bears no comparison with the value of what you get,) and make an energetic effort to induce their neighbors to do the same? But even this will not be enough. No one man, nor company of men, from any one department of knowledge, or section of the country, can make the columns of the FARMER what they should be,—what they must be to answer their wants. It must combine the experience of every class, and represent peculiar characteristics of every part of the State. We ask, therefore, the attention of those whom we address to the furnishing of materials for the columns, as well as subscription to the "material aid" of the paper.

We say thus much because we deem it due to the present proprietors of the paper, and because we feel the deepest interest in the cause it advocates. We have no pecuniary interest in the CALIFORNIA FARMER, and yet we most heartily recommend it to the pecuniary, the statistical and the literary support of all who have at heart the real well being of our State—the development of her agricultural resources.

Disease of the Grape.

SONOMA, January 13th, 1855.

DEAR SIR: I receive your paper regularly, and peruse each succeeding number with increasing interest. I wish you all the success your laudable enterprise deserves at the hands of all California planters. As you have repeatedly urged your country friends to communicate with you on any subject of interest or importance, I do so now without further preface.

In your paper of the 11th inst., there is an interesting article on the "Grape Blight in Europe." I read the communication on the subject, carefully, because for the past season or two I have taken some little interest in whatever concerns the grape, its culture or manufacture. During the past season, I have observed the fruits on a few vines in a vineyard here, to become hard, when about half grown, and finally wilt away. On some bunches, of two-thirds formed grapes, I observed a substance—a small speck, of a red color, covering the fruit—the fruit so affected was worthless and never ripened. Not knowing what this may be, I have thought that as the grape so extensively cultivated here, originally came from Spain, an infected country, that this might be the first symptoms of the same disease, which may break out here. I sincerely hope that we may be spared this blight, and will be pleased to hear from you, that my fears proceed alone from my ignorance of the disease as it exists in Europe. I recollect well that the disease, or insect rather, which, year after year, even to the present time, I believe, destroyed the orange crop of Florida, was introduced from Sicily on some of the fruit shipped to the States. Last season a large lot of vines imported from France were in the market for sale, and I presume are now in the ground somewhere. These should be destroyed, and all importations of vines, from the affected countries, stopped. If we have not the disease already, we can prevent our having it introduced amongst us.

The late rains have started the farmers to work. We will work this season in hopes of fair prices for grain next August—not next January.

Your obedient servant, I.

The above communication will be read with interest by all engaged in the culture of the vine. Every inquiry, every suggestion, every discovery in the mode of cultivation is of vital importance to this State, for California is destined to exert a great influence on the future upon this subject.

These inquiries we trust will lead to others, and we hope to see a full and free discussion upon this and all kindred subjects. Our columns are open and we solicit the friends to communicate.

The "shrivelling of the grape," to which our correspondent alludes, we should not denominate disease—certainly not the disease that is destroying the vine in Europe—but it was the result of shallow cultivation. Unless the soil is cultivated deep and made rich (for the roots to feed upon at the time the "berries swell," they will "grow hard," become "spotted," dry, shrivelled and worthless. The deeper and richer the soil, the larger and more luscious the berries, and more abundant the crop; and all experience teaches that the best cultivation is the cheapest.

We do not think there is any indication of the European disease, yet, among the vines of California; neither do we think it attached to the young vines that have been imported, and yet the suggestion of our correspondent is a good one—that those vines usually thrown upon our market in quantities had better be burned, for we verily believe that such quantities of trash will never pay the setting out. We are sorry to see so many persons half doing the work of vineries. Many are planting the grape who pay no regard to its nature or wants, and the result must be a total failure, and each experiment will retard the general success. We hope our friend J. will communicate often, and we should like his address that we may communicate to him.—En.

The Catawba Grape.

We sincerely esteem the Catawba Grape one of the very best varieties for cultivation in California. Longworth, of Ohio, whose famous Catawba Champagne is now esteemed equal to any wine imported, says it is the very finest wine grape known, and for a table grape, we believe, when properly grown, will be found far superior to our California grape. We earnestly urge our cultivators to give the Catawba a careful trial.

WHAT ARE THE BEST GRAPE?

MR. EDITOR: I wish, sir, to make some inquiries of you in relation to grapes. Are the Concord, Diana, Charter Oak, Sage, and some other varieties of grape loudly pushed up in agricultural papers equal in value to the Isabella or Catawba

grapes? In regard to the Concord, it is declared by some to be only 5th rate; as to the Diana, a dish of the same were exhibited at our County Agricultural Fair; the size of the berries and bunches were not more than one-third as large as Catawba grapes by their side. I purchased one bunch of them, which were divided among several good judges of grapes, and they were tried with the Catawba and declared to be inferior in size, and flavor, and evidently they were no ripener. I would say also that Mr. W. S. King, of Boston, decided they were the true Diana.

The Charter Oak Grape is raised by a gentleman of my acquaintance, and is declared to be valuable only for preserving; the berries, however, are of enormous size. The Sage grapes I have tasted and although of large size, it has the sharp, foxy flavor of the wild native grapes.

Now, sir, if I am incorrect or mistaken in any of these varieties, I hope to be corrected, and I desire your opinion, for I believe that farmers are the last class to be humbugged, and these grapes have obtained a high reputation by the description given in agricultural and horticultural journals. My opinion is that the Catawba Grape, for a hardy out-door grape (if well cared for) is decidedly the best grape.—P. M. Augur, in N. E. Farmer.

INSECTS IN FRUIT.—One great advantage in the cultivation of fruit in California and Oregon, is that thus far we have never seen any indications of insects penetrating such fruit as apples, pears, peaches, cherries, plums, &c. Up to the present time we have never seen a single specimen wormy or affected. This is an important matter, and it will be well to notice it and to know the causes of this security, and be prepared to enjoy such an exemption from the evil forever. Will our fruit growers give thought to the subject and favor us with the results of their experience? It is too important to be passed over.

Facts in Grape Culture.

E. A. McKay, of Naples, N. Y., gives, through the Horticulturist, some interesting facts in regard to the mode adopted by him in the cultivation of an acre of Isabella grape vines. The vines were planted five years ago last spring, one vine to a square rod. The holes are dug to about two feet deep and six to eight feet across. In the bottom of each of these holes was placed half the carcass of an ox—a drove of eighty oxen having died in the neighborhood while on their way to market. The holes were then half filled with good surface soil. Sixteen loads of leather shavings, which had been accumulating at a currier's shop, were then divided equally among the 160 holes, which were then filled with surface soil, mixed with the leather. A bushel of well-rotted stable manure, mixed with the same quantity of charcoal dust, completed the preparation for the vines. He states that most of the vines measured last spring, a foot in circumference, some of them fifteen inches, and one seventeen inches. He permitted them to bear considerably the past season, and the quality of the fruit was so superior as to command fourteen cents a pound when most grapes of the same kind brought at same place but twelve and a half cents per pound. The crop of the present season he estimated at 20 pounds to the vine, or 3000 pounds to the acre. He states that he has repeatedly dug down to the bones, and found them "completely surrounded with a net-work of living, fibrous roots."

GRAPE CULTURE AND WINE MANUFACTURE IN OHIO.—The Cincinnati Gazette contains a long and interesting article on the grape culture and wine manufacture in that vicinity. It appears that in 1846 there were 83 vineyards in the neighborhood of Cincinnati, containing 248 acres under cultivation, and 114 bearing, and although the crop the preceding year was but a partial one, 240,000 gallons was the yield. In 1852, 1,200 acres were in cultivation, 750 bearing; the annual yield was supposed to be 500,000 gallons, and the sparkling wine alone \$175,000. A bushel of grapes will make from 3 to 3 1-2 gallons of juice. Mr. Buchanan commenced planting his vineyard in 1843; in 1850 from three acres he realized, beside the cuttings, 1,640 gallons wine. In 1853 he obtained from five acres 4,326 gallons, or 867 gallons per acre. In particular spots there have been obtained 800 gallons from an acre, but 650 gallons is considered a large yield. The demand for Catawba wine is far ahead of the supply, and the quality is constantly being improved, both by the cultivators and those who prepare it for market.

Japan Lilies.

Few plants are more useful than the different varieties of Japan Lilies. They came into bloom at a time when our New Holland plants are over, and when an actual paucity of flowering plants exists, wherewith to decorate the conservatory and greenhouse; and what really can be more suitable? They produce a gorgeous display either in-doors or out; and as they are quite hardy they may be liberally planted in the open borders; they thus constitute one of our best autumnal flower garden plants. Their propagation is simple and certain. The bulbs may be separated, and each scale will eventually form a new bulb. This separation should be effected when the flower stems are withered; the scales should be stuck into pans of silver sand, and placed in a cold frame or pit. After remaining one season in this position, they should be planted in a prepared bed of peat soil, and a little silver sand intermixed with it; thus treated, the bulbs will soon grow large enough to flower. The cul-

tivation of them in this position is by no means difficult. Immediately when the bulbs go to rest in the autumn is the proper time to repot them. By no means destroy the old roots, but carefully place them amongst the fresh soil. If large examples for particular display are required, large pots may be employed, and half a dozen large flowering bulbs placed in each pot. The soil I use is rough peat. The pots should be well drained, and the crowns of the bulbs just covered with the soil; when potted they should be placed in a cold pit or frame, in order to prevent the soil from freezing, although frost will not injure the bulbs. Where room under glass is an object in winter, they may be plunged in the open air in coal ashes, in a manner similar to potted Hyacinths. I have at this time a large number in flower, which have never been under glass until within these few days; they have sustained no injury from exposure. There is scarcely any plant which is so much benefited by liquid manure as the Lily, more especially before expanding its flowers. If used in a clear state, and considerably diluted, this water alone may be applied for at least a month before it comes into flower. If the object should be out-door cultivation entirely, I should recommend them to be planted in beds; their effect is exceedingly grand. Excavate the soil 18 inches deep, and fill in the bottom a foot deep with very coarse peat, intermixed with one-fifth of decayed manure or leaf-mould. The remaining six inches may be entirely peat. If the bulbs are large enough to bloom, plant them twelve inches apart every way, and if beds of each kind are well contrasted one with the other the effect will be magnificent.—S. in Gard. Chron.

Study of Botany.

Why is not botany studied more? There is scarcely a school or college in the United States in which botany is taught, and very few in which thorough instruction in it is given. By thorough teaching, we mean where the instructor has a good knowledge of all the plants and trees growing in the vicinity of the school,—not only knowing their names, but also their classes, orders and properties. Under such a teacher, if the students form herbariums for themselves, they will scarcely fail to gain knowledge which will be both useful and practical. Useful, because it will add much to their happiness whenever they go into the garden, fields, or woods; and practical, because they can then deal understandingly with the vegetation with which this beautiful earth is clothed, and without which it would be a barren, uninhabited waste. In some of our academies and schools, a few young ladies, and perhaps gentlemen, recite a few lessons and analyze a few plants under a teacher who does not know and cannot tell the names of one-half of the plants growing within five miles of the school. Indeed, we believe there is not one of the nine colleges in this State in which botany forms a prominent study; and in only three of them is it named in their course of study; nor do we think any of said colleges has a good botanist for a professor. Yale College has no professor of botany, and we know but one college in the United States which has a separate professor for that study—the University of Cambridge, near Boston, which has a botanic garden under the supervision of Professor Gray, who is undoubtedly the best botanist in this country. In the above statement we by no means include the medical colleges, which unquestionably number several distinguished botanists among their professors, but with them little or no knowledge of botany is required for a degree. One great reason that botany is so little studied, is the want of competent teachers, and because its knowledge is not required to get a degree—that great aim of a large portion of students. Suppose the time required for Greek were given to botany, and other branches of natural science, which would be the most useful, especially to any who ever visit the country or garden? With a knowledge of botany, the world will appear brighter and more beautiful. We would by no means banish the study of Greek from our colleges. We have devoted many hours to its study, in order to obtain a degree—not worth one cent. We cannot now read a Greek work without the aid of a dictionary, nor do we think that one out of every ten graduates in the country can; still, it is of great use in affording a better knowledge of the English language, especially of scientific terms. But we think a knowledge of botany to be worth more than all the dead languages. Then why should so much time be given to their study, to the neglect of the things by which we are surrounded, and among which we move and have our being. There are realities worth knowing; and the better we are acquainted with them, the greater will be our fund from which to derive happiness.—S. B. Buckley, in Horticulturist.

VEGETABLE SOUPS.—All vegetables that are put into soups, should be put into cold water and gradually brought up to the boiling point. This will cause the vegetable to diffuse its flavor throughout the whole mass. Irish potatoes had ought never to be put in soups until they are first cut up in hot water; this extracts their bitterness and renders them fit to mingle in the other vegetable mass. The meats to flavor vegetable soups, may be beef, veal, mutton, or chicken, and like the vegetables, should be put into the cold water. There are fewer good soups made in the country, than almost any other dish, and the reason is obvious: it takes more time to cook them. An okra gumbo soup should boil incessantly six hours, when the flavor of the meat, vegetables and condiments is so intimately and delicately blended that they all seem one delicious mass. Salt hardens water and flesh, and should not be put into soups until the mass is well done.

Natural History.

Sketches of the Natural History of California

BY ALEX. S. TAYLOR.

THE PELICAN OF CALIFORNIA.

This bird, called by the Spaniards Alcatraz, is very abundant on the Pacific Coasts of North and South America. The variety inhabiting the shores of California is found from Acapulco to the Columbia river, and is migratory in its habits.

The male bird weighs between ten and twelve pounds and measures 4 3-4 feet from the beak to the end of the tail. The wings when stretched out, measure, including across the breast, 7 3-4 feet. One of the wings measures 3 1-3 feet, and across the breast 7 1-2 inches. From base of neck to vent 15 inches—the neck is 21 inches long. The upper mandible is 13 1-2 inches long and 1 1-4 inches broad; it shuts down mostly within the lower mandible, and has three mid-parallel ridges running along the roof of the mouth, two of which are grooved in their centre, and hard and sharp near to the beak. The beak is marked black and yellow, and longitudinally corrugated; acutely curved, very sharp, hard, and slightly nicked, and is 1 3-4 inch long by 3-8 of an inch thick and broad. The lower mandible is as long as the upper, but is 2 inches broad and which can easily be stretched to 8,—to it is woven into and attached the pouch, which, by measurement of one a few weeks ago, I found to be capable of containing over five gallons of water—the lower beak is of the size of a filbert and very hard. The edges of the mandibles and of the upper beak are sharp and fine. The head is 4 1-2 inches long by 3 inches thick and broad, and shaped triangular. The eye is surrounded with bare skin and is 5-8 of an inch; the color of the iris in the male is of a gay, silvery steel—that of the female is of a dull pinkish brown—the ear is situated 2 inches from the eye. The bill of the male is oval, ridged, spoon shaped, and fleshed of a red color; that of the female of the same form and of a dulled white. The nasal organ is only a slit at the base of bill—the nasal groove extends to the beak—the tongue is a small grizzly elongation on the point of the triangular bone of the trachea. The skin of the pouch is of dirty lead color, entirely bare of feathers, marked with lines and extremely elastic and soft; the trachea is in the middle of it, immediately under the termination of the jaw bones. The legs are of a lead color, 8 inches in length; the palm of the foot is 6 inches long and measures 6 1-2 inches across the end of the toes, which are armed with blackish nails.

The tail of the bird has 24 feathers, is of a rounded fan shape, and 6 inches long.

The bones are all air-celled, and very light; the skeleton weighs only 2 1-4 pounds; the wing bones of each wing, although 30 1-2 inches in length, weigh only 2 1-4 ounces. The oil sack is very large, and weighs nearly half an ounce—its covering is of long white featherets which are always charged with oil.

The plumage of the male is in color distinct from that of the female. The head of the male and upper portion of its neck is covered with long, close, plushy featherets, of a beautiful yellow color; the lower edge of the neck at the breast has a band of the same color. Both birds have a long crest down the base of the head and along the upper part of the neck. The breast and belly of both is downy white. The wings and back of the male bird are of a white and silvery steel color intermingled in elegant stripes and mottles. The female is about one-sixth smaller and generally weighs 8 pounds. The color of its plumage is of a dull heavy lead cast, and she is much more stupid and slow than the male. The stomach of the male is covered with a large quantity of hard, deep, orange-colored fat, within which is the gizzard, of a long oval figure; within the mass of fat, (which weighs one and a half pounds,) the gut is found in long convolutions intermingled throughout its substance. This is entirely wanting in the female so far as I have seen; both being examined at the same time and season. The meat of the male is brownish red, and of a much finer texture than that of the other, and is more abundant in quantity. The primary wing feathers of both are about 18 inches long and of a dull black—the breadth of wing is 10 inches. The general features of both birds are alike except the color of the plumage and mandibles—the bill is straight, and is flattened near the beak. The skin of the bird is covered with a mass of flocculent cells highly air-charged.

None of the figures or descriptions of this Pelican, as delineated in Whitelaw's Goldsmith of 1840—Milne Edwards of Paris 1834—Carpenter's

Zoology of 1844—nor Carpenter's Cuvier of London 1849, agree with the particular features, when closely observed, of the California variety of this bird. The figure in Carpenter's Zoology, pp. 521, vol. 1, is nearly like the bird we attempt to describe. These authors all confound the sea with the land Pelican.

The egg of our pelican is of a light green color, marked with blackish brown splotches, and its surface is roughened and not polished like that of the eggs of ordinary land birds. The substance of the egg is encased in a tough calcareous pellicle nearly as thick as a fowl's eggshell. The albumen of the egg when boiled is of a transparent milky color. The size of the egg is three and a half inches in length, and two inches in diameter—it is long in figure and sharply peaked, measuring only one-fourth of an inch at the apex; it weighs nearly three ounces. Great numbers of these eggs are brought to the market of San Francisco from the Farallones islands and the neighboring rocks and islets of that part of our coast, and form an important article of food: many persons prefer them to fowl's eggs. In January, 1852, a sloop of 25 tons, loaded with bird's eggs from the Farallones, was east ashore on Monterey beach.

The Pelican of our coasts lays its eggs and hatches its young on all the solitary islands and rocky islets from the Gulf and Ocean shores of Lower California up to Vancouver Island, as I am informed by old sailors. It lays from four to six of a season, beginning to hatch and bring forth their young in March and April—the young are able to fly in September of the same year.

The California Pelican is said to be found on the Pacific Coasts from Valdivia in Chili, to Vancouver Island. There is a smaller variety of the species found on the same southern coasts, and those of the Callipagos Islands (where they are very numerous) which are also said to be similar in color to ours, though one quarter smaller in size. An old whaler informs me that on the shores of Behring Straits and the N. W. Arctic, a variety of white Pelican, the size of a common duck, is found in great numbers.

It will be seen, that the Ocean Pelican of California is very different from that of the Great White Pelican of the Lagoons of the Salinas, Sacramento, and Tulare valleys of our State. This bird, which we have not yet seen, is stated to us by old settlers and hunters, to be nearly double the size of the Sea Pelican when standing—it is entirely white except the ends of the outer wing feathers which are black. This Pelican never visits or feeds on the sea coasts.

The California Pelican begins to arrive in the Bay of Monterey about the first of September, following the schools of innumerable sardines, herring and mackerel which visit us then—and leave about the first of February. The pursuit of their prey is the most lively and sprightly habit of the bird. During this period they abound in great numbers, chasing the fish with great pertinacity and greediness in fellowship with the most astonishing companies of all kind of our sea fowl.

In a clear day when the small fish are plentiful, they may be seen close to the shore in numbers of fifty and a hundred, circling with flocks of gulls at an elevation of twenty to thirty yards above the sea. This appears to be done with a view of scaring the fish into a close body, (or as the Spanish say, corraling them,) when the Pelican descends with the velocity of a shot ka-plunk into the water, scooping up into its extended lower mandible and pouch the stunned and frightened small fry; when they rebound like a cork to the surface. The sight of twenty and thirty of these huge birds falling at once like a living cataract, from the air, and splashing the water into spraying fountains, with the shrieks and quarrels of the gulls and shags snatching the fish from the bigger birds, is as curious, as it is striking and novel, and forms one of the most animated features in the fall months of the beautiful Bay of Monterey. They often continue this manœuvre from "night to morn and morn till dewy eve," keeping up such an infernal clatter and racket, with the bleatings and barkings of sea lions and others, intent on the same errand, as to persuade a stranger in these parts, that old ocean was giving up its forgotten dead of a thousand years. As the Pelican descends it gives its body a quick spiral movement, and plunges its whole body under the water, with its wings close, shut to its sides. When it rises buoyant from the sea it uses its wings as paddles, and flaps its webbed feet on the water by springs for over fifty feet, before it can sail away into the air. Towards evening they may be seen in straight regimental lines of ten and fifteen, one following close behind

the other, leisurely and solemnly wending their way to their rocky or sandy barracks hard by the ocean shore.

In the fall of 1852, the Pelican arrived in our bay in numbers incredible. In the afternoon and night they could always be found on our first lagoon, sitting lazily on the ground, or perched on the trees overhanging the water, sleeping or dozing with the bills and heads under the wings. When on land it can be easily approached, and is a stupid, lazy, dirty creature, and generally full of whacking bird-lice. It is a heavy melancholy looking animal, with the eyes and leer of an ogre. When gorged they can be easily approached and killed with a stick: their only weapons are their wings and beaks, and it is rather unpleasant when you get your fingers shut down upon by its scissors-like mandibles.

The Indians of Tobasco, Campeachy, and Yucatan, are said by the old Jesuit Fathers, to train these birds so well, as to catch fish for their owners, like the Cormorants of the Chinese. The Spanish ladies of those countries and simple days, are stated by the same creditable authorities, to cure the pouch skins so well as to make elegant work-bags and other ornamental paraphernalia. The Indians thereaway also use them for tobacco bags. We have read in some late account of outlandish parts that they are used for making gloves, and that they take dye-stuffs of brilliant colors remarkably well.

These birds were particularly noticed by the early discoverers and navigators of Lower and Upper California, by the Jesuit Fathers, and more particularly in the Bay of Monterey in the voyage of Viescino in 1602.

MONTEREY, Jan. 13, 1853.

Miscellany.

THE MOTHER'S HAND.

A wandering orphan child was—
But meekly, at the box, attired;
For oh! my mother scarce could buy
The common food each week required;
But when the anxious day had fled,
It seemed to be her dearest joy,
To press her pale hand on my head,
And pray that God would guide her boy.

But more, each winter, more and more
Stern suffering brought her to decay;
And then an Angel passed her door,
And bore her lingering soul away!
But oh! they know not what is grief,
Who ne'er kneel by a dying bed;
All other weal on earth is brief,
Save that which weeps a mother dead.

A seaman's life was soon my lot,
'Mid reckless deeds—and desperate men!
But still I never quite forgot
The prayer I ne'er should hear again,
And oft, when half induced to vend
Such paths as unto sin decay,
I've felt her soft hand press my head,
And that soft touch hath saved her boy.

Though hard their mockery to receive,
Who ne'er themselves 'gainst sin had striven,
Her whom on earth I dared not grieve,
I could not—would not—grieve in heaven;
And thus from many an action dread,
'Too dark for human eyes to scan;
The same fond hand upon my head
That blessed the boy—bath saved the man!

(From the Pioneer for January.)

The Lily of the Valley.

BY STEPHEN C. MASSITT.

In the month of May, 1853, I passed a very pleasant week at Geneva, Switzerland, tarrying two days in one of the little villages near the banks of Lake Lemán; and you shall know how agreeably my time was spent, and of my meeting with "The Lily of the Valley."

The reader is aware, that, in some parts of Northern Europe, the English language is spoken; indeed, in many of the Swiss hotels, it is quite common. I was in one instance, however, fortunate enough to meet with a family who talked good old Saxon, the head of it was the host of the pretty little village inn at which I rested. Here, as in other lands, the children have their "May Day Festivals;" and though I was not in time to witness their merry-making, I was in time to inhale the fragrance of the flowers—in time to tell you of the exquisite beauty, even though withered on the stem, of "The Lily of the Valley." What a lovely day it was—as, looking from the window of my hotel, I watched the bright sunbeams, as they danced and sparkled on the clear blue waters of Lake Lemán! The breeze was crisping the waves, so that they danced and gently tossed about the tiny boats, with milk-white sails, that glided on its surface.

A very compact little vessel was hired for a moderate price, and as she fluttered her wings to the wind, I seemed fairly to revel in the quietness of quiet and repose. The first summer rain had fallen, and the valleys, hills and dales, refreshed by the showers, seemed to send up a song of thankfulness to Heaven, while the trees, filled with blossoms, some just putting forth their leaves, looking so green and lovely; and as far as the eye can reach, it was one vast panorama of matchless beauty. On nearing a little village, the name of which I have forgotten, not very

distant from the far-famed Zurich, whose waters have been immortalized in story and song, I observed, as I thought, an unusual gaiety and liveliness among the people, and was about remarking to my companion that I imagined it was some fête day, when he informed me we had arrived just in time to see the last of the Swiss May Festival. Children's sports are to me always interesting, and so we proceeded on, through innumerable groupings of lads and lasses, and vineyards, bowers and gardens of surpassing beauty, the air seemingly laden with the perfumes of a thousand exotics, when, suddenly, in the distance the well known May Pole was seen. But the dance had ceased; the little twinkling feet that so lately had trodden on the spring blossoms, had disappeared; but the Lily-of-the-Valley was there, and its fragrance was beyond description.

A little blue-eyed girl, of some seven summers, had just plucked the flower, and placing it in her bosom, began to cry. This attracted my attention, and I went to her and asked her to tell me the cause of her grief. She said that her little sister, whom they used to call the "Lily of the Valley," had been taken from them, and she was going to send this flower with her to Heaven, to be planted there! I need not say I became much interested, and followed the little stranger for some distance; but, in the throng of children, I soon lost her.

The little ones that, on my arrival, were grouped together in the very height of glee and excitement, as I fancied, were speaking in subdued tones, while the peasants looked sad and gloomy.

Musically I strolled to the inn of the village, where I learned the cause of the ceasing of the festivities. Here, also, had they a "May Queen," and though its little head was bent in sickness, the genial sunshine, it was thought, would revive, and the merry-making and excitement prove beneficial, rather than injurious. And so they placed her upon her floral throne.

The shoutings of a hundred tender voices went up; processions were formed, and garlands, wreathed by little hands, were tossed in the air. All eyes were turned towards the throne of roses, and her crown of pure white lilies, that she loved to wear, was placed upon her brow. She looked so lovely there, in her dress of buds and blossoms; but she was very pale, and her eye looked up to Heaven! Could she have heard them calling her away? She smiled so sweetly she could not be in pain; and then she tried to raise herself, but the exertion was too much for her, and just waiving her little hand.

"She fell, by her saint-like beauty,
Asleep by the Gates of Light."

The color returned not to her cheek, and thus this tender floweret, in the very height of its May Day glory, was taken to be transplanted into the heavenly nursery!

The May Day dance was over. Garlands and wreaths of flowers dropped from slender hands, that in their glee had held them—and tears flowed like rain; and, where so lately smiles, laughter, and the joyous strains of music floated in the air, sobbings now were heard, and rejoicings were at an end.

I thought it was a glorious way to die,—ere the young heart had grown familiar with the paths of sin. While 'ere the spring flowers budded, bloomed and blossomed on her very breast—while the shoutings of innocent voices greeted her—her spirit passed silently away.

This is the story that they told me; and now I will tell you, my reader, what I saw.

On the night of the day that I arrived, the funeral of the little "May Queen" took place. Never before did I feel so strongly the impressiveness, nay, the beauty of death, directed, as it seemed to be, of all its gloom and terror.

There was no coffin—no pall—no raven plummings—none of the trappings and sombre liveries of the grave, seen there;—but upon two pieces of cedar wood, bound tightly together with boughs of overgreen and myrtle, forming a sort of trellis-work, the body was placed, dressed in a garment of plain white, with a single flower, the "Lily of the Valley"—resting on the breast. The scene was most imposing. It was night; but the moon shone full upon that lovely face; it was so light—so very light—it did not look like Death. And, then, it seemed to smile, as though a pleasant dream was hers;—or, perhaps, she was talking to the angels. And, then, each of the children killed those little lips, so still now, and cold, and their hearts seemed breaking. I could hear their sobbings;—and they called her "Lily," and they seemed to think that she could hear them! and one said she knew she smiled when they called her—but now she had gone to God to be a Queen among his little angels! She was so very beautiful! And then they sang a hymn; and its distinct echo among the hills made me think that it was answered by cherub voices;—it was so distinct, so very clear, that it startled me; and, then, I saw them turn away and weep, for the "Lily of the Valley" has passed from their sight forever!

ANNOYING.—Is it lawful to keep a dog which barks, howls and yells all night long? And if lawful, is it humane, is it christian, is it neighborly? We don't mind a perpetual bark, at the rate of a hundred and twenty reports per minute, up to three o'clock in the morning say, but after that time it very disagreeably disturbs the melodious hum of the musquitoses, and is apt slightly to interfere with one's rest. They say that every dog must have his day; but those in our neighborhood seem determined to have the night also.—
Exchange.

In our streets their name is legion. We counted fourteen all barking at the same time, a few evenings since.—Ed.

Ladies' Department.

Harmony of Colors.

RED DRAPERY.—Rose-red cannot be put in contact with the rosiest complexions without causing them to lose some of their freshness. Dark red is less objectionable for, certain complexions than rose-red, because being higher than the latter, it tends to impart whiteness to them in consequence of contrast of tone.

GREEN DRAPERY.—A delicate green is, on the contrary, favorable to all fair complexions which are deficient in rose, and which may have more imparted to them without inconvenience. But it is not as favorable to complexions that are more red than rosy, nor to those that have a tint of orange mixed with the brown, because the red they add to this tint will be of brick red hue. In the latter case a dark green will be less objectionable than a delicate green.

YELLOW DRAPERY.—Yellow imparts violet to a fair skin, and in this view it is less favorable than the delicate green. To those skins which are more yellow than orange it imparts white; but this combination is very dull and heavy for a fair complexion. When the skin is tinted more with orange than yellow, we can make it rosier by neutralizing the yellow. It produces this effect upon the black-haired type, and it is thus that it suits brunettes.

VIOLET DRAPERY.—Violet, the complimentary of yellow, produces contrary effects; thus it imparts some greenish-yellow to fair complexions. It augments the yellow tint of yellow and orange skins. The little blue there may be in a complexion it makes green. Violet, then, is one of the least favorable colors to the skin, at least, when it is sufficiently deep to whiten it by contrast of tone.

BLUE DRAPERY.—Blue imparts orange, which is susceptible of allying itself favorably to white and the light flesh tints of their complexions, which have already a more or less determined tint of this color. Blue is, then, suitable to most blondes, and in this case justifies its reputation. It will not suit brunettes, since they have already too much of the orange.

ORANGE DRAPERY.—Orange is too brilliant to be elegant; it makes fair complexions blue, whitens those who have an orange tint, and gives a green hue to those of a yellow tint.

WHITE DRAPERY.—Drapery of a lustreless white, such as cambric muslin, asserts well with a fresh complexion, of which it relieves the rose color; but it is unsuitable to complexions which have a disagreeable tint because white always exalts all colors by raising their tone; consequently it is unsuitable to those skins which, without having this disagreeable tint, very nearly approach it. Very light white draperies, such as muslin plaited or point lace, have an entirely different aspect.

BLACK DRAPERY.—Black draperies, lowering the tone of the colors with which they are in juxtaposition, whiten the skin, but if the vermilion or rosy parts are to a certain point distant from the drapery, it will follow that, although lowered in tone, they appear relatively to the white parts of the skin contiguous to this same drapery, redder than if the contiguity of the black did not exist.—M. E. Chevreul.

THE TRUE WOMAN.—The true woman, for whose ambition a husband's love, and her children's adoration, are sufficient, who applies her military instincts to the discipline of her household, and her legislative faculties in making laws for her nursery; whose intellect has field enough for her in communion with her husband, and whose heart asks no other honors than his love and admiration; a woman who does not think it a weakness to attend to her toilet, and who does not disdain to be beautiful; who believes in the virtue of her glossy hair and well-fitting gowns, and who eschews rents and raveled edges, slipshod shoes, and audacious make-ups; a woman who speaks low, and does not speak much; who is patient and gentle, intellectual and industrious, loves more than she reasons, and yet does not love blindly; who never scolds, and rarely argues, but who adjusts with a smile; a woman who is the wife we have dreamed of once in our lives and who is the mother we still worship in the backward distance of the past; such a woman as this does more for human nature and more for woman's cause, than all the sea-captains, barristers, judges and members of Parliament put together—God-given and God-blessed as she is.—
Dickens.

BEETS.—No knife should ever touch a beet previous to boiling. Rub the leaves off by hand, for if there is a wound made on the beet, the best of its juices will be lost in boiling. Drop them into boiling water, with a handful of salt. Most cooks take them from the boiling water and place them in cold water, to aid in taking the skin off, but this should never be done, as they part with one half their flavor. When taken from the pot, let them drain—then peel and slice, butter and salt, or pour good vinegar over them, which many prefer.

AN eminent writer says: "It is my firm opinion, derived from experience, that the period of courtship cannot be too short. I have reason to say, when you have hooked your fish, the sooner you use your landing net the better."

BUTTER BEANS.—Having shelled your beans, drop them into cold water—as the water boils, add salt—try with a spoon, and when done, serve up with melted butter.

POLLEY & CO.,
BAY STATE MILLS,
 N street, between Front and Second.
BAY STATE LOWER MILLS,
 Corner of Front and R streets, Sacramento.
 MANUFACTURE the celebrated Brand of Flour known as the "Bay State Lower Mills," which can always be found at our store, No. 49 K street. Also, fresh ground Buckwheat and Graham Flour, fresh ground Corn Meal, Middlings, Bran, and ground Barley, &c., which is disposed at the lowest prices. Barley, Wheat and Corn Ground to Order. v3-1

Happy Valley Flour Mills,
 Corner of First and Mellus streets, San Francisco.
 Encourage Home Industry and Home Production.

THE attention of dealers and consumers of Flour is respectfully invited to the Superior Article manufactured at the above establishment, from California Wheat of the growth of 1854, selected and prepared with the greatest care. These Mills have been in successful operation for nearly two years, during which time the proprietors have received such satisfactory assurances from those who have tested the quality of their Flour, that they can confidently recommend it as being fully equal to any brand in the market. Among the many evidences of the superior excellence of the Flour manufactured by them, the proprietors would direct attention to the substantial compliments received at the two last Annual Meetings of the State Agricultural Society, premiums have been awarded in both Fairs for the superior specimens of Flour from these Mills.

Domestic Flour.—A superior article for family use, manufactured from selected Wheat—a constant supply always on hand at the Mill, or at the Depot of the Proprietors, 35 Sacramento street.

A Liberal allowance made to the Trade.

Wheat Purchased or Ground on the most favorable terms. 19

Flour! Wheat! Barley!
 THE SAN JOAQUIN FLOUR MILLS, STOCKTON.—Are now completed and ready to grind Wheat and Barley in any quantities. The above Mills are not surpassed by any in the Atlantic States, having all the modern improvements for the manufacture of the finest Family Flour, and are capable of turning out 250 barrels per day.

A large fire-proof Warehouse for the storage of Grain, is attached to the Mill.

Particular attention is called to the fact of Stockton being the depot for the supply of the Southern Mines, and therefore offers superior inducements to wheat growers to ship their grain direct to Stockton, for milling.

Liberal advances made on consignments of Wheat.

For particulars as to terms, &c., apply at the MILLS—or to Messrs. PAIGE & WEBSTER, Union Block, corner of Battery and Union streets, San Francisco. 6

Wines and Liquors.
GOODWIN & CO., & MEERER,
 No. 64 California street, (near Front street).
 IMPORTERS and Wholesale Dealers in Foreign and Domestic Liquors, have now on hand, and for sale,—

- 500 one-eighth casks Domestic Brandy,
- 250 bbls Monongahela Whisky,
- 50 bbls very fine Old Bourbon Whisky,
- 100 one-eighth casks fine pure Pellevin Brandy,
- 50 one-eighth casks A. Seignette do,
- 40 one-eighth casks fine Champagne do,
- 15 one-eighth casks Louis Le Berton do, 1805
- 5 punchons pure Scotch Whisky,
- 15 pipes Imperial Eagle and Swan Gin,
- 100 one-eighth casks Port Wine,
- 100 casks Dunbar's Bottled Ale and Porter,
- 100 casks Tennant's do do do,
- 50 casks Boker's Bitters, genuine,
- 100 cases Owen Byrle's Champagne Cider,
- 50 baskets Heideck Champagne,
- 100 baskets fine Brandy, pints and quarts.

Also—a complete assortment of Syrups, Absinth, Curacao, Bitters, &c., &c.; all of which will be sold at the lowest prices. 21 Im

Tickets for sale at the Office of the "CALIFORNIA FARMER," Masonic Hall Building, Montgomery street, San Francisco.

First Premium Daguerrotypes.
 R. H. VANCE just awarded the FIRST PREMIUM for the best Daguerrotypes exhibited at the California State Fair. Mr. V. would be happy to wait upon any one wishing a PERFECT LIKENESS. The arrangement of his Rooms and Lights are superior to any in the State.

Rooms—New Building corner of Sacramento and Montgomery streets, entrance on Montgomery street, next door to Austin's. 16

STEAMERS.

California Steam Navigation Company.

ARRANGEMENT FOR JANUARY, 1855.
 Departure from Vallejo street wharf, at 4 o'clock, P. M.
FOR SACRAMENTO.
 Steamer NEW WORLD, Capt. Seymour;
 Steamer ANTELOPE, D. Van Pelt, master;
 Mondays, Wednesdays and Fridays.
 Steamer W. G. HUNT, E. A. Poole, master;
 Tuesdays, Thursdays and Saturdays
 The W. G. HUNT will leave Sundays, at 10 A. M.
FOR STOCKTON.

TOUCHING AT MARTINEZ, BENICIA, AND MARSH'S LANDING.
 Steamer CORNELIA, E. Concklin, master;
 Steamer H. T. CLAY, S. Barroll, Master;
 Mondays, Wednesdays and Fridays.
 Steamer AMERICAN EAGLE, E. Polk, master;
 Steamer SOPHIE, E. C. M. Chadwick, master;
 Tuesdays, Thursdays, and Saturdays.

FOR MARYSVILLE.
 Steamer J. BRADGON, Thomas Seely, master—Mondays and Thursdays.
 Steamer ELLEN HENSLEY, E. C. M. Chadwick, master—Wednesdays and Saturdays.
FOR SAN JOSE, ALPISO AND SANTA CLARA.
 Steamer GUADALUPE, S. Card, master—will leave every Tuesday, Thursday and Saturday, from Vallejo street wharf, at 9 o'clock A. M. Returning alternate days leaving San Jose at 3 o'clock A. M., Santa Clara 3 1/2, and Alpiso 9 1/2 o'clock, A. M.

FOR COLUSI, RED BLUFFS, AND INTERMEDIATE LANDINGS.

The steamer CLEOPATRA, Capt. Wm. H. Taylor, will leave Sacramento every Tuesday, at 12 o'clock M., for Red Bluffs and intermediate landings, from store-ship Antelope. Returning, will leave Red Bluffs every Friday morning.
 The steamer BELLE, Capt. Henry Gilman, will leave Sacramento every Saturday at 12 o'clock M., for Red Bluffs and intermediate landings from store-ship Antelope. Returning, will leave Red Bluffs every Tuesday and Thursday morning, at 9 o'clock. The steamer ORIENT, Capt. Carpenter, will leave Sacramento for Red Bluffs every Thursday, at 12 o'clock, M.; returning, leaves Red Bluffs every Sunday.

Freight by the above boats must be paid for on delivery. For particulars apply at the office of the Company, Jackson street, between Battery and Front, to
 R. CHENERY, President.
 H. N. SQUIRE, Vice President. 20 If

LADY JANE.

[The following beautiful verses, on a favorite Horse, were written by the late Mrs. Frances S. Osgood.]

O, saw yo'er creature so queenly, so fine,
As this dainty, mermaid darling of mine?
With a toss of her mane, that is glossy as jet,
With a dance and a prance, and a frolic curvet,
She is off! She is stepping superbly away!
Her dark, sparkling eye full of pride and of piny.
O, she spurns the dull earth with a graceful disdain,
My fearless, my peerless, my loved Lady Jane!

Her silken ears lifted when danger is nigh,
How kindles the light in her resolute eye!
How stately she paces, as if to the sound
Of a proud, martial melody playing around.
Now pauses at once, 'mid a light caracol,
To turn her mild glance on me beaming with soul;
Now fleet as a fairy, she speeds o'er the plain,
My darling, my treasure, my own Lady Jane!

Give her rein! let her go! Like a shaft from the bow,
Like a bird on the wing, she is speeding, I trow—
Light of heart, lithe of limb, with a spirit all fire,
Yet swayed and subdued by my idlest desire—
Though dainty, yet docile, and sportive but true,
Her nature's the noblest that ever I knew,
Now she flings back her head, in her dainty disdain!
My beauty! my graceful, my gay Lady Jane!

Cure for the Toothache.

BEAUTY has charms. So it has, almost equal to music. It may soothe a savage breast. It did soothe, or charm, a German music teacher one day last week. He was charmed with the beauty of a lady, bright as a star, lovely as those who dwell beyond, or in the shining orbs. He saw and she conquered. He saw her in the street, and followed. Other poodles have done the same. She entered a store—so did he. Not because he wanted to buy goods, but he thought an opportunity might occur for him to speak music to her, or hear the music of her speech.

Oh, what a voice!—more sweet than his own fiddle; and its tones vibrated to the very bottom of his larger beer barrel. And her smile—it struck him to the heart, for he thought she smiled upon him. Perhaps she did. We smiled at a bigger fool in the circus the other night. She looked at silks—he tried to suit himself with a new pair of gloves. Both were hard to suit, and time sped. At length she left, and took a stage for her home up town. He took the same mode of getting away from his home, and went up by the same conveyance, without any definite place in view at which he should pull the strap. He waited patiently for the lady to give the first pull. She got out, and entered a brown stone front. He noted the spot, and ended his ride at the next corner, and came back and looked up at the cold walls, and thought—yes, he thought of the warm heart within, and the sweet face that smiled—was it at or for him?

"Hope told a flattering tale,"

and he thought if he could only enter that portal, he could win the citadel. But how? what excuse should he make, or who inquire for, when the door was opened? Fortune came to his aid, and showed him a dentist's sign.

"Ah, true," said he, "I have a decayed tooth," and walked boldly up and rang the bell. Fortune favored him again. The lady herself opened the door. Had she watched him from the window as he watched the house, and unwilling to let him be seen by a servant, down herself to the door? Perhaps; we have seen such things before. "Is the doctor at home?"

"No; but walk in—you can wait for him."
"Oh yes, certainly, in your company any length of time—if he should not come till night—or morning."

The lady led the way to the parlor. Both were seated upon the sofa, and time went off on the wings of—love! Well, he thought so. He thought that every woman that smiled upon him was made to love. Perhaps he offered his to her acceptance. She did not accept, but that only served to make him the stronger. So few time, till a loud ring at the door bell marked a period.

The lady ran to open the door, and stooped for a few hasty words with the new comer, and then came in and said: "My husband—the doctor."

Her visitor wanted to see one just as much as the other. He would very gladly have given the room to either, but the two in one stood in the door. He looked anxiously toward the faint charmer who had enticed him into a snare, and she smiled, and showed her beautiful teeth, and vanished. The tooth reminded him of his own.

The doctor looked stern, and said sternly: "Did you wish to see me professionally, sir?" Of course he did. What else could he say he was there for? He thought of the decayed tooth, and thought he would have that out to get on himself. It was not exactly a tooth for a tooth, but it soon will be.

He took his seat, and the doctor applied the nippers and—threw the wrong tooth—a perfectly sound one, upon one side of the other.

Of course it was a mistake—a bloody mistake—but easily remedied by pulling another. That would be a tooth for a tooth. The doctor would take no excuse, and applied the instrument again and drew—another sound tooth. The decayed one now stood alone, and the doctor thought, might perhaps get well; he was tolerably sure that he had cured the musical gentleman of his toothache, and very kindly told him to pay him five dollars, and if his troublesome tooth should ever plague him again, all he had to do was to follow his wife home and he would pull all the teeth out of his head.—New York Tribune.

ROBES are but the baggage of virtue.

HORTICULTURAL, &c.

Smith's Pomological Gardens,

Banks of the American River, two and a half miles from Sacramento City.

THE proprietor of the Gardens would respectfully invite all who are engaged in "Nursery and Gardening" to visit his grounds. He will be happy to show to them, ready for sale, this fall, a collection of

Fruit Trees, Ornamental Trees, Grape Vines, Shrubs, Flowering Plants, and Green House Plants, as can be found in all the great Sacramento Valley.

The proprietor would call particular attention to his collection of *Peaches*, believing that the specimens exhibited by him in Sacramento and San Francisco markets have been unsurpassed in size, quality, or flavor.

The collections of *Pear Trees* will equal any in the country; these, with all the new varieties, will be offered this autumn.

The undersigned believes his collection worthy a visit to his grounds of all who are interested in Gardening and Orcharding. The subscriber will offer this autumn *Five Tons Vegetable Garden Seeds*, that have been raised upon his own grounds. These seeds have been grown with care and will be sold at wholesale for the present, at the Gardens.

Persons in want are invited to call upon us, and we will make reasonable terms. *Fruits, Berries, &c.*, will always be furnished at short notice at the Gardens.

The proprietor returns his thanks for the liberal patronage of the past, and hopes for a continuance of such favors. A. P. SMITH, Proprietor.

Golden Gate Nursery,

Corner of Folsom and Fourth streets, San Francisco.

THE attention of the public is requested to a large collection of the flowering Plants, now for sale at this Establishment, embracing the most extensive assortment in the State; among which may be found—

Camelia Japonica, in seventy varieties;
Perfect blooming *Roses*, of all the classes;
Moss and climbing *Roses*, do do;
Fuschias, a choice collection; *Heliotropes*, in variety;
Rose and *Lemon Geraniums*;

Lemon-scented Verbena, flowering do, *Arbutus*, *Azalea*, *Orchids*, *Pasiflora*, *Honeysuckles*, *Carnations*, *Dahlias*, *Bulbous Roots*, &c., &c.; and a general collection of Green-house plants and ornamental shrubbery.

Catalogues for 1855 will be ready on the 1st of December, and will be forwarded on application.

Orders for any part of the State, will be promptly attended to, on application to D. Nelson, No. 170 Washington street—or to the proprietor. (7-3m) W. C. WALKER.

Fruit Trees! Fruit Trees!

All the above give guarantee in quality, and we warrant them what they should be, and will sell at prices to suit the times.

Apple Trees from \$1 00 to \$2 50
Peach, Pear, Quince, from 1 50 to 2 50
Extra sized trees in proportion.

BEARD & LEWELLEN, Mission San Jose.
Orders with Warren & Son, corner of Montgomery and California streets, will be promptly attended to. 18 6m

New Invention!

BULKLEY'S STEAM DRY KILN.

THE undersigned takes this opportunity to offer to the citizens of California, Oregon and Washington Territory, the valuable invention hereby announced. One of the greatest wants of California and vicinity, for years, has been the means of preserving her products so as to have a continued supply during the late months. The vegetable products to an immense amount are annually lost in the approach of the rainy season, its long continuance, and the exposure that necessarily results to those products from the season; and the vast quantities that are exposed and accumulated in warehouses and elsewhere, have demanded some method of preserving these immense and valuable crops, that otherwise would be a loss to the producer and to the State. The loss of the Potato and Onion crop last year would amount almost a million of money, and the loss the present year will be heavy, without preservation.

The undersigned, holding the "Patent Right of the Steam Dry Kiln," offers this invention with the confident assurance that it is the very thing needed—that it is the *plus ultra* for this very want. It has been thoroughly tried and approved, for these products, and for Grain also. It has been tried for Lumber, to which it has been more particularly applied in the States, for there the Vegetable products do not require so much care as here. To shippers of Grain this invention removes all the difficulty in sending Grain on long voyages, and under the drying process of this valuable invention our Grain growers can now send their Grain to New York with safety.

The proprietor needs only to append the following certificates. The name of Henry L. Ellsworth, Esq., carries a weight that is convincing to intelligent men, and the other evidences should be satisfactory.

The model machine will soon be placed on exhibition at the office of Warren & Son, where all information can be had. JOSHUA HUTTS, Proprietor of Patent.

A Diploma and Silver Medal

Was awarded to the Inventor at the last New York State Agricultural Fair, held at Rochester, as a testimonial of its superior merits.

Letters from Hon. H. L. Ellsworth.

LAFAYETTE, January 7, 1853.
DEAR SIR: I congratulate you on the completion of your Dryer. I have for a long time urged the importance of extracting the moisture from grain and flour before shipment, to prevent fermentation. Your plan will obviate the difficulties hitherto experienced. There can no longer be any doubt that 15 pounds of water can be taken from a barrel of meal, and 15 pounds from a barrel of flour without affecting the taste or appearance of the same. Experiments at Lafayette show this. Nor is it a less gratifying circumstance that when the flour or meal is cooked, it reabsorbs proportionately more water, thus saving freight and the purity of the article. If the moisture is extracted, it must be obvious this meal will keep for long voyages, passing through the hottest climates. To the Navy, your improvement is invaluable. The world has become somewhat skeptical on the subject of patent rights. The simplicity and compactness of your machinery enables you to exhibit a working model, to remove in a moment any doubts as to your ability to sustain your patent and prove its utility. One feature in your plan deserves particular notice; in fact, this constitutes your *modus elidendi*, viz., not drying by common steam, or by fire heated pans, as has been done hitherto, but by using heated steam. Few persons are aware of the small expansion of steam, and how easily it can be heated to a high temperature with little confinement. You will be able to raise a stream to the point of ignition, say 600 or 700 degrees, though a far less heat will answer all your purposes. I will only say that European prejudice against Indian corn is fast dying away, and we may anticipate large shipments both for man and beast. The great fertility of the West, and the reduction of freights both inland and on the ocean, justifies this anticipation. Wishing you success, I remain, yours respectfully,
HENRY L. ELLSWORTH, late Commissioner of Patents.
To Henry G. Bulkley, Esq., Kalamazoo, Michigan.

LAFAYETTE, March 20, 1853.
DEAR SIR—I am highly pleased with your Dryer for lumber by heated steam. It seems almost incredible how soon even green lumber can be prepared for use. Twenty-four hours is all that is required. Steam has hitherto been used to advantage, but heated steam has not been applied for this purpose before your improvements. Every manufacturer of lumber would find it profitable to erect a cheap dryer on your plan. Full one-third of the weight of some kinds of lumber is removed by drying; the saving in cartage will more than repay the expenses of drying. When the difference between seasoned and unseasoned lumber is considered, no one who regards good work will regret the trifling expense of preparing the raw material.

Yours respectfully,
HENRY L. ELLSWORTH.
To H. G. Bulkley, Esq., Kalamazoo, Michigan.

LAFAYETTE, Pa., July 12, 1853.
I hereby certify that I have had charge of one of W. O. Hickok's shops where the most of his wood work is done, that I put up and have used H. G. Bulkley's Patent Kiln, and heartily approve of everything W. O. Hickok has said about it, and am certain that no recommendation can be too strong in praise of said kiln.

[17] W. H. SULLENBERGER.

The Pacific Loan and Security Bank.

MONEY will be received on deposit in sums of Ten Dollars and upwards, for which Certificates of Deposit will be issued, bearing date the first or fifteenth of the month, payable on demand, or at specified times, at the option of the depositors. If payable on demand, they will be without interest, unless the money remain on deposit one month, in which case they will draw interest of one per cent. per month, but no interest for fractional parts of a month. If deposited for specified times, certificates will be issued bearing one and a half per cent. per month interest for such time. Interest will cease at maturity; so that if depositors desire to continue their deposits after their certificates fall due, they must be presented for payment and renewal; otherwise interest ceases.

The money deposited is used only in loans guaranteed by us and in all cases simply secured by Mortgages, State, County and City Stocks, Merchandise, and other safe collateral, taken in the name of "MARRIOTT & WHEELER, Trustees for Depositors with Pacific Loan and Security Bank."

A register is kept at all times open to depositors for inspection, in which appear their names, the number of certificates of deposit issued, and the securities upon which the money deposited has been placed. Depositors thus not only have the personal security offered by all banks, but in addition have the benefit of the securities taken and guaranteed by us, and the facility of knowing what disposition has been made of their deposit.

FREDERICK MARRIOTT,
ALFRED WHEELER.

No. 93 Merchant street, San Francisco. 19

THEODORE PAYNE, SQUIRE P. DENNEY.
THEODORE PAYNE & CO.,
REAL ESTATE AND STOCK AUCTIONEERS.
OFFICE AND SALES-ROOM CORNER CALIFORNIA AND MONTGOMERY STREETS.

THEODORE PAYNE AUCTIONEER.

Messrs. PAYNE & CO. respectfully inform the public that they have established themselves as above, for the purpose of transacting the

Real Estate business, in all its branches, for the conducting of which they esteem themselves peculiarly qualified, by having given it their special attention for over two years past, and made themselves familiar with all questions affecting titles, &c. &c.

They will give their special attention to the public sales of estate, by Administrators, Assignees, Receivers, Mortgagees, &c., carefully complying with the terms of law.

A Register for Property, at either public or private sale always open at their office. 20 6m

To Farmers and Gardeners.

WICKERSHAM'S

Celebrated Patent Wrought Iron Farm Fence.

FENCE, for enclosing and sub-dividing lands. It can be furnished at but little above the cost of ditching, and is much more preferable, because it does not require a heavy annual expenditure to keep it in repair; it cannot be destroyed by the fires which so constantly sweep over prairie and mountain, requiring wooden fences to be renewed, nor carried away by flood from the overflow of the low lands; it is free from decay, which places it beyond comparison with wood or any other material now in use; it is valued the most highly where it has been tried the most thoroughly; it is light and graceful, yet strong, and cannot be broken down by horses or cattle. The testimony which has been given by those who have used it in the Atlantic States, is sufficient to recommend it to the farming public of California.

A complete model is now on exhibition at the State Agricultural Fair, at Musical Hall, Bush street, near Montgomery, where a full description may be seen, with the testimony of those who have erected it in the Atlantic States.

Farmers are invited to examine this fence, as there has never been any of the same kind in this country previous to the arrival of this lot, and from its peculiar construction there is not the least doubt but that it will be extensively used in this State.

J. T. Heston has now on hand, and will be constantly receiving supplies from the manufacturer, which will enable him to fill orders to almost any amount.

For particulars address J. T. HESTON,
At Warren's Agricultural Rooms;
Or, P. COGGINS, cor. Sacramento and Pike streets
October 8, 1854. 15

Artesian Well Boring.

WE would respectfully inform the public that we are fully prepared to take contracts in the above operations in a manner to guarantee satisfaction or no charge will be made.

SMITH & VAN DYKE having associated themselves with an old and experienced operator from the East, who challenges the world to compete with him in all the branches connected with the above business, are fully confident to guarantee success in all contracts that we may undertake, and warrant the work for one year. We have also implements for boring through stone to any depth, and all work done on the most reasonable terms.

For the satisfaction of those wanting anything in the above line, we would refer to Thomas Fallon, San Jose; Rufus S. Ellis, of Hayward; & Eells; M. A. Sullivan, New Custom House; Wright & Co., 137 Jackson street, &c., &c.

We can do work cheaper than any other operators, for two reasons:—
1st. Because we are prepared to work on a most extensive scale.

2d. Because we understand all branches connected with the above business, and are, therefore, able to work with certainty.

All orders left at the What Cheer House will be promptly attended to. SMITH & VAN DYKE, Contractors.
N. B.—We also refer to Warren & Son, publishers of the "California Farmer," who have seen and known the character of the work done. 7

MISCELLANEOUS.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!

Hurry for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE's who wishes PERFECT LIKENESSES? Because he has now the best arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has the largest light in the world, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: in order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

Prices as reasonable, and work superior to any in the city.

Don't forget the place.

New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. 17

COLLINS & CO.,
PRACTICAL HATTERS,

(PREMIUM HAT STORE.)

157 Commercial street, San Francisco.

THE undersigned would take this opportunity to return their thanks to their friends and the public generally for the very liberal share of patronage which they have received. They take pleasure in now announcing that they are determined that no one shall surpass them in the beauty, or finish, or quality of a hat; that no gent shall wear a finer hat than can be found at COLLINS & Co.'s Warehouse.

The proprietors of this establishment exert themselves to manufacture to order the latest styles and most approved patterns. The stock of HATS and CAPS, of every kind, now on hand, cannot be surpassed in this city.

COLLINS & CO.

ADAMS & CO.'S

CALIFORNIA AND ATLANTIC EXPRESS.

OUR Atlantic States Express will leave San Francisco on the 1st and 15th of each month, by the Pacific Mail Steamship Company's Steamers, and the Treasure crosses the Isthmus under the charge of a strong guard. The Treasure forwarded by us to the Philadelphia Mail, is always deposited there previous to that sent by any other conveyance. Our rates are lower than those offered by any other House, with the same security.

We also forward Treasure on the 1st and 15th of every month TO ENGLAND, by the P. M. S. Co.'s steamers to Panama, and from Aspinwall by the West India Mail steamers.

We draw Bills of Exchange on any of our Houses in the following places:

Boston, New York, Philadelphia, St. Louis, Baltimore, Washington, Cincinnati, Louisville, &c., &c.

Also, payable at any of the following Banks:

Mechanics' and Farmers' Bank..... Albany
Alex. Mitchell, Fire and Marine Insurance Co..... Milwaukee
Commercial Branch Bank of State of Ohio..... Cleveland
Utica City Bank..... Utica
Bank of Syracuse..... Syracuse
Bank of Auburn..... Auburn
Bank of Albany..... Albany
Rochester City Bk..... Rochester
Geo. Smith & Co..... Chicago
Michigan State Bk..... Detroit
Clinton Bank..... Columbus, O.

IN THE NORTHERN STATES we run Expresses, in our own name, always accompanied by faithful Messengers, to and from the following places:

San Francisco, Sacramento, Marysville, Benicia, Grass Valley, Nevada, Coloma, Placerville, or Morison Islands, Georgetown, Hangtown, Salmon Falls, Greenwood, Shasta City, Auburn, &c., &c.

And every other part of El Dorado, Placer and Shasta counties. Through LANGTON & Bro.'s Yuba Express, to and from the following places in Yuba, Sierra and Nevada counties:

Long Bar, Deer Creek Crossing, Park's Bar, Seward's Bar, Bridgeport, S. Yuba, French Corn, Kennebec Bar, Sweetland's, Boston Bar, Union Bar, Hoyt's Digging, Hunt's Ranch, Rose's Bar, Cherokee Corral, Hunt's Ranch, Foster's Bar, Hess' Crossing, N. Yuba, Wambow's Bar, Winslow's Bar, Slate Range, Slate Range, Oak Valley, Junction House, Nevada House, Indiana Valley, Frenchman's Bar, Empire Ranch, Sleightville, Bullard's Bar, Donkeyville, Cox's Bar, Minnesota Digging, Kunkin Creek, Goodyear's Bar, and Emery's Crossing, Middle Yuba.

Sacramento and Stockton, via Benicia in the SOUTHERN MINES, we run an Express in our own name, always accompanied by faithful Messengers, to and from San Francisco, Stockton, Soudon, Mokelumne Hill, Columbia, Mariposa, &c., by BROWN'S EXPRESS, from Stockton to all the Mines in the Southern Mines.

Our Bills of Exchange can be procured at, and Treasure forwarded to us for shipment from any of the above places. In all of the above places we have Brick Vaults and Iron Safes for the security of Treasure entrusted to us, and on board of steamboats on any of the above routes, we have Iron Safes for the security of all valuable packages transported by us.

INSURANCE.—We have made arrangements for insurance to the extent of One Million Dollars, on any one shipment, and are empowered to insure for other parties on Gold Dust, Bark, Coin and Merchandise to and from New York and this city, by endorsements on Bills of Lading, at the time of shipment.

ADAMS & CO.

Boston Clipper Steel Plow,

Manufactured by Ruggles, Nourse & Mason.

THIS splendid Plow is made after the style and form of the famous Eagle Plow, so universally known. This form of Plow in all its parts has been considered the most perfect yet invented, having taken premium in every State in the Union; also at the World's Fair.

The present Plow has been manufactured by Messrs. Ruggles, Nourse & Mason, with great care, and in the most finished style, of the very best steel, and may now be considered the highest finish and most complete Plow; and the undersigned wish the cultivators of California to call and examine the same at their place of business.

THE CALIFORNIA FARMER

And Journal of Useful Sciences.

VOL. III.

SAN FRANCISCO, THURSDAY, FEBRUARY 1, 1855.

NO. 5.

The California Farmer AND JOURNAL OF USEFUL SCIENCES. PUBLISHED EVERY THURSDAY MORNING. BY WARREN & SON.

Office in Masonic Hall Building, Montgomery street.
TERMS.—Six dollars per annum, in advance; or delivered by carrier at seventy-five cents per month. For a club of five new subscribers, we will send a sixth copy gratis.
A limited number of Advertisements inserted at fair rates.

AGENTS.

Messrs ADAMS & Co. and their offices throughout the United States of Europe.
Messrs. WELLS, FARGO & Co., at their offices throughout the Country.
Mr. O. H. HAMILTON, Travelling Agent for Sacramento City and County.
Messrs. LANTON & Co. for Donnellville, Foster's Bar, Good-year's Bar, Minnesota.
Messrs. ADAMS & Co. for Humboldt Bay, Trinidad, Crescent City, Port Orford, Umpqua City, Scottsburg, and the entire northern coast.
Messrs. LELAND & McCOMBE—Crescent City, Port Orford, Uniontown, Eureka, and Backport.
SULLIVAN'S newspaper stand, No. 5 Post Office Building; KIDWELL'S, Noisy Carriage Hall, Long wharf—San Francisco.
F. Freer, Bidwell's, Butte Co.
D. G. Whitson & Co. Coloma.
Trendwell & Co., Marysville.
James & Co., Napa.
A. W. Patten, Nevada.
Nash & Davis, Placerville.
C. O. Burton, Stockton.
Dr. Thomas J. Harvey, P. M., San Luis Obispo.
Cram, Rogers & Co., Yreka.
Parker & Roman.
Hosmer & Chamberlain, Union City, and Mission San Jose.

We desire our Agents to report to us on the 1st of every month, the increase of orders and the prospects, together with the amount due the office.

PROSPERITY.

Would the farmers of our State desire prosperity? then let them take the proper measures to secure it. When questions of State are agitated, politicians are engaged heart and soul to secure success and triumph to their cause—and shall the cultivator of the soil esteem his profession less noble than politics?—and yet, compare the interest and enthusiasm manifested at political meetings, in contrast to that of the agriculturists? We rejoice however to note the right feeling in some portions of our land, and when such feelings are awakened, prosperity will follow.

In the great State of Ohio, at their late State Agricultural Meeting, sixty counties were fully represented by delegates, nearly 300 being present. This was a large number of delegates, and the whole proceedings of the Convention occupy four and a half columns of the Ohio Farmer, one of the largest sheets published in the West.

The meeting was one of great interest. Some of the most prominent and distinguished men of the State took deep interest in the Convention. Hon. R. W. Musgrave, the President of the "Board of Agriculture of the State," presided at the Convention. Among the numerous valuable resolutions adopted were the following:

Resolved, That the best interests of the State, as well as of Agriculture, would be promoted by the establishment of Agricultural Schools.

Prof. Mather offered a resolution asking Congress for an appropriation of 200,000 acres of land for the endowment of an Agricultural College.

Mr. Leath offered a resolution recommending to county agricultural societies the protection of forest trees, and the cultivation of artificial groves.

The president laid before the Convention an exhibit of the condition of the finances of the Board, as follows:

Plate on hand, - - -	\$1,092 00
Other property on hand, - - -	1,700 00
Appropriations from State, - - -	3,000 00
Cash on hand, - - -	3,839 10

\$9,631 10

The following shows the receipts and expenditures of the State Fair held at Newark:

Receipts, - - -	\$9,000 00
Newark subscription, - - -	3,000 00

\$12,000 00

Expense of Fair, exclusive of premiums, 7,860 00

Balance at Newark, - - - \$4,140 00

Mr. Corwin offered the following, which was adopted:

Resolved, That we recommend to the farmers of Ohio, the Osage Orange as a most valuable plant for hedging, superior in every respect to any other plant which has yet been introduced in Ohio for economical and enduring fences.

Mr. McGrew offered the following:

Resolved, That this Convention recommend to the Boards of County Agricultural Societies to address their Representatives in Congress from their respective districts, requesting them to use

their utmost endeavors to secure a liberal appropriation by Congress for the establishment of a National Agricultural Bureau, to be placed upon a permanent basis, under such management as will disseminate practical agricultural knowledge throughout the entire Union, thereby promoting the general interest of the age.

Mr. Musgrave moved to amend by substituting "Department" for Bureau. Other interests had their Departments, and Agriculture, an interest of greater importance than any other, should also have its Department.

Mr. McGrew accepted the amendment as a modification of his resolution, which was then unanimously adopted.

Mr. Goff, of Logan county, offered the following resolution, which was adopted:

Resolved, That the State Board are desired to furnish to the President of each County Agricultural Society, blank Petitions, for circulation, praying Congress for the donation of land to carry out the plan of our Agricultural College; and that each President of each Society forward the same to their member of Congress, for the action of that body.

On motion of Dr. Cone, the Convention then adjourned sine die.

This large Convention was in session three days and evenings, discussing the most important subjects appertaining to the farming interest. The above are but a small portion of the resolutions adopted, but they show the character of the meeting. The greatest enthusiasm prevailed and the action will be felt.

When the agriculturists of California shall evince but a title of such earnest efforts for their own interest, then and not till then will there appear the dawning of a prosperous result to their labors. All other great interests of our State are ever ready to watch and guard with care everything that affects their welfare, and the legislature is invoked by petition for the requisite protection and aid; and shall not the Agricultural interest do the same? A thousand subjects demand their attention, and will not the farmers call their meetings and take hold of the matter? The prosperity of these interests are indicated by the wealth of their treasury; these resources still need to increase more and more their success.

We ask of those who are now desponding, to ask themselves if a great portion of the distress and loss of the past year was not the result of a sad neglect of these interests? We ask if these evils might not have been averted by union, discussion and co-operation, one with another, thus causing a diffusion of useful knowledge.

We invoke a better feeling, a deeper interest the coming year, and trust our farmers, rancheros stock raisers, will all take thought for these things, and make their influence felt.

[For the California Farmer.]

MORALS IN AGRICULTURE.

Messrs. EDITORS: Having published from two or three sources on the above topic, you will, perhaps, allow another to offer a few suggestions. I am led to these by recent transactions.

Not long since, at an auction sale in this town, Peach trees were under the hammer, and the inquiry was made by numbers of honest men, who wished trees for their own use—"What variety are they?" The honest and knowing proprietor of the nursery replied, "Melacatoon;" a very fine variety—and the trees sold like "hot corn," for the auctioneer had referred, for the wisdom and integrity of the proprietor, to a well known citizen of our town. Now, did, or did not, that proprietor know that "Melacatoon" (Melocoton) is no more the name of a variety of the peach, than evergreen is the name of a variety of tree? Did he not know that it was the name of a whole class of varieties?

Again, it is not a thousand years since a similar farce was enacted with cherry trees. In reply to an inquiry for the variety, "Morell" was pronounced with great candor, in addition to which the assurance of the auctioneer, (who never pretends to know anything about fruit trees; only what is said at the time,) that the "Morell" was a very superior variety, sufficed to recommend fine prices. Now the first impulse of a speculator acquainted with facts, is, of course, to laugh out-

right at the absurdity. Then he feels that his friend, neighbor, brother man, is being deluded and absolutely deceived. Yet he cannot interfere, for he will be trespassing upon the rights of another. Therefore he is obliged to stand by and see the whole fraternity of fruit growers and regular dealers injured by an unworthy mistake on the part of those who flood the markets and degrade the business by an illegitimate course. I buy only of regular dealers and established nurseries. From such there is little danger of deception.

I would by no means impugn the motives of those on whose course I animalvert: I only infer that they are not so thoroughly conversant with their business as they should be. JUNIUS.

Sacramento, Jan. 23, 1855.

NOTE.—The above communication we received from a source to be relied on. We often note the ignorance of vendors of trees, &c., as to character and history, or names and synonyms, that is perfectly amusing; yet it often results in a serious loss to purchasers.—Ed.

[For the California Farmer.]

SPECIMEN PLANTS.

HUMBOLDT, Jan. 15, 1855.

COLONEL WARREN: Thinking you might feel pleased at receiving a few specimens of our growth, I yesterday went out with a pick and grubbed up some. There are at least one hundred different varieties of fruit-bearing bushes, shrubs and trees in Humboldt county, which I have never seen described elsewhere. Many of which I never heard of before. I send a bundle to you by Mr. E. L. James, the gentlemanly and accommodating purser of the steamer Humboldt.

No. 1. Is a monster Currant, larger than the largest cranberry, and of exquisite flavor.

No. 2. Currants and Gooseberry.

No. 3. Red and White Salmon Berry, a gigantic species of raspberry.

No. 4. Two bushes, called by some spice, others olive, and others laurel. It is an evergreen, sugar leaved in shape, and bears a fruit resembling an olive, which the Indians use as an article of food, after roasting, and is said to be very nutritious. The leaves must be poisonous. If you will but squeeze one between the fingers and apply it to the nose, in a few moments it will produce pain in the cerebellum, and, if retained at the nose a length of time, will it is said produce temporary stupor. In the same bundle is a most beautiful variety of Honeysuckle.

We have the service berry, several varieties of the cherry and plum, and many varieties of the gooseberry, currant, raspberry, &c. We also have two beautiful varieties of the magnolia; the blossoms or flowers are from six to ten inches in diameter, one a white and the other scarlet.

If you would visit this county in May or June you would be delighted with it.

In haste, truly,

AN EARNEST AMATEUR.

NOTE.—We have received the accompanying bundle of trees and shrubs in excellent order, from our friend at Humboldt, by the hands of the gentlemanly purser of the steamer, to whom we feel highly indebted for this act of courtesy; and we feel truly grateful to our friend for the deep interest he manifests in bringing into notice these new and interesting specimens of our new country. Although he assumes to be an amateur, he will ever be known and recognized as a true friend of our State. We shall examine the specimens and report.—Ed.

[For the California Farmer.]

CALIFORNIA PEANUTS.

SACRAMENTO, Jan. 22, 1855.

Messrs. EDITORS: I have now before me yours of the 19th inst., and notice its contents. I have this day left with Messrs. Baker & Hamilton a sack of pea-nuts, to be forwarded to you. I planted quarter of an acre, and gathered about 20 bushels, or 800 lbs. I should here remark that I planted the African pea, very old, and did not get more than half a stand. The trial satis-

fies me that our sandy soil will produce 100 bushels per acre, or 3,000 lbs.—at the lowest price of African nuts now in market, say 25 cts., will yield \$750 per acre. The time to plant is about the 1st to 10th April. In ground well broke and levelled, lay off with a drill rows 4 feet apart and drop one kernel in the drill about 24 inches apart, and cover about 3 inches deep. When the vines begin to run, say 6 to 8 inches, and blossom, then commence to cover about 2 inches with the soil from between the rows, always leaving the end of the vine free.

The nuts I send you were dried in the shade expressly for seed. We are keeping over most of ours for seed. I have only about one hushel of the Carolina, but plenty are to be had of Baker & Hamilton, Sacramento city.

Yours respectfully, J. S. CURTIS.

NOTE.—We have received the above sample bag, and are gratified to hear of the success that has attended the first experiment in our State. It will be remembered that Dr. Curtis took the premium at the State Fair for the first-peanuts grown in California.

Most undoubtedly this nut can be successfully grown, for the soil of any of our sandy slopes will give a large yield. We would call the particular attention of our readers to this sample, which can be seen at our office, and where the nut can be had.—Ed.

[For the California Farmer.]

FARMING IN SIERRA COUNTY.

OAK RANCH, Sierra county, Jan. 20, 1855.

Messrs. EDITORS: I receive about ten California papers weekly, and being an agriculturist in a small way, the FARMER is of more value to me than all the others. Every person in this State engaged in that pursuit, should take such as are treated of in the FARMER, should take that paper. They would gain dollars, ten times its cost. Not only does it contain a mass of most valuable practical information, but being written in a pleasing and graceful style, it entertains while it instructs.

Mine is a little barren patch up in the most rugged and apparently worthless of the Sierras, in latitude 41° N, and an altitude of about 5,000 feet above the level of the sea. I raise nearly all kinds of garden vegetables, and about twenty-five tons of potatoes, on six acres of ground, and sell potatoes for 12 cents per pound, cabbage 20 cents per pound, turnips 12 cents, beets 16 cents. I planted about three-fourths of an acre of corn the past season, and had a fine crop; but as I sold nearly all of it when green, I have no data by which the amount can be given correctly. I allowed some to ripen for seed.

I send you a copy of my Meteorological Table, i. e. so far as the thermometer is concerned. I don't suppose it will be of general interest enough for an insertion, but it may be of some to you, to compare it with other parts of the State, and note the difference. Yours, &c.,

C. COOPER.

NOTE.—We have pleasure in acknowledging the kind letter of our friend above, together with the tables accompanying the same, which are of value and we are grateful for them, and will cheerfully furnish space for a continuance of them, confident they will afford instruction to our numerous readers. We shall be happy to hear from our esteemed friend often.—Ed.

OLD COLONY SWEET CORN.

The editor of the Granite Farmer, who has given this superior corn a fair trial, pronounces in its favor as follows:

We have cultivated, the present season, three varieties, Stowell's Evergreen, Darling's Extra Early, and Old Colony. Of Darling's Extra Early we would say that it is a good variety, but not extra early at all, at least with us. Planted at the same time with the others, it is in eating at the same time. To be sure, we have this variety on the table first, because we planted it in our garden two weeks perhaps before the other kind. With us it is simply a good corn.

We planted Stowell's Evergreen Sweet as much

for curiosity as anything. We wished to see if it would keep green forever. We had formed the opinion that it was not a first rate table corn, that it was large and coarse, with not a delicate flavor. But in this we have been happily disappointed. It is a prime table corn; its appearance is handsome, the ears are large with full deep grains. We tried it after having eaten several meals of Darling's extra early. It was unanimously pronounced the best corn; it was further said, by several who tried it, to be the best sweet corn they had ever eaten. We congratulated ourselves upon the acquisition, and vowed a spot in our garden to it ever after.

But we had not then tried the Old Colony Sweet. This we tried upon the strength of its being the "sweetest and best table corn ever cultivated," and it has fully borne out that reputation. We gave it a full trial. It was first cooked with some of the Evergreen Sweet. This latter was eaten first, and as it had come to be a favorite corn, it received its due meed of praise. But when the Old Colony came on in its turn, there was an unanimous exclamation of its superiority.

The test was a fair one and somewhat extended. No hasty conclusion was formed; ear after ear was tried, until all the table were impressed with the fact that the Old Colony led the list. Still the trial has been adjourned from day to day, but with no changes in the result.

As a table corn, we give the palm to the Old Colony. We shall try to save from the grinders, which are neither few nor slow, some seed to supply our friends if desired.

STALE BREAD.—M. Boussingault, the great chemist, says that the common belief of the cause of the conversion of new into stale bread is, that it gets dry, or, in other words, that it loses water. He, however, took a loaf weighing 8 lbs., out of the oven, being then, in its interior, at a temperature of about 207 degrees. This loaf he suspended in a room of 61 to 66 degrees, and the loss of heat carefully noted. After 25 hours, the temperature of the bread had sunk to that of the room, and the loaf had lost 0.008 per cent. of its weight—water of course. It was now half stale, and the crust no longer hard. At the end of the sixth day, the bread was thoroughly stale, although it had lost only one ten-thousandth of its weight by drying. Boussingault, therefore, regards staleness in bread as due to a gradual change in its molecular condition, and not to a loss of water.

SPECIAL NOTICE.

REDUCTION OF PRICE.

The heavy losses upon the Farming interests of the State the past year, the general depression of that interest, and the discouragements resulting to all, who know have prevented many who are engaged in Agriculture from subscribing to our Journal the past year. Feeling desirous to meet their wants as far as in our power, we now offer the CALIFORNIA FARMER at SIX DOLLARS PER YEAR, PAYABLE ALWAYS IN ADVANCE.

We trust this effort on our part to meet such circumstances will be met on the part of those engaged in the cultivation of the soil with its corresponding feeling, and that all will do us service by sending in a goodly list of subscribers and the amount for the same. We have made the price thus low, that our subscribers and friends may at once send us the proof of their good will.

Inducements for the formation of clubs will be found under another head.

Clubs Formed—Premiums to Subscribers.

With the third volume, with the opening year, we would offer to our friends stronger inducements than heretofore to make up CLUBS for the FARMER. It will be seen by our "special notice," that we shall commence with a reduction of the price of the "Farmer." The price will now be six dollars per year, always in advance. No subscriptions received unless accompanied by the amount.

To those who are disposed to form CLUBS, when we can send all to one address, we shall send SIX COPIES for FIVE NAMES, TWELVE for TEN, and TWENTY-FIVE COPIES for the names and amount of twenty subscriptions.

To those, or any of our friends who will interest themselves, we believe this will be some satisfaction, besides promoting the cause of Agriculture. We hope to see good results to all from this proposition.

TO AGENTS.

We would ask of our Agents to whom we send the CALIFORNIA FARMER, to communicate with us and to remit full accounts to the close of the year. We shall send them extra numbers for distribution. We call their attention to the reduction in price of our journal; this we hope will give satisfaction to all, so as to enable our agents to enlarge our lists, and also afford an increased reward to them.

We can offer inducements to Agents in all the large cities as Carriers, and to Booksellers and Newspaper Stores also, for Papers in quantities.

THE CALIFORNIA FARMER.

We have many inquiries, daily, from our friends in the country, who write us, desirous to make up clubs for the FARMER, and send us produce for the amount. We always do our utmost to facilitate the cultivation of the soil, and we will assure our friends that if they will make up clubs of five, ten or twenty, they can send their Wheat, Rye, Oats, Barley, or specimens of extra quality, and we will allow them the full market price in the payment of the FARMER. Our friends that are in arrears can send in the amount this time, and add the coming volume, and we will forward receipts for the same. So send along your wheat and good products. We do not mean anything—but those articles that have a value, and we will take them.

SPECIAL AGENTS FOR THE FARMER, &c.
ALL the messengers of Adams & Co., and Wells, Fargo & Co. are duly authorized by us to receive subscriptions for the CALIFORNIA FARMER, and receipt the same; also, to receive orders for Fruit Trees, Seeds, &c., and may add all business with us. All such business committed to either of these messengers will be promptly responded to by us.

OAKLAND.

Our friends at Oakland are invited to call on MR. CHARLES STEWART, and subscribe for the CALIFORNIA FARMER; he is authorized to receive subscriptions and we will cheerfully all the farmer in his employment. We are willing to receive Wheat, Rye, Oats, &c., or any valuable products of first quality in payment, as we do wish our friends to enjoy our sheet, and consequently too.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SAN FRANCISCO, THURSDAY, FEBRUARY 1, 1855.

California Agriculture.

WE copy the following from our cotemporary the Evening Journal, and we rejoice in the hope that our daily and weekly journals throughout the State are beginning to look at the Agricultural interest in its true light. We hail this as a new and glorious era, when our local journals shall be willing to accord to this branch of our nation's wealth its high position. We have read with pleasure the leader of the Evening Journal, and are familiar with the truths thus expressed, for they are but the condensed arguments we have been using the entire year; and our readers will readily recognize the various themes touched upon. There is no one branch of agriculture or its kindred subjects, in this well condensed leader of our cotemporary, that we have not been urging upon our readers the past year, and this fact makes it the more interesting to us, for we feel assured and encouraged to labor on when we see a new and increasing interest, and of a character that promises permanency.

"Agriculture is the basis of a nation's wealth," and California must so recognize it before the country can be permanently prosperous. Rich as are our mines, of what value are they to California without a permanent population of enlightened and cultivated citizens?—without those safeguards to society, law, order, churches, and homes? Had there been no other resources but the mines, what would have been the present population and condition of California? We need not answer, for its early history is known. Before the valuable resources of agriculture were known, men lived and toiled for gold only. Gold was their god—one object only, to accumulate and go home; for there appeared no prospect, then, of homes in California. Home was far away, and men cared not how they lived; they were fast going back to a savage state, both in habits and manners; but when agriculture began to be developed, then came the thoughts of home and its comforts, and with this came the first guarantee of the permanency of the golden State, and from that first year of our agricultural labors to the present time, a steady, onward progress has been made in the arts and sciences—these revealing their kindred of manufactures and giving a stimulus to commercial and mercantile trade. For each and all of these great interests, Agriculture is the basis, and when our citizens shall unite in earnest for the up-building of our State, by establishing the emigrant roads, railroads, and all other means to increase the population of our State, it will be found that the great interest of California is that which converts our barren wastes into fruitful gardens; which changes our wild prairies into fields of waving grain; and the cattle upon our hills and plains will then be esteemed of as much value as the gold that lies hidden beneath. But the theme is endless, and we pause and refer to our able cotemporary.

THE AGRICULTURAL INTEREST.

THE history of gold producing countries, in all ages, warns us that despite the frequent discoveries of the precious metal, our State can never support the position it should in the Union without great attention is paid to agriculture. The Spanish El Dorados, to which have been attributed the decay of the formerly flourishing institutions of Spain and Portugal, were without doubt, destroyed by the want of agricultural communities. California must be a farming country. Hitherto we have raised, throughout the whole length and breadth of a State six times as large as New York, hardly bread enough for one-fourth of our people. The market of the United States and Chile, have supplied us with the Cereal grains, at a price which has absorbed nearly the one-half the gold taken out in our placers. One of the greatest difficulties has been the want of that class of men who possess sufficient knowledge and energy to adopt the style of farming best adapted to California. The heavy soil, changeable seasons, and peculiar growth of vegetation of this State, require not only intelligent but practical men, suitable to the emergency of the times, to represent the agricultural districts. Insecurity of title, extravagant prices of labor, and want of water during the dry months, have been up to this time, the greatest drawbacks our farmers have experienced. From a careful trial of the qualities of the soil, it is certain that both the staples of the Northern and Southern sections of the Union, can be raised here in perfection. Tuolumne and El Dorado counties have produced tobacco pronounced by judges, equal to the best growth of the celebrated Vuelta Abago of Cuba. Upland cotton of superior quality, has been raised on one of our Northern Ranchos; the Tule lands, which are property of the State, are without doubt, susceptible of being cultivated with rice, and through the labors of our Chinese population, this crop

will be produced in sufficient quantity to warrant exportation. The Southern counties of the State, to which but little attention has hitherto been paid, are well worthy of notice. The vast extent of unoccupied land in this region, should induce the owners of the soil to encourage immigration. Southern California, from Monterey to San Diego, may be made a vine-raising country, equal to the wine-making portions of France or the valleys of Italy. Sheltered by the Coast Range from the winds of the north, possessed of a soil equal in fertility to the valley of the Nile, this portion of the State lacks only the attention of those skilled in the culture of the grape, to become the place which shall supply the Atlantic States with their Champagne, Burgundy, Madeira and all the lighter products of the vintage. Those who hold the titles of leagues of productive, yet uncultivated land, would do well to encourage the emigration of an industrious agricultural population, both by grants of land and assistance in gifts of money and stock. The unprofitable acres, which they now possess, under the influence of a thrifty, working people, would soon repay them in the increased value of the land, for whatever outlay might at first be requisite. The want of water during the first five or six months of dry weather, which is generally experienced through the summer, must in a measure be overcome by irrigation, either from ditches or from artesian wells. The great success of the latter in many instances, is an assurance that our farmers may depend with certainty upon them as a reliable means of irrigation. From the fertility of the soil and the statistics of the previous yield of land, it is well ascertained that sixty bushels of grain can be raised in California, with the same amount of labor which is required to produce twenty-five in the Atlantic States. Farming must ultimately be the main stay of California, independent of, or rather as consequent upon, the gold discoveries. The class of men needed here must be progressive, energetic and intelligent; adapting themselves to the exigency of the times, the nature of the soil, the peculiarities of the climate and the demand of the market. With such a people to develop her resources, California will soon take her true position.

[Translated from the French for the California Farmer.]

Holcus Saccharatus,

(Sorgho sucre.)

BY LOUIS VILMORIN, MEMBER OF THE CENTRAL S. OF AG.

AN article contained in the "Moniteur Universel" of January 21st, by noticing in a very inaccurate manner a presentation that I had made to the Central Society of Agriculture, during its session of the 18th of January, has prematurely attracted public attention to this plant by attributing to it—through an error in figures—qualities which, did it really possess, would sufficiently explain the rapidity with which this article has been circulated amongst a large number of journals. It is in order that these false notions may not be further extended, that I am obliged to return at once to this plant, of which I had intended not to make any fresh public mention until I should have more fully studied it.

The plant which I presented to the Agricultural Society, in the name of one of our correspondents—M. Rantonnet, of Hycres—is called *Holcus saccharatus*, *Sorgho sucre*. It is known of old and in fact, was cultivated in Italy at the commencement of the present century. But whether the process of extraction was not sufficiently well known at that period in order to pursue it with advantage, or whether the new stock in our possession be richer, its culture has been abandoned.

Four years ago, M. de Montigny, French Consul at Shanghai, China, forwarded to the Geographical Society, a collection of various kinds of grain, amongst which there was a parcel labelled, "*Sugar Cane, from the north of China*." This seed was largely distributed, by the Geographical Society, and this year I had under cultivation a small lot of it, which I received from one of my correspondents of Champagne, M. Ponsard, of Omezy.

This plant is, botanically, identical with the *Holcus saccharatus* formerly cultivated by L. Arluino, and the letter of M. Rantonnet, who charged me with its presentation, in his name, to the Agricultural Society, put me upon the track of the source of this new introduction, which must be referred to the packet sent by M. de Montigny.

The origin of these plants being established, as traced to the importation aforesaid, I will proceed to give the result of the limited experiments to which I subjected them.

One stalk of it, weighing 450 grammes,* gave me on my first experiment, October 13th, 150 grammes of a clear limpid juice, without any flavor save that of sugared water. The juice obtained from the whole stalk, yielded 10.8 of sugar for 100 of its own weight.

Another experiment, made November the 28th, with the saccharimetre, gave figures varying from 14.6 to 13.8 of sugar for every 100. I also ascertained that the proportion of sugar decreased in

the successive joints of the stalk on going upwards, those of the middle, and below it, being the sweetest.

I had only a few square metres† of ground planted with our *Sorgho*, in a garden plot not by any means rich, and in the vicinity of trees, which must have been detrimental to the development of the plants. According to the actual circumstances there were, nevertheless, about twenty stalks—of average equal to the one weighed, as above noticed, and from which the juice or sap was extracted,—to the square metre. If then, we adopt that yield as a standard—say 3 kilogrammes‡ of sap to the square metre, and 30,000 kilogrammes per hectare§—and estimate the sap at 10 per 100, it will give 3,000 kilogrammes of sugar to the hectare, which it will be seen is a much greater yield than the average of the Sugar Beet.

Thus, from this first calculation, there appears a probability that something advantageous may be made of the plant under consideration. But doubtless it will require some years more of experience before we shall be enabled to pronounce its introduction an event in the produce of industry. At all events, it appears to us that it is more likely to furnish an abundance of Alcohol (devoid of unpleasant flavor) than to rival the Beet in the production of Sugar.

This plant bears the greatest analogy to the maize (Indian corn) and may be similarly cultivated, sowing it either in drills or broad-cast, between the 15th of April and the end of March. Provisionally, on account of the small quantity of seed disposable, it might be raised in a nursery plot or in flower pots, to be transplanted in the month of May.—*Revue Horticole*, Feb. 1st, 1854.

* 1 Gramme is about 23 English grains.
† 1 French Metre is about 39 English inches.
‡ 1 Kilogramme is 1,000 grammes.
§ 1 Hectare, or 100 Acres, is about 2 English acres.

Seeds of the above described plant, have just been received at the office of the CALIFORNIA FARMER, direct from Paris.

Emigrant Road.

We have received the following Circular from the Committee on the Emigrant Road, which we cheerfully lay before our readers, bespeaking for it an attentive perusal:

EMIGRANT ROAD TO CALIFORNIA.

SAN FRANCISCO, December 29th, 1854.

DEAR SIR: The undersigned, a Special Committee of a larger Committee, appointed by a Public Meeting of the Citizens of San Francisco, in favor of an Emigrant Road across the Plains, between California and the Valley of the Mississippi, are at present engaged in collecting information and statistics on that subject.

We invite your friendly co-operation, and request you, at your very earliest convenience, to furnish written answers, as far as you can, to the subjoined "Inquiries," making them as minute and full as possible.

Address "Eugene Casserly, Adams & Co's Express, San Francisco."

We are, dear sir, respectfully, &c.,
EUGENE CASSERLY,
I. C. WOODS,
JOHN T. DOYLE,
GEORGE B. TINGLEY.
Special Committee, &c.

INQUIRIES:

1.—If you have, within the past six years, crossed the Plains, to or from California, once or oftener, state by what route, and at what season of the year, and what was the average length of your trips; and if by different routes, state the time of the year, and the length of your trip by each route. State, also, through what Pass of the Rocky Mountains, or the Sierra Nevada, your route lay in each case.

2.—State, so far as you can, the number of emigrants and the amount of live stock that have come across the Plains by any of the routes with which you are acquainted, within the past six years (including the year 1854,) or in any year of the six, and by what route.

3.—State what route has been most traveled within your observation, and by what proportion of the emigrants in the respective years above mentioned, or any of them, and state also which, in your judgment, is the most practicable route for an easy, expeditious and safe Emigrant Road, between California and the Mississippi Valley.

4.—State the general character of such most practicable route, as to soil, levels, grass, water, distance from its eastern to its western terminus, and the number and character of the stations, at which supplies for men and cattle can be obtained, with their locations and distances from each other. Give a description of the route between each of its chief points, with the distance in miles as nearly as you can, from point to point.

5.—State what is necessary and what first to be done to convert such route into an Emigrant Road of the character described, having reference especially to digging wells, to bridges or ferries over streams, &c. State what months of the year it could be made practicable for travel.

6.—If on any considerable portion of such route there is a want of wood for fuel or building purposes, &c., state at what points and for what length in miles. State if on such portion the

want of wood can be supplied by adobes or otherwise, and how the want of fuel is to be supplied.

7.—State your opinion as to the practicability of establishing and continuing along such route, at intervals of say twenty miles, stations for supplies for men and cattle; and in this view state the number, character and location of the settlements already existing along the route. State the portions of the route where such stations would be most difficult; and on such portion the practicability of such stations during the year 1855.

8.—If the route which you regard as the most available is some other than that which is most traveled, state fully and particularly your reasons for preferring it.

9.—State the practicability of such a road without a line of military posts, established by the U. States Government; and if such a line is, in your judgment, necessary, the location of those posts, their distances apart from each other, with the number of men and the defences requisite for each.

10.—State anything else you can to throw light upon this subject, or which has any bearing upon it. State fully and particularly.

Number your answers to the above inquiries, "1," "2," "3," &c., according to the number of the inquiry to which each answer relates.

We sincerely hope that all those who may read the above Circular, and have crossed the Plains, will feel a personal interest and responsibility in the matter, and cheerfully return early answers touching any or all of the subjects referred to.

There are thousands of our citizens in various parts of the State who can render essential service to this all-important public enterprise by a narration of some of the many interesting details and facts, having a direct bearing upon this subject, of their trip from the Valley of the Mississippi to California. It is really to be hoped then that all such will not neglect doing so at the earliest possible moment. Every month, week or day even, that action is delayed in regard to measures that shall induce an increase to our population, tends to retard emigration and will prove disastrous to the best interests of the country.

California demands a large increase in her emigration to save herself from losses arising from the present depressed state of trade. To ensure this increase of emigration to our shores, it is the duty of every well-wisher of our State to use his utmost endeavors in forwarding the object of the above Circular. If we would add to our population, we must push forward any and every movement, which will aid in cheapening and shortening the communication between this and the older States of our Union. The early construction of a good stage road across the Plains, is unquestionably, one of the surest and readiest methods of aiding and encouraging the emigration of families from the east to our State. Let us then, one and all, come forward and lend our aid in hastening forward this important enterprise. It is a matter in which all are interested, and consequently one that demands the attention and assistance of every citizen of California.—Ed.

SURVEYOR GENERAL'S REPORT.—A copy of the Annual Report of the Surveyor General has been received from that office. From a cursory glance we note many subjects of great interest to the people of this State; matters that we trust will receive the attention of our legislators. The report is made to the governor, according to the act establishing the office, and it is expected all important matters will thence be referred to the Legislature. Our legislators, however, having that report before them, will at once see what is most needed, and we hope they will give it their earliest attention. General Morlette has shown himself well qualified for the duties of his office by his able and well arranged report. Questions like the following belong to the people, and by them should be cared for: Boundaries, County Survey, Map of the State, County Roads, Great Missouri Stage Road, Pacific Railroad, and other Railroads, State Lands, State Library, Protection to the Natural Sciences, &c.—these are all matters of the highest moment, and will undoubtedly receive due attention at the hands of those to whom they are entrusted.

The funeral of Mr. Thomas Murray, who was killed at the fire on First street, took place last Sabbath afternoon. The procession was one of the largest ever witnessed in this city. It contained 1662 on foot, 17 on horseback and 20 carriages. Mr. Murray was very much respected by his brother firemen. His last resting place is in Yerba Buena Cemetery.

EARTHQUAKE.—We learn from the Sierra Citizen that a shock of an earthquake was experienced in Downsville on the night of the 24th, about 10 o'clock. The shock was felt at Forest City, Minnesota, head of the North Fork, and at the Keystone Ranch in Yuba county.

John Tabor.

"Let justice be tempered with mercy."

While it is the duty of every good citizen to join in seeing the law sustained, and in aiding in carrying into execution every decision of our courts, it is also his duty to hear the cry of mercy and be ready to join in the prayer that may be made for executive clemency to those who may, by being spared, as fully serve the ends of justice as if the full penalty of the law was enforced. We are for law, and yet we are for mercy; and when we recall the history of the unfortunate Tabor, as connected with the melancholy event which now demands his life as atonement, we confess we lean to the side of mercy.

By the evidence which has been adduced of his character and disposition, there are circumstances that demand mercy in the case, and that mercy we trust will not be invoked in vain. We learn that recently, petitions most numerous signed, bearing the names of our best citizens, are now in preparation to forward to the executive, and from the universal expression of the will of those who are best acquainted with all matters appertaining to it, we feel assured that the "still small voice" will at last rectify all error, and justice will satisfy the law.

EASTERN PAPERS ARE JEALOUS OF CALIFORNIA.—It is a curious fact, that we may be amused at the gross ignorance that is manifested in the old States of our Union relative to our Agricultural and Mineral resources, as well as the Manufactures of California. This ignorance may in some degree be owing to a spirit of jealousy towards our Empire State, lest the truth being told, it would tend to the injury of their State by taking from them the population we need. For this reason we often see the public papers have important articles altered or changed so as to meet the views of the intended knowing ones; facts and data are published without crediting the source whence they came. We have often seen articles that were taken from our own journal without credit, but this we could gladly bear, if they would only take more and make known the real condition and wealth of our State; we think they avoid this, lest, as we said, it should encourage emigration to our shores; this they want to check, while it is the very thing that would benefit both the old and new States equally alike.

COMMISSIONERS TO PARIS.—We publish with pleasure in this number, a communication from the Chairman of the Commissioners for the Paris Exhibition, to Gov. Bigler, and while we rejoice to know there is any degree of interest manifested to have California represented, we most earnestly hope that the Commissioners will not send specimens that shall not be a credit to the State. The mere fact that a long list of specimens go forward, though with eclat and heralded ever so widely, will not advantage California, unless these specimens shall be of a character to elevate her in the eyes of the world. California stands before the world, in her agricultural and mineral resources, unequalled, and that position must not be altered by any representations of persons or things in the Great Exhibitions of Europe. Better not be represented at all than not be represented well, and we regret exceedingly that our State has not made liberal appropriations so that efforts could have been made commensurate with her resources and character.

MECHANICS' INSTITUTE.—It is one of the best features of the times—a feature that marks progress—when we see the industrials of a community meeting in concert, and earnestly too, for mutual benefits and improvement. The recent organization of a Mechanics' Institute, or the preparatory steps for it, with active means and measures for a library, lectures, discussions and such other plans as shall best promote the objects most desirable, are hailed as omens of great good to our city. We rejoice most truly at this proof of high character on the part of the mechanics of San Francisco, and we trust the citizens will sustain them most nobly in their undertaking. Advocating, as we do, "home industry," we tender our columns most cheerfully for advancing so useful an institution, and wish it all the prosperity it so richly deserves.

Mr. H. H. Smith took out of French Ravine, last week, a mass of quartz and gold weighing seventy-five pounds, fifty pounds of which is pure gold, so says the Sierra Citizen.

More than one thousand of Santa Anna's troops have deserted to the rebels, and joined the forces under Alvarez's Lieutenant, General Moreno; a march on the City of Mexico is expected.

Meteorological Table.

Prepared for the California Farmer by C. Cooper, Oak Ranch, Sierra County, Cal.

1851.	Thermometer.	Remarks.
Nov.		
1	61 52 47	Fair.
2	47 55 48	do.
3	47 45 43	Rainy.
4	35 49 40	Fair.
5	37 46 43	do.
6	37 54 42	do.
7	36 50 40	do.
8	41 40 41	do and high winds.
9	41 35 49	do.
10	38 36 48	do.
11	42 39 49	do.
12	43 38 50	do.
13	41 61 49	do.
14	41 60 47	do.
15	50 63 47	do.
16	48 60 54	do.
17	45 52 45	do.
18	40 59 48	do.

30	36 48 40	do.
31	36 37 40	do.
Jan. 1855.		
1	42 33 32	Cloudy with very high winds.
2	41 31 26	Snow 9 inches deep.
3	28 32 32	Cloudy; snowing and windy.
4	39 33 25	Cloudy; snow 37 inches.
5	20 29 18	Cloudy till 12 M, then fair.
6	10 32 19	Fair.
7	26 39 31	do.
8	35 43 36	Rainy.
9	36 46 34	Fair. Snow reduced to 2 1/2 inches.
10	47 53 53	do do do 2 1/2 inches.
11	43 51 41	do do do 2 1/2 inches.
12	42 46 39	Fair.
13	41 51 41	do.
14	41 50 42	do.
15	40 53 42	do.
16	38 52 42	do.
17	38 51 44	do.
18	39 50 41	Cloudy. Snow 16 inches.
19	35 45 35	Fair most of day.

PERFECT STEAMBOAT EXPLOSION.—The steamer Pearl of the Combination line, just as she passed the conflux of the Sacramento and American rivers, on Saturday last, exploded, and sent in a moment from forty to sixty human beings into eternity. It appears that the Enterprise of the Citizen's line, and Pearl were racing from Marysville to Sacramento, and just as the latter was nearing the wharf, the boilers burst, resulting as above. Most of the passengers were on forward part of the boat, near the guards, as is usual on the handling of the boats, and more than two-thirds were said to have perished—some drowned, others completely blown to pieces, others with their arms and legs blown off, and otherwise terribly mutilated. The pilot, although thrown several feet in the air, escaped with little injury, and also the cook and steward. The bow of the boat was literally blown into ten thousand pieces by the force of the explosion. What remained of the boat was finally brought to shore and moored alongside of a storeship at the foot of G street. The State Tribune gives the following list of the killed and wounded, uninjured and missing, as far as learned up to 10 o'clock, Sunday evening: Killed—Charles Crowell, from Maine; James Anderson, Francis Elker, Brooklyn, L. I.; Capt. E. G. Davis, Maine; Samuel Randall, Maine; Judge Huckleby, of Shasta; C. A. Shultz, Marysville; Col. Alexander Anderson, Nevada; John Boyden, Marysville; Philip Riley, deck hand; Charles Kavanagh; Judge Wm. O'Connor, of Long Bar, Yuba county; Jesse Jones, formerly of Mud or Diamond Springs; Diotalo, an Italian; fourteen white men who are unrecognized; fourteen Chinamen; total of bodies discovered, forty.

Missing.—Marcellus T. Porter, T. V. Monut, Wm. McBride, John Stader, Geo. A. Clout, C. Jewell, James Smith.

Wounded.—Abner T. Soule, Wm. A. Gilman, R. B. Williams, Ed. B. Springer, Thomas Sheridan, R. B. Carroll, H. Hersey, David Munroe, Henry Nicholson, E. D. Nichols, Emmanuel Lewis, James Pollock, Samuel J. Jones, Edward Dunn, and thirteen Chinamen at the hospital. Number of passengers aboard the Pearl, 98; officers and crew, 18; total 116. Dead found 40, wounded 27, known to be missing 8, uninjured 14. Total accounted for 89; unaccounted for 27.

The engineer was arrested and held to bail in \$10,000. He states that he had on him 58 pounds of steam at the time of the explosion, the usual quantity carried being 60, and allowed by the inspectors to carry 80. He thinks the gauges were incorrect, as there must have been 80 pounds of steam on when the boiler exploded.

FAVORS RECEIVED.—From G. W. Murray & Co., we received a very generous parcel of pamphlets and periodicals, foreign and domestic.

From Patent Office, Washington, valuable parcels and volumes.

From Messrs. Adams & Co., and Wells, Fargo & Co., through their ever attentive messengers, many valuable favors.

HOOAN, the abducting Marshal of Oakland, has been seen in Panama, by an old acquaintance who arrived in this city on the Golden Age.

FROM THE EAST.

The P. M. steamship Colden Age arrived at this port Monday morning. We have dates from New York nine days later, and from Liverpool fifteen days later than previous advices.

The bill to extend the time of the U. S. Land Commission in California, has passed both Houses of Congress, and will doubtless be approved by President Pierce.

The House of Representatives voted down the amendment to the post office appropriation bill to provide for carrying the mails from Independence to San Francisco in coaches. An amendment for canals was ruled out of order.

The Congress of the Dominican Republic has rejected the Caneau treaty by a large vote.

N. B. Ciddings, anti-Douglass man, has been elected the Delegate to Congress from Nebraska, by 100 majority. Total vote 1,000.

Hard times press severely on all classes in the Eastern States. Meetings are being held in New York for the purpose of aiding the mechanics who are out of work.

It is stated as a certainty that Dr. Beale has received a pardon from the Governor of Pennsylvania, and that he will be set at liberty in a few days. Three of the Supreme Judges gave written opinions as to the illegality of the jury.

The New Legislature of Missouri was organized at Jefferson City, Dec. 28th. No party has a majority; the whigs and anti-Bentons being about equal, and each outnumbering the Bentons. The whigs helped the anti-Bentons elect their Clerk, and then the Bentons helped the whigs elect their Speaker.

The steamboat inspectors of Boston and Charleston have reported upon the collision between the Canada and the steamer Ocean, in Boston harbor. The officers of the Canada are acquitted of all blame, and the licenses of the captain and pilots of the Ocean are revoked.

During 1854 there arrived at New York 15,924 passengers from California, and 331,809 from foreign ports.

A large fire occurred at Toronto, Canada, Dec. 27, in the cabinet manufactory of Jacques & Hayes. Loss \$200,000.

The sloop of war Albany is given up as lost, and it is presumed the names of her officers and crew will shortly be struck from the roll of the navy. Her untimely fate calls to mind that of the Horvet, which undoubtedly foundered during one of those desolating gales that so frequently sweep the Caribbean Sea.

FROM EUROPE.

Accounts from the Crimea to 13th December, say that the siege operations seem to have made but little way, and the state of forced inactivity to which the besiegers were reduced by the exhaustion of their previous efforts, seems to have been turned to account by the Russians, in the further strengthening of their defenses. The reports of the falling off of their supplies of ammunition are belied by the fact that from the 23d of November to the 13th of December, during which they made a succession of vigorous sorties, the firing from their batteries was kept up almost incessantly. The Grand Duke Michael was observed to be encouraging by his presence the efforts of the besieged. Supplies of provisions were also said to have arrived in the town. From the preparations made for arming some of the Russian vessels in the harbor, it was thought that they were about to put to sea with a view to intercept the transports of the allies; and in the Baltic it is stated that they are again venturing out of their ports in that quarter.

Onier Paehler was about departing for the Crimea with 35,000 of his best troops.

It is said the Russians lost forty vessels by a hurricane in the Sea of Azoff.

In England, a bill to enlist German mercenaries has passed in the Commons by majority of 38.

HONOR THIEVES CAUGHT.—Two scoundrels by the names of Sheldon and Parker, came to the conclusion last Sabbath, while Mr. John Kelsey, of Oakland, was attending church, that they could use his valuable horse to better advantage than he could, and therefore led or drove him away without leave or license. They were caught on Monday, with the animal in their possession, and conveyed to jail to wait an examination on Tuesday. Since writing the above we learn that a party of men from the Redwoods, on yesterday (Wednesday) morning about 5 o'clock, took Sheldon out of the jail and hung him near the San Antonio Bridge. Parker made a confession implicating a number of persons in Oakland, and after witnessing the execution of his accomplice, was set at liberty.

THANKS.—The proprietors of "Noisy Carrier's Hall" will please accept our thanks for late Eastern papers and magazines. At their Store, 77 Long wharf, can be found all of the Eastern papers and popular magazines of the day.

RAIN HAS COME.—Last Monday night the rain commenced falling, which continued most of the time up to Wednesday morning.

SNAP BEANS.—Having taken off the string, snap them, and drop into boiling water, with the addition of salt—try with a fork, and when tender, take them up, and serve up with melted butter, or good sweet cream. Many cook snaps with meat, but they are only greens when cooked with meat.

Horticultural Department.

[For the California Farmer.]

Culture of the Raspberry Plant.

MADRONO RANCH, NAPA, Jan. 15th, 1855.

MESSRS. EDITORS: Judging from the tone of your paper your readiness to impart information whenever desired on the subject of agriculture and horticulture, and your ability so to do, I take the liberty to address you a few lines in the style of an inquirer. Although I have a way of my own, I always seek to know the best.

Now what I want to know is, what is the best mode of treatment of Raspberry Plants? I have some 500 Oregon plants that were set last year. They did not bear any fruit—were trained up to stakes four feet high, three shoots to a stake—this is their present condition. Now is it best to cut the shoots down to the ground and train up three or more new ones, or let the old ones remain? The plants are very strong and thrifty, and some of the shoots are nine feet in length.

I also wish information on planting the grape vine—I mean the distance the rows ought to be set apart, and also the space necessary between each plant in the row. It rather takes me aback (to use a nautical phrase) the way they train grape vines in this State. The general mode here is to let the vines take a regular stampede on the ground instead of training to stakes or trellises. I was always taught to believe that the grape required a plenty of sun and air; but possibly they have too much of a good thing in this country unless they are allowed to lay upon the ground, as alluded to.

I may trouble your patience again at some future time, but no more at present.

Yours truly,

A CONSTANT READER.

In answer to our correspondent, we would remind him that the raspberry being biennial in part, i. e., the growth of one year only bearing the next, all old shoots should be cut away every spring and the new shoots pruned and stunted, and the main vine, in this country headed in to three or four feet, according to size—all small laterals cut off close, and the strong side shoots pruned in short.

In order to secure a full crop of fruit, the earth should be enriched, well and finely dug with a spade, and highly cultivated during the entire season.

Plants of the raspberry should be grown about four feet apart, and strong stakes given to each to support the main stock. Two or three vines to a hill is an abundance—all over this, remove.

For the cultivation of the grape, if our correspondent is "a constant reader" of the FARMER, he will find our opinion of the best mode of cultivation in recent numbers, to which we refer him.—Ed.

The Concord Grape.

No horticultural production has excited a greater interest of late years among pomologists, than this new seedling grape. Its hardiness, productiveness, large size, and reputed earliness of ripening,—nearly a month before the Isabella,—have given it very strong claims, at least for a thorough trial.

In consequence of the repeated inquiries which have been made of us as to its quality, we recently made application for a specimen of the fruit, and have been politely furnished by E. W. Bull, its originator, with a box of beautiful bunches, which came in fine condition, notwithstanding a railway ride of several hundred miles.

Although the largest bunches had been previously selected for the different horticultural exhibitions, and the drought of the season had sensibly affected their growth, these were the most showy of any native grape we have met with. The berries measured about three fourths of an inch in diameter, and were almost perfect spheres; the bunches were nearly as large as the one already figured in the horticultural journals, sufficiently compact, and handsomely shouldered,—nearly resembling a well ripened bunch of the Black Hamburgh externally. We have been informed by some of our cautious friends, that they had seen bunches at the exhibitions this season, that were decidedly larger than the figured representation.

The dense bloom which covers the berries, adds much to the showy appearance of this grape.

Of the quality and flavor, we cannot speak so highly. We consider it as rather inferior to the Isabella, so far as we could judge from specimens conveyed a long distance in a close box. The skin is remarkably thin and tender, and the exterior portion of the berry more juicy and freer of pulp than the Isabella, but the central portion or core holding the seeds, is larger than in the Isabella, Diana, and most other American sorts. The flavor is good, but not of the highest quality. Of the time of ripening, we cannot judge of course, although it is reputed to be much earlier than even the Diana.

As to the real merits of this variety, we are inclined to consider it a valuable acquisition, although we esteem fine flavor when placed against fine appearance, much more highly than many

pomologists. As a hardy vine, and an early, large and showy fruit for market, we shall not probably find anything to compete at the north with the Concord grape; but those who desire a sweet, delicately flavored variety, for home use, without regard to size, appearance, or productiveness will choose the Diana; which is only about one fourth the size of the Concord, in berry and bunch.—N. Y. Cultivator.

Double Flowers.

The London Horticultural Cabinet of 1847, as quoted in Hovey's Magazine, says that merely planting the fresh seeds of double flowers, does not at all insure double flowers again, nor even increase the liability over any other seed similarly used. But that, to obtain them, the seed must be kept several years, or the extreme verge of vitality, when their vegetating power or vital force has become nearly expended, and that this will result in those imperfect or unnatural productions known as double flowers. In the words of the article alluded to,—

"If, after having gathered the seeds of maleconia annua, or ten-weeks' stock, we sow them immediately afterwards, the greatest number of the seedlings will produce single flowers, whilst, on the contrary, if we preserve these same seeds for three or four years, and then sow them, we shall find double flowers upon nearly every one of the plants. To explain this phenomenon, we say that in keeping a seed for several years, we fatigue it and weaken it. Then, when we place it in a suitable soil, we change its natural state, and from a wild plant we make it a cultivated one. What proves our position is, that plants, in a wild state, shedding their seeds naturally, and sowing them as soon as they fall to the ground, yet in a long succession of time scarcely ever produce plants with double flowers. We think then, after what we have said, that whenever a gardener wishes to obtain double flowers, he ought not to sow the seeds till after having kept them for as long a period as possible.

This practice ought to be observed with all plants that we wish should produce double flowers, for all varieties of the brompton stocks, ten-week stocks, and others of the same kind, there is no doubt that to flower them well, they should be sown in autumn, in well-worked soil, and taken up when the cold weather comes, and kept under a frame during the winter. In the spring, they may be planted out again, when they will flower magnificently, and yield an abundant harvest of seeds. If you have not a frame at your disposal, you may obtain the same result, by sowing the seeds at the end of February, under a south wall, for example.

The principles that we have admitted above are just as applicable to melons, and all plants of that family. We admit, like many other observers, that melon plants obtained from seeds the preceding year ought to produce, and do produce, really vigorous shoots, with much foliage; but very few fruitful flowers appear on such plants; whilst, on the other hand, when we sow old seeds, we obtain an abundance of very large fruit. In fact, in all varieties of the melon the seeds should always be kept from three to eight years, before being sown, if we would obtain fine fruit, and plenty of it."

Can any of our skillful and observant gardeners vouch for the truth of this statement? It would be an easy thing to give it a fair trial. If true with regard to melons and cucumbers, it ought to be known more widely, and it may be easily proved by trying the experiment with a few repetitions with old and new seeds, planted in equal quantities and under similar circumstances in all respects.—Country Gentleman.

LIVE BRACES FOR FRUIT TREES.—In the weekly Journal of the 16th inst., we published, (says the Louisville Journal,) the method practiced by Mr. Elihu Cross, of Hoosick, N. Y., for preventing forked fruit trees from splitting under the weight of fruit. The brace of Mr. Cross is formed by uniting a small branch from each of the two main limbs he wished to support, very much after the method adopted by gardeners in what is called, grafting by approach.

Mr. Isaac Lewis, of Hopkinsville, Kentucky, has since given us his plan, which is more simple if not quite so scientific, and may be performed by any one.

"My plan," writes Mr. Lewis, "which I have followed for thirty years, is this: when I find a forked tree that is likely to split, I look for a small limb on each fork, and clean them of leaves and lateral branches, for the most of their length. I then carefully bring them together and wind them around each other from one main branch to the other. In twelve months they will have united, and in two years the ends can be cut off. This brace will grow as fast as any other part of the tree, and is a perfect security from splitting. I have them now of all sizes, and I scarcely ever knew one to fail to grow."

Mr. Lewis has our thanks for his suggestions. We are always glad to receive from our subscribers any facts calculated to promote the science of horticulture, agriculture, or the mechanic arts.

One or two gentlemen recently conversing about the Natural Bridge of Virginia, remarked that there was an extraordinary incident connected with it, for that General Washington once threw a dollar completely over it, an achievement which has not been performed since. "No wonder," replied his companion, "for a dollar in those days could be made to go a great deal farther than at the present time."

When all news comes too late to be serviceable to your neighbor, keep it to yourself.—Zimmerman.

Valuable Extracts.

Nomenclature of Fowls.

The principle on which poultry nomenclature is founded is mainly that of their original geographical dispersion. In several classes this is sufficiently authenticated; but in others from the little attention, in former days, bestowed upon the subject, and the difficulty of recognizing present rates in the usually vague and indistinct accounts of the few early writers on this branch of natural history, great uncertainty necessarily prevails. Malays, and other Asiatic fowls, Bantams and Shanghaes, we are enabled to trace satisfactorily from their primitive habits; hence, indeed, our often expressed unwillingness to accept the erroneous designation of "Cochin-China," a district from which few, if any, specimens of the last-named fowls appear to have been derived, while Shanghai is clearly the head-quarters of the breed. The same reasoning sanctions the employment of the term Dorking to the five-clawed fowls that had their origin in the districts around that town, or were at least, those first brought into general reputation. Hamburgs, again, in the "Pencilled" variety, are fairly referable to that locality, though far, we must acknowledge, from being so exclusively; more especially in recent years, when our main supply has been received from Holland. The "Spangled" Hamburgs however, are justified in claiming that title solely from certain features common to them with the pencilled birds. But, at the same time, the various synonyms that are suggested in lieu of their present generally received designation, are all and each of them, open to equal, if not greater, objections than that they now bear. Regarded in this light, the Polish fowl has a still worse case, and the principle of an original geographical position, is here unsupported by any trustworthy evidence. If usage, therefore, be considered as insufficient authority for the name they now bear, we must confess our inability to afford any clue to a better designation founded on the same ground. So that, if we depart from the present system, to style them simply "tufted fowls," seems the only alternative left to us.

Game fowls were emphatically called, by no less an authority than Buffon, the celebrated French naturalist, the English fowl, and, indeed, if an uniform geographical system be insisted on, we do not see how they could be better described, although the derivation would here proceed from the circumstance of their having been brought to the highest state of perfection, not from having been the aboriginal fowl in this country.

Lastly, as respects Spanish, the type of that breed is pre-eminent in Spain, though common, in a greater or less degree, throughout various regions on the shore of the Mediterranean Sea.

The various alleged distinct breeds that make appearance in the "miscellaneous" class, may, for the present, be omitted in the inquiry now before us. Those already mentioned are, confessedly, the great divisions of the species; and if we are not mistaken, the remainder, Silk fowls, and one or two others, at the utmost, alone excepted, it will be difficult to make out their claim to any distinct and separate origin.

Polish and the Spangled Hamburgs are, therefore, the cases where the principle of geographical disposition fails to warrant the names of our fowls. Many and labored have been the efforts to assign the primitive abode of the former; but, however plausible and ingenious, none have hitherto carried conviction to our own mind; and a majority of those who have turned their thoughts to the same subject are probably of the like opinion. But the main object of any name applied to any object, animate or inanimate, is to specify and distinguish it from others; if, indeed, the name so given has a manifest tendency to mislead to important erroneous conclusions, a grave objection is at once evident, and proof of a more accurate designation should at once cause the disuse of the misnomer. But, as before stated, unless we substitute "tufted fowls" for Polish, and, perhaps "rose-combed, spangled fowls," for the present Spangled Hamburgs, we see no solution for our difficulty; and if this be done, geographical disposition ceases to be our guide.

An accurate designation of a species, either animate or inanimate, has frequently been unattainable till after many changes and revisions. But any, and other sciences, afford us many instances of such alterations; we need not, therefore, be surprised if the "nomenclature of fowls," a subject on which general attention has only so recently been bestowed, should as yet labor under the same difficulty.

Efforts, however have been made of late to reduce the previously confused and contradictory system to some degree of order, and the assent of an overwhelming majority of Poultry Societies has been accorded to the classification promulgated at Birmingham. Nor do we see how any better example could have been followed.

Our decided impression, from all that has been advanced on the subject, points to the retention of the present system, founded on geographical disposition as the basis for the nomenclature of fowls; some modifications, it is true, may be desirable, and in certain cases, the evidence may not be altogether satisfactory as to the original locality. We look around, however, in vain for any other better principles of classification, and, furthermore, confidently anticipate that the care that is now being bestowed on the points of merit of the different breeds, will also conduce to the most correct nomenclature, for which authorities may be attainable.—London Cottage Gard.

The friendships of the world are oft confederacies in vice, or leagues of pleasure.

Commissioners to the Exhibition at Paris.

The following letter, addressed to Gov. Bigler, will show that the Commissioners have been industrious in obtaining specimens of the various products of California, to be forwarded to the Exhibition at Paris. It appears to us that the Commissioners have pursued the proper course. The plan they have adopted, if fully carried into effect, will do more to give the people of Europe a correct impression of the vast resources of our State, than volume upon volume of books of travel.

SAN FRANCISCO, 1st COMM., 18th, 1855.

RESPECTED FRIEND: The Commissioners for the Paris Exhibition, notice that a Bill has been introduced to the Legislature, authorizing the appointment of an indefinite number of persons to attend that Exhibition, &c. They beg leave to call thy attention to the fact, that the duty of Commissioners appointed to attend the World's Fair, is to aid the managers in classifying the products from their section, as well as to attend in general to the interests of the country they represent; and that not only would two or three be amply sufficient, but a larger number might only confuse and embarrass. They also suggest, with deference, that advantage might result from communicating with them before making any appointments.

The Commissioners are desirous further, to apprise thee of what they have done:—

First—They have obtained from the newspapers the gratuitous publication of advertisements, &c.

Second—They have forwarded to Paris a list of the contributors already known, and the products to be exhibited, embracing agricultural and horticultural products illustrating the soil and climate, a large variety of mineral specimens of great value, and daguerreotype views of the principal buildings, cities and mining districts.

One of the Commissioners, M. Antoine, has made arrangements to visit some of the mines and obtain daguerreotype sketches, at his own expense, for this purpose. He also intends waiting on thee in the course of the coming week, to exhibit some of the most valuable mineral specimens intended to be sent.

The principal obstacle to a better show of the capacities of our country, consists in the heavy expense of transportation, and the great cost of almost everything in California. The expenses of the Commissioners, as yet, have been but trifling, and they are entirely willing to bear them. But they cannot do justice to the State, by presenting a proper illustration of her vast resources, without incurring liabilities beyond a reasonable limit. Perhaps the Governor would think well of recommending a small appropriation for the purpose. The rival Gold Field of Australia has appropriated \$25,000, in order "to make a creditable show."

With great respect, I subscribe myself thy friend,

H. GIBBONS,

Chairman of Commissioners, &c.

To JNO. BIGLER, Governor State of California.

BENEFIT OF RAILROADS TO FARMERS.—We find in the report of the Michigan Central Railroad for 1853, the following list of farm products carried upon that road last year:

Apples, bbls.	25,919	Grass and clov. seed,	394
Barley, bush.	23,427	hops, tons.	13,936
Beans, bush.	1,064	Salt, bbls.	433
Bran, &c., tons.	1,090	Wool, cons.	4,012
Butt, bbls.	6,873	Cattle, alive.	1,045
Butter, cons.	206	Garden roots, tons.	328
Pork, huls.	11,073	Hams, &c., tons.	224
Pork, in huls, tons.	2,101	Hides, tons.	115,295
Wheat, bush.	807,707	Outs, bush.	2,613
Corn, bush.	260,531	Plaster, cons.	212
Cheese, cons.	146	Pellets, &c., cons.	584
Cranberries, bbls.	1,036	Horses.	12,432
Dried fruit, tons.	339	Sheep.	12,377
Flour, bbls.	416,803	Lumber, feet.	12,377,534

At a rough estimate this would make upwards of 80,000 sack loads as a common road wagon in Michigan usually takes to market, drawn by two horses, at an average, going and coming, of twenty-five miles a day, and would probably average six days for each load; say four hundred and eighty thousand days, or the labor of one thousand three hundred and fifteen men and teams every day for one year, to say nothing of back loads and transportation of live stock.—Louisville Journal.

POTATOES IN HASTE.—A very nice little dish may be made of cold boiled potatoes in a very few minutes. Having peeled, cut them in slices, half an inch thick, put them in a stew pan, pour boiling water over them; cover the stew pan, and set it over the fire for ten minutes; then drain off all the water, add a small bit of butter, shake pepper over, and serve hot. Or, having cut the potatoes in slices, put them in a stew pan, cover them with milk; cover the stew pan and set it over the fire for five minutes. Work a large teaspoonful of butter with a small one of flour, and put it to the potatoes; shake a little pepper over, and add a little parsley, cut fine, if liked. Cover the stew pan for ten minutes, then turn the potatoes into a deep dish. Potatoes may be pared and cut into slices and boiled in water, with a little salt, for twenty minutes, then served with butter and pepper over; or work a teaspoonful of flour with a small bit of butter, and put it to the potatoes a few minutes before they are done; then shake a little pepper over, and serve.

WHAT is fame to a heart yearning for affection and finding it not? It is like the victor's wreath to him who is parched with fever, and longing for the one cooling draught—the cup of cold water.

He who loves to that degree that he wishes he were able to love a thousand times more than he does, yields in love to none but to him who loves more than he would wish.—Brayere.

Miscellany.

EXTRACT FROM "THE ANDES,"
AN UNPUBLISHED POEM, BY C. W. B.

NO. V.

Andes!

Thine is the throne where winter sits, asleep,
Numb and impassive, save when wind's career
In cloudy chariots, waking tremulous
Echoes in the icy air, or thunders
Break the silence of his frozen sleep.
His breath, changes to stone, the very streams
That strive to leap down, o'er aged crags,
To greet their sisters, in the vales below:
And when his icy wand, is o'er them wav'd,
The entranc'd, frozen in their dizzy leap,
Movers, and voiceless, to precipices cling.
Summer's step, ne'er mounts these lofty palaces,
Nor Flora, with her gifts, dare here intrude.
The pine tree, crowns the Apennine and Alps,
And helicon eling, to summits, where these die—
But here! what that hath vitality can live?
For towering unutterably high,
These mighty mountains, gaze serenely down
Upon a realm, that owns no king, but death!
And yet that realm is beautiful! the snow
Untrodden and unstain'd, spread o'er all,
Conceals the rock's deformity, and jagged
Pinnacles appear, like marble monsters,
Smoothly chiseled, by an artist's hand.
Thousands of winters, here have shed their snows,
That summer's sun, in vain, has shoo'd upon;
The ice of ages, gathered and grown old,
Unmoved, till rocks beneath, wearied, have fallen
Down, startling the valleys—or earthquakes
Shook the thundering avalanche from its
Native precipice.
The lightning's strike and shatter flinty rocks
Which—falling in the embrace of snows—lie
Buried till the sun's summer rays blaze down,
And with alternate frosts, from glaciers—
These, when the mountain's tremble, or by weight
Boonious, gravitating to the centre,
Fall, and in valleys strew their freight of rocks—
Or islands, and beneath a distant sea,
Remote from regions, where they had their birth.
The thousand winged winds, that sweep the ocean,
Fan them in summer, and when winter reigns,
Rush like waves of the vexed deep, against
Their rocky sides, flinging misty clouds like spray:
An clouds, that, like the trailing waves of some
Vast spirit, sweep silently along, are torn
Against the jagged crags, and the mad winds
Bear away the fragments on their giant wings.
And health dwells within their crystal palaces:
Nor sick gale, poison'd by the charnel breath
Of pestilence, ne'er visits their icy halls:
Nor scared are their solitudes, no eldes,
By groans of dying men; the air is still,
And cold, as though 'twere fluid glass.
Far below, are dusky mantled heights
That loom like phantoms, in their shrouds of mist.
And farther down, are invices, and gorges,
Whose deep terrific gloom, no sunny ray
Has e'er lit; where, on their bed of rock,
Whitening the bones of perished men, and beasts,
As in Golgotha's vale of death are strown.
From unseen distances, oft come voices up,
Of Muleteers, borne upon the sighing wind:
And muffled music—trance, and spirit-like—
Struck from eternal rocks, where fall and crush
The torrents; and where the spray that forms,
Falls in the flashing sunlight, like fragments
Iris-hued, of a heaven-born bow!

Lecture of Hon. Thomas H. Benton on the
Pacific Railroad.

THE fifth of the series of lectures before the Mercantile Library Association, was delivered in the Tremont Temple, by the Hon. Thomas H. Benton, of Missouri. The doors of the building were thrown open at half-past six o'clock, and the hall was speedily crowded to overflowing by gentlemen and ladies assembled to listen to the words of the illustrious statesman. The seats in the body of the house, in the galleries, and upon the stage, were filled with human beings, and the aisles were thronged with people—including some ladies—in a standing position.

Upon the platform, immediately in the rear of the speaker, were seated, among other gentlemen of distinction, the venerable Josiah Quincy, Senr., Hon. Abbott Lawrence, Hon. Robt. C. Winthrop, Governor Washburn, Lieut. Gov. Plunkett, Judge Shaw, Judge Wildes, Mayor Smith, our Governor elect, Henry J. Gardner, Wm. M. Sturgis, and Richard H. Dana, Jr. Among the gentlemen occupying the front seats in the body of the hall, our reporter also observed ex-Governor Boutwell, Hon. Henry Wilson, and the Hon. Marshall P. Wilder.

Col. Benton was received, upon entering, with repeated cheers and shouts of applause. After some preliminary remarks, he entered upon the subject which he had chosen for his discourse of the evening—a subject which few men are probably better qualified to discuss with interest and profit to his hearers than himself. It was "The country between Missouri and California—its physical geography, and its adaptation to settlement, cultivation, and the construction of a railroad to the Pacific ocean." We have already published a summary of the chief points of his lecture, as printed in a southern paper; and we now take pleasure in laying a fuller report before our readers.

Colonel Benton said that the whole of the vast region lying between the western boundary of Missouri and the eastern line of California, was capable of sustaining populous communities, and might be advantageously divided into five large States, corresponding to those of Pennsylvania, Ohio, Indiana, Illinois and Missouri on the other side, and well adapted in every respect to the construction of all kinds of roads, traversable in every season. The present territory of Kansas, divided in the centre, should comprise the first

two States, of over fifty thousand square miles each. A section of the Rocky Mountains, embracing the Three Parks, and taking in the head waters of the South Platte, Arkansas, Del Norte and other rivers, would make the third, which would contain sixty thousand miles. The valley of the upper Colorado, from the western base of the Rocky Mountains to the western base of the Wahsatch and Anterior ranges, two hundred miles square, would form the fourth State, and the fifth would comprise all the remainder of Utah from the Wahsatch to California.

Speaking of the adaptation of these proposed States to the construction of a railroad, Colonel Benton then said he would begin with a description of the Territory of Kansas. The length of this territory was three times its breadth, and it was conveniently divisible into two States by a line half way to the mountains, which form its present western boundary. In case of its division into two States, the first would have upon its north side the Kansas river, and its four long branches extending parallel to each other east and west, and making after their junction two hundred miles of steamboat navigation before their united waters reach the Missouri river. The land drained by these streams is termed the valley of the Kansas, and is well diversified with wood and prairie, abundantly watered by springs and streams, and its bosom is filled with building stone, coal and iron of excellent quality. Fremont says that this section of the country might be made one rich continuous cornfield, two hundred miles in length. The southern section of the first proposed State would include the whole body of the Arkansas river, a twin sister of the Kansas, flowing parallel with it and no high grounds between them. It has tributaries on each side affording lines of wood and water. On the south is the Salt Fork of the Arkansas, with its salt plains of rock salt, rendering the water of the main river undrinkable in the dry season. All of this country is fertile. The centre of the proposed State, between the two sides above described, is a rich expanded prairie, well watered and enlivened at the proper season with herds of countless buffaloes. It is a great pastoral region. The grass is remarkably nutritious. Coal may be easily procured, and trees will grow when the annual devastating fires are stopped.

Mr. Benton then proceeded to describe the second proposed State, including the western half of the present Territory of Kansas. The northern side of it, he said, was admirably adapted to agricultural purposes, and would support a large population. But the valley of the Upper Arkansas on the southern side would form its great strength. This section of the country is well adapted to the cultivation of the vegetables and grains common to the latitude. Numerous rich minor valleys open into the chief valley of the river, and the climate throughout this elevated and mountainous region is very mild, and the winters pass off with scarcely any snow. In some sections, cattle are left in the range the winter through. The country bordering on the sides of the mountains and the valleys in their recesses, are unequalled in loveliness and richness of vegetation, and offer every inducement as homes for the settler. Both of these proposed States, East and West Kansas, will probably be settled with unexampled rapidity. The agricultural and pastoral attractions, the pre-emption law, and the political advantages which have been given them, will combine to draw settlers, and even the competition for excess of settlers between the slave and free States will have a good effect in filling it with people. And lastly, the Pacific railroad, for the construction of which the geographical position and features of Kansas offer every facility, and which she will certainly build, will have a great effect in augmenting the population.

The third State, Col. Benton said, would embrace a mountainous section, three hundred miles in extreme length, north and south. It would include the Three Parks, which are delightfully warm, beautiful and fertile mountain coves, two of thirty miles diameter each, and the other of sixty, and all well sheltered, by the lofty rims of surrounding mountains. Buffalo, elk, deer, antelopes and bears abound there. It would embrace also an endless labyrinth of little valleys and basins, abounding in cool water and sweet grass, and comparatively warm and free from snow. Fremont says he found this section of country the most variously and numerous stocked with game, and the most dangerous war ground, which he had seen in all the extent of the Rocky Mountains—both indexes to a fertile country. Western men will understand this, and remember how Kentucky was called the "Bloody Ground," because Indians came there to hunt the numerous game, feeding on the rich grass, product of her rich soil; and to fight for its possession. By this test, and it is one that never fails, this mountain State will be one of eminent fertility. The State would be as superior to Switzerland in every other respect as it is in size—being three times as large.

The valley of the Upper Colorado would furnish the territory for the fourth State, and this would be equal in extent to any, inferior in soil, superior in wood and water, and possessing a more quiet, genial climate and better alternations of wood and prairie than the others.

The fifth State would comprise the remainder of Utah Territory, including the great and little Salt Lakes, and would be a magnificent country. It is probably the richest mountain country in the world—being actually a vast magazine in which are included a profusion of nature's most valuable gifts to man—soil, water, grass, wood, timber, rock-salt, coal, stone. Fremont says that its mountains are a great treasury of timber, iron and coal, which would be of indispensable use in

the construction and maintenance of the railroad, and are solid foundations on which to build the future prosperity of the rapidly increasing State. The part through which the railroad will pass when built is rich in vegetation, though many of the mountain peaks are always white with snow. The more northern region, though not so fertile, is sufficiently so to give assurance that the State will be as populous and rich as any public interest could require.

Mr. Benton remarked, after concluding his description of the five States which he had proposed, that he had said enough to show that they were well adapted to settlement and cultivation, and he would next proceed to demonstrate that they were as well suited to the construction of a railway. In the first place, his route was a direct route. When Fremont traveled through the country in the winter of 1853-4, his course did not at any time vary between the parallels of 38 and 39, until he got beyond the Great Salt Lake, when he made a slight deflection to the south and entered California. In this journey he found no snow on the Kansas and upper Arkansas rivers, but little near the eastern base of the Rocky Mountains, and west of them scarcely any. In the Anterior, Wahsatch and Sierra Nevada ranges, the passes were all free—there being sometimes several inches of snow on the ground, and sometimes none at all. And these facts dispose of the objections of snow on the route which have proved so forcible in the imaginations of many individuals.

Smoothness of ground is the next consideration for a railroad, and here Fremont found the reality to far exceed his expectations. The Unerfio river, from one of its head springs in the pass of the Sierra Blanca, has not a fall in its whole course to the ocean—a distance of seven hundred miles. The other side of the route is also very level—sufficiently so for all purposes, and the passes in the mountain ranges are, so numerous that the only difficulty arising on that score, would be as to which one to choose. Though a great elevation would be attained by the road, the length of the line would be such that the ascent would be almost imperceptible.

Another advantage of the central route is, that the railroad would have to cross no rivers of importance, all the large streams running parallel with it.

As this country possesses all the resources necessary for the construction and maintenance of a road, Col. Benton had no doubt that it would soon be made by individual enterprise. The temptation was irresistible to reach the golden California, and connect Europe and Asia through America. Settlements would promote the road; the road would aggrandize settlements, and soon there would be a line across to the Pacific of towns, cities, villages and farms. One-half of the road on this side of the Mississippi is already completed, and branches, diverging from the main track, spread fan-like over all sections of the eastern United States. It is in shape a fan, complete in every respect but the handle, and that must ere long be attached to it by the action of our enterprising people. Although he, the lecturer, had lived to an age beyond that allotted to the psalmist as the age of man, yet, barring accidents, he hoped and expected to live until that great work was accomplished.

Col. Benton said that the construction of this great railroad was an object to the advancement of which he had devoted all his powers, and he wished the solid men of Boston, to assist him. He did not want their money, but merely their countenance and good will. He wished them to consider well the subject which he had placed before them, and to lend him their influence by signing their names to a petition to Congress.

The lecture occupied about two hours and a quarter in its delivery, and was listened to with deep interest, although the audience in the distant parts of the hall were unable to catch all the words of the speaker. It abounded in incident illustrative of the points of his subject, and his perorations were generally greeted with applause. *Boston Journal.*

THE BULLET THAT KILLED GEN. WARREN.—The bullet by which Gen. Joseph Warren was killed at Bunker Hill, in 1775, is still preserved. It is an ounce ball, and was exhibited by Alexander H. Everett, on the delivery of an oration at Charleston, June 27th, 1836, in which he exclaimed:

"This is the one, fellow-citizens, which I now hold in my hand! The cartridge-paper, which partly covered it, is stained, as you see, with the hero's blood!"

This ball is now deposited in the Library of the United States Historic-Geographical Society, with the original affidavit of Rev. William Montague, formerly pastor of Christ Church in the city of Boston, who made an oath that he obtained the ball in London, of Arthur Savage, once an officer of the Customs of the port of Boston, who gave Mr. Montague this account of the ball:

"On the morning of the 18th of June, 1775, after the battle of Bunker or Breed's Hill, I with a number of other royalists and British officers, among whom was General Burgoyne, went over from Boston to Charlestown, to view the battle field. Among the fallen we found the body of Dr. Joseph Warren, with whom I had been personally acquainted. When he fell, he fell across a rail. This ball I took from his body; and as I shall never visit Boston again, I will give it to you to take to America, where it will be valuable as a relic of your Revolution."

BARTON CAKES.—Six ounces of grated loaf sugar, six ounces of fresh butter, one ounce of flour, a little spice, and two grains of volatile salts, mix the whole with two eggs.

Ladies' Department.

Fanny Fern.

We should be glad to give the true name of this authoress. But she prefers still to maintain her incognito, and a proper deference for the obligations of courtesy (which are as binding in literary as in social life) forbids our doing what would otherwise be an equal gratification to our readers and ourselves. With regard to the personal history of Fanny Fern, we feel a similar constraint. We shall, therefore, only touch, and that lightly, upon such points as, under the circumstances, may be referred to without the slightest violation of propriety.

Not many years since, Fanny Fern was living—no matter where—in affluence. No home need be more lovely, no family more happy, than hers. Ample wealth, devoted love, cultivated intellect, refined taste, and a fervid religious spirit, combined to make that home whatever could be desired on earth, and excited the respect and admiration of all admitted to the happy circle. But suddenly a bolt fell. Death came, and the husband and father was smitten down. The widowed mother and half-orphan children were left to fight the battle of life alone. Adversity succeeded adversity. Poverty followed in the dismal train, and illness and want had the afflicted family at their mercy. The mother struggled on as best she could; but we all know how hard it is for a lady to find employment which will enable her to obtain a livelihood even for herself, much less for a family of children. The female teacher generally receives only a meagre salary; the copyist pursues an uncertain calling; the seamstress can at best earn but a miserable pittance. And so, at last, after bitter years, the widowed mother, from sheer desperation, took to her pen; and another and a bright star was added to our literary galaxy.

Fanny Fern's first article was written and published in July, 1851. It was immediately copied far and wide. Each successive piece met with similar favor; until most of the newspapers of this country, and many British periodicals, were regularly enriched with her articles. But while she was thus furnishing amusement and instruction to the public, she was not receiving an adequate reward. Whenever a woman is obliged to go into the world and earn her own living, she has to undergo trials and difficulties of which a man can, perhaps, form no just idea. A delicate, sensitive lady can not, for instance, call at newspaper offices to solicit employment, or offer an article for sale, without being exposed to annoyances which to her are painful, but which a man might not observe. A refined lady can ill brook the inquiring gaze and impertinent stare of hangers-on; nor can she bargain for a proper remuneration, nor call again and again, if need be, in foul as well as fair weather. And then it is often assumed that a woman should be paid less for her labor than a man for his, though hers be equally valuable; and it is only after she has acquired a commanding reputation that she can ordinarily obtain a just equivalent for her productions. And thus, for many months, the compensation which Fanny Fern received for her writings was not at all commensurate with their value. For articles which were worth fifty dollars, and which would have commanded that sum had she known better how to sell them, she often received but a tenth of that sum; and during this time her income was far from being sufficient to maintain herself and her children comfortably. But with unyielding perseverance, and her trust in God unshaken, she worked on until she triumphed over all obstacles, earned a name of which she may well be proud, secured an ample fortune, and won the increased respect and love of those who knew her best. It is, perhaps, needless to remark that she now commands the highest prices paid to writers in this country.

In examining Fanny Fern's writings, even the earliest of them, one is struck with the evidence they exhibit that the writer understands her own powers perfectly; or, rather, that she knows positively that she can do certain things better than they have ever been done before. Though this is undoubtedly the case, she doubtless often achieves more brilliant triumphs than she anticipated; in other words, she is probably often surprised at the excellence of her own articles. She never makes a mistake, because she never attempts what she can not successfully achieve. This fact has been manifested throughout her literary career. At first her articles were mere paragraphs, and contained generally only one clearly pronounced and admirably developed idea. No words were wasted. The idea, or fact, or principle sought to be presented, was distinctly stated and clearly worked up in every attractive and telling phrase possible (as Beethoven worked up the theme of a symphony); and then the article was brought to an immediate but artistic conclusion. With practice her confidence seemed to increase, and she struck out into bolder paths. Having tried and proved the strength of her pen, she took loftier flights and continued longer on the wing. Relieved of pecuniary embarrassments and surrounded once more with the comforts of life, she wrote with greater freedom, and certainly gave to her articles a polish which some of her earlier pieces did not possess. Her latest productions are models of style and composition. *Female Prose Writers of America.*

ROCK BISCUITS.—Beat six ounces of fresh butter to a cream, add six ounces powdered loaf sugar, half a pound currants, one ounce candied peel, and three eggs; stir in one pound of flour, by degrees, well mix, and make into cakes; bake it in a quick oven.

FROM THE SOUTH.

The citizens of Los Angeles have just completed another new school house and appointed a lady and gentleman teachers.

The San Diego Correspondent of the Herald says: Complaint is made of the want of rain in this part of the country, but our farmers and rancheros are busy putting in large crops of grain, and much more will be raised the coming season than in any previous year. New ground is being plowed up in every direction, and with but little labor the land may be made to produce an abundant harvest.

For several days past, says the Star, we have enjoyed the most beautiful summer weather, the thermometer ranging at noon as high as 83 degrees Fahrenheit. We have had as yet no very severe frosts, as we notice the peach leaves are still green in many locations.

Mr. D. W. Alexander, assisted by his vaqueros, lassoed a wild bear of enormous size, who it is believed has been running wild on the plains for years. His tasks were from six to eight inches long, the potency of which was fully tested by a frightful gore in one of the horses used in his capture.

Late arrivals from Kern River represent the miners as doing remarkably well, from \$15 to \$30 per day to the hand being the unusual yield. Teams are leaving Los Angeles daily for the river, and a line of stages will be put on the route by the 1st February.

ARRIVAL OF EIGHTEEN THOUSAND SHEEP.—Mr. J. F. Chavis, who was with the late F. N. Audrey on his last trip to this country, arrived in Los Angeles a few days since, from New Mexico, by the Zuni route to the Pinos villages, and from thence down the Gila. Mr. Chavis, says the Californian, started from the Rio Grande on the 15th October, with about eighteen thousand head of sheep, crossing the Sierra Blanco on the 2d of November, he experienced quite a heavy fall of snow; on the 24th of the same month he arrived at the Pinos, and reached the Colorado on the 18th December. On the 2d December, while on the Gila, a tremendous rain fell, deluging the whole country, swelling the Gila into a mighty stream. It will be recollected that this same storm extended all along the Pacific coast, and throughout the entire country. Mr. Chavis describes the route as abounding in splendid grass, with the exception of the Colorado desert. This has been the testimony of all the immigrants who have come through the past year. His sheep are in fine order, and are now moving up the country. Mr. Chavis himself goes up in this week's steamer.

SPECIAL NOTICES.

Our Letters.—We would request all our correspondents to direct Letters and Papers to us at **SAN FRANCISCO, ONLY.** They will, with such direction, reach us immediately. Letters directed to us at Sacramento, fall in reach us regularly.

Native Pines, Oaks, &c.—Cones of the Native Pines, Acorns from our Mountain Oaks, Seed of all our Mountain Shrubs, and of every species of Valuable Tree or Shrub: for these the full price will be paid, if satisfactorily labelled, classified and arranged, at the

Office of the "CALIFORNIA FARMER,"
Masonic Hall Building, Montgomery street.

Wanted.—All the varieties of California Clover Seed, for which the highest price will be paid at the
Office of the "CALIFORNIA FARMER,"
Masonic Hall Building, Montgomery street.

Our New Office.—We invite our friends to our new office in the "Masonic Hall," on Montgomery street, opposite Lo Count & Strong's. We can show them many wonderful specimens, such as are rarely seen, and we especially invite them to call and examine the various schedule and invoices we have to offer for sale. Trees, Seeds, Plants, Grains, Flowers, Lands, Inventions, Works of Art of all kinds, these we are happy to show, and can interest our friends if they will but call and see us.

"A Thing of Beauty is a Joy Forever."—Why will people endure pimples on "the human face divine," or eruptions of any kind, when it is a fact so well known, that Dr. GUY'S YELLO DOCK AND SARSAPARILLA cleanses the skin from all impurity, removing Pimples, Sores and Blisters, leaving the affected parts as healthy, smooth and soft as the flesh of a babe. It is really priceless to all who wish the rosy beauty of childhood.

It cures all sores and poisonous wounds to discharge all in foetal matter, and eradicates every impurity from the system. It does its work mildly but effectually, giving conscious beauty and blooming health in the place of ugliness and soul-sickening disease.

SCROFULA, SYPHILIS, MERCURIAL COMPLAINTS, and a vast variety of other disagreeable and dangerous diseases are speedily and perfectly cured by the use of this medicine.

Purchasers will please be careful to ask for, and take none other but Dr. Guy's Improved Extract of Yellow Dock and Sarsaparilla. All others in comparison are worthless.

For sale at all the principal Drug Stores in the State. Park & White, Sole Agents to whom all orders must be addressed. Office No. 94 Market street, 3d door above Montgomery.

MARRIED.

On the 27th Jan., in this city, by Rev. F. Moosbake, Frederick Boehme and Miss Clara Tittel.

On the 25th Jan., in this city, by Rev. Mr. Moosbake, Wm. W. Hume, of Sonoma, and Miss Johanna Seemann, of San Francisco.

On the 23d Jan., in Sacramento, Wm. Phillips, of Mariposa, and Mrs. Mary Harris, of Sacramento.

On the 21st Jan., by Rev. H. H. Rhee, A. C. Neil, of Sacramento, and Miss Virginia E. Surface, of Dry Creek, El Dorado county.

On the 25th Jan., by Justice W. Singer, John G. Williams and Miss Margaret A. Kirkpatrick, both of Yuba county.

DIED.

On the 20th Jan., in this city, Samuel Reseguido, a native of Wisconsin, aged 35 years.

On the 24th Jan., at Forest City, A. Greenwood, aged 28 years, a native of Germany.

On the 25th Jan., at the residence of Dr. J. Marks, at Negro Hill, of typhoid fever, Dr. A. A. Joseph, a native of Charleston, S. C.

On the 25th Jan., in this city, Mary, wife of J. J. Pennypacker.

On the 24th Jan., in Sacramento, Clement W. Coote, late City Surveyor, aged 35 years.

On the 27th Jan., in Sacramento, Alexander Anderson, late Attorney at Law in Nevada.

MARKET REPORTS.

San Francisco, January 31, 1855.

TRADE continues dull, and though we have had some rain, it will not much effect business unless it continues for some time, for at least two weeks of rain is needed. Prices of grain and other produce remain without much change, and but small sales.

INGHAM'S IMPROVED SMUT MACHINES.
THESE Machines combine all the apparatus necessary to clean Grain, rendering it unnecessary to have any other machinery for that purpose in the mill. They are portable and occupy about four feet square on the floor, by eight and a half feet in height; and will clean the worst samples of Smutty Grain, also remove short straw, white caps, and other foul substances in the most perfect manner. All of the offal worth saving is collected in a reservoir, while the smut and light dust are passed out of the mill, allowing the machine to be put on the same floor with the flour chests or wherever most convenient, without being enclosed. It is a California improvement and designed to meet the wants of this country; custom machines having been found to be inadequate to that purpose. It has received the highest recommendation from all using them, among whom are Pettit & Hodgekins, Brighton Mills, Sacramento; Brooks & Hull, Happy Valley Mills, San Francisco; Wm. Sharp, American Mills, San Francisco; Bobbit & Hale, Sierra Nevada Mills, San Francisco; H. S. Hill, Washington Mills, San Francisco.

These building Mills can save expense and room by using this machine, as they will avoid all the machinery ordinarily used for that purpose.

Orders filled on short notice. SHOP on L street, between Front and Second, Sacramento.

H. B. INGHAM.
N. B.—All information given, and orders left at WARREN & SON, San Francisco, will be attended to.

The following certificate is among the number received: others can be referred to in quantities:

This is to certify that I have one of H. B. Ingham's Improved Smut Machines, and believe it to be superior to any other. I need no other fixture for cleaning grain, except the machine itself; it makes no dirt in the mill; occupies but little room; requires less power, and does the work more perfectly than any other I have ever seen or used before.

WM. SHARP, Agent American Mills, Pine street, San Francisco. v3-5

Also, fresh ground Buckwheat and Graham Flour, Irish ground Corn Meal, Middlings, Bran, and ground Barley, &c., which is disposed at the lowest prices. Barley, Wheat and Corn Ground to Order. v3-1

Happy Valley Flour Mills,
Corner of First and Mellus streets, San Francisco.
Encourage Home Industry and Home Production.

THE attention of dealers and consumers of Flour is respectfully invited to the Superior Article manufactured at the above establishment, from California Wheat of the growth of 1854, selected and prepared with the greatest care. These Mills have been in successful operation for nearly two years, during which time the proprietors have received such satisfactory assurances from those who have tested the quality of their Flour, that they can confidently recommend it as being fully equal to any brand in the market. Among the many evidences of the superior excellence of the Flour manufactured by them, the proprietors would direct attention to the substantial compliments received at the two last Annual Meetings of the State Agricultural Society, premiums have been awarded at both Fairs for the superior specimens of Flour from these Mills.

Domestic Flour.—A superior article for family use, manufactured from selected Wheat—a constant supply always on hand at the Mill, or at the Depot of the Proprietors, 35 Sacramento street.

A liberal allowance made to the trade.
J. N. BROOKS, } Proprietors.
F. C. HALL, }

Wheat Purchased or Ground on the most favorable terms. 19

Flour! Wheat!! Barley!!!
THE SAN JOAQUIN FLOUR MILLS, STOCKTON.—Are now completed and ready to grind Wheat and Barley in any quantities. The above Mills are not surpassed by any in the Atlantic States, having all the modern improvements for the manufacture of the finest Family Flour, and are capable of turning out 250 barrels per day.

A large fire-proof Warehouse for the storage of Grain, is attached to the Mill.

Particular attention is called to the fact of Stockton being the depot for the supply of the Southern Mines, and therefore offers superior inducements to wheat growers to ship their grain direct to Stockton, for milling.

Liberal advances made on consignments of Wheat.
For particulars as to terms, &c., apply at the MILLS—or to Messrs. PAIGE & WEBSTER, Union Block, corner of Battery and Union streets, San Francisco. 6

HORTICULTURAL, &c.

17,000 Premium Strawberry Plants!
From the Shell Mound Nurseries and Fruit Gardens,
Near San Antonio, Alameda County.

WE offer for sale the following List of Plants, viz.:

1,000 Boston Pine,	at	\$70 per 100
5,000 British Queen,	"	"
1,000 Hatter's New Pine,	"	"
500 Hatter's New Pine,	"	"
5,000 Hatter's New Pine,	"	"
5,000 Large Early Scarlet,	"	"
5,000 Hatter's Seedling,	"	"
1,000 Hatter's Seedling,	"	"
1,000 Black Prince,	"	"
500 Green Cone,	"	"

Plants from "Shell Mound" received a premium at the late Fair of the California State Agricultural Society. Several of the varieties above named are believed to be valuable for their fruit quality, having been cultivated for several years by Mr. Safford, at his gardens in Wayne county, N. Y., with special reference to the production of fruit.

Orders received for any number of plants, (and less than 100) and promptly executed. On invoices of \$500, and over, a discount of twenty per cent. from the above prices will be allowed.

Address, J. L. SANFORD, Cultivator,
Shell Mound, near San Antonio;
or, R. W. WASHBURN, Proprietor,
Care of Wells, Fargo & Co., San Francisco.

San Jose Nursery.

WE are prepared to supply the trade with the best varieties of Fruit Trees, Grapes, Vines, Roses, Plants, &c., in all their varieties, and are disposed to sell at a low price, that we may suit the times. Our Trees are cultivated with great personal care. Those who desire to make Nurseries and Gardens will do well to visit and ascertain for themselves our ability to supply what we advertise. Trees will be carefully labelled and packed for any season or distance.

The following Trees we offer this season:

Peach Trees, 44 varieties;	Strawberries, 7 varieties;
Pear do 44 do	Fig Trees;
Apple do 51 do	Pawpaw trees;
Plum do 15 do	Walnuts;
Apricots 6 do	Chestnuts;
Almonds 2 do	Locust Trees, very large
Quinces do 2 do	Rose Acacias, } for hedges.
Cherry do many do	Orange Orange,
Grapes, 12 do	

In addition to our Fruit and Ornamental Trees, we offer ten thousand fine Roses, comprising more than one hundred varieties, all of the best known kinds. Our plants are too numerous to specify in an advertisement. Hoping visitors will come and see us, we refer them to our agent in San Francisco, Mr. D. L. ZABOON, 121 Sansome street, where we shall have a collection of plants in the season's samples. The nursery is situated in the city of San Jose, immediately above the City Mills.

We are also prepared to refer to Warren & Son, who have examined our grounds, and who can testify of the character of our nursery, and who will receive and forward orders to us. Every order promptly and speedily attended to.

THE PRESS.

BY WM. OLAND BOURNE.

A MILLION tongues are dumb, and they are heard
Speaking of hope to nations in the prime
Of Freedom's day, to listen on the time
When the wide world of spirit shall be stirred
With higher aims than now—when man shall call
Each man his brother—each shall tell to each
His tale of love—and pure and holy speech
Be music for the soul's high festival!
Thy gentle notes are heard like choral waves,
Renealing the mountain, plain, and quiet vale—
Thy thunder-tones are like to sweeping gale,
Bidding the tribes of men no more be slaves;
And earth's remotest island hears the sound
That floats on other wings the world around!

OF ALL THE DEVILS AVOID THE BLUES.—Remember this is a comical world, given to calculation—therefore, if you would thrive and have "tallow covered kidneys," you must tickle the community and cut melancholy. Nobody wants to listen to distress if he can possibly avoid it—in a word, misery is a "dem bore" and won't be tolerated. A comedian can extract his hundred dollars a night, from almost any community—a beggar is doing a dented good business if he raises two loaves of bread. For children to complain is all very well, Mr. Ferguson, but for a man with good sense to go about like a dog with a scorbutic cranium—is a ridiculous waste of good grunting, that might better be kept for the cholic. Even the character of Cicero is lessened by the complaints he suffered to escape him; and who can read the sad things written by the banished Ovid, without despising the man whose misfortunes debased, whereas they should have exalted his mind. Men who have experienced evils which are really of a trivial nature, should be in haste to forget them. These things are important to themselves; but why should they suppose them sufficiently interesting to engage the attention of others? Again, we say, if you have trouble, just keep it to yourself; a jolly fellow can raise a half eagle at any time, a dismal individual could not effect a loan of one and ninepence if his soul depended on it. Be cheerful, therefore, for your own interest. Or, to condense the whole sermon into one line, "laugh and grow fat." "Everybody does it," who has any expectation of rising in the world.—*Albany Knicker.*

PUMPKINS IN PARIS.—There was lately exhibited in Paris a pumpkin weighing 478 pounds. We understand, says our resident correspondent, that as soon as the Empress Eugenie heard of it, she instantly sent for a slice, and had it made into a pie for her private delectation. Louis Napoleon coming in a few moments after, scented the delicacy preparing in the kitchen, for he was well acquainted with the article, having in bygone days, when in New York, often bought a three-penny slice at the street corner. After the pie had been duly baked, the Empress proceeded to taste it, and was so delighted with it, that she made way with the whole of it, leaving her royal consort with his mouth watering for the delicacy. He instantly set out with his staff to the place where the pumpkin was exhibited, and found the streets in its vicinity crowded with such a dense mass of Frenchmen, who were quarreling with each other for precedence in obtaining slices, that to see it was impossible. He instantly ordered out a regiment to drive away those surrounding it, seize the pumpkin, and bear it to the Royal Palace, where a small portion of it is yet remaining under the care of a file of soldiers. A few daring spirits attempted to cut slices in defiance of the sentry, but being threatened with the guillotine, they have since desisted.

Louis Napoleon fearing the crowds who may be drawn to such exhibitions would become ungovernable, and by association of ideas (connecting pumpkins with thoughts and Yankee freedom) be led to convert those monsters into barricades, has ordered that pumpkins shall no longer grow to that enormous size, but shall be limited to a weight of 100 pounds.—*New York Picayune.*

A TREASURE COSTING NO MONEY.—Which will you do—smile and make your household happy, or be crabbed, and make all those young ones gloomy, and the elder ones miserable? The amount of happiness you can produce is incalculable if you but show a smiling face and a kind heart, and speak pleasant words. Wear a pleasant countenance; let joy beam in your eyes and love glow on your forehead. There is no joy like that which springs from a kind act or a pleasant deed, and you will feel it at night when you rest, at morning when you rise, and through the day when about your business.

When Philip Henry, the father of the celebrated commentator, sought the hand of the only daughter and heiress of Mathews in marriage, an objection was made by her father, who admitted that he was a gentleman, a scholar, and an excellent preacher, but he was a stranger, and "they did not even know where he came from!" "True," said the daughter, who had well weighed the excellent qualities and graces of the stranger, "but I know where he is going, and I should like to go with him," and they walked life's pilgrimage together.

"Sally Mander safe?" said Mrs. Partington, as her eyes fell upon an advertisement. "Do tell me, Isaac, who this Sally Mander is, and what she's been doing, that they've got her safe?" "I don't know what she's been a doing," said Ike, "but I guess she's a sister to Jerry." "Jerry who, Isaac?" "Why, Jerry Mander," said Ike.

Money and Gold Dust received in Special Deposits, and General Deposits, received from merchants, mechanics, and others. 3

The Pacific Loan and Security Bank.
MONEY will be received on deposit in sums of Ten Dollars and upwards, for which Certificates of Deposit will be issued, bearing date the first or fifteenth of the month, payable on demand, or at specified times, at the option of the depositors. If payable on demand, they will be without interest, unless the money remain on deposit one month, in which case they will draw interest of one per cent. per month, but no interest for fractional parts of a month. If deposited for specified times, certificates will be issued bearing one and a half per cent. per month interest for such time. Interest will cease at maturity; so that if depositors desire to continue their deposits after their certificates fall due, they must be presented for payment and renewal; otherwise interest ceases.
The money deposited is used only in loans guaranteed by us and in all cases amply secured by Mortgages, State, County and City Stocks, Merchandise, and other solid collateral, taken in the name of "MARTINOT & WHEELER, Trustees for Depositors with Pacific Loan and Security Bank."
A register is kept at all times open to depositors for inspection, in which appear their names, the number of certificates of deposit issued, and the securities upon which the money deposited has been placed. Depositors thus not only have the personal security offered by all banks, but in addition have the benefit of the securities taken and guaranteed by us, and the facility of knowing what disposition has been made of their deposit.

A Register for Property, at either public or private sale always open at their office. 20

To Farmers and Gardeners.
WICKERSHAM'S
Celebrated Patent Wrought Iron Farm Fence.
For sale—Wickersham's far-famed Patent Wrought Iron Fence, for enclosing and subdividing lands. It can be furnished at but little above the cost of ditching, and is much more preferable, because it does not require a heavy annual expenditure to keep it in repair; it cannot be destroyed by the fires which so constantly sweep over prairie and mountain, requiring wooden fences to be renewed, nor carried away by flood from the overflow of the low lands; it is free from decay, which places it beyond comparison with wood or any other material now in use; it is valued the most highly where it has been tried the most thoroughly; it is light and graceful, yet strong, and cannot be broken down by horses or cattle. The testimony which has been given by those who have used it in the Atlantic States, is sufficient to recommend it to the farming public of California.
A complete model is now on exhibition at the State Agricultural Fair, at Market Hall, Bush street, near Montgomery, where a full description may be seen, with the testimony of those who have erected it in the Atlantic States.
Farmers are invited to examine this fence, as there has never been any of the same kind in this country previous to the arrival of this lot, and find its peculiar construction there is not the least doubt but that it will be extensively used in this State.
J. T. Heston has now on hand, and will be constantly receiving supplies from the manufacturer, which will enable him to fill orders to almost any amount.
For particulars address—
J. T. HESTON,
At Warren's Agricultural Rooms;
Or, P. COGINS, cor. Sacramento and Pike streets
October 8, 1854. 15

Artesian Well Boring.
We would respectfully inform the public that we are fully prepared to take contracts in the above operations in a manner to guarantee satisfaction or no charge will be made.
SMITH & VAN DYNE having associated themselves with an old and experienced operator from the East, who challenges the world to compete with him in all the branches connected with the above business, are fully confident to guarantee success in all contracts that we may undertake, and warrant the work for one year. We have also implements for boring through stone to any depth, and all work done on the most reasonable terms.
For the satisfaction of those wanting anything in the above line, we would refer to Thomas Fallon, San Jose; Rufus S. Ellis, of Haworth & Ellis; M. A. Sullivan, New Custom House; Wright & Co., 137 Jackson street, &c., &c.
We can do work cheaper than any other operators, for two reasons:
1st. Because we are prepared to work on a most extensive scale.
2d. Because we understand all branches connected with the above business, and are, therefore, able to work with certainty.
All orders left at the Well Cheer House will be promptly attended to.
SMITH & VAN DYNE, Contractors.
N.B.—We also refer to Warren & Son, publishers of the "California Farmer," who have seen and known the character of the work done. 7

HORTICULTURAL, &c.

Smith's Pomological Gardens,
Banks of the American River, two and a half miles from Sacramento City.
THE proprietor of the Gardens would respectfully invite all who are engaged in "Nursery and Gardening" to visit his grounds. He will be happy to show to them, ready for sale, this fall, as fine a collection of
Fruit Trees, Ornamental Trees, Grape Vines, Shrubs, Flowering Plants, and Green House Plants, as can be found in all the great Sacramento Valley.
The proprietor would call particular attention to his collection of Peaches, believing that the specimens exhibited by him in Sacramento and San Francisco markets have been unsurpassed in size, quality, or flavor.
The collections of Pear Trees will equal any in the country; these, with all the new varieties, will be offered this autumn.
The undersigned believes his collection worthy a visit to his grounds of all who are interested in Gardening and Orcharding.
The subscriber will offer this autumn Five Tons Vegetable Garden Seeds, that have been raised upon his own grounds. These seeds have been grown with care and will be sold at wholesale for the present, at the Gardens.
Persons in want are invited to call upon us, and we will make reasonable terms.
Fruits, Bouquets, &c., will always be furnished at short notice at the Gardens.
The proprietor returns his thanks for the liberal patronage of the past, and hopes for a continuance of such favors.
A. P. SMITH, Proprietor. 10

Golden Gate Nursery,
Corner of Folsom and Fourth streets, San Francisco.
OFFICE—NO. 170 WASHINGTON STREET.
THE attention of the public is requested to a large collection of the flowering Plants, now for sale at this Establishment, embracing the most extensive assortment in the State; among which may be found—
Camellia Japonica, in seventy varieties;
Perpetual blooming Roses, of all the classes;
Moss and climbing Roses, do do;
Fuchsias, a choice collection; Heliotropes, in variety;
Rose and Lemon Geraniums;
Lemon-scented Verbena, Flowering do, Arbutus, Azaleas, Orangetrees, Passiflora, Honeysuckles, Carnations, Dahlias, Bulbous Roots, &c., &c.; and a general collection of Green-house plants and ornamental shrubbery.
Catalogues for 1855 will be ready on the 1st of December, and will be forwarded on application.
Orders for any part of the State, will be promptly attended to, on application to D. Nelson, No. 170 Washington street—or to the proprietor. (7-3m) W. C. WALKER.

Fruit Trees! Fruit Trees!
WE have for sale at our Nursery at the Mission San Jose—
Five Thousand large Apple Trees; two thousand of them of extra size. Many of them will bear fruit the next year.
Two Thousand Peach Trees, choicest kind—large and handsome trees.
Pear Trees on the Quince as well as Pear.
Fifteen Hundred Cherry Trees from two to four feet high.
Grape, Fig, Quince, Apricot, Nectarine and Almond Trees in less quantities. All the above we guarantee in quality, and we warrant them what they should be, and will sell at prices to suit the times.
Apple Trees from \$1.00 to \$2.50
Peach, Pear, Cherry, from 1.50 to 2.50
Extra sized trees in proportion.
BEARD & LEWELLEN, Mission San Jose.
Orders with Warren & Son, corner of Montgomery and California streets, will be promptly attended to. 18

New Invention!
BULKLEY'S STEAM DRY KILN.
THE undersigned takes this opportunity to offer to the citizens of California, Oregon and Washington Territory, the valuable invention hereby announced. One of the greatest wants of California and vicinity, for years, has been the means of preserving her products so as to have a continued supply during the late months. The vegetable products to an immense amount are annually lost at the approach of the rainy season, its long continuance, and the exposure that necessarily results to those products from the season; and the vast quantities that are exposed and accumulated in warehouses and elsewhere, have demanded some method of preserving these immense and valuable crops, that otherwise would be a loss to the producer and to the State. The loss of the Potato and Onion crop last year would count almost a million of money, and the loss the present year will be heavy, without preservation.
The undersigned, holding the "Patent Right of the Steam Dry Kiln," offers this invention with the confident assurance that it is the very thing needed—that it is the *me plus ultra* for this very want. It has been thoroughly tried and approved, for these products, and for Grain also. It has been tried for Lumber, to which it has been more particularly applied in the States, for there the Vegetable products do not require so much care as here. To shippers of Grain this invention removes all the difficulty in sending Grain on long voyages, and under the drying process of this valuable invention our Grain growers can now send their Grain to New York with safety.
The proprietor needs only to append the following certificates. The name of Henry L. Ellsworth, Esq., carries a weight that is convincing to intelligent men, and the other evidences should be satisfactory.
The model machine will soon be placed on exhibition at the office of Warren & Son, where all information can be had.
JOSHUA BUTTS, Proprietor of Patent.

A Diploma and Silver Medal
Was awarded to the inventor at the last New York State Agricultural Fair, held at Rochester, as a testimonial of its superior merits.
Letters from Hon. H. L. Ellsworth.
LAFAYETTE, January 7, 1853.
DEAR SIR: I congratulate you on the completion of your Dryer. I have for a long time urged the importance of extracting the moisture from grain and flour before shipment, to prevent fermentation. Your plan will obviate the difficulties hitherto experienced. There can no longer be any doubt that 18 pounds of water can be taken from a barrel of meal, and 15 pounds from a barrel of flour without affecting the taste or appearance of the same. Experiments at Lafayette show this. Nor is it a less gratifying circumstance that when the flour or meal is cooked, it reabsorbs proportionately more water, thus saving freight and the purity of the article. If the moisture is extracted, it must be obvious this meal will keep for long voyages, passing through the hottest climates. To the Navy, your improvement is invaluable. The world has become somewhat skeptical on the subject of patent rights. The simplicity and compactness of your machinery enables you to exhibit a working model, to remove in a moment any doubts as to your ability to sustain your patent and prove its utility. One feature in your plan deserves particular notice; in fact, this constitutes your main claim, viz., not drying by common steam, or by fire heated pans, as has been done hitherto, but by using heated steam. Few persons are aware of the small expansion of steam, and how easily it can be heated to a high temperature with little confinement. You will be able to raise a stream to the point of ignition, say 600 or 700 degrees, though a far less heat will answer all your purposes. I will only say that European prejudice against Indian corn is fast dying away, and we may anticipate large shipments both for man and beast. The great fertility of the West, and the reduction of freights both inland and on the ocean, justifies this anticipation. Wishing you success, I remain, yours respectfully,
HENRY L. ELLSWORTH, late Commissioner of Patents.
To Henry G. Bulkley, Esq., Kalamazoo, Michigan.

LAFAYETTE, March 20, 1853.
DEAR SIR—I am highly pleased with your Dryer for lumber by heated steam. It seems almost incredible how soon even green lumber can be prepared for use. Twenty-four hours is all that is required. Steam has hitherto been used to advantage, but heated steam has not been applied for this purpose before your improvements. Every manufacturer of lumber would find it profitable to erect a cheap dryer on your plan. Full one-third of the weight of some kinds of lumber is removed by drying; the saving in cartage will more than repay the expenses of drying. When the difference between seasoned and unseasoned lumber is considered, no one who regards good work will regret the trifling expense of preparing the raw material.
Yours respectfully,
HENRY L. ELLSWORTH.
To H. G. Bulkley, Esq., Kalamazoo, Michigan.

HARRISBURG, Pa., July 12, 1853.
I hereby certify that I have had charge of one of W. O. Hickok's shops where the most of his wood work is done, that I put up and have used H. G. Bulkley's Patent Kiln, and heartily approve of everything W. O. Hickok has said about it, and am certain that no recommendation can be too strong in praise of said kiln.
[17] W. H. SULLENBERGER.

MISCELLANEOUS.

COLLINS & CO.,
PRACTICAL HATTERS,
(PREMIUM HAT STORE.)
157 Commercial street, San Francisco.

THE undersigned would take this opportunity to return the very thanks to their friends and the public generally for the very liberal share of patronage which they have received. They take pleasure in now announcing that they are determined that no one shall surpass them in the beauty, or finish, or quality of a hat; that no gent shall wear a finer hat than can be found at COLLINS & Co.'s Warehouse.
The proprietors of this establishment exert themselves to manufacture to order the latest styles and most approved patterns. The stock of HATS and CAPS, of every kind, now on hand, cannot be surpassed in this city.
17

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!

Hurrah for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE's who wishes PERFECT LIKENESSES? Because he has now the best arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.
2d. Because he has the largest light in the world, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.
3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.
4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.
5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.
All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.
Prices as reasonable, and work superior to any in the city.
Don't forget the place.
New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. 17

ADAMS & CO.'S
CALIFORNIA AND ATLANTIC EXPRESS.

OUR Atlantic States Express will leave San Francisco on the 1st and 15th of each month, by the Pacific Mail Steamship Company's Steamers, and the Transoceanic crosses the Isthmus under the charge of a strong guard. The Transoceanic forwarded by us to the Philadelphia Mini, is always deposited there previous to that sent by any other conveyance. Our rates are lower than those offered by any other House, with the same security.
We also forward Transoceanic on the 1st and 15th of every month TO ENGLAND, by the P. M. S. Co.'s steamers to Panama, and from Panama by the West India Mail steamers.
We draw Bills of Exchange on any of our Houses in the following places:
Boston, New York, Philadelphia,
Baltimore, Washington, St. Louis,
Cincinnati, Pittsburg, Louisville,
New Orleans, London, &c., &c.

Also, payable at any of the following Banks:
Mechanics and Farmers' Bank Albany.
Alex. Mitchell, Fire and Marine Insurance Co. Milwaukee.
Commercial Branch Bank of the State of Ohio Cleveland.
Union City Bank Utica.
Bank of Syracuse Syracuse.
Bank of Auburn Auburn.
Bank of Attica Attica.
Rochester City Bk. Rochester.
Geo. Smith & Co. Chicago.
Michigan State Bk. Detroit.
Clinton Bank Columbus, O.
In the NORTHERN MINES we run Expresses, in our own name, always accompanied by faithful Messengers, to and from the following places:
San Francisco, Sacramento, Marysville,
Benicia, Grass Valley, Nevada,
Coloma, Placerville, or Mormon Islands,
Georgetown, Hangtown, Salmon Falls,
Greenwood, Shasta City, Auburn, &c., &c.

And every other part of El Dorado, Placer and Shasta counties. Through LANGTON & BRO.'S YUBA EXPRESS, to and from the following places in Yuba, Sierra and Nevada counties:
Long Bar, Deer Creek Crossing, Park's Bar,
Sicard's Bar, Bridgeport, S. Yuba, French Corral,
Kennecob Bar, Sweetland's, Boston Bar,
Union Bar, Hoyat's Diggings, Hunt's Ranch,
Rose's Bar, Cherokee Corral, Barton's Bar,
Foster's Bar, Hess' Crossing, N. Yuba, Wombaw's Bar,
Winslow's Bar, State Range, Nevada House,
Oak Valley, Junction House, Empire Ranch,
Indian Valley, Frenchman's Bar, Downville,
Sleightville, Bullard's Bar, Kanaka Creek,
Cox's Bar, Minnesota Diggings, Middle Yuba.
Goodyear's Bar, and Emery's Crossing.

Sacramento and Stockton.
via Benicia in the SOUTHERN MINES, we run an Express in our own name, always accompanied by faithful Messengers, to and from San Francisco, Stockton, Sonoma, Mokelumne Hill, Columbia, Mariposa, &c., by BROWN'S EXPRESS, from Stockton to all the Camps in the Southern Mines.

Our Bills of Exchange
can be procured at, and Transoceanic forwarded to us for shipment, from any of the above places. In all of the above places we have *Irish Vaults and Iron Safes* for the security of Treasures entrusted to us, and on board of steamboats on any of the above routes, we have *Iron Safes* for the security of all valuable packages transported by us.
INSURANCE.—We have made arrangements for insurance to the extent of *One Million Dollars*, on any one shipment, and are empowered to insure for other parties on Gold Dust, Bars, Coin and Merchandise to and from New York and this city, by endorsements on Bills of Lading, at the time of shipment.
ADAMS & CO.

Boston Clipper Steel Plow.
Manufactured by Ruggles, Nourse & Mason.
THIS splendid Plow is made after the style and form of the famous Eagle Plow, so universally known. This form of Plow in all its parts has been considered the most perfect yet invented, having taken premiums in every State in the Union; also at the World's Fair.

The present Plow has been manufactured by Messrs. Ruggles, Nourse & Mason, with great care, and in the most finished style, of the very best steel, and may now be considered the highest finish and most complete Plow; and the undersigned with the cultivators of California to call and examine the same at their place of business.
TREADWELL & CO.,
Cor. of Battery and California streets, San Francisco.

Parker & Robbins, " Humboldt Bay.
Howard & Chamberlain, U'n City, and Mission San Jose; J. M. Thorburn & Co. New York City, N. Y.

We desire our Agents to report to us on the 1st of every month, the increase of names and the prospects, together with the amount due the office.

LETTERS FROM ROVING JACK.

NO. V.

The Corner that is Left Out—Legislation for the Farmer Needed—Conflicting Interest of the Stock-raiser and Farmer—A New County Wanted, &c.

MERCED RIVER, Jan. 27, 1855.

EDITORS FARMER: The clodhopper in this vicinity, from his peculiar situation in reference to locality, is perhaps more justifiable in being skeptical and not easily falling in with the opinion of others that great good will be done by the present Legislature for this corner of God's moral vineyard. I say corner, from the fact that is a corner, and one that has been most generally left out. We would most humbly ask what we have done that we should be as it were left or considered out of the pale of Government, not by any means in a tax-paying point, but in reference to the benefits of Legislation. The farmer, 'tis a melancholy fact, has in a measure been wholly forgotten by the California Legislature, and more particularly have the citizens of the Merced River, in their petitions to that honorable body, been entirely disregarded. We hope however that such will not be the case with the present Legislature; but judging from the past, that hope becomes as it were obscured in a gloomy mist of doubts and fears. That there are some foundations for these fears I shall by a brief statement of facts attempt to prove:

For two years we have considered our connection with the mining district oppressive and productive of no good; we humbly asked, by petition, of the Legislature of our State the liberty of forming ourselves into an Agricultural county, and if there was anything done with it the people in this vicinity are not aware of it. True, the miners and county officers of Mariposa county remonstrated against it, and why? Time has revealed the answer. The objections raised to our separating ourselves from them at that time were simply that the county was in debt and that by taxation in a year the county would be clear of debt, and then we could form a new Agricultural County under more favorable auspices, and not have a heavy debt hanging over us. The course pursued to effect the liquidation of this county debt was, to raise the taxes from one dollar and ten cents to a dollar and seventy cents on each one hundred dollars worth of property according to the assessment value. The year has rolled on, the taxes have been assessed and collected, and has the county debt been paid? No, sir, and I doubt very much if under the present organization it ever will be paid; not but that we have an honest, upright and gentlemanly set of county officials as ever the sun shone on, for we have; they are all honorable men, but unless there should be a system of retrenchment of fees and salaries of county officers, Mariposa county must either repudiate or suffer a heavy debt to hang over her to all time.

This winter we have again petitioned to the Legislature for a division of our county; the petition is now before the Legislature, or should be. We want an Agricultural County; we think we can organize a county the government of which will answer the same purpose that the present one does, and will not cost more than half the money. If the Legislature will try us, I think that we will prove ourselves capable of self-government.

And then there is a system now in practice very injurious and deleterious to the best interests of the farming population, which practice is that of bringing large droves of stock into a settlement where farming is the only occupation followed, and the dependence for bread—and in twelve hours perhaps they will destroy whole crops of grain, and the farmer must be the loser; for he has not a lawful fence. One of two things must be done in California—the farming interest of California must be protected by legislation against the evils arising from destruction by stock of all kinds, or else we must quit farming and all pitch into stock-raising, every one of us. But I fancy that the farming interest in this State is only second to the mining interest, and I am not sure that it is even second—but grant that it is, should not the interests of the farmer be protected according to the benefit that the State is to derive from it, the merchant, the lawyer, doctor, miner and the stock-raiser being dependent upon the farmer for bread? Suppose they are not, then he must send to some foreign country for bread, and by that means send a vast deal of capital out of the country, which if paid to the farmer will be invested in such a manner as to add greatly to the comfort, wealth and beauty of California, and will protect Home Industry. Stock-raising and farming cannot exist together. Yours respectfully,

ROVING JACK.

WASHINGTON'S FARM.

The following from the Maine Farmer, we pronounce good, and say that for spunk, Down-East will carry off the palm:

Every son and daughter in the Union has heard of Mount Vernon, the home of Gen. Washington. It is a place to which many a traveler bends his steps, in order to stand at the tomb of that great man, so dear to the memory of Americans.

A move has been made in Congress, that the United States purchase this homestead, and convert it to the uses of an institution, where young men might be taught agriculture as a science, and agriculture as an art, that is to say, both the theory and practice of farming. This plan originated with F. P. Blair, Esq., and has been discussed in Congress, but no definite action taken upon it. Why does the proposition receive so little attention? Because it is of so peaceful and noiseless a character. It is too useful,—there is not blood and thunder enough about it. It is too devoid of gunpowder glory to excite attention.

Why it is only buying a farm where a flock of boys may be kept, and taught the peaceful art of growing breadstuffs and feeding cattle. Rustic operations, all of them, why trouble Congress about it? But Congress is bound to be troubled with it, and about it. We doubt if the cause of agriculture is to receive an eternal quietus, when brought into the halls of Congress. Our grave National Law givers will have to listen and act ere long, to the demands of the agricultural community, and grant what they ask.

The subject is growing every day among the agricultural community. It is discussed among the people in their town clubs, in their county societies, in their state gatherings, and in their journals. The following remarks we find in an address delivered not long ago, by Channey P. Holcomb, Esq., of Newcastle, Delaware, before the Montgomery County Agricultural Society, an address which every farmer will read with pleasure, and instruction:

"The farmer of Silver Springs, Francis P. Blair, Esq., has exhorted the Congress of the nation, in one of the most argumentative, eloquent and able appeals ever made to that body in the form of a memorial, exhorted them in the name of Washington—in the name of agriculture—in the name of the American people, to purchase the hallowed and consecrated ground of Mount Vernon, and dedicate it to the diffusion of agricultural knowledge. And yet Congress pauses.

Five millions of agriculturists appeal in vain for so small a boon.

"Represented through their societies, organized throughout almost every county in the Union, with State associations, and a national association, their annual gatherings already constituting the great national gala days of the country, with an agricultural press already read by a half million of readers—paying the taxes of the country—constituting three-fourths of the people of the country, and yet Congress gives to agriculture no bureau—no department—no institution of learning, they know us but to tax us.

"In the moral world a just retribution is visited upon acts of omission, as well as upon acts of commission. The agriculturists have but to combine to punish such slighting of their claims—such overlooking of themselves and their interests, and insure from more faithful servants more faithful work. The day of reckoning may be at hand."

WHEAT.

We find some valuable information relating to wheat culture in the Working Farmer, furnished to that publication by J. Payne Lowe:

"SELECTION OF SEED.—It is of superlative importance that the best varieties of wheat should be used for seed; and this fact becomes still more apparent if there be any truth in the old and hackneyed phrase, that "Like begets like." It is supposed by many growers that the peculiarities of different kinds of wheat are retained for some years, when sown in localities other than those to which they were natives. Care should be taken that seed wheat be free from the seeds of other plants, and also that grains of inferior quality, rendered so by disease or the attacks of insects, etc., be not used. It is also of much importance that the varieties suited to the particular climate in which it is intended to be grown, be selected, and in these days of railroad travel the getting of seeds from distant places within a short period of time, can be easily achieved.

"STEERING THE SEED.—Although the causes of the supposed effects produced by what is generally termed the *pickling* of seeds, are involved in considerable obscurity, yet almost every wheat grower seems to have some faith in the operation, and claims for this process of pickling, that it is a preventive of smut and other diseases common to the genus *Triticum*. The plan most universally pursued is to rush the wheat with water, after which a brine is made sufficiently strong to float an egg, and then the wheat is steeped in this solution for about twelve hours, after which it is spread upon a floor and as much newly shaken lime applied as will coat each grain. It is possible that the brine may assist in rendering the seed free from many impurities, and may also where the soil is deficient of chlorophyll of sodium and lime, benefit it even by the application of small quantities of these constituents, and thereby assist the young plant in its early stages of growth. Other soaks or steeps have also been used, such as chamber-ley, which is well known to be a most powerful fertilizer, and solutions of wood-ashes, as well as many others, but the ones already referred to seem to have been the most universally used. Irrespective of the effects produced by chamber-ley for the purposes of a steep, yet there is no doubt that it is very beneficial to the wheat plant during its growth, for being one of the most powerful of fertilizers, it furnishes constituents most conducive to the growth of the plant.

"QUANTITY OF SEED AND MANNER OF SOWING IT.—The quantity of seed that should be sown per acre, is dependent in part upon the variety and size of the seed, quality and condition of soil, time and modes of planting, etc. If the seed be sown very thickly, the straw will be fine and light. If sown broadcast and harrowed in, more seed will be required than if put in by the drilling machine, because in such case many grains will be left uncovered by the harrow, and others being covered at improper depths either rot or do not germinate. If the seed be harrowed in, about two bushels per acre are usually sown, and if put in by means of the seed drill, about five pecks. This saving of three pecks per acre in regions where the wheat crop is large, becomes an item of considerable importance. As previously stated the wheat plant will tiller much more freely in soils properly prepared by subsoil plowing and under-draining; thus it may be understood less seed is required on soils so treated. Seeds sown by the drill, in falling to the soil assume that position which is natural; they are planted at even depths, the distances apart are regular, and the growing crop presents a uniform appearance, whereas the mechanical force exerted in sowing it from the hand, is a preventive not only of such even distribution, but interferes with the natural position of the grain in the soil. The plowing in

of seed is more preferable to harrowing in, for the reason that the depths to which it is sown are more regular, but drilling in seems preferable to either.

Professor Nesbit in a lecture on Manures before an English Farmers' Club, speaks of a Rev. Mr. Smith, of Northamptonshire, who has pursued the practice of growing wheat for several years without the application of manures—and as Prof. Nesbit is looked upon as a reliable authority, it may be interesting to state Mr. Smith's mode of procedure. He prepares his soil by thoroughly digging and forking it. He then sows his wheat in sets of rows three feet apart, each set consisting of three rows one foot apart. At the proper time, after the crop arrives at maturity and has been cut, Mr. Smith dibbles his seed for the next crop, according to the manner already described, in those three feet spaces which had been at rest during the growth of the previous crop, and so continued his operations for several years. In addition to these facts Prof. Nesbit goes on to state that "During the last four or five years, he has taken on an average from 30 to 34 bushels per acre from his land, without the addition of any manure whatever, in the shape of guano or dung, or any other visible matter. He has been mowing, however, all the time; because by his constant stirring there has been a powerful absorption of materials from the air, nitre bells have been formed, and the result produced is the same as would follow from an absolute dressing of nitrate of soda." Prof. Nesbit also states during his remarks, that Mr. Smith's soil was rich in inorganic materials; thus it can readily be understood, that the soil in taking carbonic acid and ammonia from the atmosphere, had a rich supply of the organic materials most necessary to be added, and hence that by frequent and exact mechanical mixture of the soil, thus facilitating chemical action by free admission of atmosphere, that his crops of wheat could obtain the necessary nutriment for their growth, and that too for years in succession, but after such time as he ceased to cultivate his soil as already stated, and the inorganic constituents become used up, no longer could successive crops of wheat be grown; for the wheat nor any other plant, cannot create the constituents necessary for its development. This practical experiment fully proves some of the advantages of deep disintegration. Many growers are now in the habit of sowing oats with their wheat, at the rate of from one-half to three-quarters of a bushel per acre, which are killed upon the appearance of a heavy frost, and serve as a mulch to the wheat, thus preventing it in part from being winter killed. How excellent this may be, experience will soon decide. The practice seems plausible, and worthy the attention of wheat growers. It is quite certain that if the soil be under-drained and sub-soil plowed, the immediate surface will be partially protected against frost, and falling rains will be permitted to pass downward, giving up their carbonic acid, ammonia, etc., for the use of plants; thus the interstices of the soil being in a great measure free from ice, the crop is less liable, when thawing occurs, to be thrown out by the frequent contractions and expansions of the soil. If there be snow upon the surface of the soil, it will, on melting, penetrate downwards, giving up its ammonia to the carbon and ammonia, instead of being carried away over the surface of the soil with the snow water, as would be the case in the absence of the conditions brought about by mulching.

The period at which the seed should be sown, must depend upon the climate; but in the Northern States about the middle of September is considered to be the most seasonable time.

FALL AND SPRING CULTURE.—If a slight top-dressing of concentrated fertilizers be added in the fall, and a light roller be used to even the surface, the roots will take a stronger hold, and the whole plant invigorated, so as to be the better enabled to withstand the froeings and thaws of winter. In the spring if the crop be too thick, a harrow proportioned in weight to the tenacity of the soil, might be used to thin it out; if then another light top-dressing be applied, it will in most instances have a tendency to increase the luxuriance of the crop. Clover and grass seed may be sown, if such be required, after which a slight rolling will prove beneficial to both crops. If the wheat be sown in drills, it should be cleaned in early spring to eradicate weeds.

GERMINATION OF THE SEED.—The following from Liebig on germination, contains most of the facts already known in relation to this interesting subject, and coming from such a source will doubtless be deemed reliable:

"Other substances must be present in a plant, besides the starch, sugar and gum, if these are to take part in the development of the germ, leaves, and first fibres of the radicle. There is no doubt

that a grain of wheat contains within itself the component parts of the germ and of the fibres of the radicle. These component parts are starch and gluten; and it is evident that neither of them alone, but that both simultaneously assist in the formation of the root, for they both suffer changes under the action of air, moisture, and a suitable temperature. The starch is converted into sugar, and the gluten also assumes a new form, and both being conveyed to every part of the plant. Both the starch and the gluten are completely consumed in the formation of the first part of the roots and leaves; an excess of either could not be used in the formation of leaves, or in any other way.

"The conversion of starch into sugar during the germination of grain is ascribed to a vegetable principle called *diastase*, which is generated during the act of commencing germination. But this mode of transformation can also be effected by gluten, although it requires a long time. Seeds, which have germinated, always contain much more diastase than is necessary for the conversion of their starch into sugar, for five parts by weight of starch can be converted into sugar by one weight of malted barley. This excess of diastase can by no means be regarded as accidental, for, like the starch, it aids in the formation of the first organs of the young plant, and disappears with the sugar."

IMPORTANT DECISION.—In the U. S. Supreme Court, says the N. Y. Herald, Mr. Justice Curtis delivered the opinion of the Court in the case of *Alexander Lawrence et al. vs. Charles Minturn*. The Court decided a vessel seaworthy, when the cargo was stowed below the deck, would be considered seaworthy with a cargo on deck, if placed there by the consent of the shippers; and in the event of the deck cargo being thrown overboard in stress of weather, the shippers were not entitled to an average, nor were the owners liable on a charge of the unseaworthiness of their vessel. The judgment of the Court below, giving \$28,000 damages, was reversed, and the libel ordered to be dismissed with costs.

SOMETHING NEW.—The N. E. Farmer, says that at the Farmer's Club in Boston, there was exhibited lately an artificial cow, constructed for the purpose of weaning the calf!—a sham brindle, with sham teats, yielding milk and water! But what's to be done in the matter of weaning the cow herself, who mourns the loss of her darling as if she was gifted with reason?

The abolition of the feudal tenure in Canada, has been very quietly submitted to by the owners of estates.

SPECIAL NOTICE.

REDUCTION OF PRICE.

The heavy losses upon the Farming interests of the State the past year, the general depression of that interest, and the discouragements resulting to all, we know have prevented many who are engaged in Agriculture from subscribing to our Journal the past year. Feeling desirous to meet their wants as far as is in our power, we now offer the CALIFORNIA FARMER at SIX DOLLARS PER YEAR, PAYABLE ALWAYS IN ADVANCE.

We trust this effort on our part to meet such circumstances will be met on the part of those engaged in the cultivation of the soil with a corresponding feeling, and that all will do us service by sending in a goodly list of subscribers and the amount for the same. We have made the price thus low, that our subscribers and friends may at once send us the proof of their good will.

Inducements for the formation of clubs will be found under another head.

Clubs Formed—Premiums to Subscribers.

Under the third volume, with the opening year, we would offer to our friends stronger inducements than heretofore to make up CLUBS for the FARMER. It will be seen by our "special notice," that we shall commence with a reduction of the price of the "Farmer." The price will now be six dollars per year, always in advance. No subscriptions received unless accompanied by the amount.

To those who are disposed to form CLUBS, when we can send all to one address, we shall send SIX COPIES for FIVE NAMES, TWELVE for TEN, and TWENTY-FIVE COPIES for the number and amount of twenty subscriptions.

To those, or any of our friends who will interest themselves, we believe this will be some satisfaction, besides promoting the cause of Agriculture. We hope to see good results to all from this proposition.

THE CALIFORNIA FARMER.

We have many inquiries, daily, from our friends in the country, who write us, desiring to make up clubs for the FARMER, and send us produce for the amount. We always do our utmost to facilitate the cultivation of the soil, and we will secure our friends that if they will make up clubs of five, ten or twenty, they can send their Wheat, Rye, Oats, Barley, or specimens of extra quality, and we will advance them the full market price in the payment of the FARMER. Our friends that are in attendance can send us the amount thus due, and add the coming volume, and we will forward receipts for the same. So send along your wheat and good products. We do not mean—anything—but those articles that have a value, and we will take them.

TO AGENTS, BOOKSELLERS, &c.

With a desire to extend as widely as possible the circulation of the FARMER, and by this means make known all the Agricultural Information we obtain, we shall offer to Agents, Booksellers, and all who desire our paper in quantities, a price for copies by the hundred that will leave them a handsome margin.

SPECIAL AGENTS FOR THE FARMER, &c.

All the messengers of Adams & Co., and Wells, Fargo & Co., are duly authorized by us to receive subscriptions for the CALIFORNIA FARMER, and receipt the same; also, to receive orders for Fruit Trees, Seeds, &c., and any and all business with us. All such business committed to either of these messengers will be promptly responded to by us.

OAKLAND.

Our friends at Oakland are invited to call on MR. CHARLES STEWART, and subscribe for the CALIFORNIA FARMER; he is authorized to receive subscriptions and will cheerfully inform the farmer in his employment. We are willing to receive Wheat, Rye, Oats, &c., or any valuable products of first quality in payment, if we do wish our friends to enjoy our sheet, and conveniently too.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SAN FRANCISCO, THURSDAY, FEBRUARY 8, 1855.

WHEN WE ARE ABSENT.—Duties appertaining to the great interests we serve require that we should be frequently absent from our office; this is now imperative, that we may obtain the most interesting and valuable data, with which to serve those for whom we speak. When absent from our desk, we commend our friend, Mr. I. M. BLOOD, formerly connected with the Press in Connecticut, and for some time with one in this city. Mr. B. will receive communications for our paper, and be ready to receive subscriptions and advance the interest of the CALIFORNIA FARMER, in all its departments.

What Constitutes a State?

In the inaugural address of Gov. Grimes, of Iowa, we recognize that tone which, when felt more generally throughout the Commonwealth, will give a character to all our institutions and raise us in reputation and influence at home and abroad.

When the Chief Magistrates of every sovereign State shall be imbued with a desire to improve the condition of the whole State, regardless of sectional or party influence; when they shall resolve to leave an impress of their labors, that shall be remembered for good only—then, and not till then, shall we see and feel all the best and lasting influence which our republican institutions are calculated to exert, or were intended to exert by the patriot founders of that glorious chart of liberty to which we look for peace, prosperity, and happiness.

"Educate the people," is a watchword that should be heralded from one portion of our land to another. Educate them by every means in the power of each and every form of Government, from the primary school of a country village, to the richly endowed college of the sciences, established, encouraged and supported by the liberality of the nation's purse. The United States are now far behind every other nation, on the subject of education, as fostered by the National or State Governments.

"It is true, the cause of education is progressing, but not so rapidly as it should, or would, if the legislators were reminded more frequently of the wants of the State." But we will not forestall the most excellent appeal of Governor Grimes, to which we have alluded; we give a portion of his own words, and hope they will not be forgotten by any one, but acted upon, not only in Iowa, but in every State of our glorious Union; and most especially would we commend them to those who regard the best interests of our own NOBLE EUREKA STATE. The Governor, in speaking of the wants of the State, says:

"She wants educated farmers and mechanics, engineers, architects, metallurgists and geologists. She needs men engaged in the practical duties of life, who have conquered their professions, and who are able to impart their knowledge to others. She wants farmers who shall be familiar with the principles of chemistry as applied to agriculture; architects and mechanics who will adorn her with edifices worthy of so fair a land; and engineers and geologists who will develop her resources, and thus augment the wealth and happiness of her citizens. These wants can only be supplied by the establishment of a school of applied sciences. I have no hesitation, therefore, in recommending that a University fund be appropriated to establish a practical scientific or polytechnic school."

AGRICULTURAL WAREHOUSE.—It is always a source of pleasure to every purchaser to enter a warehouse where every impression you receive carries conviction that you are doing business at "head quarters;" that you are receiving the best quality, and at fair prices. A purchaser is always better pleased to make a selection from a large and well assorted stock of a regular importer, than to go to those who have bought at second or third hand. We have now in our mind one warehouse at which we believe purchasers can be satisfied with a stock to select from, that ought to suit, as to the quantity, quality and price. For as to quantity, no one stock in our city can exceed it; and the quality speaks itself No. 1—the price being regular importers prices, purchasers can rely upon their being fair and equitable. We have been speaking of an agricultural warehouse known widely as Treadwell & Co., corner of Battery and California streets; and also known up-river as Treadwell & Co., of Marysville. A house of this character and standing should be widely known as possible, for they are evidences of prosperity in themselves. We wish our readers would visit their extensive warehouses, and we are sure they will be pleased in doing so.

State Agricultural Society.

The Quarterly Meeting of the Board of Managers of the California State Agricultural Society, met in convention at Sacramento, on the 2d inst. The following named gentlemen were present,—

C. I. HUCHINSON, President.
W. W. STOWE, Vice President,
J. L. L. F. WARREN, Corresponding Secretary.
O. C. WHEELER, Recording Secretary.
A. FRIERSON, Treasurer.
E. L. BEARD, Vice President, (by proxy.)

On motion of Mr. Stowe, the Recording Secretary was directed to procure a suitable book for the records of the Society.

Voted, That the Secretary be requested to prepare a Memorial to the Committees on Agriculture of the Senate and Assembly.

Voted, That a Committee of three be appointed to prepare a List of Premiums to be submitted to to this board on Wednesday evening next.

Messrs. Stowe, Frierson, and Wheeler were appointed this Committee. On motion, the President was added to the number.

On motion of Mr. Wheeler, the following resolution was adopted.

Resolved, That the CALIFORNIA FARMER be the organ of this Society, and that the doings of the same, with all notices of its meetings, be published therein.

On motion of Mr. Stowe, it was

Resolved, That Hon. C. W. Cook be elected an honorary member of this Society.

On motion, adjourned to Wednesday evening, 7th inst., at 7 o'clock.

O. C. WHEELER, Recording Secretary.

Patent Office Seeds.

SACRAMENTO, Jan. 27, 1855.

MESSRS. EDITORS: Having just received from the Patent Office at Washington, a small assortment of seeds, selected in England by the agent of the office, I shall be happy to distribute the same to such professional and amateur gardeners as may wish to test their value in our interesting soil and climate. A small quantity of the celebrated "Sole Wheat" is among the collection. Communications (post-paid,) or personal calls at Tenth street, between F and G, will be received and answered with promptness and pleasure.

Yours very truly,

O. C. WHEELER.

NOTE.—We commend the above kind notice to all our readers. It is worthy their attention, as emanating from the right spirit. We have received some of the same kind from the patent office, and know them to be worthy the trial. We also received some through the politeness of Mr. W., and recommend our friends to go and visit this gentleman. That will be much better than sending, besides seeing a fine and well cultivated nursery and gardens, made so by untiring industry and attention. They will find pleasure and profit, and receive instructions from one of our best amateur cultivators in the country. For we can say, with truth, that the grounds of Rev. Mr. Wheeler give evidence of what can be done; besides, it is worth a ride of many miles to obtain such trees and other articles as can be found in that Excelsior Nursery, to which card we refer our readers.—En.

DR. GIBBON'S LECTURE AT SACRAMENTO.

Well may every citizen of our State be glad to note the advance making toward a better condition of society. In our cities, schools, lyceums, lectures, and libraries, are rapidly springing up, and education, improvement, and progress, is the watchword. This is well. We also notice, and with increased pleasure too, that our public men—our scientific men, and professional men of all classes, readily step forward to aid in all these public measures, and to their honor be it spoken.

The Pioneer Society of Sacramento, are now making rapid progress. They have able and efficient officers—are rapidly collecting a library and museum—have established a course of lectures of a high order. Already have lectures been delivered by Col. E. D. Baker, Dr. Winslow, and Dr. Henry Gibbons, to large and appreciating audiences. Each lecturer by his knowledge and influence, has awakened an interest that gives assurance of permanence. It will ever be our pleasure to aid forward all such valuable auxiliaries to the permanence and prosperity of our cities, towns, and State.

MAINE LAW.—We understand the ladies in Olevanas Co. are circulating petitions for, and advocating the passage of a law similar to the Maine law, for the suppression of the liquor traffic in this State. If the ladies throughout the State move in this matter and demand of the Legislature such a law, we pity the Representative or Senator that dares to vote against it.

California Bacon, Hams and Pork.

How few are aware of the rapid progress that is now in operation for the entire independence of California. Our forefathers fought, bled and died to win their own independence from British tyranny and sway; but from that day we have been paying an annual sum of "tribute money" to the same British tyranny. We may talk as much as we please of independence, but there is no freedom so long as we look to them or receive of them what are esteemed as the necessities of life, or rather called necessities, although properly named extravagancies; and what was true of our forefathers in their efforts for independence, is true now as applied to ourselves in California. We need not talk of independence so long as we are so dependent upon other States for what we could easily raise or manufacture within our own borders.

We rejoice to know the struggle for independence is commencing in earnest. Many new and valuable kinds of products are daily brought to light, also new inventions, and important discoveries—all tending to independence. Among those recently brought to view we note bacon sides, hams and salted pork and beef.

On our last trip to Sacramento we called at the Phoenix Market, carried on by John Bosler, and were requested to notice the samples of very fine "smoked hams, bacon sides, salt pork, beef, &c," all cured by this gentleman at Sacramento. Mr. B. also showed us the finest pork we have ever seen in California—a splendid hog, only ten months old, and weighing when dressed 330 lbs., raised near the city by him. The sides were very deep, thick, hard and fat; and those "spare ribs!" the very thoughts of one roasted, with cranberry sauce to match, seemed delicious. Well what is California coming to? We answer to her true position. Independence, when she shall raise, produce, and manufacture enough for all her wants, and keep her gold dust at home to build up the State.

Festivities at Sacramento.

ALTHOUGH San Francisco is the metropolis of our State, it is not the capital—and although the commercial emporium, yet Sacramento can and does, offer opportunities of a social nature equal if not superior, to any city in our State.

We do not fear contradiction when we assert that the extent and influence of social life and enjoyments are more widely felt at Sacramento than elsewhere in California. Fashionable life, etiquette, wealth, and fashion, may have a greater preponderance at the "Bay City," but the "Queen City of the Plains," will wear the crown in all the widely extended influences of refined social life. The family circle, the pleasant intercourse of neighborhoods, and the charms of social parties of pleasure, here present a degree of rational enjoyment no where else to be found upon the Pacific coast.

When we speak of the public gatherings, and the literary and scientific meetings, we cannot but remark that they are encouraged and graced by the society of large numbers of intelligent women. To the large public balls and parties of Sacramento also, one can go without that fear to check the enjoyment, which is too frequently engendered in most such assemblages elsewhere, for in no place of the same number of inhabitants can a public ball be conducted with such full assurance of pleasure.

Under these features it is pleasant to notice the "Citizen's Ball" announced for the 8th inst. It will most assuredly be one of the most interesting assemblies of pleasure yet presented to the citizens of this favored city. The managers are composed of some of the first citizens of the place, and all the arrangements are of the highest and most refined character; and there can be no question but all who attend will enjoy themselves.

CALIFORNIA TOBACCO.—Some time since we received fine samples of tobacco from S. S. Turner, Esq., grown at Sonoma. This tobacco is of excellent quality, and is said by judges to be of extra quality. Recently we have received a parcel of very handsome cigars, manufactured from the leaf by H. L. Gassert. These cigars have been seen and tested and pronounced of very superior quality. Samples of tobacco and cigars can be seen at our office.

TAME PIGEONS.—A large number of these domestic birds are now offered for sale at \$2.25 per pair. It is said to be very easy to raise these birds in this country, and they find ready sale. We would advise our friends the farmers to think of this.

We are under obligations to our friends of the Noisy Carrier's Hall, for the N. Y. Tribune and Herald, and the Boston Journal, received by the Uncle Sam.

[For the California Farmer.]

A SIX POUNDER.—A chunk of gold weighing six pounds, was found last week at Smith's Flat, Sierra county, by Baker & Co.

To the Readers of the California Farmer.

The annexed communication, with the names attached, has been kindly tendered to us. We would only ask of our friends to read and judge for themselves, as to the importance of the subject named therein.

We are deeply grateful for every testimonial of favor and encouragement in our labors, and for every approving word and token from every source.

TO THE FRIENDS OF

Agriculture, Horticulture, and Floriculture.

"Knowledge is power," is a truth nowhere more fully illustrated than in the field of your enterprise; and on no part of that field more important than in our State. In other States and different climates, the experience of ages is condensed into books; and the son inherits the practical knowledge of his father. Their books are their general guide, and their periodicals contain the result of their continued improvements. But with us the case is different. Here we have a climate to which the instructions of no book are adapted, a soil peculiarly unlike any to the development of which science has been applied, and almost an entire want of experience in any department. Here no father has learned more than a few of the first principles of agriculture, much less has he had time to transmit even the moiety he has learned to a son. Our first generation of agriculturists is yet in its merest youth.

If no books adapted to our circumstances are yet written, and no man has sufficient experience to write one; and if the periodicals published elsewhere entirely fail to meet our wants, we are shut up to a single choice between two courses—we must either grope our way in the dark, feeling and experimenting each for himself, for all those facts and principles which are peculiar to our soil, climate and productions; (and this will reach nearly the whole range of our operations) thus advancing by a process so slow as to be entirely unsatisfactory to every one; or we must sustain a periodical, which shall be a general reservoir for the reception and diffusion of the experience of all—an instrument whose columns shall be a constant reflector of all the light which our thousand intelligent cultivators of the soil can elicit from their "watch and toil." Which shall be our choice, cannot admit of a question.

Such a periodical we find in our midst. The CALIFORNIA FARMER we believe capable of meeting our every want. The Messrs. Warren have evinced an energy in, and devotion to, the work which is worthy of all praise, and is a sufficient guaranty for the future. Shall the FARMER receive that countenance and encouragement it deserves? Will the growers of grain and vegetables, fruits and flowers, in this State, treat themselves to a weekly repast in the perusal of its columns, (the annual subscription price bears no comparison with the value of what you get,) and make an energetic effort to induce their neighbors to do the same? But even this will not be enough. No one man, nor company of men, from any one department of knowledge, or section of the country, can make the columns of the FARMER what they should be,—what they must be to answer their wants. It must combine the experience of every class, and represent peculiar characteristics of every part of the State. We ask, therefore, the attention of those whom we address to the furnishing of materials for the columns, as well as subscription to the "material aid" of the paper.

We say this much because we deem it due to the present proprietors of the paper, and because we feel the deepest interest in the cause it advocates. We have no pecuniary interest in the CALIFORNIA FARMER, and yet we most heartily recommend it to the pecuniary, the statistical and the literary support of all who have at heart the real well being of our State—the development of her agricultural resources.

THE TREES IN CONVENTION.

We are persuaded that more trees die of the laziness or carelessness of their owners than from all other causes united. Were they gifted with tongues, and assembled in convention, we think there would be indignant remonstrance at their untimely "taking off," and the cause of their death would almost invariably be laid at the grower's door. Whether such a convention has actually been held or not, we do not presume to affirm; but we find among our editorial notes, reports of speeches said to have been delivered at such a tree meeting. It seems the orchard and garden trees took a hint from the "Joint-worm Convention" held sometime this last summer, down South, which they saw reported in the papers, and thought if the field insects could muster a gathering, it was fair for them to be up and doing. So a meeting was called at Pomological Hall, to protest against death's doings, and to devise ways and means to promote the longevity of the race. The notes state that the meeting was unusually full, and that the natives of the orchard were all astonished at their own strength and numbers. The chief speakers were invalids, who bore in their persons unequivocal evidence of harsh usage and neglect. A venerable gentleman, by the name of Apple, was among the first to address the chair. There was a terrible stoop in his shoulders, and a sad crook in his limbs, occasioned by the heavy burdens he had borne. His collar was perforated with holes, and little piles of saw-dust lay about him as if he were about to make a saw-dust pudding, instead of a speech.

"You see, gentlemen," said he, "that if this convention had been held a little later, I should not have been here to attend it. This is my last speech, as it happens to be my first. I speak from the horrors of the grave, and trust, therefore, that my words will be heeded. You see in me the marks of premature age, that I am honey-combed by the borer, and am soon to go the way of all trees. I might have continued my useful labors for generations to come, had I not been over-tasked with burdens, and had my friends seasonably guarded me against my enemies. But not a finger did they lift to rout the caterpillars from their nests, or to save me from the ravages of the canker-worm. Year after year violence was done to my taste in dress, and instead of the beautiful green I most delighted in, I was forced to put on russet and dingy brown in mid-summer. The borers seized me by the collar and plied me with their instruments of death, and not a soul of the bipeds that thrived on the fruits of my toil thought it worth while to knock out their teeth. I cannot stand it much longer. I move you sir, that we appoint a committee to draw up a remonstrance, in view of our common grievances. A short-legged gentleman next arose, and was introduced to the audience as Mr. Pear. Some called him a dwarf, but he did not relish the name, and always feigned youthfulness to account for the lack of length in his perpendiculars. His coat was a pepper-and-salt hue, and some called him a scaly fellow.

"I rise," said he, "to second the motion of my friend, Mr. Apple, and I do it all the more cheerfully, because I have certain grievances of my own that call for relief. It is enough to bring blight and mildew upon my body, that has the susceptible soul of a pear within him, to be treated as I am. Because I happen to be a modest gentleman, and am willing to take lodgings with my country friend Mr. Quince, I am treated as a person of small consequence, and am jammed into quarters close enough to breed distempers of all kinds. Instead of the great ado men make about the blight, the only wonder is that the race was not all blighted long ago. I am a wonder to myself when I remember the usage I have survived. At first I was over-fed, and dosed with stimulants, that I might grow rapidly and gratify my owner's cupidity with a large crop of fruit. My limbs had no opportunity to harden, and the first killing frost sloughed them off every winter. Then I began to bear, and that was the end of my stuffing. I can now scarce get nourishment enough to make fruit, and as to making wood, it is impossible as a new creation. I am prematurely old, mossy, hide-bound, and to top all, covered with scale-bugs, that are sapping my life. Not one of the ingrates whom I have annually feasted with my dainties, has had the manliness to touch me with potash or soda, and rout these enemies. I shall go for the motion."

Mr. Peach was on his feet in a twinkling, and said that "the grievances presented by the gentlemen that preceded him, were milk-and-water tales in comparison with the abuse which had been heaped upon him. If the age of martyrs was not already passed, he would readily pass as the John Rogers of his race, save that, to make the case parallel, the wife and all the children should have been tortured with him." Here he gave a hectic cough by way of emphasis, and which showed that he was dealing with realities. "The abuse begins in my case previous to birth. We are bred as promiscuously as the fish, and the result of this low state of morals is, that the honor of the family is impeached, and every woman among us gets jealous and dies off with the yellows. When we were young, and had vigorous constitutions, we could get along with almost any fare and do good service. Our very hardihood invoked neglect, and that treatment has become so chronic, that multitudes of us perish under the feast of the grave in my case. I am attacked above ground, and my life-blood is flowing out

through their deadly wounds. No one thinks to be after these wretches with a stick or a—" Here he was taken with a fit of coughing, and ruptured a blood vessel, which broke up the meeting.

The convention was timely, and the discussion was on home topics, as we discovered the first time we visited our own garden. There were the saw-dust piles about our apples and quinces. We took a sharp-pointed knife, and a piece of wire, and were immediately upon the track of these animal augurs, *auguring* so ill for their future usefulness. The white-livered wretches caught it for once, so that we shall have a clean conscience when the remonstrance of the convention comes to town. The pears, some of them, were covered with the white scale insects, which we soon scattered with a strong decoction of soft soap suds and a coarse brush. The peach trees we cleaned around the collar, cutting out the white worms that clustered under the oozing gum, and treating the wounds with a good covering of wood ashes. We saw, in a very short examination, that the speakers at the convention were manifestly dealing in home truths in their remarks. Possibly some of our readers may find their own gardens an illustration of the same truthfulness. At all events, it will be perfectly safe to examine your trees without delay—do not let them die of neglect.—*Am. Agriculturist.*

The Castor-Oil Plant.

The castor-oil plant, (*Ricinus communis*), belongs to the Natural Order Euphorbiaceae, which consists of a collection of trees, shrubs and herbaceous plants, abounding with an acrid, milky juice. The plants of this order grow in warm regions, especially in equinoctial America, and the interior of Africa, where they occur as trees or bushes or herbaceous herbs, and often present the appearance of Cactuses, from which they are at once distinguished by their milky juice.

The castor-oil plant grows spontaneously in the East and West Indies, in Africa, and the southern parts of Europe. In the temperate and more northern counties of Europe and America it is a herbaceous annual, with a primrose or mealy stem, peltate-palmate leaves, and simple unisexual flowers, the male and female being present on the same plant. The fruit consists of numerous clusters of thorny three-seeded capsules. The plant grows from three to eight feet in height, but the first frosts of autumn destroy it. In more southern latitudes, where the climate is warmer, the stem of the castor-oil plant is ligneous and it assumes a shrubby and sometimes even an arborescent growth, attaining to a height of from twenty to thirty feet.

At Ville-franche, near Nice, there were, in 1818, specimens in the open air about thirty feet high, which were the only arborescent species at that time growing in Europe. In the happy regions within the tropics, where the beams of the sun forever shine, the castor-oil plant takes its highest form of development; amongst the stately palms and arborescent ferns, it grows into a powerful and lofty tree, covering with an ample canopy of shade the browsing elephant, or the beautiful and ferocious tiger, the principal inhabitants of the woodland solitude.

The entire plant is possessed of active properties; but its medicinal virtues are chiefly contained in its seeds. These seeds, of which three are found in each capsule, are about the size of a small bean, obtuse at both ends, with a smooth, shining, marbled surface. The castor-oil is extracted from them.—*Arthur's Home Magazine.*

Trees and Flowers.

We feel the irreparable destruction of flowers more than we do the stripping of trees and shrubs, because these appeal more than they to our protection and to our fondness.

We look up to trees as superiors, in whom reside guardianship and protection. They teach us patience, endurance, and unwearied hope. We see them beaten bare by autumn storms, and perfectly content to stand bare. The moment the winter relents, they spring forth again, and all the summer long you hear them singing, but never do you hear a tree rehearse its wrongs. It forgets the past. It lives outwardly so long as it can, and then retreats within itself, patient to wait for better times. And we feel also, in the case of trees, something of the veneration which antiquity always inspires. They are old chronologers. They are older than the oldest living men. That old oak was an old oak when that crippled old man yonder was a boy, and it was an old tree in the days of his fathers. These faces that grimly hang upon our walls—the portraits of shadowy ancestors that long since have ceased to make a noise in the world—these very old faces, in generations gone by, used to look up into these fresh and hearty trees that carry themselves so youthfully, and marvel how high they were, and wonder that little birds were not afraid of falling down off from their perilously high branches. The annual changes of trees are therefore devoid of the sense of death. Leaves die. We pity them. But trees do not die. They undress. They sleep in naked majesty. What time they will, when the south wind blows its horn among the hills, they rouse themselves and put on again their robes, and go forth as at other times.

It is not so with flowers. They are like little infant children. They look up to us for protection. They have no life that lasts. When they are stricken they make no resistance. They utterly die. And it is a real pain that we do not choose to enounce, to go out after the final frost stroke, and see all the plants which we have nursed and fondled, not gone, but lying there in colors so disgraceful to their former beauty. All

these fine-edged leaves, these delicate lineations, these exquisite hues and shades of color, these matchless forms and symmetries, whatever is superlative in fineness, delicacy, variety, profusion, gorgeous richness, now lying a heap of undistinguishable decay and loathsomeness. The dank smell of decomposing vegetation drives you from your garden as from a grave-yard. The brilliant generous verbenas, the pensile and graceful fuchsias, the geraniums, the mariondians, the tufted ageratums, and the other scapes which blossom all the summer long, from which you had gathered hundreds of bunches of flowers, to cheer your parlor, to inspire your pen while writing, to furnish you silent loving company as you walked about among frigid men or barren things, they have here all gone to corruption before your eyes.—*Henry Ward Beecher.*

Experiments in Wheat Culture.

A well known English agricultural writer, Cullbert W. Johnson, in an article on the Wheat Crop, in the September number of the Farmer's Magazine, says:

Now there are one or two facts which have been produced within the last two or three years, which are well worthy of the farmer's attention—not as offering certain rules for our imitation on all soils and in every situation, but as affording valuable suggestions for new experimental courses of inquiry. It is pretty certain that the best state to which the soil should be brought for the reception of the seed-wheat, is not in all cases well determined. At the July gathering at Mr. Mechi's farm, some fine specimens of wheat ears were produced by Mr. Piper, of Colne Engaine, grown on land which had not been plowed for several years, and yet had, with the aid of top-dressings of soot and other artificial manures, produced good crops of wheat every year: here was the result from an undisturbed soil. On the other hand, we have the equally successful, yet opposite practice of Mr. Smith, of Lois Weedon, who follows for wheat every other year—still growing wheat and wheat only, year after year. His practice he briefly describes as follows: "I divide my field into lands five feet wide. In the centre of each land I drop or drill my seed in triple rows, one foot apart, thus leaving a fallow interval of three feet between each triple row. When the plant is up, I trench the intervals with the fork easily, taking my spits about three inches from the wheat; and at spring and during summer I clean them with the blades of the sharp-cutting horse-hoe, and keep them open with the tines of the sculler. Every year, in short, I trench and cultivate two and a half feet of the five for the succeeding crop, and leave the other two and a half for that which is growing. One moiety of each acre is thus in wheat, and the other moiety fallow; and the average yield of that half acre is thirty-four bushels, surpassing the average yield of a whole acre on the common plan." Why wheat should be thus grown for a series of years on the same land with success in Essex and in Northamptonshire, and in one place by constantly stirring the soil, and in the other locality by never plowing, but by merely hoeing the seed in, and hoeing it afterwards for the removal of weeds, certainly seems to be phenomena worthy of our careful study, when we are considering the state of the soil the best adapted for the growth of wheat.

Agriculture the Only Real Source of Wealth.

A warrior in the Mark-Lane Express, maintains the position that commerce and manufactures must ever be secondary to the cultivation of the soil, and that the latter is not only the most important of all the industrial pursuits of man, but also the only real source of wealth. In proof of the truth of this position he compares the nature and results of other industrial pursuits with that of the cultivation of the soil. It may tend to elevate the business of the farmer, both in his own estimate and in that of others, to consider some of the principal points and features in this comparison. For this purpose we present a brief outline of them to the American reader.

First, as to commerce. There is nothing produced by commerce, its office being merely the barter of commodities. And whether this barter takes place between one country and another, or between individuals of the same country, it is but an exchange of equivalents. Hence it is to be regarded as a mere medium for the distribution or circulation of wealth, and not as in any way contributing to its existence or production. Then as to manufactures, there is no matter produced which did not previously exist, their office being only to convert material previously existing into forms of greater utility or convenience. Mining, at first sight, may appear to have a greater claim to the production of wealth, but does not, in reality, produce anything which did not before exist, every pound of coal, iron, silver or gold, having previously existed in the bowels of the earth before being taken from them. Agriculture alone affords an increase of matter; and the surplus of over the cost of production constitutes the only increase of real wealth or capital. But however true this may be, it must be remembered that commerce by the exchange of commodities, and manufactures by giving to the matters produced by agriculture a more useful form, are greatly conducive to the aggrandizement of nations; and to the convenience and comfort of their population.

THEOLOGY IN A NUTSHELL—A very young child, whose kind and pious mother had early taught him the being and power of God, was asked, "How many Gods are there?" "One," said the little boy. "How do you know that?" inquired his sister. "Because," replied he, "there is no room for any more, for He fills every Where."

Miscellany.

(From the N. Y. Evening Post.)
BE BRAVE.

(When Hercules went to unbind Prometheus, the ancients tell us that he smiled the length of the great ocean in an earthen pitcher.)

Another man, where'er thou art,
That art suffering grief and woe,
From this fable take new heart,
Feel the lesson it doth show.
Godlike mind in body frail,
That can stem the wintry sea,
Breasting storms, with tattered sail,
Struggling with adversity—
Know that triumph over losses
Him who courage still possesses.

When the storm had pressed thee sore,
And the wrecking rocks are near,
Fearless gaze upon the shore,
Though it show but stern and drear;
Warily direct thy helm,
Grasping it with steadfast hand;
Fearful hearts slight storms o'erwhelm,
'Tis one's need to reach the land;
Keep thine eye undimmed by fear,
Thou shalt safe to harbor steer.

See'st thou on life's dreary coast,
All thy fortune wrecked and gone—
All that made thy manhood's boast
Vanished like the dews of dawn—
Friends that flocked at thy board,
Eyes that looked with love on thee—
Thank thy fate that such a horde
Fled thee with prosperity.
Now thou know'st their value well,
And the true from false can tell.

When the gods' aroused ire
Bound Prometheus to his rock,
In revenge for theft of fire
Bared him to each storm's rude shock,
And to add disgrace to pain,
That his soul might feel the smart,
Bound him with the scorpion's chain—
Set vulture grief to gnaw his heart;
All their malice proved but naught,
Resolution lived in thought.

Thus, though sorrows harass life,
Still the brave will with them cope;
Hearts and arms grow strong with strife,
And, though bound, gain wider scope.
When Anteus touched the ground,
Wrestling with the demi-god,
He arose to each rebound
Fresher from his mother's sod;
Though his fatherhood did not thrive,
Let it teach thee true to strive;
Let them thus from every fall
With renewed vigor rise,
Till at last they vanquish all
That dispute the wheel for prize.

THE ONE ACRE FARM;

A Cure for Hard Times.

BY ISIDORE HOE.

"How much land have you got here in your lot, Mr. Briggs?"

"I have one acre."

"One acre! and here you are taking the New England Farmer, the Cultivator, Hovey's Magazine, and the Horticulturist, and all because you have one acre of ground! How many such papers would you have to take if you had a hundred acres?"

"I shouldn't probably need more than I take now; you know, Mr. Chapman, one can go through with all the notions on one acre as well as on a hundred."

"A man can throw away money without any, if he has a mind to. For all the good you get from such periodicals, you might as well, probably, throw the money they cost, into the fire; they are nothing but humbugs."

"I pay two dollars for the New England Farmer, one dollar for the Cultivator, three dollars for the Horticulturist, and two dollars for Hovey's Magazine—in all eight dollars."

"Eight dollars! Enough to buy a 'tip-top' barrel of flour, and a leg of bacon; and then if you read these periodicals, there is twice the amount of the money spent, in the time of reading them."

"I do usually read or hear read, almost every word there is in them; my boys and I take turns in reading, and one reads aloud while the rest work."

"Complete nonsense! No wonder your shop don't turn out any more boots in a day, than it does!"

"Perhaps we don't do as great days' work some days, as some of our neighbors, but I guess that in the course of the year, we turn out as many, according to the number of hands at work, as most do."

"I suppose it is out of these publications you get your foolish notions about so many kinds of fruit trees. One of my boys came home a while ago, and said Mr. Briggs had got lots and lots of fruit trees, and such things, that cost, I don't know how much, and wanted me to buy some grape vines, pear trees, and so on. I told him it was all foolishness, and not to let me hear him say any thing about spending money so foolishly. You have, I dare say, laid out ten or fifteen dollars, this spring."

"Yes, nearly as much again. I have laid out twenty-five dollars for trees and garden fruits."

"Twenty-five dollars! I wonder you are not on the town, or in jail at least, before now."

"I'm not afraid of either; I'll bet you twenty-five dollars, that I will sell you that amount of fruit from those things for which I paid the twenty-five dollars, in five years."

"Dime! I'll stand you; so your trees will cost you fifty dollars sure, in money, besides the time thrown away in setting them out and taking care of them."

"As for the time spent in setting them out, or taking care of them, it is as good exercise as playing ball, wicket, or anything else. While we were setting them out, one of your boys came to get my boys to go over to Mr. Moody's, where he said was to be a great time playing ball; and I have no doubt, your boys spend just as much time playing, as mine do with our trees and so forth; and then something is done, but in placing the strength is all laid out for nothing."

"Well, it don't cost anything to play ball, but trees cost money."

The foregoing conversation occurred in the shop, between two neighbors, both boot-makers, in a town not more than thirty miles from Boston.

Mr. Briggs, in whose shop the conversation took place, was a man of more than ordinary intelligence for one of his advantages and circumstances in life. He had been a poor boy, and by industry, observation and economy, had worked his way on in life and reared and well educated a family of children, who, like himself, were industrious and steady. For the few years past, he had become interested in horticulture, and both for exercise and amusement, had turned his attention to cultivating his "one acre farm." His attention was first called to this, by means of a "back number" of the New England Farmer, which was put round some things bought at the store. Mr. Briggs found this so interesting, that he purchased another number at the periodical depot, and then he became a regular subscriber. His sons soon became interested in the same direction, and the interest of the father and sons increased to the pitch indicated in the foregoing conversation.

In time, every inch of that acre of ground was "brought under the spade," and almost every "best" variety of fruits had a place there, and the father and sons found pleasure and profit in the garden after being slotted up in the shop till the "stent" was done, and the exercise was far more profitable than the spasmodic, violent exercise taken in gauges.

Mr. Chapman, the other neighbor, was a man of the common stamp. He looked upon every thing new or uncommon, as folly and nonsense, and was ready to sneer at every one who stepped aside from the common track. It looked simply silly to him to see a man stay at home from muster, or training, or show, spend his time in cultivating a garden; or, instead of loitering away the evening at the store, smoking, and hearing or telling a deal of nothing or worse, to spend the evenings at home, reading such "nonsense" as the Farmer and Horticulturist afford.

Years pass, and Mr. Briggs' "one acre farm" shows that he and his boys have not read the papers in vain. They have learned to set out a tree, and how to take care of it after it was set out. Every thing showed it received the right kind of food and care, and straightway began to bring forth fruits meet for good cultivation. In a short time the wants of the family were more than supplied, and the surplus found a ready market with the neighbors at good prices.

Those early apples, so rich and tempting, when all other apples were so green and hard; and then such pears; they went as fast as the sun and house could ripen them, at three, four and five cents apiece. Then such clusters of rich, ripe grapes—too tempting for the coldest to pass without a watering mouth. Mr. Chapman's family were among the best customers for the tempting fruit—first having learned their excellence by the liberality of Mr. Briggs, who never failed to send a specimen of his best to his neighbor.

The fifth season came, and it proved a very fruitful year. Apple, pear, peach, plum, and other trees, were loaded with fruit. Keeping in mind his conversation with Mr. Chapman, Mr. Briggs had directed his family to set down every cent's worth of fruit sold to Mr. Chapman or his family. This year as it happened, was a year of extreme hard times. The boot business was at its lowest ebb; little work, and very low wages—and yet the prices of every kind of provisions up to the highest notch, and money extremely tight. But there was one family that did not seem to be in the least affected by the change in the prices of labor and high rates of provisions, or scarcity of money—Mr. Briggs and his two oldest sons, had a little spare change to let on short time, to their needy neighbors.

One day Mr. Chapman, who was short, applied to Mr. Briggs for a "half" for a "quarter," meaning fifty dollars for three months.

"Yes," said Mr. Briggs, "a 'half' or a 'whole,' just as you like."

"What, a hundred dollars by you these times! How is this? You and your boys don't work any harder than I and my boys do, and we can scarcely get along; we are as saving and pinching as can be, too; times are so dreadful hard, and every thing a family has to buy, is so dreadful high, and wages so low; potatoes, a dollar a bushel, beef fifteen cents a pound, pork sixteen cents, eggs twenty-five cents a dozen, and flour ten or twelve dollars a barrel! How can a man live?"

"It won't be hardly fair for me to ask for that twenty-five dollars, now, will it?"

"Twenty-five dollars! What do you mean? I don't understand you!"

"Don't you recollect we have a bet between us about the price of some fruit trees I bought five years ago next spring?"

"Ah, I do remember something about it. You were to give me twenty-five dollars if you didn't get your twenty-five dollars back from me for the

products of those trees and things. It will come very handy just now."

"Don't be too fast neighbor. I am afraid it won't come very handy just now." That was what I was dunning you for, that twenty-five dollars."

"What! you don't pretend to say we have had twenty-five dollars worth of stuff from your garden?"

"More than that from that very twenty-five dollars worth of trees and other things. Here is an account of every thing you have bought and paid for; of course it don't include what I have sent you gratis."

"And you certainly have not been stingy. Why, this bill amounts to thirty-seven dollars! It is not possible!"

"It is just so; you have had over twenty bushels of apples, and three bushels of pears, and these alone come to twenty-five dollars."

"I own up the 'corn,' draw the note for seventy-five dollars."

"No, I guess we will let that twenty-five go. I only mention it to show you that there may be good sense in new things, sometimes. Now I'll let the twenty-five dollars over again, that my store bill has not been, the past season, half as large as yours, though I have had one the more in my family."

"If I had not been so badly taken in before, I could stand you; but I guess it won't be safe."

"We have raised our own potatoes, corn, peas, beans, and all other garden vegetables. Our eggs are always fresh and in abundance from the nest, and for more than two years we have not been without ripe fresh fruit."

"How can that be?"

"Well, by the first of June, we have strawberries ripe, soon after, cherries; then raspberries, currants, gooseberries, and so forth; and long before these are gone, the early apples, pears and peaches; then grapes, later pears and apples; and these continue all winter, and apples until July, when the early fruits again connect the luscious circle."

"Well, I declare, that is something I never thought of; but it takes so much time and bother to get these things started—then it is an everlasting job to take care of them."

"It needs no more time and money than you throw away on things that amount to nothing at all, and with abundance of fruit, you save the expense of a heavy winter bill, which diet is not at all healthy in hot weather. No doctor has been called to step foot into my door for over four years past. Fresh, ripe fruits, are sure remedies for all ailments, and they are not hard to take."

Mr. Chapman put the fifty into his "worn-out skin," and left with "a flea in his ear."—N. E. Farmer.

Ladies' Department.

The Love of Woman.

MAN is the creature of interest and ambition. His nature leads him forth into the struggle and bustle of the world. Love is but the embellishment of his early life, or a song piped in the intervals of the acts. He seeks for fame, for fortune, for space in the world's thought, and dominion over his fellow-men. But a woman's whole life is a history of the affections. The heart is her world; it is there her ambition strives for empire—it is there her avarice strives for hidden treasures. She sends forth her sympathies on adventure; she embarks her whole soul in the traffic of affection; and, if shipwrecked, her case is hopeless—for it is a bankruptcy of the heart. To a man the disappointment of love may occasion some bitter pangs; it wounds some feelings of tenderness—it blasts some prospects of felicity; but he is an active being; he may dissipate his thoughts in the whirl of varied occupation, or he may plunge into the tide of pleasure; or, if the scene of disappointment be too full of painful associations, he can shift his abode at will, and, taking as it were, the wings of the morning, can fly to the uttermost parts of the earth, and be at rest. But a woman's is comparatively a fixed, secluded, and a meditative life. She is more the companion of her own thoughts and feelings; and if they are turned to ministers of sorrow, where shall she look for consolation? Her lot is to be wooed and won; and, if unhappy in her love, her heart is like some fortress that has been captured, sacked, and abandoned, and left desolate. How many bright eyes grow dim—how many lovely forms fade away into the tomb, and none can tell the cause that blighted their loveliness.

As the dove will clasp its wings to its side, and cover and conceal the arrow that is preying on its vitals, so is it the nature of woman to hide from the world the pangs of wounded affection. The love of a delicate female is always shy and silent. Even when fortunate, she scarcely breathes it to herself; but when otherwise, she buries it in the recesses of her bosom, and there lets it cower and brood among the ruins of her peace. With her if the desire of her heart has failed, the great charm of her existence is at an end. She neglects all the cheerful exercises which gladden the spirits, quicken the pulses, and send the tide of life in healthful currents through the veins. Her rest is broken, the sweet refreshment of sleep is poisoned by melancholy dreams; "dry sorrow drinks her blood," until her emaciated frame sinks under the slightest external injury. Look for her, after a little while, and you find friendship weeping over her untimely grave, and wondering that one who but lately glowed with all the radiance of health and beauty, should so speedily be brought down to "darkness and the worm." You will be told of some wintry chill, some casual indisposition, that laid her low; but no one knows the

mental malady that had previously sapped her strength, and made her so easy a prey to the spoiler. She is like some tender tree, the pride and beauty of the grove; graceful in its form, bright in its foliage, but with a worm preying at its heart. We find it suddenly withering, when it should be most fresh and luxuriant. We see it drooping its branches to the earth, and shielding leaf by leaf; until wasted and perished away, it falls even in the stillness of the forest; and as we muse over the beautiful ruin, we strive in vain to recollect the blast or thunderbolt that could have smitten it with decay.—Washington Irving.

The Charms of a Married Life.

It is in that chair yonder, not the one your feet lie upon, but the other beside you, closer yet, were seated a sweet-faced girl, with a pretty little foot lying out upon the hearth, a bit of lace running round the swelling throat, the hair parted to a curl over a forehead fairer than any of your dreams; and if you could reach an arm round that chair back, without fear of giving offense, and suffer your fingers to play idly with those curls that escape down the neck, and if you could clasp with your other hand those little white taper fingers of hers, which lie so temptingly within reach, and so, talk softly and low in the presence of the blaze, while the hours slip without knowledge, and the winter winds whistle unheeded for; if, in short, you were no bachelor, but the husband of some such sweet image (dream call it, rather), could it not be far pleasanter than a cold, single night-sitting, counting the sticks, reckoning the length of the blaze, and the height of the falling snow?

Surely imagination could be stronger and purer, if it could have the playful fancies of dancing commonwealth to delight it. All toil would be torn from mind-labor, if but another heart grew into this present soul, quickening it, warming it, cheering it, bidding it ever God-speed.

Her face would make a halo, rich as a rainbow, a-top of all such noisome things as we lonely souls call trouble. Her smiles would illuminate the blackest of crowded cares, and darkness that now seems you despondent in your solitary chair, for days together, evening bitter fancies, dreaming bitter dreams, would grow light and thin, and spread and float away, chased by that devoted smile.

Your friend, poor fellow! dies—never mind; that gentle clasp of her fingers, as she steals behind you, telling you not to weep—it is worth ten friends!

Your sister, sweet one, is dead—buried. The worms are busy with all their fairness. How it makes you think earth nothing but a spot to dig graves upon!

It is more; she says she will be a sister; and the waving curls, as she leans upon your shoulder, touch your cheek, and your wet eyes turn to meet those other eyes—God has sent his angel, surely!

Your mother, alas, she too is gone! Is there any bitterness to a youth, alone and homeless, like this?

But you are not homeless; you are not alone; she is there; her tears softening yours, her smile lighting yours, her grief killing yours; and you live again to assuage that kind sorrow of hers.

Then, these children, rosy, fair-haired; no, they do not disturb you with prattle now—they are yours. Toss away there, on the green sward; never mind the hyacinth, the snow-drops, or the violets, if so be any are there; the perfume of their healthful lips is worth all the flowers of the world. No need now to gather wild bouquets to love and cherish; lovelier, true, are all dead things; things livelier bodd your soul.

And she, the mother, sweetest and fairest of all, watching, tending, caressing, loving, till your own heart grows pained with tenderest jealousy; and curses itself with loving.

You have no need now of a cold lecture to teach thankfulness; your heart is full of it. No need now, as once, of bursting blossoms of trees taking leaf, and greenness, to turn thought kindly and cheerfully; forever beside you there is bloom, and ever beside you there is fruit for which eye, heart, and soul are full of unknown, unspoken—because unspoken—thank-offerings.—The Marvel.

PRUSSIAN MAXIMS.

GOOD AND EVIL.

Good gentlemen goodly from evil, evils grow

An wheat seeds, wheat; and barley, barley show.

A GOOD WIFE.

A modest, chaste, and an obedient wife

Is a bar upon husband in a kingly throne;

What though the live long day with tolls be rife,

The solace of his eyes at night is his own.

If she be virtuous, and her words be kind,

Mark not her beauty or her want of grace

The fairest woman, if deformed in mind,

Will in thy heart's affections find no place;

Dazzling as Eden's beauty to the eye,

In outward form; foul is her face within,

Better in dungeon, bound with chains, to lie,

Than bare feet in a wife of frowning mien.

Better bare feet than pinching shoes, the woe

Of travel is less hard than broils at home.

Contentment's door upon that mansion close,

Whence wrangling women's high-pitched voices come.

ROASTING YOUNG LADIES.—When you hear a young woman boasting say she never did a "stitch of work in her life," or that she cannot tell a pork steak from a squash pie, make up your mind coolly that she's a poor piece of goods, and not to be taken at any price. The sooner you get your hat and moving portions outside the door the better.

Why is a married man like a candle? Because he sometimes goes out at night when he ought not to.

FROM THE EAST.

The steamship *Uncle Sam* arrived at this port Sunday afternoon, bringing advices from New York to Jan. 12, and 500 passengers. The time made is only 33 days 6 hours from Europe, 23 days from New York, and 20 from New Orleans.

In Congress, Hon. M. S. Latham made a lengthy and elaborate speech on the Pacific Railroad bill in the House of Representatives, Jan. 9, which is commended as very able and eloquent. In the Senate, Jan. 11, the bill was referred to a special committee, and ordered printed.

The bill for a telegraph to the Pacific is before the House, reported from the committee on territories.

James Harlan, whig, has been elected U. S. Senator Iowa, to succeed Gen. A. C. Dodge.

W. H. Barras has been appointed District Attorney of Oregon Territory, and Samuel Dexter, of Maryland, Marshall of Kansas Territory.

Gardner, the Know Nothing Governor of Massachusetts, in his inaugural message, made a full enunciation of the principles of the party which elected him.

The steamer *Ben Franklin* was fired into by the commander of the fort at St. Thomas on the 21st Dec. She had been chartered by the British Mail Steamship Company to convey mails and passengers to Barbadoes. The outrage called forth a firm protest from the American Consul Major Helm, to Gov. Berg.

Late accounts from Mexico state that a large trade is being carried on in mother of pearl shell, at La Paz, Lower California. A Hamburg bark had left with a full cargo.

Anson P. Morrill was on the 5th Jan. elected Governor of Maine by the Legislature. He received the unanimous vote of the Senate.

FROM EUROPE.

No change has taken place at Sebastopol. Reinforcements, amounting in all to 18,000 men, had been received by the allies by December 18, and 5,000 Turks had landed at Eupatoria. The French had mounted their batteries on the third parallel. On the night of the 6th, the Russians evacuated the redoubts at Bataklava, carrying with them eighty-five pieces of artillery. By the 15th the damage done by the rain to the allies' works had been repaired. It is said that the Russians have removed part of their artillery to the ships, twenty-two of which are equipped for sea. Sorties took place frequently, but the Russians were generally repulsed. Gen. Menschikoff was sick, and the command had devolved on Osten Sacken. The Czar's sons have returned to St. Petersburg.

The Czar is concentrating troops round Moscow and on the Austrian frontier—looking, it is said, to the possibility of a decided rupture with Austria.

A high diplomatic conference was to be held on the 28th of December, at Lord Westmoreland's office in Vienna. The ambassadors of England, France, Austria, Prussia and Russia (Prince Gortschakoff) were to take part in the discussion. The conference is to be "of a positive character."

The Cunard steamer *Arcturion* sailed from Marseilles on the 21st Dec., with 1,640 men of the 18th French regiment of the line, for the Crimea. The *Arcturion* attracted much attention at Marseilles.

The event of the week is the speech of the Emperor of France, which makes no allusion to any prospect of peace, and is followed up by a loan of five hundred millions of francs. There has been an important diplomatic conference at Vienna. The Prussian mission to England proves to have been of no importance. The bill for the enlistment of foreigners into the British service has passed into law. Parliament has adjourned.

The very latest dates from the Crimea (Dec. 20,) state that it is confidently asserted that the resolution has been adopted to storm Sebastopol as soon as the Turkish reinforcements come up. The French, it is said, are to storm, while the British and Turks attack Menschikoff.

The late report of the Grand Jury states that San Francisco contains 60,000 persons, and property to the amount of \$60,000,000; equal to \$1,000 to every man, woman, and child.

SAN FRANCISCO MARINE LIST.

ARRIVALS.

JAN. 31—Horn bark *Herman*, Hamburg, 150 days; via Valparaiso 44 days; with mail.
Br bark *Macdonald*, Patia, Rio Janeiro, 124 days; with mail.
Br bark *Herman*, Bessede, Bordeaux, 165 days; with mail.
Schr *Albatross*, Dunbar, Port Querton, 16 days; with mail.
FEB. 1—Steamship *Columbia*, Dall, Oregon, 60 hrs; with mail.
Clipper *sch Wauderer*, Virgin, Punta Arenas, 48 days; with mail and mailbag.
FEB. 5—Steamer *Uncle Sam*, Bahilwin, San Juan, 12 days; with passengers, mail, etc.
FEB. 6—Brig *J. S. Cohn*, West, Humboldt Bay, 11 days; lumber.
Schr *Albatross*, Honon, Hodge, 56 hrs; produce.
FEB. 6—Brig *Summ Ahngah*, Corao, Honolulu, 20 days; with mail, and 15 passengers.
Schr *Sun Serpent*, Feb, San Luis Obispo, rfa Monterey, 2 days; with grain.
Schr *Olivia*, Thomas, Monterey, 2 days; 900 sacks potatoes.

CLEARANCES.

JAN. 31—Steamships *John L. Stephens*, Pearson, for Panama; Golden Age, Walker, for Hawaii.
FEB. 1—Steamship *America*, Haley, for San Diego; *Chil* ship *America*, Mootons, Tulcanuao.
FEB. 2, 3, 5, and 6 no clearances.
FEB. 6—SAILED—Clipper ship *Ostorne Howes*, Kelly, Callan; *sch Wauderer*, Virgin, ports in the Pacific.

MARRIED.

On the 28th Jan., at Michigan Bar, Joseph W. Hoostain and Miss Sarah E. Jones, both from Dover, Maine.
On the 29th Jan., by Rev. E. McNeil, Elkanah Payne and Miss Matilda C. Robinson, both of Sacramento.

SPECIAL NOTICES.

Our Letters.—We would request all our correspondents to direct Letters and Papers to us at SAN FRANCISCO, ONLY. They will, with such direction, reach us immediately. Letters directed to us at Sacramento, will reach us regularly. WARREN & SON.

Nativo Pines, Oaks, &c.—Cones of the Native Pines, Acorns from our Mountain Oaks, Seed of all our Mountain Shrubs, and of every species of Valuable Tree or Shrub; for these the full price will be paid, if satisfactorily labelled, classified and arranged, at the Office of the "CALIFORNIA FARMER," Masonic Hall Building, Montgomery street.

Wanted.—All the varieties of California Clover Seed, for which the highest price will be paid at the Office of the "CALIFORNIA FARMER," Masonic Hall Building, Montgomery street.

Our New Office.—We have our friends to our new office in the "Masonic Hall," on Montgomery street, opposite Le Count & Strongs. We can show them many wonderful specimens, such as are rarely seen, and are especially invited to call and examine the various schedule and invoices we have to offer for sale. Trees, Seeds, Plants, Grasses, Flowers, Insects, Works of Art of all kinds, these we are happy to show, and can interest our friends if they will call and see us. WARREN & SON.

"A Thing of Beauty is a Joy Forever."—Why will people endure pimples on "the human face divine," or eruptions of any kind, when it is a fact so well known, that Dr. Guyott's Yellow Dock and Sarsaparilla cleanses the skin from all impurity, removing Pimples, Sores and Blisters, leaving the affected parts as healthy, smooth and soft as the flesh of a babe. It is really priceless to all who wish the rosy beauty of childhood.

It cures all sores and poisonous wounds to discharge all infected matter, and eradicates every impurity from the system. It does its work mildly but effectually, giving conscious health and blooming health in the place of ugliness and soul-destroying disease.

SCROFULA, SYPHILIS, MERCURIAL COMPLAINTS, and a vast variety of other disfigurement and dangerous diseases are speedily and perfectly cured by the use of this medicine.

Poisonous will place be careful to ask for, and take none other but Dr. Guyott's Improved Extract of Yellow Dock and Sarsaparilla. All others in comparison are worthless. For sale at all the principal Drug Stores to the State. Pink & White, Sole Agents, to whom all orders must be addressed. Office No. 94 Merchant street, 3d floor above Montgomery. 13

Valuable Newspaper Routes. We have several very valuable Newspaper Routes for sale. Enquire at the office of CALIFORNIA FARMER, Masonic Hall Building, Montgomery street.

MISCELLANEOUS.

Ingham's Improved Small Machines. THESE Machines combine all the apparatus necessary to cleanse Grain, rendering it unnecessary to have any other machinery for that purpose in the mill. They are portable and occupy about four feet square on the floor, by eight and a half feet in height; and will clean the worst samples of Smutty Grain, also remove short straw, white caps, and other foreign matter in the most perfect manner. All of the offal and husks are collected in a reservoir, while the grain and light chaff are passed out of the mill, allowing the machine to be put on the same floor with the flour chests or wherever most convenient, without being enclosed. It is a California machine, and is adapted to meet the wants of this country; and eastern machines having been found to be inadequate to that purpose. It has received the highest recommendation from all who have used it, among whom are Pettit & Holzkeins, Brighton Mills, Sacramento; Brooks & Hill, Happy Valley Mills, San Francisco; Wm. Sharp, American Mills, San Francisco; B. H. & H. H. Sierra Nevada Mills, San Francisco; H. S. Hill, Washington Mills, San Francisco.

Those building Mills can save expense and room by using this machine, as they will avoid all the machinery ordinarily used for that purpose.

Orders filled on short notice. SHOW on L street, between Front and Second, Sacramento. H. B. INGHAM.

N. B.—All information given, and orders left at WARREN & SON, San Francisco, will be attended to.

The following certificate is among the number received: others can be referred to in quantities:

This is to certify that I have one of H. B. Ingham's Improved Small Machines, and believe it to be superior to any other. I need no other fixture for cleaning grain, except the machine itself; it makes no dirt in the mill; occupies but little room; requires less power, and does the work more perfectly than any other I have ever seen or used before.

WM. SHARP, Agent American Mills, Pine street, San Francisco. v3-5

To Farmers and Gardeners. WICKERSHAM'S Celebrated Patent Wrought Iron Farm Fence.

FOR sale—Wickersham's patented Wrought Iron Fence, for enclosing and subdividing lands. It is superior to any fence in use, and does not require a heavy masonry wall to keep it in repair; it cannot be destroyed by the fires which so constantly sweep over prairie and mountain, requiring no constant renewal, nor carried away by flood from the overflow of the low lands; it is free from decay, which places it beyond comparison with wood or any other material now in use; it is valued the most highly where it has been tried the most thoroughly; it is light and graceful, yet strong, and cannot be broken down by horses or cattle. The testimony which has been given by those who have used it in the Atlantic States, is sufficient to recommend it to the farming public of California.

A complete model is now an exhibition at the State Agricultural Fair, at Musical Hall, Bush street, near Montgomery, where a full description may be seen, with the testimony of those who have erected it in the Atlantic States.

Farmers are invited to examine this fence, as there has never been any of the same kind in this country previous to the arrival of this lot, and from its peculiar construction there is not the least doubt but that it will be extensively used in this State. J. T. Heston has now on hand, and will be constantly receiving supplies from the manufacturer, which will enable him to fill orders to almost any amount.

For particulars address J. T. HESTON, At Warren's Agricultural Rooms; Or, P. COGGINS, cor. Sacramento and Pine streets. October 8, 1855. 15

Artisan With Holding. We would respectfully inform the public that we are fully prepared to take contracts in the above operations in a manner to guarantee satisfaction or no charge will be made.

SMITH & VAN DYKE having associated themselves with an old and experienced operator from the East, who challenges the world to compete with him in all the branches connected with the above business, are fully prepared to guarantee success in all contracts that we may undertake, and warrant the work for one year. We have also implements for boring through stone to any depth, and all work done on the most reasonable terms.

For the satisfaction of those wanting anything in the above line, we would refer to Thomas Fallon, San Jose; Rufus S. Eells, of Haworth & Eells; M. A. Sullivan, New Custom House; Wright & Co., 137 Jackson street, &c., &c.

We can do work cheaper than any other operators, for two reasons:

1st. Because we are prepared to work on a most extensive scale.

2d. Because we understand all branches connected with the above business, and are, therefore, able to work with certainty. All orders left at the Wm. Chees House will be promptly attended to.

SMITH & VAN DYKE, Contractors.

N. B.—We also refer to Warren & Son, publishers of the "California Farmer," who have seen and known the character of the work done.

Southwick & Co's Grand Raffle!

\$48,540!!

FIRST GRAND PRIZE \$30,000!!!

THE Proprietors of the above Raffle, having sold a sufficient number of their Tickets to justify them in fixing the "Day of Drawing" for Saturday, 10th day of March next, have much pleasure in informing their friends and the public generally, that the drawing will be by wheel, in which the numbers of every Ticket which has been issued will be posted, and the first twenty drawing numbers will be drawn, the fortunate holders of which will receive the Prizes immediately after the drawing, or they will be held in trust for those who are absent, by a Committee of Ticket Holders, elected by those present at the drawing, and who will superintend the same and fully represent all Ticket holders who may not be able to attend the drawing.

Tickets Sold and Valid for day and night up to the hour of drawing, at the principal office in Sacramento, or can be secured by application to the various Agents in all parts of the Northern and Southern States, San Francisco, &c.

Remember!—Saturday, 10th day of March next. Secure your Tickets without delay.

FLOURING MILLS.

HENRY POLLEY, D. S. NICHOLS, BETH H. GARFIELD,

POLLEY & CO.,

BAY STATE MILLS,

N street, between Front and Second.

BAY STATE LOWER MILLS,

Corner of Front and K streets, Sacramento. MANUFACTURE the celebrated Brand of Flour known as the "Bay State Lower Mills," which can always be found at our store, No. 21 K street. Also, fresh ground Buckwheat and Graham Flour, fresh ground Corn Meal, Middlings, Bran, and ground Barley, &c., which is disposed at the lowest prices. Barley, Wheat and Corn Ground to Order. v3-1

Happy Valley Flour Mills,

Corner of First and Mellus streets, San Francisco.

Encourage Home Industry and Home Production.

THE attention of dealers and consumers of Flour is respectfully invited to the Superior Article manufactured at the above establishment, from California Wheat of the growth of 1854, selected and prepared with the greatest care. These Mills have been in successful operation for nearly two years, during which time the proprietors have received such satisfactory assurances from those who have tried the quality of their Flour, that they can confidently recommend it as being fully equal to any brand in the market. Among the many evidences of the superior excellence of the Flour manufactured by them, the proprietors would direct attention to the substantial compliments received at the two last Annual Meetings of the State Agricultural Society, premiums have been awarded at both Fairs for the superior specimens of Flour from these Mills.

Domestic Flour.—A superior article for family use, manufactured from selected Wheat—a constant supply always on hand at the Mill, or at the Depot of the Proprietors, 35 Sacramento street.

A liberal allowance made to the trade. J. N. BROOKS, } Proprietors. F. C. HALL, }

Wheat Purchased or Ground on the most favorable terms. 19

Flour! Wheat! Barley!!!

THE SAN JOAQUIN FLOUR MILLS, STOCKTON—Are now completed and ready to grind Wheat and Barley in any quantities. The above Mills are not surpassed by any in the Atlantic States, having all the modern improvements for the manufacture of the finest Family Flour, and are capable of turning out 250 barrels per day.

A large fire-proof Warehouse for the storage of Grain, is attached to the Mill.

Particular attention is called to the fact of Stockton being the depot for the supply of the Southern Mines, and therefore offers superior inducements to wheat growers to ship their grain direct to Stockton, for milling.

Liberal advances made on consignments of Wheat. For particulars as to terms, &c., apply at the MILLS—or to Messrs. PAIGE & WEBSTER, Union Block, corner of Battery and Union streets, San Francisco.

Varieties.

A DOLLAR OR TWO.

With cautious step, we tread our way through
This intricate world as other folks do,
May we still on our journey be able to view
The benevolent face of a dollar or two;
For an excellent thing
Is a dollar or two,
No friend is so true
As a dollar or two;
Through country or town,
As we pass up and down,
No prospect so good
As a dollar or two!

Would you read yourself out the bachelor crew
And the hand of a pretty young female sue,
You must always be ready the handsome to do,
Although it will cost you a dollar or two.
Love's arrows are tipped
With a dollar or two,
And affections are gained
With a dollar or two;
The best aid you can meet
In advancing your suit,
Is a dollar or two!

Would wish your existence with faith to imbue,
And enroll in the ranks of the sanctified few;
To enjoy a good name; a well cushioned pew,
You must freely down with a dollar or two.
The gospel is preached
For a dollar or two;
And salvation is reached
By a dollar or two;
You may sin sometimes,
But the worst of all crimes
Is, to find yourself short
Of a dollar or two.

CELEBRATED ENGLISH OAKS.—An English publication gives the following accounts of the most celebrated oaks in England: The oldest oak in England is supposed to be the Parliament Oak (from the tradition of Edward I. holding a parliament under its branches) in Climpstone Park, belonging to the Duke of Portland, the park being also the most ancient in the island; it was a park before the Conquest, and was seized as such by the conqueror. The tree is supposed to be 1500 years old. The tallest oak in England was believed to be the property of the same nobleman; it was called the "Duke's Walking Stick," was higher than Westminster Abbey, and stood till of late years. The largest oak in this country is called the Calthrop Oak, Yorkshire; it measured seventy-eight feet in circumference where the trunk meets the ground. The "Three Shire Oak," at Worksop, is so called from its covering part of the counties of York, Nottingham and Derby. It had the greatest expanse of any recorded in this island, dropping over 767 square yards. The most productive oak was that of Gelous, in Monmouthshire, felled in 1810. Its bark brought £200, and its timber £670. In the mansion of Tredegar Park, Monmouthshire, there is said to be a room 42 feet broad, and 227 feet long, the floor and wainscots of which were the production of a single oak tree, grown on the estate.

ANECDOTE OF MR. CHOATE.—At the trial of the salvage case of the bark Missouri, at Boston, the case in which a part of the cargo was embezzled by the masters of the two vessels on the Coast of Sumatra, one of the masters was examined as a witness, and disclosed the plan of embezzlement, and stated the inducements that were offered to him by the other master. He said that he objected at first, and told his comrade they would be found out and convicted, but was overborne with the assurances given him. Mr. Choate cross-examined him strictly and particularly as to what the inducements and assurances were. The witness had the appearance of holding back a little, but at last he said: "Well, sir, he told me that if we were found out, he could get Mr. Choate to defend us, and he would get us off if we were caught with the money in our boots." It was not five minutes nor ten minutes that it required to bring the audience back to a sober countenance. The counsel on the other side paid a tribute, in his closing argument, to the genius of Mr. Choate, the fame of which, extending to the antipodes, was relied upon as stronger than the law and the evidence.

In 1817 Lady Franklin produced and published a poem from which the following is extracted. It is said that this poem brought about her acquaintance and final marriage with Sir John. There appears a strange agreement between his ultimate sad fate and the ideas expressed in the production:

"Oh has their eight
Been strained o'er growing realms of dreary white,
While each clear iceberg floating o'er the main,
Seemed a white sail and waxed hope again;
Till fabled outcasts both of heaven and man,
E'en to their hearts the piercing coldness ran;
O'er blasted fields they rolled their suffering eyes,
And sank the victims of the un pitying skies."

It was Napoleon who said, "Strange as it may appear, when I want any good head work done, I choose a man, provided his education has been suitable with a long nose. His breathing is bold and free, and his brain, as well as his lungs and heart, cool and free. In my observations of men, I have almost invariably found a long nose and head go together."

JUST LIKE HIM.—The man "who is too poor to take a paper," has bought a slabsided dog, an old shot gun, and a twenty shilling gold watch. He educated his children in the street, and boards his Shanghai in his neighbors.

HORTICULTURAL, &c.

Smith's Pomological Gardens,
Banks of the American River, two and a half miles from Sacramento city.
THE proprietor of the Gardens would respectfully invite all who are engaged in "Nursery and Gardening" to visit his grounds. He will be happy to show to them, ready for sale, this fall, as fine a collection of
Fruit Trees, Ornamental Trees, Grape Vines, Shrubs,
Flowering Plants, and Green House Plants,
as can be found in all the great Sacramento Valley.
The proprietor would call particular attention to his collection of Peaches, believing that the specimens exhibited by him in Sacramento and San Francisco markets have been unsurpassed in size, quality, or flavor.
The collections of Pear Trees will equal any in the country; these, with all the new varieties, will be offered this autumn.
The undersigned believes his collection worthy a visit to his grounds of all who are interested in Gardening and Orcharding.
The subscriber will offer this autumn Five Tons Vegetable Garden Seeds, that have been raised upon his own grounds. These seeds have been grown with care and will be sold at wholesale for the present, at the Gardens.
Persons in want are invited to call upon us, and we will make reasonable terms.
Fruits, Bouquets, &c., will always be furnished at short notice at the Gardens.
The proprietor returns his thanks for the liberal patronage of the past, and hopes for a continuance of such favors.
A. P. SMITH, Proprietor.

Golden Gate Nursery,
Corner of Folsom and Fourth streets, San Francisco.
OFFICE—No. 170 WASHINGTON STREET.
THE attention of the public is requested to a large collection of the flowering Plants, now for sale at this Establishment, embracing the most extensive assortment in the State; among which may be found—
Camellia Japonica, in seventy varieties;
Perpetual blooming Roses, of all the classes;
Moss and climbing Roses, do do;
Fuschias, a choice collection; Heliotropes, in variety;
Rose and Lemon Geraniums;
Lemon-scented Verbenas, Flowering do, Arabidiums, Azaleas, Oleanders, Passifloras, Money-suckles, Carnations, Dahlias, Bulbous Roots, &c., &c.; and a general collection of Green-house plants and ornamental shrubbery.
Catalogues for 1855 will be ready on the 1st of December, and will be forwarded on application.
Orders for any part of the State, will be promptly attended to, on application to D. Nelson, No. 170 Washington street—or to the proprietor.
(7-3m) W. C. WALKER.

Fruit Trees! Fruit Trees!!
WE have for sale at our Nursery at the Mission San Jose—
Five Thousand large Apple Trees; two thousand of them of extra size. Many of them will bear fruit the next year.
Two Thousand Peach Trees, choice kind—large and handsome trees.
Pear Trees on the Quince as well as Pear.
Fifteen Hundred Cherry Trees from two to four feet high.
Grape, Fig, Quince, Apricot, Nectarine and Almond Trees in less quantities. All the above we guarantee in quality, and we warrant them what they should be, and will sell in prices to suit the times.
Apple Trees from\$1 00 to \$2 50
Peach, Pear, Cherry, from 1 50 to 2 50
Extra sized trees in proportion.
BEARD & LEWELLEN, Mission San Jose.
Orders with Warren & Son, corner of Montgomery and California streets, will be promptly attended to. 18 5m

New Invention!
BULKLEY'S STEAM DRY KILN.
THE undersigned takes this opportunity to offer to the citizens of California, Oregon and Washington Territory, the valuable invention hereby announced. One of the greatest wants of California and vicinity, for years, has been the means of preserving her products so as to have a continued supply during the late months. The vegetable products to an immense amount are annually lost at the approach of the rainy season, its long continuance, and the exposure that necessarily results to those products from the season; and the vast quantities that are exposed and accumulated in warehouses and elsewhere, have demanded some method of preserving these immense and valuable crops, that otherwise would be a loss to the producer and to the State. The loss of the Potato and Onion crop last year would count almost a million of money, and the loss the present year will be heavy, without preservation.
The undersigned, holding the "Patent Right of the Steam Dry Kiln," offers this invention with the confident assurance that it is the very thing needed—that it is the *ne plus ultra* for this very want. It has been thoroughly tried and approved, for these products, and for Grain also. It has been tried for Lumber, to which it has been more particularly applied in the States, for there the Vegetable products do not require so much care as here. To shippers of Grain this invention removes all the difficulty in sending Grain on long voyages, and under the drying process of this valuable invention our Grain growers can now send their Grain to New York with safety.
The proprietor needs only to append the following certificates. The name of Henry L. Ellsworth, Esq., carries a weight that is convincing to intelligent men, and the other evidences should be satisfactory.
The model machine will soon be placed on exhibition at the office of Warren & Son, where all information can be had.
JOSHUA BUTTS, Proprietor of Patent.

A Diploma and Silver Medal
Was awarded to the inventor at the last New York State Agricultural Fair, held at Rochester, as a testimonial of its superior merits.

Letters from Hon. H. L. Ellsworth.
LAFAYETTE, January 7, 1853.
DEAR SIR: I congratulate you on the completion of your Dryer. I have for a long time urged the importance of extracting the moisture from grain and flour before shipment, to prevent fermentation. Your plan will obviate the difficulties hitherto experienced. There can no longer be any doubt that 18 pounds of water can be taken from a barrel of flour, and 15 pounds from a barrel of flour without affecting the taste or appearance of the same. Experiments at Lafayette show this. Nor is it a less gratifying circumstance that when the flour or meal is cooked, it reabsorbs proportionately more water, thus saving freight and the purity of the article. If the moisture is extracted, it must be obvious this meal will keep for long voyages, passing through the hottest climates. To the Navy, your improvement is invaluable. The world has become somewhat skeptical on the subject of patent rights. The simplicity and compactness of your machinery enables you to exhibit a working model, to remove in a moment any doubts as to your ability to sustain your patent and prove its utility. One feature in your plan deserves particular notice; in fact, this constitutes your main claim, viz., not drying by common steam, or by fire heated pans, as has been done hitherto, but by using heated steam. Few persons are aware of the small expansion of steam, and how easily it can be heated to a high temperature with little confinement. You will be able to raise a stream to the point of ignition, say 600 or 700 degrees, though a far less heat will answer all your purposes. I will only say that European prejudice against Indian corn is fast dying away, and we may anticipate large shipments both for man and beast. The great fertility of the West, and the reduction of freights both inland and on the ocean, justifies this anticipation. Wishing you success,
I remain, yours respectfully,
HENRY L. ELLSWORTH, late Commissioner of Patents.
To Henry G. Bulkley, Esq., Kalamazoo, Michigan.

LAFAYETTE, March 20, 1853.
DEAR SIR—I am highly pleased with your Dryer for lumber by heated steam. It seems almost incredible how soon even green lumber can be prepared for use. Twenty-four hours is all that is required. Steam has hitherto been used to advantage, but heated steam has not been applied for this purpose before your improvements. Every manufacturer of lumber would find it profitable to erect a cheap dryer on your plan. Full one-third of the weight of some kinds of lumber is removed by drying; the saving in cartage will more than repay the expenses of drying. When the difference between seasoned and unseasoned lumber is considered, no one who regards good work will regret the trifling expense of preparing the raw material.
Yours respectfully,
HENRY L. ELLSWORTH.
To H. G. Bulkley, Esq., Kalamazoo, Michigan.

HARRISBURG, Pa., July 12, 1853.
I hereby certify that I have had charge of one of W. O. Hickok's shops where the most of his wood work is done, that I put up and have used H. G. Bulkley's Patent Kiln, and heartily approve of everything W. O. Hickok has said about it, and am certain that no recommendation can be too strong in praise of said kiln.
(17) W. H. SULLENBERGER.

Money and Gold Dust received in Special Deposits, and General Deposits, received from merchants, mechanics, and others. 3 ADAMS & CO.

The Pacific Loan and Security Bank.
MONEY will be received on deposit in sums of Ten Dollars and upwards, for which Certificates of Deposit will be issued, bearing date the first or fifteenth of the month, payable on demand, or at specified times, at the option of the depositors. If payable on demand, they will be without interest, unless the money remain on deposit one month, in which case they will draw interest of one per cent. per month, but no interest for fractional parts of a month. If deposited for specified times, certificates will be issued bearing one and a half per cent. per month interest for such time. Interest will cease at maturity; so that if depositors desire to continue their deposits after their certificates fall due, they must be presented for payment and renewal; otherwise interest ceases.
The money deposited is used only in loans guaranteed by us and in all cases amply secured by Mortgages, State, County and City Stocks, Merchandise, and other safe collateral, taken in the name of "MARRIOTT & WHEELER, Trustees for Depositors with Pacific Loan and Security Bank."
A register is kept at all times open to depositors for inspection, in which appear their names, the number of certificates of deposit issued, and the securities upon which the money deposited has been placed. Depositors thus not only have the personal security offered by all banks, but in addition have the benefit of the securities taken and guaranteed by us, and the facility of knowing what disposition has been made of their deposit.
FREDERICK MARRIOTT,
ALFRED WHEELER.
No. 98 Merchant street, San Francisco. 19

SOLIDIFIED MILK.
MANUFACTURED BY
SAMUEL T. BLATCHFORD.
FOR SALE BY
BINGHAM & REYNOLDS,
201 Sansome street.

THE PRESERVED MILK is made from PURE FRESH MILK, combined with crushed sugar, and when reduced to liquid, as stated in the directions, can be used for all purposes for which Milk is used, as it is simply Pure Milk and Sugar. The Tablets weigh one pound and are equal to five pints of pure milk. The proprietor recommends with confidence the article to all persons going to sea, its properties of self-preservation having been fully tested during the last eighteen months. To the WHALING interests its value is inestimable, and to travelers by land or sea, (especially when accompanied by young children) it recommends itself by its portableness and the facility with which it may be used.

The proprietor would call the attention of the public to the following certificates:

New York, April 4, 1851.
Mr. S. T. Blatchford—
DEAR SIR: In answer to your inquiries relative to the preparation of Solidified or Preserved Milk, having used it on my last voyage to San Francisco, I can with the utmost confidence recommend it to sea-faring men as being the best article of the kind I have ever seen or used, retaining, as it does, the taste and flavor of fresh milk.
Yours, &c.,
O. R. MUMFORD,
Master of Clipper Ship "Tornado."

Extract from a letter from a Californian, }
Dated May 31, 1854. }
"In regard to the Solidified Milk which you entrusted to me for the purpose of testing the merit of the preparation, I can with confidence say that it has proved entirely satisfactory. I have a portion of it yet remaining in as good condition as when you gave it to me, and it will, I have no doubt, keep for years. The preparation will be a great luxury to the sailor, as it will enable him to enjoy an article of food that has hitherto been supposed could only be had on shore.
Very respectfully, yours, &c. EARL BARTLETT."

Extract of a letter from Rev. M. Williams, }
Dated Valparaiso, Aug. 9, 1853. }
"But the Tablets of Milk prepared by S. T. Blatchford & Co. were the climax of comfort. I would say, let no one go to sea without them. I have a few now left in my room as perfect as when first made."
April, 1853. 7

Mr. Samuel T. Blatchford—
DEAR SIR: Some twelve months since I heard of your preparation of Milk and procured a sample, a portion of which I tried at the time and found it good. When preparing for sea last December, I tried the balance, which proving equally as good as months before, I procured several pounds, and during the voyage to and from Europe, have had the milk on the table every day, and have found it excellent.
I have used several preparations of milk, and have no hesitation in pronouncing yours the best. I consider it just the thing. In future voyages I shall endeavor to have a supply of it.
Yours, very respectfully,
RICH S. CORNING,
Master of Clipper Ship "Rapid."

Boston Clipper Steel Plow,
Manufactured by Ruggles, Nourse & Mason.
THIS splendid Plow is made after the style and form of the famous Eagle Plow, so universally known. This form of Plow in all its parts has been considered the most perfect yet invented, having taken premiums in every State in the Union; also at the World's Fair.
The present Plow has been manufactured by Messrs. Ruggles, Nourse & Mason, with great care, and in the most finished style, of the very best steel, and may now be considered the highest finish and most complete Plow; and the undersigned with the cultivators of California to read and examine the same at their place of business.

San Francisco ahead of the World!

Ever on, on pace with the Age and Times!

Hurrah for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE's who wishes PERFECT LIKENESSES? Because he has now the best arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.
2d. Because he has the largest light in the world, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.
3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.
4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.
5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.
All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.
Prices as reasonable, and work superior to any in the city.
Don't forget the place.
New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. 17

ADAMS & CO'S

CALIFORNIA AND ATLANTIC EXPRESS.
OUR Atlantic States Express will leave San Francisco on the 1st and 15th of each month, by the Pacific Mail Steamship Company's Steamers, and the Treasure crosses the Isthmus under the charge of a strong guard. The Treasure forwarded by us to the Philadelphia Mint, is always deposited there previous to that sent by any other conveyance. Our rates are lower than those offered by any other House, with the same security.
We also forward Treasure on the 1st and 15th of every month to ENGLAND, by the P. M. S. Co.'s steamers to Panama, and from Panama by the West India Mail steamers.
We draw Bills of Exchange on any of our Houses in the following places:

Boston, New York, Philadelphia,
Baltimore, Washington, St. Louis,
Cincinnati, Pittsburgh, Louisville,
New Orleans, London, &c., &c.

Also, payable at any of the following Banks:
Mechanics' and Farmers' Bank Albany.
Alex. Mitchell, Fire and Marine Insurance Co. Milwaukee.
Commercial Branch Bank of State of Ohio Cleveland.
Utica City Bank Utica.
Bank of Syracuse Syracuse.
Bank of Auburn Auburn.
Bank of Attica Buffalo.
Rochester City Bk. Rochester.
Geo. Smith & Co. Chicago.
Michigan State Bk. Detroit.
Clinton Bank Columbus, O.

In the NORTHERN MINES we run Expresses, in our own name, always accompanied by faithful Messengers, to and from the following places:
San Francisco, Sacramento, Marysville,
Benicia, Grass Valley, Nevada,
Coloma, Placerville, or Mormon Island,
Georgetown, Hangtown, Salmon Falls,
Greenwood, Shasta City, Auburn, &c., &c.
And every other part of El Dorado, Placer and Shasta counties.
Through LAXTON & BAO'S YUBA EXPRESS, to and from the following places in Yuba, Sierra and Nevada counties:
Long Bar, Deer Creek Crossing, Park's Bar,
Sourd's Bar, Bridgeport, S. Yuba, French Corral,
Keenebec Bar, Sweetland's, Boston Bar,
Union Bar, Hoyat's Digging, Hunt's Ranch,
Rose's Bar, Cherokee Corral, Barton's Bar,
Foster's Bar, Hess's Crossing, N. Yuba, Wormbow's Bar,
Winslow's Bar, Slate Range, Slate Range,

NEW SUBSTITUTE FOR THE POTATO.

In the garden of the Horticultural Society at Chiswick, are growing two plants of a Chinese yam, which is expected to prove an excellent substitute for the potato. They have been obtained from the *Jardin des Plantes* at Paris, where they have been made the subject of experiments that leave no doubt that it will become a plant of real importance in cultivation. "It," says M. Decaisne, who has paid much attention to matters of this kind, "a new plant has a chance of becoming useful in rural economy, it must fulfill certain conditions, in the absence of which its cultivation cannot be profitable. In the first place, it must have been domesticated in some measure, and must suit the climate; moreover, it must in a few months go through all the stages of development, so as not to interfere with the ordinary and regular course of cropping; and, finally, its produce must have a market value in one form or another. If the plant is intended for the food of man, it is also indispensable that it shall not offend the tastes or the culinary habits of the persons among whom it is introduced. To this may be added, that almost all the old perennial plants of the kitchen garden have been abandoned in favor of annuals, wherever the latter could be found with similar properties. Thus, *lathyrus tuberosus*, *sedum telephium*, &c., have given way before potatoes, spinach, and the like. Now, the Chinese yam satisfies every one of these conditions. It has been domesticated from time immemorial, it is perfectly hardy in this climate (Paris), its roots are bulky, rich in nutritive matter, eatable when raw, easily cooked—either by boiling or roasting—and then having no other taste than that of flower (*fecule*). It is as much a ready-made bread as the potato, and it is better than the *batis* or sweet potato. Horticulturists should, therefore, provide themselves with the new arrival, and try experiments with it in the different climates and soils of France. If they bring to their task, which is of great public importance, the requisite amount of perseverance and intelligence, I have a firm belief that the potato yam (*igname batatas*) will, like its predecessor the potato, make many a fortune, and more especially alleviate the distress of the lower classes of the people." Such is M. Decaisne's account of this new food plant, which is now in actual cultivation at Chiswick; and judging from the size of the set from which one of the plants had sprung, it is evident that the tubers have all the requisites for profitable cultivation. One has been planted under glass, the other in the open air, and at present both appear to be thriving equally well. The species has been called *dioscorea batatas*, or the potato yam. It is a climbing plant, bearing considerable resemblance to our common black bryony, and when it is considered how nearly that plant is related to the yams, the probability of our new comer becoming naturalized among us, receives support. Whether, however, it realizes all that the French say of it or not, the trial of it in this country cannot prove otherwise than interesting and worthy of the society which has had the honor of introducing it. Let us hope, however, that it may indeed prove what it is professed to be, "a good substitute for the potato," and in all respects equal to that valuable esculent.—*Farmer's Mag.*

ADVANTAGE OF CUT FEED.

We copy the following from the Wool Grower, showing in the most satisfactory manner the advantage of cut over uncut hay in feeding fattening cattle, milch cows, and working oxen. In feeding work horses it is still more important that their feed be cut, for it is a barbarous custom to compel a horse, after working all day, to consume the whole night in grinding the hay which is to sustain him through another day's labor. Working oxen do not so thoroughly masticate their food before it is first swallowed, and they lay at rest while the process of rumination is going on:

It is generally admitted to be good economy to cut hay for cattle, if it is of an inferior quality, much less being wasted by the animal; and it affords an excellent opportunity of mixing meal or shorts with it, by way of seasoning, making it more palatable as well as more nutritious. But many farmers have their doubts whether it pays to cut good hay—whether much benefit is derived from the operation in the way of rendering it more easy of digestion, &c. With a view to settle the question, the Worcester county Massachusetts Agricultural Society offered two premiums of \$30 and \$26, for the best experiments on the subject, laying down the rules according to which the experiments should be conducted, which were briefly as follows:

The trial to be made with at least two animals, as near alike in condition, age, &c., as possible, the time of trial to be at least eight weeks, divided into periods of two weeks each. One animal to be fed with cut, while the other is fed with uncut hay; the feed of each to be reversed at the expiration of two weeks, and so on alternately each two weeks during the trial. If any other food except hay be given (such as roots or meal) the same quantity to be given to each, that the result in relation to cutting the hay be not affected by other food. The animals to be kept in the same stable and at the same temperature. Each animal to be weighed at the commencement of each two weeks, and at the close of the experiment. The same kind of hay (what is usually called English hay) to be used during the whole time. The time of giving food and drink to be regular, and also of milking. The time of weighing to be in the morning, and before the animal has been allowed to drink.

There were four competitors for the premiums: Messrs. Demond, Dodge, Lincoln, and Hawes. Mr. Demond's experiments were on two cows, seven years old, dried off the 10th of December, 1851. The experiment commenced January 1, 1852, and lasted eight weeks. In addition to the hay, each cow was allowed a half peck of turnips per day, or seven bushels to each cow during the experiment, which are considered equivalent to 68 pounds of hay.

Mr. Dodge's experiments were with two steers, both two years old this spring. Trial commenced 3d of January, 1852, and continued eight weeks. Each steer, in addition to the hay, was given two quarts of meal per day, which is equivalent to 293 pounds of hay for each steer during the eight weeks.

Mr. Lincoln's experiments were with two milch cows, four years old each; one calved the 14th and the other the 20th of June, 1851. Trial commenced 9th of January, 1852. In addition to the hay, each cow ate 648 pounds of carrots, equivalent to 171 pounds of hay.

Mr. Hawes' experiments were on two working oxen, seven years old each this spring. Trial commenced 15th of December, 1851, the cattle being kept pretty regularly at hard work during the eight weeks of the experiment. They were given nothing but hay.

The following exhibits the final results of the experiments:

C. B. DEMOND—Dry Cows.			
Weight of hay consumed in 8 weeks	1171	Cut.	Un-cut.
Gain in weight of animal during 8 weeks	64		56
Mean weight of animal, 952 lbs.			
HARVEY DODGE—STEERS.			
Weight of hay consumed in 8 weeks	916	Cut.	Un-cut.
Gain in weight of animal during 8 weeks	80		60
Mean weight of animal 1110 lbs.			
W. S. LINCOLN—Milch Cows.			
Weight of hay consumed in 8 weeks	1159	Cut.	Un-cut.
Gain in weight of animal during 8 weeks	130		30
Milk yielded in 8 weeks	432		417
Mean weight of animal, 900 lbs.			
A. W. HAWES—WORKING OXEN.			
Weight of hay consumed in 8 weeks	2106	Cut.	Un-cut.
Gain in weight of animal during 8 weeks	121		93
Mean weight of animal, 1567 lbs.			

It is seen that in every one of the experiments there is a greater increase of animal from the cut than from the uncut hay; the difference in the

quantity of milk is small, but in favor of the cut food. It is, in our opinion, to be regretted that the same animal was not kept on the same food during the whole length of the experiment, and not have changed their every two weeks; for in such short periods it is very doubtful if the scales will at all indicate correctly the actual gain in fat or flesh of the animal. There is no doubt, however, that the experiments were conducted with great care and accuracy, and the results are so uniform as to confirm the opinion of those who think a good economy to cut even good hay. Mr. Hawes makes the following remarks in his statement to the committee:

"A great advantage in cutting hay, at least for working stock, was very obvious during the whole of this experiment; before the ox feeding on uncut hay had gotten one-half through with his allowance, the ox fed on cut feed had eaten up all given him, and was lying down taking his rest; and this, at noon when but little time is permitted for eating and rest, must be an advantage of no small importance."

Mr. W. S. Lincoln says: "Some time before commencing this experiment I was feeding to my stock what could be called poor stock hay, and roots. I commenced cutting this hay for all my stock, young and old (16 head), occupying one hour and a half daily. Almost simultaneously with feeding the cut hay was an increase of milk, very perceptible as it was milked in the pail. From day to day the milk increased so, from the stock I have described, as to require the substitution of six-quart for four-quart pails as previously used. I think I am within bounds in saying the increase was over a pint daily per cow, occasioned, to the best of my knowledge, solely by the use of cut hay."

The first premium was given to Mr. Lincoln and the second to Mr. Hawes.

BARLEY FOR HORSES.

The following remarks on the value of Barley as food for horses, from the pen of J. Harris, agricultural editor of the Rural New Yorker, who has had an excellent opportunity of witnessing the feeding economy of farmers, both in England and in this country, contains some very valuable suggestions on this subject. There is one point, however, in relation to the value of the barley crop, which should not be omitted—its great superiority to either corn or oats in a rotation, as a predecessor of wheat. Whatever theory may say, the practice of many of our most skillful farmers gives the preference greatly to barley as compared to oats, so far as exhaustion of the land is concerned; and we all know that very good wheat crops have been obtained after corn, since the advent of the weevil has rendered it necessary to sow as early as the first of autumn, in order to throw the ripening period beyond the reach of the insect season.—*Country Gentleman.*

One of our best Western agricultural papers says: "Barley is an excellent food for horses, much better even than corn. It is decidedly cheaper." That barley is an excellent food for horses cannot be doubted. For a given weight, all things considered, it is perhaps the next best grain after oats. English farmers give their horses as much barley as oats. In fact, on the light land farms, the "work" horses seldom get a feed of oats—barley, bran, ruta lagas, &c., being used as a substitute. The barley is of course ground. It is now, however, becoming quite common there to boil the barley, instead of crushing it. It should not be boiled too long, as besides the risk of burning, the horses do not eat it so readily. An hour's boiling or until the barley begins to burst, is long enough. It should be taken from the boiler while hot and mixed with wheat chaff, cut straw, hay, &c., and the addition of a little salt makes it more palatable. We know of nothing that appears to fatten a horse quicker, or keep him in better health, than this food.

But because boiled barley is a cheaper horse food than oats in England, does it follow that it is the best and cheapest food that we can use? For the production of barley the long growing season and cool summer of the British Isles are superior to any other in the world. We can raise much better wheat than the English, but the best barley we ever saw in this country would be considered unfit for maling purposes in England, while for Indian corn this climate is all that could be desired. In this climate, therefore, we believe it is impossible for barley to compete with Indian corn in furnishing nutritious food. It is at present grown with considerable profit; but this is owing to its selling for maling purposes for much more than it is worth as food for horses—and it is worth more as food for horses than any other animals. In other words, much more nutritious matter can be obtained for a given cost from a crop of Indian corn than from a crop of barley. But it will be said that corn is not such a healthy

food for horses as oats or barley. We believe this is true, and probably owing to such a large quantity of available carbonaceous matter, such as starch, oil, sugar, &c. If this be so, a highly nitrogenous food, such as peas or oil-cake, mixed in small quantity with the corn meal, would greatly improve it. The woody fibre, or chaffy matter of the oats or barley, could be well supplied by chaff and cut straw, mixed with the corn and pea or oil-cake meal.

We feel sure, therefore, that while barley is an excellent food for horses, it is not "decidedly cheaper" than corn, and when corn is judiciously fed, as we have suggested, it may be questioned whether it is "better even."

FLAX, AND MR. MAPES.

In another number, says the Prairie Farmer, will be found a criticism upon a flax speech of Mr. Mapes, before the N. Y. Farmers' Club, by Geo. Anderson, Esq. Mr. Mapes comes to the rescue of his reputation with a denial that he is correctly reported in the article criticised, and gives the following as true statements made by him. They certainly look more sensible:

"The treatment and manufacture of flax is fast becoming of great importance to the American people, and particularly of that portion which is now wasted, from flax grown for the purpose of saving the seed. Thousands of tons of tangled flax straw are annually burned in some single counties in Ohio, and until the present time it has been nearly or quite valueless, except as a manure for land. Improvements of all kinds followed the discovery of Claisen's process, and among others, Mr. A. H. Caryl, of Ohio, has invented a machine for manufacturing the tangled straw, and many other of the now wasted products of flax and hemp manufacture, into merchantable articles, and so large is our flax crop that this machine becomes one of the most important inventions of the day. Its operation on tangled flax straw may be thus described:

"It breaks the straw, separates the fibre from the woody portion, and renders it fit for market. The machine will break about 3,000 pounds of straw per day, delivering its product in a finished shape, and requiring the attendance of two men and three horse power. The straw is worth, in Ohio, after having been rotted, \$5 to \$10 per ton. A ton will produce 500 pounds of clean flax when rotted, and if treated by the machine before being rotted, 425 pounds. The rotted flax when cleared by this machine is worth \$140 a ton, and instead of the product being in the form of tow, it is the whole body of flax. Scutched tow may be cleaned by this machine so as to render it good flax for spinning. As the flax is now spun, the difference between straw and tangled flax is but small, the tangled flax being worth, within a few cents per pound, as much as the lower qualities of straight flax. The new style of machine invented by Mr. Caryl, will straighten the tangled flax as delivered from Carey's machine in the early part of the process of spinning. The straw is fed upon an endless apron, and is passed between several pairs of fluted rollers to break the wood; thence through a pair of feed rollers, armed with coarse curbs; the teeth being hooked toward the fluted rollers to prevent the flax being thrown too rapidly into the machine by the picker.

"The picker is a cylinder four feet in diameter, having on its periphery from sixteen to thirty-two bars, three feet long. On each of these bars is a row of teeth, and between each of the bars are rods at a distance of three-quarters of an inch apart, which rods hold the flax up to the cards above, but at the same permitting the dirt to fall through them. Above this picker are cards three inches wide and three feet long, through which the flax is drawn by the picker. The flax is carried upward and over to a point opposite the feed roller, where it is met by a brush cylinder revolving downwards towards the picker, and with twice the speed of the picker. Below the point of contact between the teeth and the brush, is a tin spring which presses slightly against the face of the brush; the brush revolving downward reverses the position of the ends of the fibres, thus pulling off the flax from the teeth and passing it between itself and the tin, pressing it half round itself, where it is met by a blast of wind from a fan blowing in a direction opposite to the rotation of the brush, and by which it is stripped from its surface in a state ready for the market, and suited for immediate use in the carding mill.

"Flax-seed raised in Ohio is variously estimated, but supposed to be 400,000 bushels per annum. At Dayton alone, 250,000 bushels are received—and of all this immense amount, not more than two per cent. of the flax is ever worked or saved at all—and this has arisen entirely from the want of proper machinery by which it might

To the Readers of the California Farmer.

THE annexed communication, with the names attached, has been kindly tendered to us. We would only ask of our friends to read and judge for themselves as to the importance of the subject named therein.

We are deeply grateful for every testimonial of favor and encouragement in our labors, and for every approving word and token from every source.

TO THE FRIENDS OF Agriculture, Horticulture, and Floriculture.

"KNOWLEDGE is power," is a truth nowhere more fully illustrated than in the field of your enterprise; and on no part of that field more important than in our State. In other States and different climates, the experience of ages is condensed into books; and the son inherits the practical knowledge of his father. Their books are their general guide, and their periodicals contain the result of their continued improvements. But with us the case is different. Here we have a climate to which the instructions of no book are adapted, a soil peculiarly unlike any to the development of which science has been applied, and almost an entire want of experience in any department. Here no father has learned more than a few of the first principles of agriculture, much less has he had time to transmit even the moiety he has learned to a son. Our first generation of agriculturists is yet in its merest youth.

If no books adapted to our circumstances are yet written, and no man has sufficient experience to write one; and if the periodicals published elsewhere entirely fail to meet our wants, we are shut up to a single choice between two courses—we must, either graze our way in the dark, feeling and experimenting each for himself, for all those facts and principles which are peculiar to our soil, climate and productions, (and this will reach nearly the whole range of our operations) thus advancing by a process to slow as to be entirely unsatisfactory to every one; or we must sustain a periodical, which shall be a general reservoir for the reception and diffusion of the experience of all—an instrument whose columns shall be a constant reflector of all the light which our thousand intelligent cultivators of the soil can elicit from their "watch and soil." Which shall be our choice, cannot admit of a question.

Such a periodical we find in our midst. The CALIFORNIA FARMER, you believe capable of meeting an energy in, and devotion to, the work which is worthy of all praise, and is a sufficient guaranty for the future. Shall the FARMER deserve that countenance and encouragement it deserves? Will the growers of grain and vegetables, fruits and flowers, in this State, treat themselves to a weekly repast in the perusal of its columns, (the annual subscription price bears no comparison with the value of what you get,) and make an energetic effort to induce their neighbors to do the same? But even this will not be enough. No one man, nor company of men, from any one department of knowledge, or section of the country, can make the columns of the FARMER what they should be,—what they must be to answer their wants. It must combine the experience of every class, and represent peculiar characteristics of every part of the State. We ask, therefore, the attention of those whom we address to the furnishing of materials for the columns, as well as subscription to the "material aid" of the paper.

We say thus much because we deem it due to the present proprietors of the paper, and because we feel the deepest interest in the cause it advocates. We have no pecuniary interest in the CALIFORNIA FARMER, and yet we most heartily recommend it to the pecuniary, the statistical and the literary support of all who have at heart the real well-being of our State—the development of her agricultural resources.

Seedling Fruit Trees.

Now the question is, what are those "peculiar circumstances" under which seedlings may be relied on for uniformity, and for being the same as the parent stock? I answer that to reproduce without mixture or combination of different species or varieties, nature works by the same rule throughout the entire vegetable kingdom, that she does in the animal kingdom. No man would procure twenty different kinds of fowls, turn them promiscuously together, and then expect to breed distinct varieties; neither by purchasing all the different breeds of sheep in the country and keeping them in the same flock, could he expect the offsprings to be the pure Spanish, French, Saxon or Southdowns; and yet this would be as rational as is the common mode of testing seedling fruits. Every gardener who has even a general scientific knowledge of his business, knows that different varieties of melons planted together are unfitted for seed in consequence of their becoming mixed. Those who cultivate the ruta baga for the purpose of seed raising, if they are careful cultivators, allow no other turnips, or even the kale or cabbage to blossom on the same farm.

The truth is, that everything that has the power of reproducing, whether animal or vegetable, produces its own kind and no other; and each has its peculiar mode of mixing. Thus, fruits become mixed by means of pollen or dust of the blossoms, which is carried from one to another by winds, or birds, or bees, and other insects, and in consequence they often combine all the varieties in an orchard, almost of an entire neighborhood. Therefore, he who would raise seedling fruits with a view to ascertain whether each produces its kind, unless he has in some way excluded the parent tree from the influence of all other trees, has not yet commenced his experiment.

Further illustrations might be given, but I have made this article much longer than I intended. I have been for some time a subscriber to the Farmer, and a constant reader of its pages, but this is the first time I ever attempted to write for it. If what I have here said should be thought worthy of its columns, I may, as I have leisure, take up in my plain style, some other matters connected with agriculture.—*Comopolite in the Michigan Farmer.*

Making Hot-Beds.

HOLMES' Southern Farmer gives the following directions for forming a hot-bed. After describing a frame for market gardeners, he proceeds:

But should you wish a smaller frame, a good strong box of the size required, having the top and bottom knocked out, and the sides made sloping to the front, which should be cut down to half the height of the back, so as to allow the rains to run off easily from the ends, which may be a common window sash that will exactly fit the top of the box, and that is well putted, and can keep out the rain.

How to make a Hot-bed.—Having placed your frame where the bed is to stand, fronting it to the south or south-west, take a pointed stick and mark the ground all round the inside of the frame; then remove the frame and dig out this space about eighteen inches deep; this done, replace the frame, which will rest immediately on the edge of the pit. Then procure some stable manure, which ought to be fresh from the stable, and place it near (in a heap) where you are making the bed, *shake every fork-full well to pieces*, mixing the long with the short. And now begin to make the bed, taking the low and the short together, mix them well; and in such a way as to suffer no lumps, putting it in the bottom of the pit; let the bed rise in all parts together, as nearly as possible; that is to say, do not put too much in one part at one time. Beat the whole down with the fork, as you proceed. When you have shaken on dung to the thickness of four or five inches, beat all over again well, and so on till the manure is about nine inches from the top of the front of the box; now see that it is quite level and put on the glass. The heat will begin to rise by the next morning, and by noon of the second day it will be ready to receive the earth.

The earth should be dry; not like dust, but not too wet, and should be rich and fresh, and the bed should be filled up about six inches deep with it; put on the sash or sashes, and let them remain on twenty-four hours, then take them off and stir the earth well with your hands; for hands are the only tools hereafter to be used in the hot-bed.

The earth is to be level, not sloping like the glass. The glass is sloping to meet the sun and turn off the wet. The earth which was taken out of the pit should be heaped up round the outside of the frame, so that no water may lie near it; and now your bed is ready for the seed.

Sowing Seed in the Hot-bed.—Take off the sashes or lights, and make little drills with your finger from the back of the bed to the front; make them equi-distant, parallel and straight; then drop your seeds along the drill regularly; cover all over neatly and smoothly, write the names or numbers, and the date of the sowings, on a small piece of stiff paper, put it into the cleft of a little stick, and stick it into the ground; put on the lights, see that they fit well; and then (says Corbett) look upon your spring work as happily begun.

Management of the Hot-bed.—The main principle is to give always as much air as the plants will endure; taking advantage of every mild day to remove the sashes and give the plants air, even before the seeds begin to appear. Give air to the bed every day, unless it be very cold indeed.

The usual way of giving air, is by bits of thick board cut like a wedge, broad at one end and coming to a point at the other. Each light is lifted up, either at the back or front of the frame, as the wind may be, and the wedge or tilter, as it is called, is put in to hold the light up. But if more air be wanted, raise the lights higher, and on a fine day take them off entirely.

When the plants are up, they will soon tell you about air, for if they have not enough they will grow up long-legged and will have small seed-leaves; and indeed if too much deprived of air, will droop and die. Let them grow strong rather than tall; short stems, broad seed-leaves, very green—these are the signs of good plants and proper management. "Remember," (says Corbett again) out of a thousand failures in hot-bed culture, nine hundred and ninety-one arises from giving too little air."

Watering the Hot bed.—When it is necessary to water, "take off the sashes one at a time, and water with a watering-pot that does not pour out heavily; water just at sun-set; and then shut down the lights; the heat will then rise, and your plants grow prodigiously."

Protecting the Hot-beds.—Should high winds and very sharp frosts set in, protect your bed with straw and moss, and if a cold north-west wind, make a small screen of cornstalks. Russia mats or old grass bags, or an old carpet, should be kept to cover the sashes with in case of hail, snow, or very cold weather. Should these not be convenient, use straw, hay or moss.

Hyacinth Culture.

Nothing more highly recommends itself for culture to those who delight in the bloom and fragrance of winter flowers, than the hyacinth. Its flowers are so easily produced, and are so exquisitely beautiful, it fails not to delight the eye, while its pleasant odor diffuses an agreeable perfume in the apartment where it is kept. But its chief recommendation is, that it asks but little attention, requires but little room, and will grow in most any place where the human family can live. Although it thrives better for careful culture, yet few plants will endure more real neglect or abuse. Liable to few diseases, infested by no insects, all it asks of you is a glass of fresh water weekly renewed, and a little spot to stand upon, near the light and air of your setting-room window—I am speaking of the culture of the hyacinth in bulb glasses only, for this I esteem the more desirable method of producing their blossoms in the winter, as well for convenience and cleanliness, as for the ability to move them easily from place to place—the latter a great consideration when the flower nods on its stalk. The season (December) is too late for midwinter flowers from roots now started, yet they will come forward and bloom long before our fairly spring has revived their brothers in the open border, or any of the floral sisterhood. A correspondent in a recent number of your paper, has given ample directions for their general care but permit me briefly to add a hint or two besides, in doing the glasses, rain-water universally receives the preference. My own experience has not convinced me of its superiority. The two winters past I have used well-water slightly impregnated with lime. I obtained decidedly stronger, healthier and freer blooming plants than any previous winter on rain-water. I lost but a very few by decay. The roots were remarkably free from the slimy appearance so common. The rain-water I had previously used, was discharged over a long tin roof, but this could have given no vicious quality to the water, I judge. On a stalk of "Grand Vainqueur," I counted fifty-eight flower bells. I am now trying both rain and well-water side by side. In rooms, the hyacinth is generally kept by far too warm, and too much deprived of fresh wholesome air. In consequence, the roots soon put on a slimy sickly appearance, and the result is, no flower at all, or one too insignificant to be prized. Any one who knows how the hyacinth opens its bells in the flower border in early spring, while the earth is still at a very low temperature, should need no other argument to convince him that these are not hot-bed children. A uniform temperature, light and the atmosphere of a room not close—if you have a loose rattling window, give it up to the hyacinths; the cool air that percolates every crevice will be health and beauty to your plant—and your success is certain. If you have not a sunny south window, you need not despair. From force of circumstances I have been compelled to keep mine for the most part near a north window. The growth has been slow but sure. When the flower stalk began to rise with its swelling buds, then of a sunny day I carried them up to an old deserted attic where the sun streamed in for a few hours each day. And with that much sunlight, on them, I have been favored with vivid colors and delicious odors.

The great foe of the hyacinth is canker, a species of mould that attacks the base of the bulb. When this appears use the knife like a bold surgeon, unhesitatingly, to extirpate the disease, and you will be frequently rewarded by seeing new and vigorous roots shoot downwards. As the roots are not the least beauty of the plant, I use white glasses. For the first few weeks or until the roots are nearly at the bottom of the glass, I cover the glass with a coarse brown paper. This not only gives the roots the opportunity of growing in their native darkness, but equalizes the temperature of the water. Then when the plant is ready to blossom, I have not only the beauty and fragrance of the flower, but through the clear white glass, I see also the beautiful and delicate tracery of the roots. To all those who would deck their rooms with cheerful winter blossoms, let me again commend the hyacinth.—*Correspondent of the Country Gentleman.*

The Muse.

(ORIGINAL.)
I'M ALONE.

I LOOK around and feel the awe,
Of one who walks alone,
Amid the wrecks of former days,
In mournful ruin strewn.
I start to hear the stirring sounds,
Among the distant trees;
The voice of the departed
Is borne upon the breeze.
The melody of early spring,
The trembling notes of birds,
Can never be so dear to me
As her remembered words.
I sometimes dream her pleasant smiles
Still on me sweetly fall;
Her tones of love, I fondly hear,
My name in saddest call.
I know that she is happy,
With angels' garments on;
But my heart is sad and desolate,
To think I am alone.

Boston, January 1, 1855.

J. Q. A. W.

(From the Louisville Journal.)
STUART HOLLAND.

(ASBEST) all the terrible incidents attendant upon the destruction of the Arctic, there is one that impresses us with a feeling of awe and admiration, and shows to all the world that the age of heroes is not yet altogether gone by. Stuart Holland could not be induced to leave the ship; his post was at the gun from first to last, firing signals. He kept firing that gun at intervals till the ship went down. We saw him in the very act of firing as the vessel disappeared below the waters.—*N. Y. Express.*

Fling out, fling out the stars and stripes,
A banner for the brave—
The youth who with the Arctic sank,
Yet found a hero's grave—
For the stalwart arm and the gallant heart
That such high triumph won,
That, when the stoutest hearts had quailed,
Still fired the signal gun.
For him who still undaunted stood,
Unaided and alone,
While on the black and hungry waves
The dead like leaves were strewn.
A darkening, leaden sky above,
A yawning gulf beneath,
Yet stood he bravely by his post,
And face to face with Death.

A slender form, chilled by the blast,
Wet with the ocean spray—
Were there no thoughts of health and home
And kindred far away?
Serene he stood, yet who may tell
Of his deep inward thought?
What dear remembrances and hopes
Within his full heart wrought.

There were brave hearts at Austerlitz,
Brave hearts at Waterloo,
And brave hearts met at Bunker Hill,
Firmly as steel and true;
Yet banner floated on the hyacinth,
And trumpets rent the air;
Amid such "pomps and circumstances"
Dastards would not despair.

But thou, O dauntless sailor youth,
Didst bear alone thy part,
Thy only trust in the dark day,
God and thy own brave heart;
And they may rear a marble shaft
And deep engrave thy name,
But outward forms are needed not
To keep thy deathless fame.

For regal thrones, and kingly crowns,
Coffers where rubies shine,
Are paltry things to high resolve
And noble deeds like thine.
Thy name a fragrance shall exhale
When the red gold shall rust,
And art's proud monumental shaft
Lies shattered in the dust.

Fling out, fling out the stars and stripes,
A banner for the brave—
The youth who with the Arctic sank,
Yet found a hero's grave!
For the stalwart arm and the gallant heart
That such high triumph won,
That, when the stoutest hearts had quailed,
Still fired the signal gun!

(From the Pioneer Magazine.)
CALIFORNIA.

BY MRS. L. H. SIGOURNEY.

LAND of Gold! New England greets thee,
O'er the mountain and the main;
With a sister's smile she meets thee,
Youngest of our household train.
Many a form her bosom cherishes
Dwells beneath thy sunny sky—
And their fond incensurables brighten
Every look of sympathy.

She, mid rocks and storms was cradled,
Mid the threat of angry fies,
Then, in sudden, dreamlike splendor,
Pallas-born, to vigor rose.

Children of one common country,
Firm in Union let us stand—
With compeered endeavor, earning
Glory for our Native Land.

Climbs of gold, and climbs of iron,
Climbs that reap the bearded wheat,
Climbs that rear the snowy cotton
Pour their treasures at her feet;

While with tender exultation,
She who marks their filial part,
Like the mother of the Gracchi,
Holds her jewels in her heart.

He who defers his charities till his death, is rather liberal of another man's than his own.

Miscellany.

Being Somebody.

A SKETCH FOR YOUNG MEN AND BOYS.

"Come, William, you will go with us this afternoon," said James Grey to his cousin.

"No, James, I have already given you my reasons for refusing," was the reply.

"A fig for such reasons! You can't afford the time! Why, man—or boy, rather, for you will never be a man—what is one afternoon, that you are so afraid of spending it!"

"Much, very much, James. I have a difficult plan almost completed, and wish to finish it while the idea is fresh in my mind."

"That everlasting plea again. Some old machinery, enough to puzzle the brain of Archimedes himself. Are you going to invent a perpetual motion? I do declare you are enough to provoke the patience of a saint. Forever moping over plans and diagrams, and models, and heathenish machinery, that would make one think your room a Pagan temple. I expect you will apply for a patent for an improvement in the ear of Juggernaut. But it is no use to talk to you, for you are joined to your idols."

"I should try to be somebody," he pettishly continued, as he turned toward the door.

"Would you, James?" was the quiet reply of William; "well, I am, *trying* to be somebody."

"You take a strange way for it, though. Here you are shut up in this dismal room, night after night, never enjoying a harmless trick with the rest of us, or giving yourself any of the indulgences that make life pleasant. Even a holiday makes no difference with you. One would suppose you loved the very sight of the tools and workshop, for you have them forever with you."

"Don't get excited, James," said William, smiling. "Come, be serious now. Do I neglect any of my duties? Do I not perform as much labor and succeed as well in my trade as any of you? And as for enjoyment, no one loves pleasure better than I do. I should enjoy a sail with you this afternoon very much, but my means of improvement are limited, and but little of my time can I call my own."

"James, we are machinists, causing gross material substances to assume shapes of beauty and fitness under the mysterious supremacy of our wills. Some call this a low, a common business, a mechanical operation; but it is not so. There is a mental power to which matter must bow, and there is nothing higher than to elevate and ennoble our conceptions, so as to make this plastic matter subservient to the best interests of man. It is thus improvements are made. First, the ideal, then the corresponding outward form. In my mind there is shadowed forth, though but dimly—"

"Save me from such learned inflections," exclaimed James. "I have no taste for what I can not understand. Well, William, be a dreamer, if you please. I am for active life and its pleasures. Hurrah for our sail, and good-bye to the second Fulton!"

"Poor James! a mere hewer of wood and drawer of water," said William, as he closed the door and resumed his occupation.

"Where's Will?" cried several voices, as James joined his companions in the street.

"Oh, in his room, of course, calculating how much beetle power it will take to draw an acorn up an ant-hill."

"Couldst you prevail on him to come? He is one of the best rowers we have."

"Prevail on him? you might as well try to prevail on an oyster to leave its shell? I was really vexed, and gave him a short piece of my mind. I told him at length, I would try to be somebody," said James, lighting his cigar and twirling his cane after the most approved fashion.

"Good!" said Harry Gilbert. "I am glad you showed your spirit. He is a good-hearted fellow if he is full of oddities, and it may perhaps start him from his burrow. But what did he say?"

"Oh, after arguing the matter awhile he went off into a learned dissertation, in the midst of which I made my escape. He will never be anybody in the world, that is the long and short of it."

James and William Grey were cousins, and were apprentices in a machine shop, where various kinds of machinery were made. James, as may be inferred by the foregoing conversation, looked upon his employment as a necessary evil. To him it was a mere unskilled labor, a given number of blows, a requisite degree of heat, a certain expenditure of strength—in a word, it was toil in its most literal sense.

William, on the contrary, viewed it with the eye of an artist. There was not merely the rough iron to be moulded into some uncared-for machine, but, as he told James, a plastic material, assuming beauty by the will of man. He studied, therefore, not only the mechanical part of his trade, but his inventive genius was excited. Curiosity led him to examine the uses and peculiar adaptation of the machinery he made, till at length his active mind suggested various improvements.

All his leisure time was employed in the construction of models, and his room might have been taken for a miniature patent-office. The last year of his apprenticeship was nearly at its close, and William had not only improved, but invented several really useful designs.

Looking over a paper one day, he read an offer of a prize of \$1,000 for the best model for a peculiar kind of machinery to be used in a cotton factory.

"Why should not I try," said he. He understood what was wanted, and day after day did he study intensely on the subject. At

length he grasped the idea, and it was upon this he was at work when James urged him to join the sailing party.

Late at night his cousin returned, weary with pleasure, and found him sitting at the table, a sealed package before him, his cheeks flushed, an unusual brightness in his eye, and a peculiar expression on his countenance.

About a week after this, a gentleman knocked at the door. It was opened by James, who was alone.

"I wish to see Mr. Grey," said the stranger, glancing with a smile at the peculiar decoration of the room.

"My name is Grey," returned James, placing a chair for the guest.

"Allow me to congratulate you on your success, Mr. Grey," said the gentleman, pointing to a counterpart of the model which stood upon the table.

"My success! I do not understand you, sir," said James.

"Are you not Mr. Grey, the inventor of this delicate and important machinery?"

"I am Mr. Grey, but I am not the inventor of anything," returned James somewhat bitterly.

"Here is the fortunate person, my cousin, William Grey," he continued, as William entered.

"I rejoice in your success, young man," said the stranger to William. "Your plan has met the entire approbation of the committee, of which I am one. My name is Wilson, and I am authorized to pay you the thousand dollars, and also to advance you another thousand on condition that you superintend the erection of the works to be established."

William was astonished, overwhelmed, and after expressing his thanks, added, "I am yet an apprentice, and my time will not expire within some three months. After that I will accept your offer, if you will wait till then."

"An apprentice!" said Mr. Wilson. "How then let me ask you, have you obtained such a knowledge of mechanics?"

"By saving my leisure moments, joined to a love of my business, as involving some of the best interests of man."

Six months from that time saw William in a responsible office, with a high salary, and the patentee of several useful inventions, while James was a journeyman laborer with \$25 a month.

"Well, James," said Harry Gilbert, a short time after, "William is *somebody*, after all."

"Yes," returned James. "I think we judged him wrongfully once. I would give all I have in the world to live over my apprentice life again. These leisure moments are what make the man after all."—*Congregationalist.*

JESUS AND THE DEAD DOG.—Jesus, says a very old Persian story, arrived one evening at the gates of a certain city, and he sent his disciples forward to prepare supper, while he himself, intent on doing good, walked through the streets into the market-place.

And he saw, at the corner of the street, a group of people gathered together looking at an object on the ground; and he drew near to see what it might be. It was a dead dog, with a halter round his neck, by which he appeared to have been dragged through the dirt; and a viler, a more abject, a more unclean thing, never met the eyes of man.

And these who stood by, looked on with abhorrence.

"Fugh!" said one, stopping his nose, "it pollutes the air." "How long," said another, "shall this foul beast offend our sight?" "Look at his torn hide," said a third, "one could not even eat a shoe out of it." "And his ears," said a fourth, "all dragged and bleeding!" "No doubt," said a fifth, "he hath been hanged for thieving."

And Jesus heard them, and looking down compassionately on the dead creature, he said,

"Pearls are not equal to the whiteness of his teeth."

Then the people turned towards him with amazement, and said among themselves, "Who is this? This must be Jesus of Nazareth, for only he could find something to pity and approve even in a dead dog." And being ashamed, they bowed their heads before him, and went each one on his way.

WHERE CORK COMES FROM.—Cork is nothing more or less than the bark of evergreen oak, growing principally in Spain, and other countries bordering the Mediterranean; in English gardens it is only a curiosity. When the cork-tree is about fifteen years old, the bark has attained a thickness and quality suitable for manufacturing purposes; and after stripping, a further growth of eight years produces a second crop; and so on at intervals, for even ten or twelve crops. The bark is stripped from the tree, in pieces two inches in thickness, of considerable length, and of such width as to retain the curved form of the trunk when it has been stripped. The bark peeler or cutter, makes a slit in the bark with a knife, perpendicularly from the top of the trunk to the bottom; he makes another incision parallel to it, and at some distance from the former; and two shorter horizontal cuts at the top and bottom. For stripping off the piece thus isolated, he uses a kind of knife with two handles and a curved blade. Sometimes after the cuts have been made, he leaves the tree to throw off the bark by the spontaneous action of the vegetation within the trunk. The detached pieces are soaked in water, and are placed over a fire when nearly dry; they are, in fact, scorched a little on both sides, and acquire a somewhat more compact texture by this scorching. In order to get rid of the curvature, and bring them flat, they are pressed down, while yet

hot, with weights.

During the troublesome times of Charles I., a country girl went to London and applied for a situation as a servant maid, but not being successful, finally became a *tub girl* in a brewery. The brewer saw the plain, modest, industrious girl and her attention to business both won his respect and sympathy, and soon after he married her. While she was yet young and pretty, the brewer

died, leaving his wife a princely fortune. Mr. Hyde, (afterwards Earl of Clarendon) was chosen as a lawyer to settle the estate. Mr. Hyde, lured by the vast fortune, took the easiest way to secure it, and married the widow, once the tub girl of the brewery. By his wife, Mr. Hyde had one daughter, who became the wife of James II., and mother of Mary and Anne, Queens of England. Thus on one side the boasted blood of the illustrious House of Brunswick, arose from a poor servant girl, whom in later years the family would scarcely deign to spurn with their foot, and yet one in talents and honesty far their superiors.

There is something of a moral in this circumstance that may be studied with profit. Do not despise your poorer relations, for though scant of money and worn by want, be sure there may be a mine of wealth, of true feeling, under the dirty waistcoat, brown-faced laborer. Though they do not wear boots shaped to the exact model of city fashion, they certainly have an elastic honest tread, of which mincing dandies should be proud. And if their dress is a bit more tatty and rough, there is enough genuine warmth in their hearts, to make even rags endurable, and thaw the frigid pride of place, and make them true "lords of creation."—*Country Gentleman.*

It is the peculiar misfortune of women, resulting from the relative position which they occupy in society, that they never can see more than one side of a man's character. Of course, the fair side is always presented towards them; and all the darker traits, and wilder extravagances, are sedulously concealed on the reverse. This makes it so doubly dangerous for a girl to consult only her own preferences, and her own will, in making her choice for life; and this also proves the expediency, on all occasions, of taking the advice of some experienced counsellor. Many a man may shine in the saloon by his wit, taste, elegance, and address, or good breeding; and yet, when he quits society, and revolves on his axis, the darker half of his day may be passed in the kennel, the stable, or the gambling-house.

FANNY FERN thinks it most provoking for a woman who has worked hard all day mending an old coat of her husband's, to find a love letter from another woman in his pocket. Most likely,

Why is a woman's tongue like a planet? Because nothing short of the power that created it, is able to stop it in its course.

When has a man a right to scold his wife about his coffee? When he has more than sufficient grounds.

The young lady who caught a gentleman's eye is requested to let it go.

Ladies' Department.

A Word to the Sorrowful.

"It is good for me that I have been afflicted."

Wilt thou am I thus tried? The question is constantly being asked by one and another. Affliction, in the present tense, is scarcely ever recognized as a good. As in the wrench of an operation, the nerves of a patient are distracted and the whole of the vital force is used up in mere endurance, so in affliction.

Often the soul revolts and rebels under it; its immediate effect seems to be to increase our spiritual maladies. Persons often say under severe trials,—"I used to think I had some self-control, some patience, some good temper. I thought I had, to some degree, overcome selfishness and pride, but these harassments and trials seem to upset all. And accordingly a person, when passing through periods of severe trial, often seems to be growing worse, to be becoming hard and irritable and unlovely. A writer has said, it is not while the storm is driving the ship on the beach, that we go out to look for treasures; but when the storm is laid and the sun shines out clear, we find the jewels and precious stones which the sea has cast upon the beach. Often in the height of an affliction all comfort is vain, as mendicants in the fury of some diseases. The soul must spend itself, the storm must pass. It may be months, it may be years, before the soul can come to herself enough to look back and say, "It is good for me that I have been afflicted." Nor is the good of affliction often perceivable as the result of one paroxysm, but rather as the aggregate of several. The mechanic who would bring out the clouds and veins of a precious wood, seems to harass and torture it in many ways, and if the wood were a sentient creature, it might complain as the saw and plane, and the rude pumice-stone, pass successively over it, and each varnish is scraped and rubbed—nor till the last touch has been given does one see the full result. So of afflictions. Some are like strokes of the axe and hammer, splitting and rending the heart of the soul; others are wearing and continued, like the slow work of the file and the polishing-brush, and very seldom, under the process, does the soul recognize their use; but after long years, a softened melody of spirit is produced as the result of all.

One thing is remarkable of afflictions, and that is that almost every soul feels itself stricken in the precise point where it is least able to bear. Oh, were it any thing but this—I could hear any thing else—the most frequent exclamations of the hour of sorrow. We would bear very composedly a supposititious affliction—an affliction so-called, against which our peculiar temperament so fortifies us that to us it is no affliction. But when Omniscience puts forth its hands and touches that vital point, known to God alone, where each is most sensitive, that is *real* affliction, and the soul shivers under it. We could change our affliction for this or that, but we could not change that which only can serve its purpose.

Could a diamond speak, when the quarry is leisurely filing away its glittering particles and vexing it with weary frictions and polishing, it might say: I could bear a good hammer stroke, but, Oh! this is wearing my very soul away. Nevertheless the artisan knows that it is not the hammer, but the weary polish that the diamond must have to make it glitter royally at last in a diamond. Such are some of the most common, least valued of our afflictions—a slow, wearing, heart-entring process—an affliction oftentimes is known and recognized as such only by God who orders it, and who knows the precise moment when it is possible to let it cease.

Then let the soul deeply engrave in its belief this answer to its oft-recurring question, why am I thus tried? *Because this affliction and no other can save thee.* The great Father is an economist in all his lavish profusion of riches, but of nothing is he more saving than of the sorrows of his beloved—not one tear too much—not one sigh, not one uneasiness or anxiety too many, is the lot of the meanest of his chosen.—*Mrs. H. B. Stowe.*

Success in Life.

This moral of the following may be just as good as though the anecdote was not taken from the lives of kings and queens,—whose rank has no intrinsic value and is rather like a bank note, only current in a particular spot and time, than a coin of good gold, available every where, and for all time. And hence we do not like to instance a chance elevation thereto, as any reason for hope with those whose circumstances in this country, however lowly now, yet hold up within their reach so bright a future; nor yet as a reason for regard with the rich, for poor relatives or poor neighbors; for if there are not other reasons strong enough to open their hearts and purses, in religion and in charity, benevolence for this cause will not be very praiseworthy. But we trust our readers will discriminate to this point for themselves and the effect of the following cannot be evil. We find it uncredited, in an exchange:

There is a tale in the history of the House of Brunswick, that teaches a lesson to daily toilers after standing and reputation, as well as to that class of aristocracy

"Whose pedigree traced to earth's earliest years, Is longer than anything else but their cares."

During the troublesome times of Charles I., a country girl went to London and applied for a situation as a servant maid, but not being successful, finally became a *tub girl* in a brewery. The brewer saw the plain, modest, industrious girl and her attention to business both won his respect and sympathy, and soon after he married her. While she was yet young and pretty, the brewer

died, leaving his wife a princely fortune. Mr. Hyde, (afterwards Earl of Clarendon) was chosen as a lawyer to settle the estate. Mr. Hyde, lured by the vast fortune, took the easiest way to secure it, and married the widow, once the tub girl of the brewery. By his wife, Mr. Hyde had one daughter, who became the wife of James II., and mother of Mary and Anne, Queens of England. Thus on one side the boasted blood of the illustrious House of Brunswick, arose from a poor servant girl, whom in later years the family would scarcely deign to spurn with their foot, and yet one in talents and honesty far their superiors.

There is something of a moral in this circumstance that may be studied with profit. Do not despise your poorer relations, for though scant of money and worn by want, be sure there may be a mine of wealth, of true feeling, under the dirty waistcoat, brown-faced laborer. Though they do not wear boots shaped to the exact model of city fashion, they certainly have an elastic honest tread, of which mincing dandies should be proud. And if their dress is a bit more tatty and rough, there is enough genuine warmth in their hearts, to make even rags endurable, and thaw the frigid pride of place, and make them true "lords of creation."—*Country Gentleman.*

Domestic Economy.

INDIAN INDIAN.—"Prompter," in his "Jonny-Oake Philosophy," in a late number of the Rural, on the "household," says:—"It required more care, and forethought, and, perhaps, more labor, to get up its preparations than wheaten flour, as a large batch of bread from that material can be made at one time, and last for several days without any further care; while the other requires labor at every meal." I am "very happy" to tell him that he is a little mistaken, if not more. Indian bread can be made quicker than wheat bread, which will neither "require labor at every meal," (any further than the labor of eating it,) nor for several days; and it is far more healthy, especially for farmers. How it would affect the stomachs of "sweet cake humanity," I don't pretend to say; (sad experience would tell,) but a farmer's stomach would laugh at the idea of having it to work upon. Here is the recipe: Take two quarts of good buttermilk, two-thirds of a tea-cupful of molasses, one table-spoonful of salt, one table-spoonful of saleratus; mix as thick as it can be stirred, with equal parts of Indian meal, and wheat canal, or Graham meal. Then steam it two and a half or three hours. Before steaming, let it stand in a warm place half an hour to rise. The above mixture will make two loaves in two quart bunsins.—*Sarah, in the N. Y. Rural.*

CARROT FOR MILK AND BUTTER.—It is only a few years since we had various recommendations for coloring butter to a deep golden yellow, by grating up and mixing in the pulp of the orange carrot, but the best way that we found for giving the carrot color, was to pass these roots first through the cow. We have, with nothing more than an average cow, made seven pounds of butter per week, much resembling the best grass butter, besides using a small portion of the milk daily on the table. This was accomplished by the use of about a peck and a half of the white variety per day. We hope such of our readers as can, will experiment in the use of this root, the present winter, and let us know the result.—*Albany Cultivator.*

SUGAR FROM PUMPKINS.—A patent has been granted by the French Government for making sugar from pumpkins; it is said the quantity produced will be at least as great as could be obtained from an equal weight of beet-root. This invention comes at a time when it has been found that beet-root can be more profitably employed in making brandy than sugar.

SIR A. COOPER'S CHLORALIN LINIMENT.—One ounce of camphorated spirit of wine, half a do. of liquid subacetate of lead; mix, and apply in the usual way three or four times a day. Some persons use vinegar as a preventive; its efficacy might be increased by the addition to the vinegar of one fourth its quantity of camphorated spirits.

LATER FROM AUSTRALIA.—The Melbourne Morning Herald of November 1st, says, the screw steamer City of Norfolk, lying so long idle in Hobson's Bay, has been purchased by Capt. Green, late of the Panny Major, and is announced to sail for San Francisco, via Tahiti, on the 20th of Nov.

On the 31st of October, the Legislative Council of Victoria, passed by a vote of 22 to 11, a proposition to grant Mrs. Chisholm the sum of \$25,000 as a testimonial for her valuable services to the Colonies, conditional on the sum of \$75,000 being raised by private subscription. Mrs. Chisholm, at last accounts, was at the gold-fields endeavoring to find outlets for the superabundant labor that formed the surplus population in the towns.

From all we can learn there is reason to believe that the ensuing harvest may yield an average produce. The reports from Van Diemen's Land, are decidedly favorable—the price of flour was nominal, and sales reported at £27 per ton. From New South Wales the reports are not so uniformly good—some districts having been affected with drought, recently however, rains had fallen, and it was possible the crops might recover. From Adelaide, the accounts were unfavorable, especially in reference to crops on the plains, which had also suffered from drought. This, however, says the Melbourne Argus, of Oct. 31st, "will not affect the higher districts, and prices are not firm. In Victoria, up to the present moment, the weather is favorable, refreshing showers having lately fallen. It is our impression that the crop in these Colonies will be an average one, and this, combined with good crops in Europe, and an average crop in America, induces us to believe that prices of breadstuffs in the ensuing year will not rule so high as in the present."

The Panny Major, for San Francisco, says the Melbourne Herald, takes £2,000, and the Black Warrior, for Callio, £8,000 in specie—all on the account of Adams & Co.

The Government exports for the week ending Nov. 7th, carried 5,235 1-2 ounces gold, and £170 in cash.

Mrs. Catherine Hayes has been received at Melbourne with tremendous enthusiasm. The Argus devotes a column and a half to an account of her first concert, at the Queen's Theatre, on Oct. 28th. The house was densely packed. Her later entertainments have been equally popular, and the enthusiasm of the audience, equally great.

Laura Keene and Edwin Booth, have been performing with great success at Sydney.

The ship Charlotte, with troops on board for Calcutta, was wrecked during a gale, in Port Elizabeth, Algoa Bay, and 62 soldiers, 11 women and 28 children were drowned.

The ship Robert Sayers, from this port, laden with lumber, was destroyed by fire in the Sydney harbor on the 7th of November.

WRECK.—The schooner Piedmont, Capt. F. Smith, was lost on the bar while coming out from Humboldt Bay, Jan. 20. The crew all drifted ashore, safely, on a piece of the wreck.

DIED.
On the 7th Feb., in this city, Rebecca Clark, of this city, and Mrs. Jane A. Keely, formerly of New Orleans.
On the 8th Feb., in this city, by Rev. Wm. Robinson, Mr. Lafayette Silvers and Miss Kate Dornady.
On the 8th Feb., in this city, by Rev. Dr. Scott, Judge F. M. Wainwright, of Martinez, and Mrs. Catherine Sleight, formerly of Genesee, N. Y.
On the 10th Feb., in this city, by Rev. Dr. Egnout, Mr. Leis and Miss Ellen Werthimer, all of this city.
On the 12th Feb., in this city, by Rev. Dr. Scott, Mr. Wm. F. Nelson and Mrs. Susan Lemy Butler, all of this city.
On the 5th Feb., in Stockton, Dr. E. S. Holden and Miss M. Martin Lyon, both of that city.
On the 6th Feb., near Diamond Springs, Mr. Geo. P. Morrill and Mrs. M. E. Wardsworth, both of Diamond Springs.
On the 8th Feb., in Stockton, by Judge J. K. Shuler, Mr. P. L. Shoaff and Miss Lucie N. Teachman, all of that place.

SAN FRANCISCO MARINE LIST.
ARRIVALS.
Feb. 7.—Hudson Bay Company's steamer Otter, Swenson, Victoria (V. I.), 16 days, with salmon.
Feb. 8.—Bark Orinda, Scott, London, 190 days, with mds; Schr S. D. Bailey, Garlin, San Pedro, 7 days; produce.
Feb. 8.—Sloop American, Haley, San Diego, 24 days; pass, etc.
Feb. 8.—Clipper ship Winged Arrow, Bearse, Boston, 115 days; mds; Schr Quon of the West, Danae, Santa Cruz, 14 hours; lime.
Feb. 9.—U. S. revenue cutter Jefferson Davis, Lt. Penzo com'd; 14 days.
Feb. 9.—Sloop Sound, 14 days.
Feb. 9.—Bark Success, Darnley, Monterey, 30 hours; with stone.
Feb. 10.—U. S. sloop-of-war St. Marys, Comdr T. Bailey, Honolulu, 12 days. Officers and crew all well.

Feb. 13.—Hamb bark Hermann, Hemling, for Mazatlan; brig Charlotte, Sayer, Valparaiso; schr Gen Pierce, Badger, ports in the Pacific.

MARKET REPORTS.
The conditions of the market are about the same. Business seems to be steadily improving. The copious rains have given hope and inspired a better confidence. Wheat remains steady at 33 3/4c; Barley, 2c; Oats, 3 1/4c; Potatoes, 1 1/2c. The Flour market is on the decline, owing to the quantity of common brands and the tightness of the money market. Provisions are becoming scarce and advancing. Dairymen and rancheros should look to this, for California should not send out her gold for butter, cheese, lard, hams, or provisions of any kind in such a country as this. Look to it farmers!

SPECIAL NOTICES.
Southwick's Raffle—A Splendid Dairy Prize.—Of all the Raffles proposed, we know of none that has a better or more utilitarian prize than Southwick's Dairy Prize. The prize is one hundred and twenty-two cows—this is prize No. 1. There are also many other valuable prizes. Mr. Southwick, the proprietor, is a gentleman of responsibility, well known throughout Sacramento Co., and there can be no doubt but the Raffle will be conducted in good faith and fairness. It will be drawn in a few weeks.
Good and responsible Agents wanted. Terms made known by application at the office of the CALIFORNIA FARMER.

Our Letters.—We would request all our correspondents to direct Letters and Papers to us at SAN FRANCISCO, ONLY. They will, with such direction, reach us immediately. Letters directed to us at Sacramento, fail to reach us regularly. 4v3

Native Pines, Oaks, &c.—Cones of the Native Pines, Acorns from our Mountain Oaks, Seed of all our Mountain Shrubs, and of every species of Valuable Tree or Shrub; for these the full price will be paid, if satisfactorily labelled, classified and arranged, at the
Office of the "CALIFORNIA FARMER,"
Masonic Hall Building, Montgomery street.

Wanted.—All the varieties of California Clover Seed, for which the highest price will be paid at the
Office of the "CALIFORNIA FARMER,"
Masonic Hall Building, Montgomery street.

Our New Office.—We invite our friends to our new office in the "Masonic Hall," on Montgomery street, opposite the Court & Strong's. We can show them many wonderful specimens, such as are rarely seen, and we especially invite them to call and examine the various schedule and invoices we have to offer for sale. Trees, Seeds, Plants, Grains, Houses, Lands, Inventions, Works of Art of all kinds, these we are happy to show, and can interest our friends if they will but call and see us.
WARREN & SON.

"A Thing of Beauty is a Joy Forever."—Why will people culture plumes on "the human face divine," or eruptions of any kind, when it is a fact so well known, that Dr. Guyssot's Yellow Dock and Sarsaparilla cleanses the skin from all impurity, removing Pimples, Sores and Blisters, leaving the affected parts as healthy, smooth and soft as the flesh of a babe. It is really priceless to all who wish the rosy beauty of childhood.

It cures all sores and poisonous wounds to discharge all infected matter, and eradicates every impurity from the system. It does its work mildly but effectually, giving conscious beauty and blooming health in the place of ugliness and soul-sickening disease.

SCROFULA, SYPHILIS, MERCURIAL COMPLAINTS, and a vast variety of other disfiguring and dangerous diseases are speedily and perfectly cured by the use of this medicine. Purchasers will place be careful to ask for, and take none other but Dr. Guyssot's Improved Extract of Yellow Dock and Sarsaparilla, and be sure to get the genuine. Sole Agents, J. & W. White, 94 Merchants street, 3d door above Montgomery. 13

FLOURING MILLS.

Happy Valley Flour Mills, Corner of First and Melus streets, San Francisco.

Encourage Home Industry and Home Production.

The attention of dealers and consumers of Flour is respectfully invited to the Superior Article manufactured at the above establishment, from California Wheat of the growth of 1854, selected and prepared with the greatest care. These Mills have been in successful operation for nearly two years, during which time the proprietors have received such satisfactory assurances from those who have tested the quality of their Flour, that they can confidently recommend it as being fully equal to any brand in the market. Among the many evidences of the superior excellence of the Flour manufactured by them, the proprietors would direct attention to the substantial compliments received at the two last Annual Meetings of the State Agricultural Society, premiums have been awarded at both Fairs for the superior specimens of Flour from these Mills.

Domestic Flour.—A superior article of family use, manufactured from selected Wheat—a constant supply always on hand at the Mill, or at the Depot of the Proprietors, 35 Sacramento street.

A liberal allowance made to the trade.
J. N. BROOKS, } Proprietors.
F. C. HALL, }

Wheat Pouches or Ground on the most favorable terms.

Flour! Wheat! Barley!!!
THE SAN JOAQUIN FLOUR MILLS, STOCKTON—Are now completed and ready to grind Wheat and Barley in any quantities. The above Mills are not surpassed by any in the Atlantic States, having all the modern improvements for the manufacture of the finest Family Flour, and are capable of turning out 250 barrels per day.

A large live-proof Warehouse for the storage of Grain, is attached to the Mill.

Particular attention is called to the fact of Stockton being the depot for the supply of the Southern Mills, and therefore offers superior inducements to wheat growers to ship their grain direct to Stockton, for milling.

Liberal advances made on consignments of Wheat.
For particulars as to terms, &c., apply at the Mills, or to Messrs. PAIGE & WEBSTER, Union Block, corner of Battery and Union streets, San Francisco.

MISCELLANEOUS.

Ingham's Improved Sawt Machines.

THESE Machines combine all the apparatus necessary to cleanse Grain, rendering it unnecessary to have any other machinery for that purpose in the mill. They are portable and occupy about four feet square on the floor, by eight and a half feet in height; and will clean the worst samples of Smutty Grain, also remove short straw, while caps, ends and other foul substances in the most perfect manner. All of the offal (which is collected in a reservoir, while the smut and light dust are passed out of the mill, allowing the machine to be put on the same floor with the flour chests or wherever most convenient, without being enclosed. It is a California improvement and designed to meet the wants of this country; eastern machines having been found to be inadequate to that purpose. It has received the highest recommendation from all using them, among whom are Pettit & Holckens, Brighton Mills, Sacramento; Brooks & Hall, Happy Valley Mills, San Francisco; Win. Sharp, American Mills, San Francisco; Babbitt & Hule, Sierra Nevada Mills, San Francisco; H. S. Hill, Washington Mills, San Francisco.

Those holding Mills can save expense and room by using this machine, as they will avoid all the machinery ordinarily used for that purpose.

Orders filled on short notice. SHOP on L street, between Front and Second, Sacramento. H. B. INGHAM.
N. B.—All information given, and orders left at WANNEN & SON, San Francisco, will be attended to.

The following certificate is among the number received:

This is to certify that I have one of H. B. Ingham's Improved Sawt Machines, and believe it to be superior to any other. I need no other fixture for cleansing grain, except the machine itself; it makes no dirt in the mill; occupies but little room; requires less power, and does the work more perfectly than any other I have ever seen or used before.
WM. SHARP, Agent American Mills,
Fine street, San Francisco. v3-5

To Farmers and Gardeners.

WICKERSHAM'S

Celebrated Patent Wrought Iron Farm Fence.

FOR sale—Wickersham's famous Patent Wrought Iron Fence, for enclosing and subdividing lands. It can be furnished at but little above the cost of fencing, and is much more preferable, because it does not require a heavy annual expenditure to keep it in repair; it cannot be destroyed by the fires which so constantly sweep over prairie and mountain, requiring wooden fences to be removed, nor carried away by flood from the overflow of the low lands; it is free from decay, which places it beyond comparison with wood or any other material now in use; it is valued the most highly where it has been tried the most thoroughly; it is light and graceful, yet strong, and cannot be broken down by hoes or cattle. The testimony which has been given by those who have used it in the Atlantic States, is sufficient to recommend it to the farming public of California.

A complete model is now on exhibition at the State Agricultural Fair, at Musical Hill, Bush street, near Montgomery, where a full description may be seen, with the testimony of those who have erected it in the Atlantic States.

Farmers are invited to examine this fence, as there has never been any of the same kind in this country previous to the arrival of this lot, and from its peculiar construction there is not the least doubt but that it will be extensively used in this State. J. T. Weston has now on hand, and will be constantly receiving supplies from the manufacturer, which will enable him to fill orders to almost any amount.

For particulars address
J. T. WESTON,
At Warren's Agricultural Rooms;
Or, P. COGGINS, cor. Sacramento and Pine streets
October 8, 1854. 15

Artesian Well Boring.

WE would respectfully inform the public, that we are fully prepared to take contracts in the above operations in a manner to guarantee satisfaction or no charge will be made.

SMITH & VAN DYKE, having associated themselves with an old and experienced operator from the East, who challenges the world to compete with him, in all the branches connected with the above business, are fully confident to guarantee success in all contracts that we may undertake, and warrant the work for one year. We have also had experience in boring through stone to any depth, and all work done at the most reasonable terms.

For the satisfaction of those wanting anything in the above line, we would refer to Thomas Fallon, San Jose; Rufus S. Ellis, in Milwaukee & Ellis; H. A. Sullivan, New Custom House; Wright & Co., 137 Jackson street, &c., &c.

We can do work cheaper than any other operators, for two reasons:
1st. Because we are prepared to work on a most extensive scale.
2d. Because we understand all branches connected with the above business, and are, therefore, able to work with certainty.

All orders left at the What Chees House will be promptly attended to.
SMITH & VAN DYKE, Contractors.
N. B.—We also refer to Warren & Son, publishers of the "California Farmer," who have seen and known the character of the work done. 7

HORTICULTURAL, &c.

17,000 Premium Strawberry Plants!

From the Shell Mound Nurseries and Fruit Gardens, Near San Antonio, Alameda County.
WE offer for sale the following List of Plants, viz.:
1,000 Boston Pine, at \$70 per 100
5,000 British Queen, " 35 " "
1,000 Burr's New Pine, " 35 " "
500 Rival Huisum, " 35 " "
5,000 Large Early Scarlet, " 15 " "
2,000 Hovey's Seedling, " 15 " "
1,000 Pringle's Seedling, " 15 " "
1,000 Black Prince, " 15 " "
500 Crispin Cone, " 15 " "

Plants from "Shell Mound" received a premium at the late Fair of the California State Agricultural Society. Several of the varieties above named are believed to be remarkable for their fruitful qualities, having been cultivated for several years by Mr. Sanford, at his gardens in Wayne county, N. Y., with special reference to the production of fruit.

Orders received for any number of plants (not less than 100) and promptly executed. On invoices of \$500, and over, a discount of twenty per cent. from the above prices will be allowed.

Address, J. L. SANFORD, Cultivator,
Shell Mound, near San Antonio;
or, R. W. WASHBURN, Proprietor,
Care of Wells, Fargo & Co., San Francisco.

WE are prepared to supply the trade with the best varieties of Fruit Trees, Grapes, Vines, Roses, Plants, &c., in all their varieties; and are disposed to sell at a low price, that we may suit the times. Our Trees are cultivated with great personal care. Those who desire to make Nurseries and Gardens will do well to visit and ascertain for themselves our ability to supply what we advertise. Trees will be carefully labelled and packed for any season or distance.

The following Trees we offer this season:
Peach Trees, 44 varieties; Strawberries, 7 varieties;
Pear do 44 do Fig Trees;
Apple do 54 do Pomegranates;
Plum do 15 do Walnut;
Apricots 6 do Chestnuts;
Almonds 2 do Locust Trees, very large
Quinces do 2 do Rose Acacias, for hedges,
Cherry do many do Orange Orange,
Grapes, 12 do

In addition to our Fruit and Ornamental Trees, we offer ten thousand *small* Roses, comprising more than one hundred varieties, all of the best known kinds. Our plants are all numerous to specify in an advertisement. Inquiring visitors will come and see us, we refer them to our agent in San Francisco, Mr. DE LAHORE, 121 Sanson street, where we shall have a collection of plants in the season as samples. The nursery is situated in the city of San Jose, immediately above the City Mills.

We are also permitted to refer to Warren & Son, who have examined our grounds, and who can testify of the character of our nursery, and who will receive and forward orders to us. Every order promptly and specially attended to.

Tickets for sale until called for every Day and Evening, at the principal office on Second street, opposite Wells, Fargo & Co.'s Bookbinding House.
* * * Tickets for sale at the Office of the "CALIFORNIA FARMER," Masonic Hall Building, Montgomery street, San Francisco.

INDIAN MUMMY.
ONE of the most interesting specimens of preserved humanity is now open for exhibition at the office of the CALIFORNIA FARMER. The certificate of Dr. Evans, U. S. Geologist, furnishes sufficient data to prove its authenticity and value; the certificate of five of our most distinguished medical men furnish facts that should awaken a general interest in our community to see this valuable and positive proof of the earlier races of the aborigines of California.
The Mummy now exhibited is supposed to be a highly distinguished chief of some tribe of the "Flat-Head Indians," this race have left no record, and the present tribes have no knowledge of the race of which this is a representative. Capt. Russell, the discoverer, is familiar with the Indians of the same vicinity, speaks their language, and has been years with them; yet neither they nor himself can find any trace by which to recover the history of the present relic.
The Chief now measures 5 feet 3 inches in length—full size—the last two inches long. The body presents a natural appearance, and as it lays in the coffin, surrounded by the materials usually deposited with chiefs, together with other bones and skulls found with the Mummy, it is indeed a most interesting specimen.
Capt. Russell has expended much in bringing this specimen to the city and preparing it for the States, and it is now offered for exhibition in hopes that a sufficient sum can be raised to retain it here, as it is a record of the early history of California. The Mummy will be exhibited at the office of the CALIFORNIA FARMER, for a short time. Admission 50 cts.; Children half-price. The Free, Modest and Solvite men, and Clergymen, are invited Free, as the object is diffusion of knowledge.
G. J. W. RUSSELL, Proprietor.
v3-4

Pottery! Pottery!

Wares made to order. Dealers are particularly solicited to call and purchase. Orders to be left at the Pottery, or No. 264 J street.
v3-2 T. R. FREER, Agent.

Varieties.

Anticipation and Enjoyment.

The greatest enjoyments of life are its unexpected ones. It is seldom the favorite child of the family, or the favorite project, or most coveted possession which, in fact, makes a man's happiness. While in them overwrought expectation defeats itself—enjoyment rises suddenly from unexpected sources. The butterfly which we spend hours in chasing, comes to us at last with wings all blackened and shattered from the rude eagerness with which we have seized it; but in some listless hour, when we do not seek, comes another and settles down before us, confidently fanning his stately wings, and bringing to our unexpected eye just the beauty we lost by pursuit. The party of pleasure designed and executed in the same hour, has a vividness of enjoyment which that we have been months anticipating, falls short of. So also of celebrated persons, places, and things. The expectation that precedes, almost overlays and destroys them. The artistic and enthusiastic soul has constantly to combat a secret sense of his disappointment in view of the most grand or beautiful objects of nature or art. Often there has been more true, vivid emotion of the beautiful excited by little unexpected touches and passages of natural scenery around our own homes, than by the full view of the most celebrated and long-desired scenery of foreign lands. A line of golden sunlight slanting under the dark boughs of an orchard, a sudden smile dropped from some cloud on the distant mountain, the twinkling and glitter of wet leaves after a shower, the sudden apparition of the crescent moon and evening star in the flush of twilight! Such things as these, seizing the soul while it lay at anchor like a moored barge on a glassy sea, have filled it full with a freight of pleasure that it would have missed had its sails been up in expectant pursuit.—Mrs. Stowe in the N. Y. Independent.

M. DeBalzac who was lying awake in bed when he saw a man enter his room cautiously, and attempt to pick the lock of his writing desk. The rogue was not a little disconcerted at hearing a loud laugh from the occupant of the apartment, whom he supposed asleep.

"Why do you laugh?" asked the thief.

"I am laughing, my good fellow," said M. De Balzac, "to think what pains you are taking, and what a risk you run, in the hope of finding money by night in a desk where the lawful owner can never find any by day."

The thief "evacuated Flanders" at once.

A black minister was closing up his prayer when some white boys in the corner had the ill manners to laugh, so that the sable supplicant heard them. He had said but a moment before, and very earnestly, "Bress all dat is human," when the laugh occurred; and commencing again just before the "Amen," the pious old negro said: "O Lord, we are not in the habit of adding postscripts to our prayer, but if the 'spression, 'Bress all dat is human,' won't take in dese wicked white fellers, den we pray dat de Lord will bress some of dem white fellers, also besides."

"My-dear, don't say tale, say narrative," said a modest lady to her little son, who was relating a very interesting tale he had just read in a newspaper. While the little fellow was thinking of his mistake, the old house-dog walked in, shaking his tail and looking quite familiarly at the boy, when he exclaimed, "Ma, make Sancho quit shaking his narrative!"

We have all heard of the smiles of Providence. I was much pleased with Uncle Jim's ideas on the subject. "Good morning, Uncle Jim." "Good morning." "Well, you have had your daughter married, have you?" "Yes." "Well, really Providence has smiled upon you." "Smiled! no bless you, she snickered right out!"

The Culppeier Observer says: "Wanted, at this office, an editor who can please everybody. Also, a foreman who can arrange the paper as to have every man's advertisement to head the column."

An Irishman who was near sighted, and about to fight a duel, insisted that he should stand six paces nearer to his antagonist than the latter did to him, and they were both to fire at the same time.

It is remarked by something of a wag, that where twenty persons have stomachs, but one has brains!—hence brewers grow rich, while printers remain poor. Philosophical that!

An ingenious writer says that no one likes the crying of another person's baby. It is not so hard, however, as the crying of one's own baby, for it is farther off.

If you want to increase the size and prominence of your eyes, just keep an account of the money you spend foolishly, and add it up at the end of the year.

Some men are called sagacious merely on account of their avarice; whereas a child can clench its fist the moment it is born.

A true picture of despair, is a pig reaching through a hole in the fence to get at a cabbage that lies only a few inches beyond his reach.

When Adam got tired of naming his numerous descendants, he said, "Let the rest be called Smith."

DETERMINE with yourself to employ a certain stated time, in order to acquire the virtue to which you are least disposed.

The Pacific Loan and Security Bank.

MONEY will be received on deposit in sums of Ten
Dollars and upwards, for which Certificates of Deposit
will be issued, bearing date the first or fifteenth of the
month, payable on demand, or at specified times, at the option
of the depositors. If payable on demand, they will be without
interest, unless the money remain on deposit one month, in
which case they will draw interest of one per cent. per month, but
no interest for fractional parts of a month. If deposited for
specified times, certificates will be issued bearing one and a half
per cent. per month interest for such time. Interest will cease
at maturity; so that if depositors desire to continue their de-
posits after their certificates fall due, they must be presented for
payment and renewal; otherwise interest ceases.

The money deposited is used only in loans guaranteed by us
and in all cases amply secured by Mortgages, State, County
and City Stocks, Merchandise, and other safe collateral, taken
in the name of "MARRIOTT & WHEELER, Trustees for
Depositors with Pacific Loan and Security Bank."

A register is kept at all times open to depositors for inspection,
in which appear their names, the number of certificates of
deposit issued, and the securities upon which the money de-
posited has been placed. Depositors thus not only have the
personal security offered by all banks, but in addition have the
benefit of the securities taken and guaranteed by us, and the
facility of knowing what disposition has been made of their
deposit.

FREDERICK MARRIOTT,
ALFRED WHEELER.

No. 28 Merchant street, San Francisco. 19

SOLIDIFIED MILK.
MANUFACTURED BY
SAMPLER FOR SALE IN THE
BINGHAM & REYNOLDS,
201 Sansome street.

THIS PRESERVED MILK is made from PURE FRESH
MILK, combined with crushed sugar, and when reduced
to liquid, as stated in the directions, can be used for all purposes
for which Milk is used, as it is simply Pure Milk and Sugar.
The Tablet weighs one pound and is equal to five pints of pure
milk. The proprietor recommends with confidence the article
to all persons going to sea, its properties of self-preservation
having been fully tested during the last eighteen months. To
the WHOLESALE trade its value is inestimable, and to travel-
ers by land or sea, (especially when accompanied by young
children) it recommends itself by its portableness and the
facility with which it may be used.

Certificates.

The proprietor would call the attention of the public to the
following certificates: New York, April 4, 1854.

Mr. S. T. Blanchford—
DEAR SIR: In answer to your inquiries relative to the pre-
paration of Solidified or Preserved Milk, having used it on my
last voyage to San Francisco, I can with the utmost confidence
recommend it to sea-faring men as being the best article of the
kind I have ever seen or used, retaining, as it does, the taste
and flavor of fresh milk. Yours, &c.
R. MUMFORD,
Master of Clipper Ship "Tornado."

Extract from a letter from a Californian,
Dated May 31, 1854.

"In regard to the Solidified Milk which you entrusted to me
for the purpose of testing the merit of the preparation, I can
with confidence say that it has proved entirely satisfactory. I
have a portion of it yet remaining in as good condition as when
you gave it to me, and it will, I have no doubt, keep for years.
The preparation will be a great luxury to the sailor, as it will
enable him to enjoy an article of food that has hitherto been
supposed could only be had on shore.
Very respectfully, yours, &c.
EARL BARTLETT."

Extract of a letter from Rev. M. Williams,
Dated Valparaiso, Aug. 2, 1853.

"But the Tablets of Milk prepared by S. T. Blanchford & Co.
were the climax of comfort. I would say, let no one go to sea
without them. I have a few now left in my room as perfect as
when first made." April, 1853.

Mr. Samuel T. Blanchford—
DEAR SIR: Some twelve months since I heard of your pre-
paration of Milk and procured a sample, a portion of which I
tried at the time and found it good. When preparing for sea
last December, I tried the balance, which proving equally as
good as months before, I procured several pounds, and during
the voyage to and from Europe, have had the milk on the table
every day, and have found it excellent.
I have used several preparations of milk, and have no hesita-
tion in pronouncing yours the best. I consider it just the thing.
In future voyages I shall endeavor to have a supply of it.
Yours, very respectfully, RICH. S. CORNING,
Master of Clipper Ship "Rapid."

Boston Clipper Steel Plow,

Manufactured by Ruggles, Nourse & Mason.
THIS splendid Plow is made after the style and form of the
famous Eagle Plow, so universally known. This form of
Plow in all its parts has been considered the most perfect yet
invented, having taken premiums in every State in the Union;
also at the World's Fair.

The present Plow has been manufactured by Messrs. Ruggles,
Nourse & Mason, with great care, and in the most finished
style, of the very best steel, and may now be considered the
highest finish and most complete Plow; and the undersigned
with the cultivators of California to call and examine the same
at their place of business. TREADWELL & CO.,
Cor. of Battery and California streets, San Francisco,
TREADWELL & CO. Marysville.

HORTICULTURAL, &c.

Smith's Pomological Gardens,
Banks of the American River, two and a half miles from
Sacramento city.
THE proprietor of the Gardens would respectfully invite all
who are engaged in "Nursery and Gardening" to visit his
grounds. He will be happy to show to them, ready for sale,
this fall, as fine a collection of
Fruit Trees, Ornamental Trees, Grape Vines, Shrubs,
Flowering Plants, and Green House Plants,
as can be found in all the great Sacramento Valley.
The proprietor would call particular attention to his collec-
tion of Peaches, believing that the specimens exhibited by
him in Sacramento and San Francisco markets have been un-
surpassed in size, quality, or flavor.
The collections of Pear Trees will equal any in the country;
these, with all the new varieties, will be offered this autumn.
The undersigned believes his collection worthy a visit to his
grounds of all who are interested in Gardening and Orchard-
ing. The subscriber will offer this autumn Five Tons Vegeta-
ble Garden Seeds, that have been raised upon his own
grounds. These seeds have been grown with care and will be
sold at wholesale for the present, at the Gardens.
Persons in want are invited to call upon us, and we will make
reasonable terms.
Fruits, Bouquets, &c., will always be furnished at short notice
at the Gardens.
The proprietor returns his thanks for the liberal patronage
of the past, and hopes for a continuance of such favors.
A. P. SMITH, Proprietor.

Grape, Fig, Quince, Apricot, Nectarine and Almond Trees
in less quantities. All the above we guarantee in quality, and
we warrant them what they should be, and will sell at prices
to suit the times.
Apple Trees from \$1 00 to \$2 50
Peach, Pear, Cherry, from 50 to 2 50
Extra sized trees in proportion.
BEARD & LEWELLEN, Mission San Jose.
Orders with Warren & Son, corner of Montgomery and
California streets, will be promptly attended to. 18 6a

New Invention!

BULKLEY'S STEAM DRY KILN.
THE undersigned takes this opportunity to offer to the citi-
zens of California, Oregon and Washington Territory, the
valuable invention hereby announced. One of the greatest
wants of California and vicinity, for years, has been the means
of preserving her products so as to have a continued supply
during the late months. The vegetable products to an immense
amount are annually lost at the approach of the rainy season,
its long continuance, and the exposure that necessarily results
to those products from the season; and the vast quantities that
are exposed and accumulated in warehouses and elsewhere, have
demanded some method of preserving these immense and val-
uable crops; that otherwise would be a loss to the producer and
to the State. The loss of the Potato and Onion crop last year
would count almost a million of money, and the loss the present
year will be heavy, without preservation.

The undersigned, holding the "Patent Right of the Steam
Dry Kiln," offers this invention with the confident assurance
that it is the very thing needed—that it is the *ne plus ultra* for
these products, and for Grain also. It has been tried for
Lumber, to which it has been more particularly applied in the
States, for there the Vegetable products do not require so much
care as here. To shippers of Grain this invention removes all
the difficulty in sending Grain on long voyages, and under the
drying process of this valuable invention our Grain growers can
now send their Grain to New York with safety.

The proprietor needs only to append the following certifi-
cates. The name of Henry L. Ellsworth, Esq., carries a weight
that is convincing to intelligent men, and the other evidences
should be satisfactory.

The model machine will soon be placed on exhibition at
the office of Warren & Son, where all information can be had.
JOSHUA BUTTS, Proprietor of Patent.

A Diploma and Silver Medal

Was awarded to the inventor at the last New York State Agri-
cultural Fair, held at Rochester, as a testimonial of its superior
merits.

Letters from Hon. H. L. Ellsworth.

LAFAYETTE, January 7, 1853.
DEAR SIR: I congratulate you on the completion of your
Dryer. I have for a long time urged the importance of extract-
ing the moisture from grain and flour before shipment, to pre-
vent fermentation. Your plan will obviate the difficulties
hitherto experienced. There can no longer be any doubt that
18 pounds of water can be taken from a barrel of meal, and 15
pounds from a barrel of flour without affecting the taste or ap-
pearance of the same. Experiments at Lafayette show this.
Nor is it a less gratifying circumstance that when the flour or
meal is cooked, it re-absorbs proportionately more water, thus
saving freight and the purity of the article. If the moisture is
extracted, it must be obvious this meal will keep for long voy-
ages, passing through the hottest climates. To the Navy, your
improvement is invaluable. The world has become somewhat
skeptical on the subject of patent rights. The simplicity and
completeness of your machinery enables you to exhibit a work-
ing model, to remove in a moment any doubts as to your ability
to sustain your patent and prove its utility. One feature in
your plan deserves particular notice; in fact, this constitutes
your main claim, viz., not drying by common steam, or by
fire heated pans, as has been done hitherto, but by using heated
steam. Few persons are aware of the small expansion of steam,
and how easily it can be heated to a high temperature with
little confinement. You will be able to raise a stream to the
point of ignition, say 600 or 700 degrees, though a far less heat
will answer all your purposes. I will only say that European
prejudice against Indian corn is fast dying away, and we may
anticipate large shipments both for man and beast. The great
fertility of the West, and the reduction of freights both inland
and on the ocean, justifies this anticipation. Wishing you suc-
cess, I remain, yours respectfully,
HENRY L. ELLSWORTH, late Commissioner of Patents.
To Henry G. Bulkley, Esq., Kalamazoo, Michigan.

LAFAYETTE, March 20, 1853.
DEAR SIR—I am highly pleased with your Dryer for lumber
by heated steam. It seems almost incredible how soon even
green lumber can be prepared for use. Twenty-four hours is
all that is required. Steam has hitherto been used to advantage,
but heated steam has not been applied for this purpose before
your improvements. Every manufacturer of lumber would find
it profitable to erect a cheap dryer on your plan. Full one-
third of the weight of some kinds of lumber is removed by dry-
ing; the saving in cartage will more than repay the expenses
of drying. When the difference between seasoned and unseasoned
lumber is considered, no one who regards good work will
regret the trifling expense of preparing the raw material.
Yours respectfully, HENRY L. ELLSWORTH.
To H. G. Bulkley, Esq., Kalamazoo, Michigan.

HARRISBURG, Pa., July 12, 1853.
I hereby certify that I have had charge of one of W. O. Hick-
ok's shops where the most of his wood work is done, that I
put up and have used H. G. Bulkley's Patent Kiln, and heartily
approve of everything W. O. Hickok has said about it, and am
certain that no recommendation can be too strong in praise of
said kiln. (17) W. H. SULLENBERGER.

MISCELLANEOUS.

San Francisco ahead of the World!

Ever on, on space with the Ago and Times!

Hurry for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE's who wishes
PERFECT LIKENESSES? Because he has now the
best arranged Gallery on the Pacific Coast, and not to be sur-
passed by any in the world. Instruments containing lenses
more perfect, and with greater power than any ever before
used in this country.

21. Because he has the largest light in the world, from which
he can form three distinct lights—top, side, and half side lights
—that now enables him to overcome the great difficulty which
every artist in this city has to contend with—namely: In order
to obtain perfect likenesses, different formed features require
differently arranged lights.

31. Having the largest light, he is enabled to make pictures
in half the time of any other establishment in the city; there-
fore they must be more perfect, for it is well known, the shorter
the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating
of pure silver which produces the clear, bold and lasting picture
that is so much admired, and which cannot be produced on the
common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought
his chemical preparations to perfection, using compounds en-
tirely different from anything ever before used in the art, which
enables him to produce perfect likenesses, at every sitting, with
that clear, soft and beautiful tone, so much admired in all his
pictures.

All those wishing perfect likenesses will do well to call before
sitting elsewhere, and judge for themselves.

Prices as reasonable, and work superior to any in the
city.

Don't forget the place.

New Building corner of Sacramento and Montgomery
streets, entrance on Montgomery, next door to Austin's. 17

TREADWELL & CO.,

CORNER OF CALIFORNIA AND BATTERY STREETS,
SAN FRANCISCO.

IMPORTERS, JOBBERS AND RETAILERS OF
Hardware and Mining Tools; also, Agricultural Implements,
Field and Garden Seeds of all descriptions, from the cele-
brated House of Messrs. Ruggles, Nourse & Co.,
Boston.

Field and Garden Seeds of all varieties:
Tobacco, Beans, Peas, Potatoes, Seed Sown, of all kinds;
Turners, Reapers, Mowers, Fan Mills, Straw Cutters, Corn
Shellers, Vegetable Cutters, Corn and Flour Mills, Sausage
Cutters and Sifters, Horse Powers, Saws, Mills;
Wheat Drills, Churns, Ox Yokes, Bows, Hoes,
Rakes, together with all the small tools and
implements appertaining to cultivation.

N. B.—Branch House at Marysville. All orders promptly
attended to. v35

ADAMS & CO.'S

CALIFORNIA AND ATLANTIC EXPRESS.

OUR Atlantic States Express will leave San Francisco on the
1st and 15th of each month, by the Pacific Mail Steamship
Company's Steamers, and the Treasure crosses the Isthmus
under the charge of a strong guard. The Treasure forwarded
by us to the Philadelphia Mint, is always deposited there previ-
ously to that sent by any other conveyance. Our rates are lower
than those offered by any other House, with the same security.
We also forward Treasure on the 1st and 15th of every month
To ENGLAND, by the P. M. S. Co.'s steamers to Panama, and
from Aspinwall by the West India Mail steamers.

We draw Bills of Exchange on any of our Houses in the fol-
lowing places:

Boston, New York, Philadelphia,
Baltimore, Washington, St. Louis,
Cincinnati, Pittsburg, Louisville,
New Orleans, London, &c., &c.

Also, payable at any of the following Banks:
Mechanics and Farmers' Bank Albany
Alex. Mitchell, Fire and Marine Insurance Co. Milwaukee
Commercial Branch Bank of State of Ohio Cleveland
Utica City Bank Utica
Bank of Syracuse Syracuse
Bank of Auburn Auburn
Bank of Attica Buffalo
Rochester City Bk. Rochester
Geo. Smith & Co. Chicago
Michigan State Bk. Detroit
Clinton Bank Columbus, O.

In the Northern Mines we run Expresses, in our own
name, always accompanied by faithful Messengers, to and from
the following places:

San Francisco, Sacramento, Marysville,
Benicia, Grass Valley, Nevada,
Coloma, Placerville, or Mormon Islands,
Georgetown, Hangtown, Salmon Falls,
Greenwood, Shasta City, Auburn, &c., &c.

And every other part of El Dorado, Placer and Shasta counties.
Through LANGTON & BRO.'S Yuba Express, to and from the
following places in Yuba, Sierra and Nevada counties:

Long Bar, Deer Creek Crossing, Park's Bar,
Sicard's Bar, Bridgeport, S. Yuba, French Corral,
Kennecott Bar, Sweetland's, Boston Bar,
Union Bar, Hoynt's Diggings, Hunt's Ranch,
Foster's Bar, Cherokee Corral, Barton's Bar,
Winnell's Bar, Hess' Crossing, N. Yuba, Wombow's Bar,
Oak Valley, State Range, Shale Range,
Indian Valley, Junction House, Nevada House,
Siskiyew, Frenchman's Bar, Empire Ranch,
Cox's Bar, Bullard's Bar, Downerville,
Minnesota Diggings, Kinnik Creek,
Goodyear's Bar, and Emery's Crossing, Middle Yuba.

Sacramento and Stockton,
via Benicia in the SOUTHERN MINES, we run an Express in our
own name, always accompanied by faithful Messengers, to and
from San Francisco, Stockton, Sonoma, Mokelumne Hill, Col-
umbia, Marysville, &c., by BROWN'S EXPRESS, from Stockton to
all the Camps in the Southern Mines.

Our Bills of Exchange
can be procured at, and Treasury forwarded to us for shipment,
from any of the above places. In all of the above places we
have Brick Vaults and Iron Safes for the security of Treasure
entrusted to us, and on board of steamboats on any of the above
routes, we have Iron Safes for the security of all valuable pack-
ages transported by us.

INSURANCE.—We have made arrangements for insurance to
the extent of One Million Dollars, on any one shipment, and
are empowered to insure for other parties on Gold Dust, Bars,
Coin and Merchandise to and from New York and this city, by
endorsements on Bills of Lading, at the time of shipment.

ON THE POTATO ROT.

A SUPPLEMENT TO THE "POTATO RESTORED."

EDITOR MICHIGAN FARMER:—As I am confident that my views of the rot are correct, and that several erroneous theories respecting it are being circulated through this State, I take this method of stating some interesting facts connected with the subject; and as I do not pretend to be a "Potato Doctor," but merely an experienced agriculturist, I do not wish to have these important facts kept secret, but made as public as possible, by means of your widely circulated journal. Beginning with 1845, the first year of blight, I will make an extract from the report of the commission of Agriculture, of the Province of Groningen in Holland, on the Potato disease. The report after a few preliminary remarks, describes the appearance of the disease thus: "The intense heat of the early part of the summer of 1845, was succeeded by cold and rainy weather, which lasted from the 15th of July, to the end of the month of August. On the 21st and 22d of July, an extraordinary fog was perceived in many places which spread a disgusting smell: on the 28th of July the first symptoms of disease were discovered in the provinces of Groningen, and North Brabant, the disease commenced at the uppermost part of the plant, and attacked successively, the leaf, the stem and the tuber. This is fully confirmed by experiments made at Groningen."

"The Commission does not agree with those naturalists who think that the origin of the disease may be attributed to the race of potatoes having gradually deteriorated; as in the commune of Marnui, and province of Groningen, among other instances, is to be seen a field of potatoes the produce of seed raised from the apple or berry, equally attacked by the disease, and suffering in common with the general crop. This and an infinite number of similar cases, prove incontestably that the disease does not originate in the seed." Now every candid and disinterested person will admit that is strong evidence, and the best and most reliable that Holland can afford.

Well, after four years had elapsed, and numerous experiments had been tried, we find the Royal Agricultural Society of England, receiving in 1849, the following report from Mr. Bosanquet, of Herefordshire. The society had given him seed of the potato apple or berry procured from the native county of the potato, Chili, in South America. He states: "I sowed the seed in pots in my vineyard, and afterwards removed them to the open air; about the middle of July the disease made its appearance in my garden. The Chilean potatoes were very much affected, indeed more so than the common potatoes, and their leaves were soon destroyed; I consider the circumstance of these potatoes having been attacked by the blight, as presumptive evidence that the disease does not originate in the potato itself, but is purely atmospheric, and is more prevalent when the atmosphere is much charged with electricity, and when there is a fall in temperature accompanied with much wet. The disease certainly commences in the leaves and extends gradually to the stems and tubers, in the same manner as mortification extends in the human frame from diseased parts to sound ones. Now here is most important evidence elicited by that far-famed agricultural corporation, the Royal Agricultural Society of England.—That potatoes raised from the seed of the apple, brought from Chili, and treated in the most scientific way, were destroyed by the rot, "which" the report says "commenced in the leaves, and extended gradually to stem and tubers."

We will now see what America has to say on this subject, and as Minnesota is a recently settled territory, where the soil is rich and new and unexhausted by frequent cropping, it must be suitable to the cultivation of potatoes. We will permit a party from that region to make a statement of facts.

In the Patent Office Report for 1852-3, (page 467) is to be seen a communication signed "P. Prescott, Superintendent of Farming for Sioux." He writes from St. Paul's, Minnesota, and states his potatoes grew well until the middle of August, about which time there were cold rains for two or three days, after which the weather cleared and there were three nights so cold as nearly to produce frost. The weather then became very warm, in five or six days black spots appeared on the leaves, and in ten days after the tubers were affected.

I am confident that this dreadful disease is caused by the state of the atmosphere, and that some powerful agent being deposited on the leaves, checks the progress of alkali, and causes the decay. I have positive evidence that the disease is not confined to the potato, for the same dews produce the same result on my tomatoes, cabbages and rutabagas. The rutabagas have all rotted, I have not harvested one. The effect of the dew was

most apparent on the tomatoes, those parts where the dew collected heaviest being soonest turned black."

Now these statements agree thoroughly with the theory advanced in the "Potato Restored," and ought to receive the greatest attention. If any more proof were required to settle the question, and to extinguish error, it could be easily produced from any part of the old world or the new. The dryness of the present summer, has prevented the appearance of the rot in America, but it has done considerable damage in Europe, especially in those countries which possess a moist climate. A few extracts from an Irish newspaper will describe its progress in Ireland in 1854. Mr. J. Clapperton, an eminent agriculturist, (whose writings have been approved of, and circulated by the Royal Irish Agricultural Improvement Society,) in a communication in the Leinster Express, dated "August 19th, 1854," remarks that "during the last eight days the atmosphere has been highly charged with electricity. Thunder showers are always sudden, partial and heavy, and under present circumstances, we have not seen anything remarkable in this particular, but the effect has been of much more hurtful tendency than we have experienced for many years. During the last six days the potato disease has been very decided in its action. It is extending from the leaves to the tubers, with alarming rapidity, as the leaves are always smitten, or seriously disorganized for several weeks before the tubers are affected." Now this is the testimony of one of the most eminent agriculturists in Ireland; and observe his remarks allude to the crop of this year, and they fully agree with the high authorities quoted by me; that the disease is atmospheric, that it is caused by electricity, that it begins on the leaves, and extends to the stem and tubers. Among your numerous subscribers are many distinguished, scientific and practical men. If they think that my views are correct, and well sustained, I will feel obliged by their aid in the cause of Truth vs. Error. In the "Potato Restored" I have given my opinion on the true cause of the rot, and the best means of preventing it.

I remain, sir, yours, &c., EDWARD MASON.

SUCCESS OF THE FARMER.

The success of the farmer is in proportion to the amount of knowledge he brings to bear upon his profession, and not on the strong hands or capital employed, nor any other exterior advantage. Like most other undertakings, it depends on the mind of the man. The hands are the instruments by which the plow is guided, or a scythe or fork is wielded, and strong ones are necessary for the work; but they are only the instruments of the controlling intellect which plans, devises, arranges, and controls the whole. Dolts do not make the best farmers, but the men who think are they who will succeed here just as they will anywhere else.

If this be true, we can see at a glance where improvement in agriculture is to commence. The farmer is required to be a thinking man; and he is the best farmer who brings the best trained intellect to the work—the soundest logic, the best judgment, and the purest heart. It is true that men acquire considerable skill in most pursuits of mere repetition of their processes; by habit a farmer may go through the yearly routine of sowing a crop, reaping and harvesting the same, just as his father had done, without ever thinking of the reasons which should decide his course. A certain degree of success will often attend such farming, but let anything new occur to break in upon his habit or routine of things, and our imitator is at his wit's end at the first corner. Mere instinct never invented anything new, but it may repeat old processes skillfully.

The farmer is styled the "Lord of the Soil," and certainly the appellation pertains to him, if he has the ability to appreciate the high station. This ability is the result of knowledge. This knowledge, too, enables him to unite science and art, which is necessary to constitute a good farmer. This union must be derived from book learning, which by too many has been considered wholly superfluous and its teachings distasteful. What other art or science is supposed to be attainable in any considerable degree without reading or study? Why should the farmer alone rely on intuition—on instinct for his improvement, and be directed in his employment by habit? Why should he consider himself nothing more than the head tool of his implements and but the mainspring of their movements, while the mechanic and the artisan, by their science, seem to infuse intellect into them.

If knowledge be necessary in any occupation, it is pre-eminently so in that of the farmer. The mechanic has no call to investigate the elements which are the basis of the material of his handicraft. His stock is before him, and his tool, guided by the unerring hand and practical eye of a

professional skill, gives form and finish to his work. Not so with the business of the farmer; he may as readily learn its mechanical parts, but he has problems to solve and mysteries to investigate. He should be familiar with the component parts of the substance on which he bestows his labor—their relative proportions, their affinities, their separate and compound agencies, and the influence of other bodies in their adaptation to the results he is laboring to obtain. In short, he must know the necessary and intimate connection between cause and effect.

I have said that the profession of agriculture requires more study than that of the artisan. If this be true, it is fortunate for the farmer that he can command more time for its acquisition. Winter is comparatively, and to him more peculiarly, a season of leisure. Those who do not possess books on this subject can readily borrow them. But a farmer is the last person who should live by borrowing. Let me recommend a better course. Let an agricultural library be established by an association in the town consisting of a select number of standard works upon this subject, with the lighter productions and periodicals of the day. General knowledge, independent of mental enjoyment, is important in all occupations—not only as it may direct the hand, but as it calls into exercise other energies conducive to the common good.—H. G. Eastman, in Rural New-Yorker.

SHEEP AND WOOL.

The annexed table, showing the number of sheep and pounds of wool produced in each of the States and Territories of the Union, according to the Census of 1850, has been published in many of the papers. We have added, in another column at the right hand, the average yield of a sheep in each State, in pounds and hundredths:

States.	Sheep.	Pounds wool.	Av.
Maine.....	440,043	1,302,020	3.09
New Hampshire.....	381,656	1,084,476	2.88
Vermont.....	810,092	3,410,993	3.70
Massachusetts.....	188,651	585,136	3.10
Rhode Island.....	44,296	129,292	2.92
New York.....	334,281	3,372,351	2.82
New Jersey.....	100,488	375,880	2.33
Pennsylvania.....	1,822,357	4,481,570	2.45
Delaware.....	27,503	57,768	2.10
Maryland.....	177,002	420,226	2.69
District of Columbia.....	150	525	2.82
Virginia.....	1,311,084	2,669,795	2.18
North Carolina.....	595,219	970,738	1.63
South Carolina.....	281,754	487,224	1.76
Georgia.....	560,435	930,019	1.76
Florida.....	24,311	24,217	0.99
Alabama.....	371,808	557,118	1.76
Mississippi.....	304,929	559,019	1.83
Louisiana.....	110,333	109,377	0.97

Utah Territory.....	9,271	9,922	2.82
New Mexico.....	377,571	32,901	0.08
	21,571,306	52,117,297	2.42

It appears that the average is higher, by six-tenths of a pound, in Vermont than in any other State. Massachusetts comes next, and then Maine. These are the only States where it exceeds three pounds. In New Mexico and California, probably, the sheep are raised for mutton and poultry, and few of them are sheared; for though we find a very large diminution in the weight of fleeces as we proceed southward, it is not credible that fleeces actually sheared should average only about five ounces in California, and only about an ounce and a quarter in New Mexico.

The weight of fleeces in Vermont is not owing wholly to the latitude or temperature; for if it were, New Hampshire and Maine ought to yield heavier fleeces still. It is doubtless in part caused by the quality of the pasturage, air and water of the Green Mountain range; an advantage in which Massachusetts partakes. Another, and a principal cause is, the superiority of the breeds raised there. Almost all the sheep raised there are descended from breeds carefully selected from the best flocks in Spain; and it has been long since ascertained that, with decent treatment they do not deteriorate in Vermont. Not improbably, most parts of the Alleghany range may be found nearly or quite as well adapted to the same breeds.

The fleeces in Vermont are very nearly 20 per cent. heavier than those in any other State, and 25 per cent. heavier than the average of the whole United States. The profit of wool-growing, compared with lighter fleeces of equal fineness, is about in the same proportion; for the rearing and support of a poor sheep is as costly as of a good one. But besides this, the fleeces are much finer than the average of the whole country, and bring a higher price per pound. It is plain, therefore,

On my Ranch I find several varieties of soil, which if properly understood would all produce well, even without irrigation. One portion makes a good meadow, and don't appear to be adapted to anything else; another part appears to suit grain; a part on which the soil is rich I find I cannot raise potatoes, but carrots, turnips, and many other early vegetables do well; and on another part, which I term the first bottom, every species of vegetables, even Indian corn, flourished and grew to perfection through the dry season, and that without watering in any way. Now here is one point on which I had formed a very erroneous conclusion, which was, that all the land in California required irrigation to insure success; my short experience has caused me to come to quite a different conclusion, so far as my farm is concerned, at least.

You see, gentlemen, I am no scholar, and have not written this letter with the calculation of appearing in your journal, but would add my poor mite in encouraging you to persevere in stimulating practical California farmers to come out, and let us have their experience, and save many young beginners and new comers from making great blunders.

Yours, respectfully,
WM. TAYLOR.

MANURE is the capital on which farmers do business; and the man who teaches them how to obtain it at a reasonable rate, and in sufficient quantities, does the public better service than if he lectured the livelong day on copper and silver mines, and amused the sleepy hours with golden dreams.

AGRICULTURE, like the leader of Israel, strikes the rock—the waters flow, and the famished people are satisfied.

why the Vermont farmers go into the business so much more generally and extensively than those of any other State. It is plain, too, what farmers of other States must do, if they would reap the same profits from this business.

There are towns in New Hampshire, where sheep of the same breeds yield the same profits; and so in some other States. It is probable, however, that in this staple the Northern States will always retain some advantage over the Southern, and the mountains over the plains.—*Boston Traveller*.

PLANTS AS PURIFIERS OF AIR WITHINDOORS.
Some people, says the Magazine of Horticulture, are not yet able to understand the different or even opposite effects of the leaves and the flowers of plants upon the air we breathe. The flowers, like animals, absorb oxygen and give out carbonic acid gas; the leaves, on the contrary, absorb carbonic acid gas, and give out oxygen. Hence, in this respect, house plants, when not in flower, tend to purify the air of the room in which they are kept, and might advantageously be cultivated to a certain extent, for this very purpose. But there is still another point to be considered in relation to this matter. The leaves of plants not only serve to regenerate the atmosphere of a room by absorbing the noxious gases emitted from the lungs of human beings, but they also evaporate into the air a great quantity of moisture. It is customary with those who warm their rooms by means of a close stove, to place a vessel of water upon it, in order to supply any deficiency of atmospheric moisture occasioned by the heated stove. If we reflect a little upon the enormous quantity of moisture taken up from the earth, and evaporated into the air by almost every growing plant, we should be convinced that a few geraniums, rose bushes, or any other deciduous plants, would supply a room with a sufficient abundance of this healthful moisture. House plants, therefore, cannot be too highly recommended, for their utility in promoting the wholesomeness of our indoor atmosphere, as well as for purposes of ornament. The only precaution necessary to be given is, that whenever a plant is in flower, it should during that period, be removed from our sleeping rooms.

A CALIFORNIA PORCUPINE.—The Shasta Courier says: On a recent visit to Fort Reeling, we were shown the stuffed skin of a real porcupine, killed by the unending rifle of Lieut. Van Vost. This is the first animal of this species, (which a witty friend denominates the cactus species,) that we have heard of in California.

A WORD TO SUBSCRIBERS.

WE desire to say to our subscribers, that having sent out numbers of bills for our dues, it may be that in some cases they may have paid Agents we had in the field some six months or more ago and have not made their full returns to us—they may have paid them and we not be advised of it. We beg of each to remind us if so, that we may correct any error. We are sorry to hear of any such error. Our Paper is now only SIX DOLLARS per year, always in advance. Shall we not hear from you reader?

SPECIAL NOTICE.

REDUCTION OF PRICE.

The heavy losses upon the Farming Interests of the State the past year, the general depression of that interest, and the discouragements resulting to all, we know have prevented many who are engaged in Agriculture from subscribing to our Journal the past year. Feeling desirous to meet their wants as far as in our power, we now offer the CALIFORNIA FARMER at SIX DOLLARS PER YEAR, PAYABLE ALWAYS IN ADVANCE.

We trust this effort on our part to meet such circumstances will be met in two parts of those engaged in the cultivation of the soil with a corresponding feeling, and that all will do us service by sending in a goodly list of subscribers and the amount for the same. We have made the price thus low, that our subscribers and friends may at once send us the proof of their good will.

Indemnities for the formation of clubs will be found under another head.

Clubs Formed—Premiums to Subscribers.

With this third volume, with the opening year, we would offer to our friends stronger inducements than heretofore to make up CLUBS for the FARMER. It will be seen by our "special notice," that we shall commence with a reduction of the price of the "Farmer." The price will now be six dollars per year, always in advance. No subscriptions received unless accompanied by the amount.

To those who are disposed to form CLUBS, when we can send all to one address, we shall send SIX COPIES for FIVE NAMES, TWELVE for TEN, and TWENTY-FIVE COPIES for the names and amount of twenty subscriptions.

To those, or any of our friends who will interest themselves, we believe this will be some satisfaction, besides promoting the cause of Agriculture. We hope to see good results to all from his proposition.

THE CALIFORNIA FARMER.

We have many inquiries, daily, from our friends in the country, who wish us, desirous to make up clubs for the FARMER, and send us produce for the amount. We always do our utmost to facilitate the cultivation of the soil, and we will assure our friends that if they will make up clubs of five, ten or twenty, they can send their Wheat, Rye, Oats, Barley, or specimens of extra quality, and we will allow them the full market price in the payment of the FARMER. Our friends that are in a hurry can send us the amount thus due, and all the coming volume, and we will forward receipts for the same. So send along your wheat and good products. We do not receive anything—but those articles that have a value, and we will take them.

TO AGENTS, BOOKSELLERS, &c.

With a desire to extend as widely as possible the circulation of the FARMER, and by this means make known all the Agricultural Information we obtain, we shall offer to Agents, Booksellers, and all who desire our paper in quantities, a price for copies by the hundred that will leave them handsome margins.

SPECIAL AGENTS FOR THE FARMER, &c.

All the messengers of Adams & Co., and Wells, Fargo & Co. are duly authorized by us to receive subscriptions for the CALIFORNIA FARMER, and receipt the same; also, to receive orders for Fruit Trees, Seeds, &c., and any and all business with us. All such business committed to either of these messengers will be promptly responded to by us.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SAN FRANCISCO, THURSDAY, FEBRUARY 22, 1855.

The Word is Onward!

The best proof that the State is progressing in spite of the depression that pervades a great portion of its interests, arises from the fact that we see those interests that tend to permanency constantly progressing.

The money market may be tight, merchandise may fall, ships may want freight, and mechanics' wages may be less; all the general interests may feel what is called "hard times;" but still, if we see fields plowed, grain sowed, lands fenced, cottages built and the stock increased; if we see this, and see people coming to our shores, then we may be assured that the word is onward!

Warehouses may be closed, banks may break, men may be out of trade and employment; but this is not in vain. All need rest, all need change—like the plant that has blossomed and borne its fruit. The winter comes, its fruit is gathered, the leaves fall, and the tree may appear blighted and dead; but soon the rains of Spring, the returning sun and its renewed warmth re-clothes with verdure every branch, the sap circulates anew, again blossoms appear, and again the tree is loaded with fruit. So shall it be with our goodly cities and our noble State, if we but will it and bestow our energies where they are most needed in the present exigency.

Build up the Country and that will build up the cities. Labor to develop the resources of the State in all her own domestic industry, and make known this industry among the citizens of the old States, and this will awaken them to the true character of California. This will bring a population to our shores, whose energy, industry, and talents, will build up the State and place it high among the States of our glorious confederacy. Until this is done, we cannot expect permanent success or prosperity to rest upon us.

SHEEP RAISING AND WOOL GROWING.—Very few countries in the world have better facilities for sheep raising and wool growing than California. Our hills, at mid winter, give early feed, and the mildness of our seasons offers protection to young lambs, thus saving the large expenditure of building required elsewhere. Slight sheds or folds are only necessary here, and these always are needed to protect from heat or cold. It is important that the very best variety of sheep should be introduced; and it is gratifying to notice that there are those who are beginning to realize the importance of this source of wealth to California. We learn that Mr. Rowe has imported six Saxony sheep from Australia, and some other parties will introduce more soon. There can be no doubt but wool growing will soon become a valuable branch of our home industry, and that in a few years our exports of wool will be looked upon with astonishment. We hope stock raisers will import only the very best.

THE MULBERRY TREE—*Morus Multicaulis*.—Public attention should be awakened to the value of this tree to California. The climate favors it; it is a rapid growing tree, and two or four years only are required to raise a tree of twenty or twenty-five feet high. Our climate also favors the successful growing of the "silk worm," whose favorite food is the mulberry. The slopes of our hills are the favored spots for the mulberry groves, and the "cocoeneries" and workshops for the manufacture of silk. There is a great similarity of climate between the silk districts of China and of our State, and there can be no doubt but that manufactures of sewing silk and silk goods of many kinds will be the products of California soil in a very short time. The amount expended in the United States for silk goods is almost incredible. By careful estimates it is found to be nearly \$60,000,000 per year for the last four years; and, by proper effort on the part of the cultivators of California, a slice of this enormous expenditure could be retained within our own nation.

BREMEN GESE, DUCKS, &c.—We learn from H. Koster, Esq., of Petaluma, near Santa Rosa Valley, who recently returned from the continent of Europe, that he has brought with him six large fine white Bremen geese, and several "top knot" ducks, together with many valuable trees, shrubs, plants, &c. He intends to plant a fine garden, and nursery, and also to give attention to the raising of new kinds of poultry. Mr. K. has now some ten varieties of pigeons, many curious and rare. He intends to make this business permanent, and has already engaged in an outlay of

over \$20,000. It is such acquisitions and such expenditures of money that build up a State. May success attend his efforts.

THE BLUE ROSE.—It is announced by some of our exchanges that a florist of France has at last been successful in producing, by a series of hybrids, that long looked for wonder, "the Blue Rose." We do not vouch for the correctness of this, for we have not seen it in our foreign exchanges; yet, when announced under authority, we shall hasten to lay the facts before our readers. We have the yellow tea, black rose, (deep purple) and now the blue—all the results of scientific crossings.

AN ITEM OF THE AGRICULTURE OF THE UNITED STATES.—With a population of about 23,000,000, there is in cultivation 18,000,000 acres of land. The quantity of wheat raised is estimated at 100,000,000 bushels. The horned cattle in the United States are estimated at 19,000,000; horses, 5,000,000; sheep and goats, 22,000,000; swine, 30,000,000. Is agriculture of any value?

VALUE OF THE VINE IN FRANCE.—About 5,000,000 acres are under cultivation with the vine in France. By this great source of wealth the vine might soon be named among the great products of California, if proper attention was paid to it. The product of this 5,000,000 acres of vines is 900,000,000 gallons of wine. Will the vine growers of California look to this?

THE GENESSEE FARMER.—It may seem invidious to single out one agricultural journal from the array of able and well conducted journals of old States and to speak in its praise, but in doing so our object will be more fully understood, when we state the fact that this old and favorite paper, in its last issue received by us, took particular pains to notice the various agricultural papers of the States, and spoke of them all in a very handsome manner. The list thus noticed occupied nearly a column, and embraced thirty-five weekly and monthly journals devoted to the science of Agriculture and Horticulture in the United States. We look upon this generous act of our cotemporary as a pleasing evidence of that interest in the science which in a just degree forgets self, that it may be liberal and generous to others. We like to see this, and though our friends did not embrace the CALIFORNIA FARMER in their list, yet, believing it an oversight at the time, we nevertheless feel and acknowledge the goodness of the act to the great majority, and to the cause in general, and we are most happy to recommend, and do most cordially, the "Genessee Farmer" to our readers, as a paper of great interest and value to all who are engaged in agricultural pursuits. There are several journals in the old States our farmers should take; it would be better for them than any investment of the same amount applied elsewhere. We urge our friends to "think of these things."

WE ACKNOWLEDGE the receipt of many very kind favors, and we sometimes fear we may not note all; if our friends find us remiss, we trust they will not think it intentional.

From the the Patent Office, by Hon. O. Mason, Commissioners of Patents, we have received a very liberal collection of new seeds for distribution to amateur cultivators, and all others.

From Hon. Senator Gwin, and Hon. Mr. Latham, we have to acknowledge many valuable books and papers, speeches, &c.

From Messrs. Murray & Co. booksellers, magazines, pamphlets, and foreign and domestic papers, full files.

From Noisy Carrier's Book and Stationery Co. Long Wharf, late magazines and papers, received per steamer Oregon.

From Gen. Marlette, Surveyor General, the full annual report—a document of value, affording very many important data of California.

From Richard H. Lee, of Philadelphia, the premium plates of the Presidents, a very beautiful engraving, a work of art most superb.

Communications from several contributors, which will duly appear.

MSS. "Pencilling," from E. A. W. will appear in next issue. We hope to hear from this source often; this will be an ornament to our Ladies' Department.

From Adams & Co. and Wells, Fargo & Co.—the usual favors.

WARREN'S MUSEUM.—Members of the Legislature, strangers, scientific men, and all who feel interested in the advance of California's interest, are invited to call and see the products of California as exhibited by us at the Office of the CALIFORNIA FARMER. Every facility and information, rendered free.

Steamships to China.

Extract from the Speech of Hon. M. S. Latham, of California, delivered in the House of Representatives, January 9, 1855.

Mr. CHAIRMAN: I rise to say a few words upon a subject of interest, not only to my constituents, but, I believe, to the whole country, in favor of the bill establishing a line of mail steamships between San Francisco and Shanghai, in China, touching at the Sandwich Islands, and at Japan. I am aware that the State which I have the honor in part to represent, has been looked upon in the House, and in the Senate, as a constant applicant for legislative favors, and a tax upon the United States Treasury.

California has been represented as swallowing up a large amount of our national resources; but the question, how much the wealth and enterprise of California has added to our national prosperity and power?—which is essential to a proper appreciation of the subject—is often lost sight of, or treated merely as incidental to the problem of finance and statesmanship.

Sir, I do not speak boastfully, when I venture to assert, that the achievements of California, though they may seem to be but the work of yesterday, mark an epoch in the history of the world. The settlement of the Pacific coast by our race, the discovery and exploration of the precious metals, the rapidly increasing intercommunication between the eastern and western shores of this continent, the opening of Eastern Asia to our commerce, the emigrant trade from China, the conclusion of a commercial treaty with Japan, the gravitation of the Sandwich Islands towards our confederacy, and the new life now springing up in Australia and the Oceanic Islands, mark as distinct an era in the human race, and must lead to as complete a revolution in the moral, religious, and political condition of mankind, as was produced, four centuries ago, by the discovery and colonization of this continent. It was the discovery of America and of the capes, which transferred the seat of trade from the Mediterranean to the Atlantic States of Europe, swallowed up the Italian Republics, and gave, first to Spain and Portugal, and subsequently to Holland and England, the wealth and power resulting from navigation and commerce.

The discovery of America not only transferred power from one European State to another, but it also changed the relative condition of the people. Wealth, which at that time almost entirely consisted of lands, the exclusive possession of which, by a few nobles, furnished the basis of feudal tenures and a feudal aristocracy, found an equally potent factor in the accumulation of precious metals, and the vast exchange of products traveling from hand to hand, which made their owners independent, rich, and powerful, without the possession of lands and tenements; diminishing, in the same ratio, the power and influence of the nobles. It gave birth to a class of wealthy merchants, navigators, and traders, to which, subsequently, were added manufacturers and handicraftsmen, who soon struggled for, and obtained, political power.

The so-called "middle classes" of Europe owe their origin almost entirely to the New World, with which history, by a single leap, passed from feudal aristocracy and slavery to the emancipation of the laborers. The conquest of India might have given Europe an oriental caste, still further subdividing classes; the discovery of America, and its gigantic colonization, opened to all classes a field of hardy enterprise, which invigorated both the old and the new continents. The New World gave to the Old World, first wealth and prosperity, then political regeneration, and, finally, a new social development, improving the condition of individuals.

Now, I maintain, Mr. Chairman, that the occupation and settlement of California by our own hardy pioneers is destined to have the same influence on Asia, and all the people bordering on the broad Pacific, which the discovery and settlement of the eastern shore of America had on Europe. It will produce an entire revolution in the commerce, trade and navigation of the East, followed by a complete change in the moral, religious, and political condition of the Asiatics, with whom we shall exchange our products, our wealth, and our ideas. The changes in Europe have been the work of some eight or ten generations; but in view of the astounding development of California within less than a decade, we have every reason to hope that, with the progress of science, and the employment of such powerful agents as steam and electricity, the changes produced in the East will be so rapid, and so marked by their consequences, as to come within the sphere of our own observation, and insure to the advantage of the living. For the first time, in the history of the world, does a people of European origin—not a handful of adventurers, but a whole State, embodying all the arts of civilized life, and partaking of the highest political organization—wield power on the shores of the Pacific; for the first time does a great nation trade from shore to shore on that ocean. The road to India, which Columbus and his followers sought when they discovered America, is found. It crosses our continent; it is ours from ocean to ocean; subject to our laws, and open to our enterprise.

Never, in the history of the world, was there a greater mission intrusted to a more youthful and energetic people, combining in so eminent a degree the patience and endurance of the agriculturist, with the venturesome spirit of the merchant, and the martial daring of the soldier. Unity of race, language, and organization, give momentum to our will, and effect and consequence to our acts. In less than a century we have risen from a handful of colonists to a great independent nation, taking rank with the proudest on earth; showing a

law of progress and a series of improvements, the ultimate term of which dazzles the imagination. In this law of progress, in this series of improvements, we have reached, settled, and fructified California. We have, with its treasures, animated the commerce of the world, stimulated enterprise, and given a fresh impetus and new direction to the steam of European immigration to this country. If the growth of Europe has astonished and stupefied Europe, the unprecedented development of the wealth and magnificence of California, has surprised and dazzled even the United States. Accustomed, as we are, to view, with comparative indifference, the unexampled history of our eastern and western States, we still lack the standard of comparison to measure the quickening process of wealth and power exhibited in our new empire on the Pacific. If it was the most daring and enterprising Europeans who came to settle on our Atlantic shores, those who now emigrate from the Atlantic to the Pacific coast are certainly not among the most sluggish of our own race, or unwilling to assume new obligations, growing out of a new and healthful condition of private and public life. As all Europe contributed to settle our Atlantic borders, so every State of the Union contributes now its quota of intelligence, enterprise and daring to give vitality and strength to our splendid domain beyond the Rocky Mountains. If the old Atlantic States of this glorious Confederacy understand the process of crowding the events of centuries into the short space of decades, we, of the extreme west, advance with the speed of the sun, and fulfill the mission of a decade within the annual return of the seasons.

At this rate, we not only add most substantially to the power and influence of the Confederacy, but promise a quick and ample return for every legislative favor that Congress may think fit to bestow. I believe, Mr. Chairman, that California and Oregon are destined to re-enact, on a large and magnificent scale, the part which Egypt played in the history and civilization of the Old World, and that San Francisco is to be the modern Alexandria through which the wealth of India is to be poured into our lap. As the Old World received its civilization from Egypt, so will a new civilization, science, and the doctrine of the living God, be carried from the western shores of this continent to reanimate the stagnant races of Japan, China, and the Indian Archipelago. Commerce is a greater fertilizer of the human intellect than war, and a better messenger of the religion of peace, than the clang of swords or the roar of artillery.

This bill, Sir, if it pass this House, will go far in aiding us to fulfill our great mission, and will do that for the advancement of the whole country which no other legislative act, involving no greater appropriation of money, is likely to accomplish in so short a time. We ask for nothing that will not, through us, benefit every other State in the Union; no commercial advantages, that shall not equally promote the trade and traffic of the Atlantic sea shore, and nothing that is not absolutely necessary to preserve that bond of fraternal union between all the States which is the cause of our strength, and the talisman of our national prosperity. I will not here detain the committee with elaborate statistics of the comparative commerce of England and the United States with China and the East Indies. These have been furnished by other persons, and may be consulted with advantage by those who wish to obtain accurate information on the subject. The reports of the British House of Commons, and of Congress, furnish all the required details. I would here observe, however, that all statistics of the China trade, whether British or our own, must be taken with a grain of allowance; as the official returns, in all cases, are intended to deceive the Chinese Government, and to conceal rather than reveal the truth to the trading community. Thus we have been told, in an official report made to this House, in 1848, that the "recognized" imports into China in 1844, on British accounts, amounted to nearly \$16,000,000, consisting of woolen goods, cotton fabrics, including yarns, and raw cotton from India; and that, in the same year, there were smuggled into China 40,000 chests of opium, valued at \$20,000,000.

Mr. WARREN. Will the gentleman from California, state whose report he alludes to?

Mr. LATHAM. I allude to the report of Hon. Thomas Butler King, chairman of the Committee on Naval Affairs, made to this House in May, 1848. Of course, the latter is mere guess work, while the former amount includes only that portion which was officially stated at the custom houses. The commercial statistics of a country are of little or no value when it must be admitted that the illegitimate, or smuggling trade, exceeds the lawful trade by several millions per annum; and when the capacity for continuing that trade can only be estimated by the resources of a comparatively unknown Empire. We shall probably be not far from the truth when we assume that the imports of opium into China, exceed the regular imports of dutiable articles by at least one hundred per cent., and that twenty per cent. of the opium smuggled into China is on American account.

This has been the opinion of Chinese merchants, as stated by Gutzlaff and Neuman, (unquestionable authorities on all subjects connected with the Chinese Empire;) and the Chinese merchants in the seaports and the interior are far better informed on such matters than the Mandarins. The civil war, too, which has now been raging for several years, and which may continue for several years longer, must furnish additional facilities to the opium smugglers; and if vice and debauchery usually follow the trail of armies, it is but reasonable to suppose that opium eating and smoking

are now rapidly on the increase in every part of China.

The report above quoted, gives the imports into China, on British accounts, as follows:

Woolen and cotton goods,	\$15,929,132
Opium,	20,000,000
Total,	\$35,929,132

Or, in round number, \$36,000,000. All the exports from China, exclusive of Sycee silver, fell short of \$18,000,000; balance in favor of England \$18,000,000. Such a trade cannot, in the natural course of things, continue long; especially, as the freights are all earned by European or American vessels, and the imports into China are all for Chinese accounts and for Chinese consumption. The Chinese Government is, indeed, reduced to the alternative, either to allow and encourage the culture of opium, or to see the country and itself rapidly reduced to bankruptcy. It has not the power to prevent smuggling, which is carried on by armed vessels, the officers and supercargoes of which distribute both chests of opium and the Scriptures; and with the eagerness of the people to buy the poison, the trade which ruins the country is sure to make the fortune of the smuggler.

Our trade with China is yet in its infancy; we chiefly export thither cotton goods, which are acknowledged to be of a superior texture and better quality than the English, raw cotton, lead and ginseng. In 1845, our whole export to China, amounted to little over \$1,300,000, and very nearly the same amount of specie; while the exports from China to the United States, amounted, in round numbers, to \$6,700,000; leaving a large balance in favor of China. Other statistical accounts, furnished by the British House of Commons, show an increase in the exports of China to foreign countries, but also a corresponding increase in the value of the opium smuggled into it. The balance of trade against the United States and in favor of China, had, in 1845, as above stated, already exceeded \$5,300,000, and this balance was settled by bills on London, against shipments of specie.

In 1846 the balance of trade between this country and China, was, in round numbers, but \$4,600,000 against the United States; while British imports from China had fallen off some \$6,000,000, and exports to China \$11,000,000; probably occasioned by their diminished capacity to buy either rags or poison. British trade with China depends on the capacity of the Chinese to pay in cash for articles they can no longer pay for in goods or products of their own; while our commerce with that country being, as yet, largely in favor of the Chinese, presents a considerable margin to be filled by the ingenuity and enterprise of our merchants. Our manufacturers may improve their fabrics or render them less costly; our navigators may reduce the commercial balance against us by carrying freights; we may reship a portion of our imports from China to other countries; we may carry a portion of the British and other foreign imports into China, and we may discover new articles of consumption for the Chinese markets.

It seems to me, Mr. Chairman, that in all these respects we are better circumstanced than the British; and, in saying that, I would indicate that our commercial relations with China are capable of being improved beyond those of any other country.

RUN ON PAGE, BACON & Co.—The reported suspension of the House of Page & Bacon in St. Louis, caused a report that the House of Page, Bacon & Co. in this city was about to fail, and numerous persons crowded about the house on Saturday to obtain their deposits. The rush was made principally by poor men and women, whose all was dependent on the solvency of the bank, and whose anxiety led them to crowd toward the counter at the risk of their lives, several getting severely bruised. The most of the heavy business men dealing with the House had sufficient confidence to leave their funds with it. The run subsided before the close of banking hours. It is almost needless to say, says the Chronicle, that, although the news from New York was of a nature to alarm those not fully aware of the condition of the firm named, still there was not a particle of reason for the panic, as the House is fully able to pay all its liabilities, and then be worth a million of dollars. When the run commenced they had in their vaults more than twelve hundred thousand dollars to meet the demands of depositors, besides ample means for sustaining themselves in other respects. The merchants and bankers held a meeting at the Merchants' Exchange at two o'clock, and passed strong resolutions of confidence in the moral and financial integrity of Page, Bacon & Co. There is certainly not the least cause for a panic. No firm in California, none in the Union, nor out of it, have a right to claim confidence more than they. The news has not shaken in the least the confidence of our merchants, bankers, and business men in the integrity and sound condition of Page, Bacon & Co.

THE FIRE.—By the fire on Sunday morning, two hotels were nearly destroyed—the St. Charles, on the southeast corner of Washington and Davis streets, extending 150 feet on Washington by 110 feet on Davis, part of it three stories high, and Hillman's Temperance House adjoining, 50 feet front by 120 deep. Both buildings were of wood, and the loss is estimated at \$30,000.

FROM THE EAST.

THE STEAMSHIP OREGON arrived on Saturday, with news one week later news from the East. She brought a large number of women and children, and many returning Californians.

The passengers by the steamship Sonora arrived at Panama Jan. 20th, and crossed the Isthmus in cars, from ocean to ocean. The first train came through from Aspinwall to Panama Jan. 23. The revolution in Mexico is gaining ground. It is reported that 2,000 of Santa Anna's troops, including five Generals and many other officers, have joined Alvarez, and were to start from Acapulco on the 8th of February, with the intention of taking the city of Mexico.

The clipper ship Tiquia, of 666 tons, was lost off Cape Hatteras on the 11th of January. The loss is stated at \$350,000.

Edward Everett having resigned his position as U. S. Senator, the Massachusetts Legislature are likely to have some trouble in electing his successor. Henry Wilson, is nominated by the Assembly, while the Senate prefers B. Ely.

Loker Renick & Co., of St. Louis, have failed, but it is thought would resume. There had been a run on the houses of Lucas & Simmons, Benoist & Co., and E. W. Clark & Brothers; but these establishments stood the test.

The new Mayor of New York has compelled the liquor shops to close on Sunday.

Piero Soule has resigned his post as Minister to Spain, and it is said that J. C. Breckenridge of Kentucky will be appointed to the place.

A bill to appropriate \$300,000 for an extension of the General Post Office was passed in the U. S. Senate on the 17th January.

The President has appointed F. Davis, postmaster at Coloma; W. H. Endicott, postmaster at Nevada; Mr. Thatcher, postmaster at Placerville; John McCracken, U. S. Marshal for Oregon; Samuel D. Leconte, of Maryland, Chief Justice of Maryland.

The stoppage of the House of Page & Bacon, at St. Louis, on the 12th January, caused a great excitement in New York. A meeting of Californians was held, to express confidence in the House of Page, Bacon & Co. of San Francisco, and a committee of the meeting addressed a letter to Mr. H. D. Bacon, in which they say "that should it prove that your house has been sacrificed for the selfish end of establishing another on its ruins in San Francisco, we will use our influence in every honorable way to prevent the accomplishment of such an object." Mr. Bacon, in his letter of reply says: "Having diligently, and I believe successfully labored to secure the creditors of my California House, Page, Bacon & Co., against loss or damage growing out of the unexpected and unjustifiable dishonor of my St. Louis House, Page & Bacon, by Duncan, Sherman & Co.; it is with no small gratification that I have received a letter from the committee appointed at a meeting held at the Metropolitan Hotel, of the creditors and friends of both houses, expressing entire satisfaction with the course pursued by me for the accomplishment of that end."

The friends of the St. Louis House say that it will have no difficulty in recovering its position, the partnership as well as the private property of the firm being far beyond all liabilities.

FROM EUROPE.

The general news from Europe is not of great importance. The allies are making vast preparations for a general assault upon Sebastopol. The plan is to continue a fire without cessation for 48 hours, to be followed by a general assault from both French and English. Although the works were in a very forward state, the correspondent of the Presse believes that nothing serious can be attempted against Sebastopol before the 15th January.

Diplomacy still continues busy at Vienna, in which Prussia had joined. It is said that the Russian interpretation differs but little from that of the allies, thereby affording a chance, though a slight one, for peace.

Messrs. Morewood & Rogers, iron merchants, of London, have failed for upwards of £180,000 sterling. Their assets are said to be large.

The London Times has created considerable excitement in England by advocating the immediate removal of Lord Ruglan from his command in the East, on the ground of incompetency. The same paper is also busy writing down the Ministry, and indicates the Marquis of Dalhousie, the present Governor of India, as the only man capable of the position of Minister of War.

In France, accounts from the Industrial Districts were most satisfactory. There were immense demands for space in the Crystal Palace, and a new gallery was ordered to the building.

Advices from Australia to the 20th December, give accounts of serious troubles between the miners and the government forces. The miners seem determined to no longer pay the customary license duty of \$7 50 per month, and some sanguinary fights had taken place between them and the government forces. It is said that the Commission and the police force made necessary by the license system, cost more, by about £200,000 than is realized by the licenses.

News from China to 9th December, in relation to the war between the Imperialists and the Rebels, states that Canton affairs are approaching a crisis apparently, the Imperialist troops having been routed by the Rebels in the rear of the city, and driven in pell mell. There had also been a grand naval engagement, in which the Rebels gained the advantage.

Why should a thief never steal candles? Because they will surely come to light.

THE DAIRY PRIZE.—We make the following extracts from a letter received by us a few days since:

"I had one other object in writing this letter: I noticed in the FARMER of the 25th January, your remarks with regard to Messrs. Southwick & Co.'s Grand Dairy Prize; and for the first time I have given my consent that part of my family may try their 'luck' in a small way, so I have troubled you with the enclosed three dollars for the purpose of purchasing three tickets—one for my wife, one for my eldest daughter and her sisters, and one for my eldest son and his brothers. Your attention to this little matter will confer a favor on,

"Yours very respectfully,"

WHEN WILL IT RAIN?—This all-important question has been decided by the eccentric Duncomb's reply to the Dunstable Farmer—

"Well, Duncomb, how will be the weather? Sir, it looks cloudy altogether. And coming 'cross our Houghton Green, I stopped and talked with old Frank Beane, While we stood there, sir, old Jen Swain, Went by and said, he know'd twood rain. The next that came was Muster Hunt, And he declared, he know it wont. And then I met with farmer Blow— He told me plainly he didn't know. So, sir, when docters disagree, Who's to decide, you or me?"

BIG LUMPS.—The Marysville Herald mentions the following nuggets taken out of Baldwin & Co.'s claims, at Smith's Diggings, on the 11th: one weighing 14 ounces, one 16, one 13, and one 7 ounces. One chunk weighing 97 1-2 pounds Troy, was taken from the claim of H. H. Smith, French Ravine, eight miles from Downville; its value is estimated at \$12,000.

THREE THOUSAND FIVE HUNDRED DOLLARS FOR A BULL.—The bull "Syrias," which received the premium at the recent Bourbon County (Ky.) Agricultural Fair, has been bought by Mr. R. A. Alexander, of Woodford, in that State, at \$3,500.

NEW ENGLAND ENTERPRISE.—We have often alluded to the prosperity of the towns and villages of these States, says a New York exchange, and we now give the following statement in reference to the industry of one of these small communities. The whole township, by the last census, had a population of only 1,776 inhabitants:

WARREN.—Among the many towns which furnish the Boston market with the necessities of life, Warren holds a prominent rank. The people are intelligent, enterprising, and active. The farms are well adapted to grazing, and are almost exclusively devoted to that purpose. Since the 1st of May last, there have been sent from Warren to Boston, 218,000 pounds of cheese, and 589,994 gallons of milk; and during the month of November, the same city received 73,128 lbs. of pork from Warren and vicinity. Efforts are making to secure a course of lectures during the winter, and, though late, it is hoped the endeavors will succeed. The Warren Cotton Mills Co., are completing a large brick factory over one hundred feet long, and four stories high.

A NEW GRAPE MALADY.—A new malady has proved very fatal to vines, during the past season, in the northern counties of England. A correspondent of the Gardeners' Chronicle, mentions a singular case of this disease, arising evidently from a minute parasite. It made its appearance last year for the first time on a peculiarly healthy vine, noted for its excellent fruit, which it seems likely to destroy. The first indication of the disease is a little brown speck: this increases gradually, forming an orbicular spot of sienna brown, and preserving a definite outline. The surface of the spots, sometimes from the extension of one patch but more frequently from the confluence of more than one, is rough, with little raised, orbicular reddish bodies, arranged in concentric circles, and easily separated from the matrix. The writer classes this little parasite under the genus *Septoria*, and remarks that he can as yet suggest no remedy, and is doubtful whether it will admit of one. We have not yet heard of this disease in America.

ENLARGING VEGETABLES.—Upon an average, only one half the size is attained for all vegetables grown which might easily be had by an improved mode of culture. If every thing was doubled in size, without saying any thing about an increase otherwise in the amount of crops, what a vast gain it would be to the farmer. Every body is struck with the improved value given to grain, as well as roots and esculents, by increased size. Then why don't every body try to increase their own? Take, for example, the common garden pea, and try the following experiment:

Plant it in very rich ground; allow it to bear the first year say half-a-dozen pods only; save the largest the following year, and retain of the produce three pods only; sow the largest the following year, and retain one pod; again select the largest, and the next year the sort will have trebled its size and weight. Ever afterward sow the largest seed, and by these means you will get peas, or any thing else, of a bulk of which we at present have no conception.

Select wheat in the same way, and after three years you will be astonished at the result.—*Plough, Loom and Anvil.*

THE LIBERTY SOCIETY is now in full blast. Question for discussion—"If a man builds a corn-crib, does that give him a right to crib corn?"

Horticultural Department.

The Ohio Pomological Society.

By the Circular of this Society, we note one of the important features of it—viz; that members were invited to attend prepared to report upon the following points:

1st. The fruits cultivated, by himself, or in his region, with the proper name, and all the local and synonyms known to him. The character of the top and subsoil in which grown; if the surface is a level plane, or hill side, the aspect and elevation. What varieties are best adapted to these soils and locations, and their productiveness. The mode of cultivation, pruning, &c. The effect of manures, kind used, when and how applied.

2d. The influence of the stock on the health and duration of the varieties, grafted, or loaded on the same, and the relative merits of the two modes of propagation, if any. Also, the relative effect of root grafting (as practiced by many nurserymen,) and stock grafting, on the health and duration of the tree.

3d. Observations on insects injurious to fruit trees, and vines. The diseases or maladies to which they are subject, with the best modes to counteract these evils, with any other information of interest on the subject.

These questions are worthy the attention of cultivators of fruit every where, and we would urge it upon the cultivators of fruit in California and Oregon.

A convention of the nurserymen and fruit-growers of this section of the country would do more to advance this great interest, than any step that could be taken.

Tree Planting.

We notice among the munificent bequests of Elliot Cressen, a legacy of \$5,000 to be employed in planting trees in Philadelphia. There is something touching in this gift. It is fragrant of good taste and friendly feeling. It seems to express gratitude for the comforting shade of some old tree under which the weary philanthropist had meditated his schemes of usefulness; and of co-siderate interest for the health and pleasure of future generations, who are to people the city of his birth. And when monuments of marble and of bronze shall crumble, the broad arms of the elm and the oak shall stand out against the sky as the befitting emblems of the liberality and the last of the tree-loving Philadelphians.

Every one should plant trees. No object is more beautiful than a spreading elm, or a lively evergreen; none more productive than the apple or the hickory pear. Half the labor bestowed on a single crop of potatoes, would originate an orchard the benefits of which in a few years would be equal in value annually, to the potato crop, yet with but little labor beyond the harvesting. A fortnight's toil in the spring or autumn, in transplanting choice fruit trees to the roadside, or tastefully grouping them on the lawn, will ultimately add more to the value of the place than twice the time employed in building or fencing. For their own comfort, for the sake of their descendants, for the taste and improvement of the country, plant trees—let every body plant trees.

That bald, naked church, tasteless, treeless! Who will have compassion on the worshippers, and surround it with trees? That district school house, bare and unsightly; who will interest the boys in planting and protecting shrubs and trees that it will make it an attractive and beautiful spot? Those verdantless villages, with their houses thrust upon the street—who will distribute honey-suckles, and Virginia creepers and prairie roses, that they may be turned into civilized habitations?

There is a softening, humanizing influence in horticulture and tree-planting, that we could wish were more general. There is too much danger of the gross and sensual and selfish in our national character; and while our reliance must be on religious and educational influences to correct this tendency, we believe that good and only good, would come of the love for trees and flowers, and the cultivation of both. It may be blessed in leading the heart up to the love of the Rose of Sharon and the garden of God.—*American Messenger.*

Peculiarities in Plants.

If we consider the vegetable kingdom attentively, we are astonished as much with the variety as with the greatness and magnificence of the phenomena which it offers to our contemplation. Almost every season, every day, every hour, and every place, presents us plants under different circumstances, with peculiar qualities and in varied forms. Scarcely does the soft air of spring refresh the earth, when every object, in which there is still a germ of life, becomes developed with astonishing rapidity. The plants which spring has graced with foliage, summer decks with a multitude of flowers. In autumn the fruits are collected. In winter those plants, once so beautiful, are found to be, some in a state of dissolution, others in a state of rest, or in a continued development, which proves that nature is engaged in an unintermittent activity. But, in winter, the greater number of plants die; the fallen foliage decomposes, returns into the earth, and becomes the rich source of nutriment for a succeeding growth. But to judge of those changes which are observed in plants such long periods are not required. How great is the variety in the phenomena of flowers and plants daily to be seen! Observe them attentively early in the morning of June or July, when night has scarcely raised its

dark veil, and when the sun is hardly risen above the horizon. Everything has another aspect than during the day. The flowers are closed, the leaves have changed their direction; those that were spread out seem disposed to close, and present quite another appearance than by day; you would even think them about to renounce their former state of buds, and to return to a state of formation and development. The vegetable kingdom sleeps! However, not only the form and position, but also the colors, have quite a different appearance. The fields have often a green color, like that of the waves of the ocean. And this is not only the effect of vapors fallen from the atmosphere but also of the fact that plants, by their altered directions, offer us surfaces that are differently colored. Another cause of this phenomenon is, that on their surface a cover like wax is left, which the sunbeams cause to disappear afterwards, and then the original color presents itself again. At mid-day, all is in its full splendor. The flowers are opened, the leaves are spread out, and often they reflect the sunbeams from their shining surfaces; sweet smells spread over the fields; vegetation attires itself with its most magnificent raiment, and proclaims to the serious contemplator of nature the greatness and power of Him who called all things into existence. And in what state does the vegetable kingdom appear to us in the evening? While the last rays of the sun, the source of life in nature, yet linger in the west, the plants seem to be again in a deep asleep. The whole of animated nature, as if wearied with the day, inclines with them to repose. The birds and other animals, inhabitants of the woods, are silent, hiding themselves among the branches and leaves; the insects creep to their holes; silence and calm reign everywhere, till morning comes to revive the whole creation.—*De Friese, translated for the Gardeners Chronicle.*

JAPANESE GARDENS.—The gardeners of Japan display the most astonishing art. The plum tree, which is a great favorite, is so trained and cultivated that the blossoms are as big as those of the dahlias. Their great triumph, however, is to bring both plants and trees into the compass of the little garden attached to the houses in the cities. With this view, they have gradually succeeded in dwarfing the fig, plum, and cherry trees, and the vine, to a stature so diminutive as scarcely to be credited by an European; and yet these dwarf trees are completely covered with blossoms and leaves. Some of the gardens resemble pictures in which nature in skillfully modelled in a miniature—but it is living nature! Maylon, whose work on Japan, was published at Amsterdam, in 1840, states that in 1828, the Dutch agent of commerce at Nagasaki, was offered "a snuff-box, one inch in thickness, and three inches high, in which grew a fig tree, a bamboo, and a palm tree in bloom."

SUNFLOWER WITH CORN.—Mr. Depew of Pittsfield has been experimenting by raising sunflower and corn together. He planted one acre and one hundred and fifty-two rods of ground on the 24th of May, with a corn planter, five feet apart the sunflower and corn was mixed in the hill. The yield was sixty-eight bushels of ears of dent corn, and thirty-five bushels of sunflower seed fully ripened and harvested about the 1st of October. His sunflower seed he designs to feed to his poultry, of which he keeps a large number. Sunflower seed gives a large yield of an excellent drying oil, and might be made profitable to raise for the oil.—*N. in Michigan Farmer.*

How Much Tobacco is Used.

The present annual production of tobacco is estimated to be 4,000,000,000 pounds—four billions of pounds! This is all smoked, chewed, or snuffed. Suppose it all made into cigars, one hundred to the pound, it would produce 400,000,000,000—four hundred billions of cigars! These cigars at the usual length—four inches—if joined together, would form one continuous cigar 25,252,520 miles long, which would encircle the earth more than one thousand times. Cut up into equal pieces, 240,000 miles in length, there would be over one thousand cigars which would extend from the centre of the earth to the centre of the moon.

Put these cigars into boxes 10 inches long, 4 inches wide and three inches high—100 to the box—it would require 4,000,000,000 boxes. Pile up these boxes in a solid mass, and they would occupy a space of 294,444,444—two hundred and ninety-four million cubic feet! If piled up 20 feet high, they would cover a farm of 338 acres, and if laid side by side, the boxes would cover very nearly 20,000 acres. Let some boy who reads the *American Agriculturist* estimate how large a village or city would be required to furnish store houses for all these boxes.

If a person smoke a cigar every twenty minutes, and continue this night and day, it would require an army of 2,500 such smokers 6,000 years to consume the above; and if each person smoked only four cigars a day—a pretty fair allowance he should say—it would take 45,000 smokers 6,000 years—a larger term than the human race has existed—to smoke up all the tobacco now produced in a single year.

Allowing this tobacco manufactured to cost on the average ten cents a pound, and we have 400,000,000 of dollars expended every year in producing a noxious, deleterious weed. At least one and a half times as much more is required to manufacture it into marketable form and dispose of it to the consumer. At the very lowest estimate then, the human family expend every year one thousand million of dollars in the gratification of an acquired habit—or one dollar for every man, woman and child upon the earth!

This sum would build two railroads around

the earth at a cost of twenty thousand dollars per mile, or sixteen railroads from the Atlantic to the Pacific. It would build one hundred thousand churches costing \$10,000 each; or half a million of school houses costing \$2,000 each; or one million of dwellings costing \$1,000 each. It would employ one million of preachers, and one million of teachers, giving each a salary of \$500. It would support three and one-third millions of young men at college, giving each \$300 per annum for expenses. We leave others to fill out the picture. Is this annual outlay to increase or decrease in future? Reader, how much do you contribute to this fund?—*American Agriculturist.*

CURING HAMS, BEEF AND VENISON.—If you want a good ham, success depends upon the manner it is cured; the ham should not be so salt as to need freshening. We have enquired of hams according to the following receipt, and always found it safe, and made them just salt enough for the table: For every one hundred pounds of hams take 8 of saltpetre, 2 quarts of molasses, and 2 quarts of fine salt; mix them with a sufficient quantity of water to cover the hams. When packed rather closely in a barrel let the brine stand for two or three hours to settle; turn off and throw away the sediment. Cover the hams with the brine and repack once a week, changing the position of the hams. In from four to six weeks they will be cured, and may be smoked at pleasure. After smoking repack them in the barrel of brine, which will keep them, in a cool cellar, through the summer without increasing or diminishing their saltiness and safe from the flies. We have kept hams all summer perfectly sweet in a stone smoke house, suspended about one foot below the roof. Beef, venison and mutton may be kept in the same way.—*N. in Mich. Farmer.*

A GOOD IDEA.—The Secretary of the Shiawassee County Agricultural Society writes to us, while ordering some numbers for distribution, as premiums given at the last Fair of that County, as follows: "The Society will offer premiums, the coming year, in agricultural papers instead of money; and it will look, at home first, instead of abroad, as it thinks the subjects and tone of the articles published, render them more applicable to our climate and location." We are much obliged for the Society's good opinion, and shall endeavor to render the present volume still more applicable to the agriculture of Michigan, than any of its predecessors, and thus repay the members for their good intentions towards us.—*Mich. Farmer.*

PHILIDOR'S MEMORY AT CHESS.—As a young man, Philidor exercised this remarkable talent as a means of making money. In Germany, England, and Holland, he beat all the best players, although he gave them advantages. More than once he was known to direct the game of a person placed out of his sight whilst he himself was playing another game, but efforts of that kind fatigued his head so much that he discontinued them. The Count d'Artois, however, having heard of the feat, greatly desired to witness it, and sent word to Philidor that he would play him in that manner for a hundred louis d'ors. Philidor, after duly warning the Prince that he was sure to beat him, at last consented to his wish and accepted the bet.

When the Count d'Artois had selected the two players who were to conduct his game—as he was quite decided to pay the hundred louis, however the thing turned out—he secretly prevailed upon Philidor's second to falsify execute one of the orders given to him. This understanding effected, the game began, and had proceeded but a very short while, when Philidor having told his player to move a knight, the player moved a bishop, and, twenty moves afterwards, informed him that his adversary checked his king with his queen.

"That is impossible!" cried Philidor; "our knight would take her."

"But the knight is not there," replied the Prince's accomplice; "it is the bishop."

"How so! The bishop?"

Resting his head upon his hands, Philidor sat buried in reflection, until he recalled to his memory the whole progress of the game.

"At the fifth move," he at last said; "when I told you to advance the knight, you made a mistake and advanced the bishop."

At these words the Count d'Artois, seized with wonder and admiration, rose from his seat, confessed the trick, and asked Philidor's pardon. The following morning he sent him the hundred louis enclosed in a gold box, bearing his initials in diamonds.

WONDERFUL, IF TRUE.—The New York Evening Post narrates a singular circumstance. A cashier of a bank, not a hundred miles from Wall street, found his funds \$200,000 short, at a time when his accounts were about to be examined. He consulted an attorney friend, who discovered that he had no property available to convert to cash to cover the deficit, and advised him to take \$200,000 more, then, when the discovery took place, he would have something to negotiate with the directors, and induce them to refrain from a public expose. The cashier took the advice—and the money. The discovery occurred; he compromised with them for \$100,000, and neither the stockholders nor the public knew anything of the matter. Resigning his situation, he lived, respected by all, on his fortune, the other \$300,000, and died during the current year.

COAL ASHES.—The best purposes which coal ashes can be applied to in town or country is in making garden walks. If well laid down, no weeds or grass will grow, and by use they become as solid and more durable than brick.

Miscellany.

THE TEAR.

BY OSCAR G. HUGHAN.

The hour of midnight is the hour to sleep;
The hour of morning is the hour to pray;
The hour of twilight is the time to weep;
The heart's deep bitterness in tears away.

My mother, when I left thee, long ago,
I saw a tear-drop from its fountain start;
And down my faded cheek, in silence, flow
The overgrowings of a broken heart.

How eloquent that tear! It seemed to say,
Though unregarded, "Do not leave me now,—
Years creep upon me, and my hair is gray,
And Grief's deep impress sits upon my brow.

"Think! think, how sad, how lone my hours will be
When thou art wandering o'er the boundless main;
Smiling with the smile I love to see,
But in whose warmth I may not live again.

"If thou but knew what tears, what sighs will start,
When I behold my cherished idol bow,
Thou couldst not thus in thoughtlessness depart,
And leave me tottering o'er the grave alone."

If I had loved thee with as deep a love
As I have lain upon a stranger's shrine,
We never had parted;—like the stars above,
We both had lived within each other's smile.

But now my heart is broken by its care,—
Its flowers of feeling, one by one, have died;
And 'mid the ruins of its black despair,
Once more it wanders sadly to thy side.

If thou hast hovered o'er thy homeless son,
Thou know'st what years of misery have fell,—
What blighted hope and broken faith have done,
To bind my soul in sorrow's deadening spell.

I know thy spirit hovers o'er me now—
I feel its presence in my desolate heart;
Oh! that I could but kiss thy clouded brow,
And bid each sorrow from thy breast depart.

I hear thy voice, so saint-like, soft, and mild,
Repeating solemnly, "Thy will be done!"
Keep from temptation, my lost, wandering child,
And thine the glory for the triumph won."

I need not tell thee even thus to pray,—
I know thou wilt for others likewise kneel,—
That Love may teach them by its sunny ray,
The ills and woes of other hearts to feel.

Dean Swift and the Cobbler.

It happened that the Dean was one day passing through Patrick's Close, when he espied a cobbler hard at work in his stall. Poor Crispin, though half naked, was singing away like a lark, and hammering at the heel of an old shoe with an apparent lightness of heart that astonished the Dean, when he contemplated the merry wretch's obvious misery.

"Friend," said the Dean, pausing in his walk at the stall, and addressing him, "you seem to be very poor; but then you seem to be very merry."

"It's not mirth, sir," replied the cobbler—"I'm singin' for the children in the cellar below."

"How is that?" asked the Dean; "I don't understand you."

"Why, sir," said the man, "whenever the poor things are hungry, and have nothing to eat, I sing droll songs for them, in order to make them forget the hunger."

"What family have you?"

"Not many, sir—only twelve or thirteen, or so—but please God, there's a good time comin'—Nelly, sir, has her gifts—and, between you and me, is a valuable subject to her Majesty—as for myself, God help me, I'm obliged to keep hammering away at the leather as well as I can, just as you see me, sir, at the heel of this old shoe."

"And have you no prospect," asked the Dean, "of improving your condition in life?"

"If there be such a prospect, sir," replied the cobbler, "I have not been able to catch a glimpse of it yet; but I suppose you have heard the proverb of our trade, sir—once a cobbler, always a cobbler."

"The proverb is a bad one," observed the Dean, "and strikes at the very root of industry."

"It doesn't touch me at all events—for as far as industry goes I'm a pattern to the neighborhood; but, unfortunately, the harder I work the poorer I get. However, we have one comfort, which is, that there's a better world before us, and that we are preparing ourselves for it."

"How is that?" asked the Dean.

"Why, sir, fasting and prayer are the best means of working out our salvation. It's true, indeed, we haven't time to pray much, but we make it up in fastin'—as for my own part, since I cannot fast and pray, I fast and sing."

"Oh, ho!" thought the Dean, "this a character; I must try him a little further. What do you mean by saying, the harder you work the poorer you get?"

"Nothing's plainer, sir; my family's growin' up, and the employment goes down; you may understand me without a dictionary."

"Well, then," said the Dean, "suppose a friend were to enable you to lay in a quantity of leather, and all the necessary materials for making shoes, let me ask, could you make them?"

"Could Dane Swift write a ballad?"

"Ye people of Ireland, both country and city,
Come listen with patience, and hear me out my duty;
At this time I'll choose to be wiser than witty,
Which nobody can deny."

"God bless the Dane, at any rate—by puttin' down Wood and his halfpence he saved me from bankruptcy. I should have closed my stall only for him. But after all, he deprived me of a good berth of it."

"What berth?" asked the other.

"Why, sir, the post of *Solicitor-General* that I had in my eye at the time; but faith he stopped

my promotion. However, I can hammer the leather still, if the work would only come in.

*The intelligence are coming, the nation's undoing;
There's an end of your ploughing, your boking and brewing;
In short, you must all go to wreck and to ruin,
Which nobody can deny."

The Dean began to feel more than amusement in his chat with the merry cobbler, and after some further conversation he said:—

"Well, now, you comical rogue, do you know Dean Swift?"

"Not by person, sir; that's a pleasure that's before me: but I know him well by carriage."

"What do you know about him?" asked the Dean.

"Why, that he's a true friend to Ireland and her people, and an enemy to all oppressors."

"Both high men and low men, and thick men and tall men,
And rich men, and poor men, and free men, and thall men,
Will suffer; and this man, and that man, and all men,
Which nobody can deny."

"Faith," he added, "if he wanted a carriage, and came to me for one, he should have no reasons to complain of it."

"Well, now," said the Dean, "you seem to be a merry, honest fellow, and I think if you were assisted to improve your condition, that the assistance would not be thrown away upon you."

"Well, I think not," replied the cobbler. "I'm a good deal of that notion myself. Honestly, industry and good humor runs in our family; but, somehow or other, poverty, insists on being a relative as well as the others, and sticks to us like wax."

"Suppose, now," said the Dean, "that I lend you the sum of ten pounds, to buy leather and commence shoemaking, will you promise to pay me at the rate of half-a-crown a week?"

"I can only give you my word for it at the present time," replied the cobbler; "but you'll find I'll keep it."

"Well, then," said the Dean, opening his pocket-book, "here are ten pounds for you, which I give, trusting you will make good use of them."

"You are Dane Swift," said the cobbler, "for no other man would do such an act as this."

"I am," replied the Dean, "and will further befriend you if you deserve. Now, good-bye, and be industrious."

"Asy, your reverence," replied the cobbler. "I can't part from you that way. Down to my cellar you must come, till Nelly and the childer sees you, or I give up the money. It's the honor of the thing I look to—and, besides, I have a duty to discharge. Come your reverence, don't be ashamed? It'll be no longer a cellar while you're in it, but a charming room; and for the same reason, you must get drawing room treatment—besides, I have an old custom of the country to fulfill."

The Dean, whose curiosity was excited to know more about a man whom he looked upon as an original, suffered himself to be prevailed upon, and descended into the cellar. After the cobbler had introduced Nelly and the Dean to each other, he whispered to the former, into whose hands he thrust the ten pound note; and in a few minutes she returned with bottle of claret!

"What's this?" exclaimed the Dean. "Do you expect me to drink with you?"

"We have an old and holy custom in this country," replied the cobbler, "that the man who gets the money always gives the treat; because, you see, sir, nothing prospers when it's not done."

The Dean received a glass, and drank to his prosperity; after which he turned his steps homewards, considerably amused and not a little mystified by the rather eccentric conduct of the cobbler. Before he went, however, he enjoined him to come to the Deanery every Saturday at an appointed hour, to pay him his weekly instalment of half-a-crown.

Accordingly, when the day and hour came, he presented himself at the hall-door, stating that he wished to see the Dean upon business.

"You, rascal," returned the servant; "have you the assurance to suppose that Dr. Swift could have any business with you, unless through the servants?"

"I come by his own appointment," replied the cobbler, "and it's not unlikely, if you refuse to bring the message, that you may find a slippery stone at his door. You ought to know him, I think. His reverence took a glass of claret with me this day week in my own place. If you know who the Dean is, remember you do not know who I am."

With some difficulty the man went up and delivered his message; when, much to his surprise, the Dean immediately desired the man to be shown up to the drawing-room, where he happened to be sitting.

"Well," said the Dean, "I am glad to find that you are likely to be punctual in your payments."

"Sir," returned the cobbler, "you will find me here as regularly as Saturday comes. There's the first half-crown."

"That is very right," said the Dean; "nothing like punctuality and honesty."

The Dean, who was reading, then resumed his book, feeling naturally certain that the man, now that the affair between them had been transacted, would of course, have gone about his business—but in this he was mistaken, for the cobbler held his ground.

"Pray, why do you wait?" asked the Dean, at length; "have you not paid the money?"

"No doubt of that, sir," replied the cobbler, "but you cannot forget the old custom of the country—the man that gets the money always gives the treat."

"Oh," exclaimed the Dean, "you shall have it," and as he spoke, he rang the bell.

"John," said he, when the servant entered, "give this man a glass of whisky."

"Sir," said the cobbler, in reply, "I, though

but a poor man, got you a bottle of claret, and you, who are a rich one, offer me a class of whisky. I expect, sir, to get as good as I gave."

"And you shall, too," replied the Dean; "John, give that man a bottle of claret. Now, sir, I understand you," he added, "a bottle of claret is worth four shillings, and your weekly instalment is only half-a-crown—begone, you rascal, and never let me see your face again. I could afford to lend you ten pounds, but I could not afford to be repaid upon your own principle."

The tradition, however, goes on to say that the cobbler, whose name, we think, was Parker, proved himself to be an honest man, punctually paid the money in question, which pleased the Dean so much, that he became a warm friend and supporter to him, and scribbled not to aid him with both his purse and counsel until he had the satisfaction of seeing his witty protegee an independent and respectable man.

Be Ye Perfect as your Father which is in Heaven is Perfect.

The human soul seems any lower aim. Beggers as we are, we remember us of our divine lineage! Now let us count the costs. We have each of us, individually, in regard to our organic health or harmonious expression of our souls in our bodies, and all of us collectively, in the wise ordering of our social relations, our organization of labor and evolution, of harmonies from nature; the same problem to solve, the same conquest to effect, and the same ends of unity to attain, that God has to solve, to conquer, and to attain, in the life of the universe: namely, to give those loves or passions in which the rays of the Divine Spiritual Sun are individualized and refracted in us, as the rays of the physical sun are individualized and refracted in the varied colors of the crystal, the shell, the flower, or the bird; that form, order, and surface appropriate to their essence; and necessary to their harmonious effect. We must co-operate in details, and at the periphery of life with what God is doing in general, and at the center of life: God being the infinitely great, and man the infinitely small, in social movement, and the contact of extremes linking or leaguering man directly with God, and rendering his wise and ardent co-operation essential to the attainment of the divine ends in regard to the destinies of this planet; in a secondary degree to those of this solar system, and so on; widening, like a circle in the water, till it loses itself in the expanse of creation.

The internal essential state of Being, necessary for the true, incarnation or reception of the Divine into our natural life, is called the state of grace, though it is indeed not those who are in it, but those who desire it, who name and speak of it. The attainment of positive life is very quiet; hessless like the Sun, stars, and flowers, but its pure emanations, and justifies the German proverb, that "Speech is Silver, but Silence is Gold." The Liturgy terms it, that peace which passeth all understanding, and, rightly so, since it does not come within the sphere of the understanding or intellect, but that of the heart and the affections, which is like the difference between a dinner and a bill of fare; and as hungry people think most about eating, and the starving see splendid banquets spread before them in their dreams; so it is with very virtuous talkers, whose speech is an apology for what they are not, and who spend in expression that spiritual force which others, blessed with stronger instincts of self-preservation, retain for their own organic development. There is also another class, from the abundance of whose heart the mouth speaketh.

In our English poetry, Byron represents the intense aspiration of the first class, amid loss and despair. Tennyson sometimes, Proctor always, the sunshine and power of the latter, the beauty of positive being, while Shelley touchingly combines the characters of both.

Isaiah is the prophet of aspiration—Christ is the prophecy fulfilled in a divine life.

Baxter calls the state of grace the *Saint's rest*.

This is the conscious harmony of the soul with God, and of our wills with His organic and creative will, so that, consecrated and sustained by the inflow of infinite love and power, our action is no longer exhaustive, but increases our power to act in the same sphere of divine co-operation: (viz., healthful influence of agriculture in our co-operation with the forces of sun and earth).

It is rightly called a grace, because it comes to us either with or without our seeking, and manifests to us God's favor and love in the most intimate and personal sense. It inspires the deepest self-respect by the conscience that God dwells in our hearts, and from this fullness of our own life, proceeds to conscious unity with the great brotherhood of humanity, combining with reverence for their divine possibilities the tenderest compassion for their actual errors and weakness, showing that we love "God, whom we have not seen, by helping our brother whom we have seen."

Our appreciation of harmony, in external nature and in other souls, tends constantly toward its spiritual level in our own life, so that God seems to transform the creation for our individual benefit. Shakespeare, who knew that the love of women was the love of God made human, lends Romeo in his black despair to Juliet's grave, and it becomes for him a "feasting presence full of light."

This divine joy also descends into nature; it is the light among the rose-laved clouds that heralds sunrise, and robes every object in prismatic beauty; it makes us feel the mighty heart of the earth throbbing through us, and brings us into harmony and union with every form of life and love.

The leaf that trembles against the summer sky, on the topmost bough of yonder oak; those trails of rose and jasmine that bathe the air in odors,

are instinct for us with purest consciousness and exquisite enjoyment.

"Are not the mountains, waves, and skies a part
Of me and of my soul, as I of them?
Is not the love of these deep in my heart
With a pure passion?"

"All Heaven and earth are still; from the high host
Of stars to the hilled lake and mountain coast,
All is concealed in a life intense,
Where not a beam, nor air, nor leaf is lost,
But bath a part of being, and a sense
Of that which is of all creator and defense."

"It is a tone; the soul and source of music,
Which makes known eternal harmony, and sheds a charm,
Like to the fabled Cytherean zone,
Binding all things with beauty; 'tis our life's alarm
The spectre, death, had he substantial power to harm."

Such anticipation of the heavenly life, becomes permanent only on obedience to all divine laws, whether spiritual or organic, to which, though it predisposes, it does not guide us, since it is only a passive state of our affections, not an active process of intelligence and will.

It requires the clear supremacy of the spiritual life, and vanishes whenever we yield to the temptations of circumstances, or relapse into our common life of the senses and intellect.

Under favorable conditions of a natural and social sphere, it is capable of being cherished, of modifying the habitual tenor of life, and of often rising to its first enthusiasm. It may be destroyed by diseases, however induced, by a blow, or a fall, or poison, equally with those consequent on a long succession of misfortunes, imprudences, or organic errors. It is a grace and not a right for any individual, so long as the reign of incoherence for the race, as long as there are temptations to sin and to ruin, instead of temptations to right action, and to preservation; as long as we are distracted between opposite duties to ourselves and to others, and the violation of divine harmonies is equally the consequence of our remaining inactive, or of our active employment in the functions and relations of a social sphere, which is false to the instincts and attractions of the soul. The state of grace is then the beauty of the spiritual babe, but the babe must grow, must out its teeth, must suffer to act. It is to be considered as the seed corn for the harvest of the future, as the revelation of a loving Providence, to prevent us from being sunk into utter atheism, by the miseries prepared for us, and a dew which refreshes the plants of virtue and courage.

It has many degrees from this fullness of the divine life in us down to the most moderate self-reliance.

To the intellect it imparts sanity; to the affections, devotion and serenity; to the senses, true refinement; reflecting upon them its consecration as the ministers of the soul.

To the whole being, when once naturalized, it becomes equilibrium, health, and harmony, and lifts us into a medium quite above the superficial incoherences of actual circumstance.

In proportion as it is attained, our being becomes persuasive, and our action efficient toward the highest end.—*Extracts from the Solar Ray.*

Ladies' Department.

WRITTEN ON SEEING MY MOTHER'S PORTRAIT
ON THE SECOND ANNIVERSARY OF HER DEATH

My Mother, as I gaze upon thy picture dear
That still reminds of thee now passed away
Thy long home in heaven,
My weary spirit finds a calm relief
In thoughts of thee, to quell the youthful grief
That to my heart was given.

I will not mourn thee, Mother, no—this heart
Can feel that thou art happier now above,
From all earth's sorrows free;
Though thy maternal smile from me is gone,
I will be happy, even, though alone
In memories of thee.

Two years have flown, without thy faithful love,
Two years, since from my side forever thou wert torn
By death's relentless hand;
Yet bless me from thy heavenly home, and pray—
When earthly ties are given, I may join thee—
In that bright spirit-land. Nona.

Wealth before Character.

In the upper circles of fashionable life, says the N. Y. Independent, no questions are asked how one came by his money, if he only shows that he has money, or appears to have it. If he lives in a fine house, keeps a good carriage, gives splendid parties, no questions are asked as to whether all this is honestly paid for. With such a standard before them, it is not surprising that aspiring men, who feel themselves in other respects the equals, if not the superiors of their wealthy neighbors, should find some short road to wealth. The passion for riches, the idea that success in life depends mainly upon wealth, is fruitful in temptations to dishonesty. "For they that will be rich fall into temptation and a snare, and into many foolish and hurtful lusts, which drown men in destruction and perdition. For the love of money is the root of all evil; which, while some coveted after, they have erred from the faith, and pierced themselves through with many sorrows."

This is the maelstrom of character in our city. Men will be rich, they must be rich; they put forth on the sea of speculation, they reach after every floating straw of prosperity, they give themselves to the giddy passion of money-getting, and are whirled every whither by its power. Smoothly they ride at first on the giddy outskirts of dishonesty, jill, infatuated with the pursuit, they dive deeper and deeper, and are sucked into the mighty vortex—a wreck of character, fortune,

hope, and life. The only safeguard is to hug the shore of honesty. Make character supreme.

So strong is the infatuation of wealth among us, such the glare of wealth above character, such the imputed disgrace of poverty, that even feminine delicacy will come out from the retirement of private life to resent the imputation of poverty before marriage as a greater grief than a husband's fraud; and the newspapers must publish to the world that, whatever robberies a man may be charged with, his wife was never guilty of the stupendous crime of being—"a poor girl." We transgress no rule of propriety in thus advertising to what is matter of public advertisement. We offer no censure upon individuals. But is it not pitiable to see from such volunteer exposures of high life, how wealth and character stand respectively in the estimation of many who make our society? The influence of such false pride is baleful in the extreme. Is it not worth any woman more than gold to say, "however poor I or my family may have been, my husband is an honest man?"

A CHAPTER ON MARRIAGE.—Marry not a man who thinks woman's only duty is, to make his shirts and cook his dinners. Such a man would make his wife a slave.

Marry not a man who is too proud to acknowledge woman's equality, for that man is a tyrant, and would make a slave or a nobody of his wife.

Marry not a man who thinks it is woman's privilege to learn of her husband at home, for that is not the man to teach you—your life would be one of hopeless ignorance.

Marry not a man who is fortune-hunting; for the money once obtained, you would be a secondary consideration, taken because the money could not come without you.

Marry not a man who in his intercourse with men speaks sneeringly and vulgarly of woman; for that man's love would be a kind to be despised and loathed by the virtuous.

Marry not a man who seeks for amusement where his sisters are excluded; for that man's associations are low, his ideas of purity limited, and himself not worthy the companionship of a high-minded woman.

CURE FOR BURNS.—The American Agriculturist says "of all applications for a burn, we believe there are none equal to a single covering of common wheat flour. This is always at hand, and while it requires no skill in using, it produces almost astonishing effects. The moisture produced upon the surface of a slight or deep burn, is at once absorbed by the flour, and forms a paste which shuts out the air. As long as the fluid matters continue flowing, they are absorbed, and thus prevented from producing irritation, as they would do if kept from passing off by oily or resinous applications, while the greater amount of these absorbed by the flour, the thicker the protecting covering is, that next to the surface it is kept moist and flexible. It can also be readily washed off, without further irritation in removing. It may be occasionally washed off very carefully when it has become matted and dry, and a new covering be sprinkled on."

HOW TO HAVE GOOD COFFEE.—Due regard being paid to the quality of the coffee, Old Government Java being the best to be found in our Western markets, the next thing to be done, is to pick it over, carefully; after which, it should be washed and dried. Then roast it—being careful that the kernels are equally browned, to a deep chestnut color, and not burned, as that destroys the life of coffee, giving it a bitter and disagreeable taste. Grind it not too fine; then break an egg into it, and stir it till the particles adhere, then turn into the pot of boiling water, and let it boil twenty or thirty minutes. After taking it from the stove, turn into it a few spoonfuls of cold water, to settle it. This, with sugar and sweet cream, has no bad taste in it, and is fit for a king; or what is better, for the farmers of Ohio, or any other class of honest people.—*Ohio Farmer.*

GOOD COFFEE.—"The very best way for making coffee is to put the ground coffee into a wide-mouthed bottle over night, and pour rather more than half a pint of water upon each ounce and a half, and to cork the bottle; in the morning to loosen the cork, put the bottle into a pan of hot water, and bring the water to a boiling heat. The coffee in then poured off clear, and the latter portion strained; that which is not drunk immediately is kept closely stoppered, and is heated as it is wanted." Who will try this?

A GOOD WAY OF COOKING ONIONS.—It is a good plan to boil onions in milk and water; it diminishes the strong taste of that vegetable. It is an excellent way of serving up onions, to chop them after they are boiled, and put them in a stew pan, with a little milk, butter, salt and pepper, and let them stew about fifteen minutes. This gives them a fine flavor, and they can be served up very hot. So says an exchange.

SMOKING.—The following anecdote, says the Chronicle, has been communicated to us by a German friend as one that he has never noticed in English:

Goethe once said that a man of real genius could not be a smoker; therefore he was convinced that Lessing never smoked. Mr. K—, Librarian of Wolfenbützel, being desirous to ascertain the truth of this remark, went to an old woman, of whom he knew that she had been Lessing's housekeeper for a number of years, and asked her whether Lessing had smoked.

"Smoked!" exclaimed the old woman; "yes, sir, he did smoke and write all day; but, beside that, he was not fit for anything else."

By Telegraph.

As we were going to press a telegraphic dispatch was received stating that Nevada was on fire, and up to that time twenty buildings had been destroyed.

THE LADIES' FAIR for the benefit of Rev. Mr. Pond, on Green street, has received \$1,800, which will very nearly pay off the entire debt of the church.

MARKET REPORTS.

THE continued depression of business and of our interests, arising from the long continued drought, affecting the mining, mercantile and agricultural interests of the whole State. Flour is on the decline; Grain is not so firm. Produce of all kinds is abundant and prices generally low. Provisions are scarce and higher. Butter, Cheese, Lard, Hams, Pork and Beef are all demanding good prices, and farmers, dairymen and stock raisers will do well to look to this matter. For many articles of merchandise prices are merely nominal.

SPECIAL NOTICES.

Southwick's Raffle—A Splendid Dairy Prize.—Of all the Raffles proposed, we know of none that has a better or more utilitarian prize than Southwick's Dairy Prize. The prize is one hundred and twenty-two cows—this is prize No. 1. There are also many other valuable prizes. Mr. Southwick, the proprietor, is a gentleman of responsibility, well known throughout Sacramento Co., and there can be no doubt that the Raffle will be conducted in good faith and fairness. It will be drawn in a few weeks.

Good and responsible Agents wanted. Terms made known by application at the office of the CALIFORNIA FARMER.

Our Letters—We would request all our correspondents to direct Letters and Papers to us at SAN FRANCISCO, ONLY. They will, with such direction, reach us immediately. Letters directed to us at Sacramento, fail to reach us regularly.

WARREN & SON.

Office of the "CALIFORNIA FARMER,"

Masole Hall Building, Montgomery street.

Wanted—All the varieties of California Clover Seed, for which the highest price will be paid at the

Office of the "CALIFORNIA FARMER,"

Masole Hall Building, Montgomery street.

Our New Office—We have our friends to our new office in the "Masole Hall," on Montgomery street, opposite Le Count & Strong's. We can show them many wonderful specimens, such as are rarely seen, and we especially invite them to call and examine the various schedule and invoices we have to offer for sale. Trees, Seeds, Plants, Grains, Horses, Lands, Inventions, Works of Art of all kinds, these we are happy to show, and can interest our friends if they will but call and see us.

WARREN & SON.

"A Thing of Beauty is a Joy Forever."—Why will people endure pimples on "the human face divine," or eruptions of any kind, when it is a fact so well known, that Dr. Guy's Yellow Dock and Sarsaparilla cleanses the skin from all impurity, removing Pimples, Sores and Blisters, leaving the affected parts as healthy, smooth and soft as the flesh of a lamb. It is really priceless to all who wish the rosy beauty of childhood.

It cures all sores and poisonous eruptions to discharge all to infected matter, and eradicates every impurity from the system. It does its work mildly but effectively, giving conscious beauty and blooming health in the place of ugliness and soul-sickening disease.

SCURF, SCALD, SYPHILIS, MERCURIAL COMPLAINTS, and a vast variety of other discreditable and dangerous diseases are speedily and perfectly cured by the use of this medicine. Purchasers will please be careful to ask for, and take none other but Dr. Guy's Improved Extract of Yellow Dock and Sarsaparilla. All others in comparison are worthless.

For sale at all the principal Drug Stores in the State. Pink & White, Sole Agents, to whom all orders must be addressed. Office No. 14 Merchants street, 3d floor above Montgomery.

FLOURING MILLS.

Happy Valley Flour Mills,
Corner of First and Mission streets, San Francisco.

Encourage Home Industry and Home Production.

THE attention of dealers and consumers of Flour is respectfully invited to the Superior Article manufactured at the above establishment, from California Wheat of the growth of 1854, selected and prepared with the greatest care. These Mills have been in successful operation for nearly two years, during which time the proprietors have received such satisfactory assurances from those who have tested the quality of their Flour, that they can confidently recommend it as being fully equal to any brand in the market. Among the many evidences of the superior excellence of the Flour manufactured by them, the proprietors would direct attention to the substantial compliments received at the two last Annual Meetings of the State Agricultural Society, premiums having been awarded at both Fairs for the superior specimens of Flour from these Mills.

Domestic Flour—A superior article for family use, manufactured from selected Wheat—a constant supply always on hand at the Mill, or at the Depot of the Proprietors, 35 Sacramento street.

A liberal allowance made to the trade.
J. N. BROOKS, } Proprietors.
F. C. HALL, }

Wheat Purchased or Ground on the most favorable terms.

Flour! Wheat! Barley!!!

THE SAN JOAQUIN FLOUR MILLS, STOCKTON—Are now completed and ready to grind Wheat and Barley in any quantities. The above Mills are not surpassed by any in the Atlantic States, having all the modern improvements for the manufacture of the finest Family Flour, and are capable of turning out 250 barrels per day.

A large fire-proof Warehouse for the storage of Grain, is attached to the Mill.

Particular attention is called to the fact of Stockton being the depot for the supply of the Southern Mills, and therefore offers superior inducements to wheat growers to ship their grain direct to Stockton, for milling.

Liberal advances made on consignments of Wheat.

For particulars as to terms, &c., apply at the MILLS—or to Messrs. PAIGE & WEBSTER, Union Block, corner of Battery and Union streets, San Francisco.

Ingham's Improved Smut Machines.

THESE Machines combine all the apparatus necessary to cleanse Grain, rendering it unnecessary to have any other machinery for that purpose in the mill. They are portable and occupy about four feet square of the floor, by eight and a half feet in height; and will clean the worst samples of Smutty Grain, also remove chort stems, white cups, ends and other foul substances in the most perfect manner. All of the offal worth saving is collected in a reservoir, while the smut and light dust are passed out of the mill, allowing the machine to be put on the same floor with the flour chests or wherever most convenient,

AGRICULTURAL, &c.

Agricultural Implements.

HORTICULTURAL, &c.

17,000 Premium Strawberry Plants!

From the Shell Mound Nurseries and Fruit Gardens,
Near San Antonio, Alameda County.

WE offer for sale the following List of Plants, viz.:
1,000 Boston Pine, at \$70 per 100
5,000 British Queen, " 35 " "
1,000 Burr's New Pine, " 35 " "
500 Rial Indigo, " 35 " "
5,000 Large Early Scarlet, " 15 " "
2,000 Hovey's Seedling, " 15 " "
1,000 Frolic Hambro, " 15 " "
1,000 Black Prince, " 15 " "
500 Crimson Giant, " 15 " "

Plants from "Shell Mound" received a premium at the late Fair of the California State Agricultural Society. Several of the varieties above named are believed to be remarkable for their fruitful qualities, having been cultivated for several years by Mr. Sanford, at his gardens in Waukena county, N. Y., with special reference to the production of fruit.

Orders received for any number of plants, (not less than 100) and promptly executed. On invoices of \$300 and over, a discount of twenty per cent. from the above prices will be allowed.

Address, J. L. SANFORD, Cultivator,
Shell Mound, near San Antonio;
or, R. W. WASHBURN, Proprietor,
Care of Wells, Fargo & Co., San Francisco.

San Jose Nursery.

WE are prepared to supply the trade with the best varieties of Fruit Trees, Grape Vines, Roses, Plants, &c., in all their varieties; and are disposed to sell at a low price, that we may suit the times. Our Trees are cultivated with great personal care. Those who desire to make Nurseries and Gardens will do well to visit and ascertain for themselves our ability to supply what we advertise. ROOTH & CO., JOHN KIRK.

Tickets for Ball and Raffle for every Day and Evening, at the principal office on Second street, opposite Wells, Fargo & Co's Banking House.
* Tickets for sale at the Office of the "CALIFORNIA FARMER," Atlantic Hall Building, Montgomery street, San Francisco.

INDIAN MUMMY.

ONE of the most interesting specimens of preserved humanity is now open for exhibition at the office of the CALIFORNIA FARMER. The certificate of Dr. Evans, U. S. Geologist, furnishes sufficient data to prove its authenticity and value; the certificate also of five of our most distinguished medical men furnishes facts that should awaken a general interest in our community to see the valuable and positive proof of the earlier races of the aborigines of California.

The Mummy now exhibited is supposed to be a highly distinguished chief of some tribe of the "Pine-Hood Indians." This race have left no record, and the present tribes have no knowledge of the race of which this is a representative. Capt. Ross, the discoverer, is familiar with the Indians of the same vicinity, speaks their language, and has been years with them; yet neither they nor himself can find any trace by which to recover the history of the present relic.

The Chief now measures 5 feet 5 inches in length—full size—the feet are 9 inches long. The body presents a natural appearance, and, as it lays in the casket, surrounded by the materials usually deposited with chiefs, together with other bones and skulls found with the Mummy, it is indeed a most interesting specimen.

Captain Russell has expended much in bridging this specimen to the city and preparing it for the States, and it is now offered for exhibition in hopes that a national sum can be raised to retain it here, as it is a record of the early history of California. The Mummy will be exhibited at the office of the CALIFORNIA FARMER, for a short time. Admission 50 cts.; Children half price. The Free Medical and Scientific men, and Clergymen, are invited Free, as the object is diffusion of knowledge.
C. J. W. RUSSELL, Proprietor.

Pottery Pottery!

NOW ready and for sale the SACRAMENTO POTTERY, on J street, near Butler's Port, a large assortment of Plain and Fancy Flower Pots; Baiters, Preservers, Urns and Cakes Jars, with covers; Green Pots, Churns, Milk Pans, Jugs and Stovepipe Bales, of superior quality; with everything else in the line. Wares made to order. Dealers are particularly solicited to call and purchase. Orders to be left at the Entry, or No. 254 J street.

T. R. FREER, Agent.

Varieties.

TRY AGAIN.

How oft has disappointment morned
Some cherished plan of mine,
And hidden winter clouds appear
Whence summer's sun should shine;
Yet often as they darker grew,
I've seen some wondrous pen
Upon the very blackest write
The sentence, "Try again."

How often in the stillly hour
Of night the heavy sigh
In sympathy has strove to meet
The tear-drop in my eye;
And then like angels whispering
Their messages to me,
I've heard a quiet breathing of
The sentence, "Try again."

How often, as I've walked amidst
Life's ever busy tide,
And jostled with its favored ones
On each and every side;
When my misfortunes seemed to be
Overwhelming, even then
Has come good spirit breathing to me
The sentence, "Try again."

My guardian angel it must be,
Or else the weight of care
Had sunk me in the very depths
Of sorrow and despair;
But, oh, my heart much lighter seems,
And hope shines brighter, when
I hear that spirit softly breathe
The sentence, "Try again."

—Littlequill.

CLERICAL WIT.—A certain parson of the Unitarian sect, who whilom dwelt in Winnissinnet, and who loved a joke better than preaching—went one day to pay a bill to one William Spade, of that village. The master of the shop not being in, the money was handed over to the boy. A few moments afterwards, the factious parson meeting the tradesman, he addressed him with—
"Billy Spade, your bill is paid!"

This same parson was not over fastidious about his wardrobe. One day meeting his brother, who was also a divine, who censured him for being so careless about his dress, and especially reprimanded him for wearing striped pants, it being altogether unclerical. Whereupon the humorous divine retorted by saying—
"Brother C, my religion does not lie in my breeches."

One of the very best things, however, that we have heard was from a preacher of the same school as the former, and who did the preaching for a society in another town. His people he found were

"Uncertain, coy, and hard to please."

He had tried almost everything, running as close as he dare to the manifold schisms of the day; but of no avail. He knew not what course to pursue. In his dilemma he called upon a brother parson, and asked him what he should do as all his schemes had failed.

"Suppose you should blend a little of the Second Advent doctrine into your discourses," suggested the brother, "that might possibly suit their cases."

"Ah," returned the other, "I durst not try that remedy; for it is as much as I can do to make them believe in the First advent!"—*Boston Post.*

NEVER refuse to kiss a lady. Gallantry, religion and good taste alike forbid it. If it is sweet, it will make your feel like a barrel and a half of white sugar for a week; and if it is not, you will at least have the satisfaction of knowing that it is the best that could be offered. Kisses, however, like candy, are generally made up with a deal of saccharine about them. Young gentlemen at all skeptical should try on a few.

The following dialogue is represented to have taken place between a farmer and an Irish reaper, the latter being considerably under the common stature:

Irishman—"D'ye want anybody for the harvest?"

Farmer—"No; you're too little."

Irishman—"Arrah, now, and do you cut your corn from the top? said Pat, as he walked off, indignantly.

"GUDSAKE, man," said a duncie housewife to an honest dairyman, the other day—"what sort o' milk's this ye're doin' us wi' now? The last I got, there was about a third o' water."

"Then ye're a' wrang, guidwife," answered Will; it's some ither body's milk ye've been getting—mine's half and half!"

"The moon," said a total abstainer, "is not quite a teetotaler; but she lets her moderation be known to all men, for she only fills her horn once a month." A hystander observed, "Then she must fill it with something very strong, for I have seen her half gone myself."

A friend relates the following: A mile or two from town he met a boy on horseback, crying with cold. "Why don't you get down and lead him? that's the way to keep warm." "No," said the boy, "it's a hired boss, and I'll ride him if I freeze."

"Is the steamer in?" said a gentleman to a newsboy in New York, lately. "Yes—just got the news." "Has she got any further from the seat of war?" "Yes—about three thousand miles since she left Liverpool."

It is to be presumed that, when military men talk of attacking the enemy in flank, it means nothing less than touching them up under the ribs,

HORTICULTURAL, &c.

Golden Gate Nursery,
Corner of Folsom and Fourth streets, San Francisco.
OFFICE—No. 170 WASHINGTON STREET.
THE attention of the public is requested to a large collection of the flowering plants, now for sale at this establishment, embracing the most extensive assortment in the State; among which may be found—
Camellia Japonica, in seventy varieties;
Perpetual blooming Roses, of all the classes;
Moss and climbing Roses, do do;
Fuschias, a choice collection; Heliotropes, in variety;
Roses and Lemon Geraniums;
Lemon-scented Verbenas, Flowering do, Arbutus, Azaleas, Oleanders, Passiflora, Honeyuckles, Carnations, Dahlias, Bulbous Roots, &c., &c.; and a general collection of Green-house plants and ornamental shrubbery.
Catalogues for 1855 will be ready on the 1st of December, and will be forwarded on application.
Orders for any part of the State, will be promptly attended to, on application to D. Nelson, No. 170 Washington street—or to the proprietor,
(7-3m) W. C. WALKER.

Fruit Trees! Fruit Trees!!
WE have for sale at our Nursery at the Mission San Jose—Five Thousand large Apple Trees: two thousand of them of extra size. Many of them will bear fruit the next year.
Two Thousand Peach Trees, choicest kind—large and handsome trees.
Pear Trees on the Quince as well as Pear.
Fifteen Hundred Cherry Trees from two to four feet high.
Grape, Fig, Quince, Apricot, Nectarine and Almond Trees in less quantities. All the above we guarantee in quality, and we warrant them what they should be, and will sell at prices to suit the times.
Apple Trees from \$1.00 to \$2.50
Peach, Pear, Cherry, from 1.50 to 2.50
Extra sized trees in proportion.
BEARD & LEWELLEN, Mission San Jose.
Orders with Warren & Son, corner of Montgomery and California streets, will be promptly attended to. 18 6m

Smith's Pomological Gardens,
Banks of the American River, two and a half miles from Sacramento city.
THE proprietor of the Gardens would respectfully invite all who are engaged in "Nursery and Gardening" to visit his grounds. He will be happy to show to them, ready for sale, this fall, as fine a collection of

Fruit Trees, Ornamental Trees, Grape Vines, Shrubs, Flowering Plants, and Green House Plants, as can be found in all the great Sacramento Valley.
The proprietor would call particular attention to his collection of Peaches, believing that the specimens exhibited by him in Sacramento and San Francisco markets have been unsurpassed in size, quality, or flavor.

The collections of Pear Trees will equal any in the country; these, with all the new varieties, will be offered this autumn. The undersigned believes his collection worthy a visit to his grounds of all who are interested in Gardening and Orcharding. The subscriber will offer this autumn Five Tons Vegetable Garden Seeds, that have been raised upon his own grounds. These seeds have been grown with care and will be sold at wholesale for the present, at the Gardens.
Persons in want are invited to call upon us, and we will make reasonable terms.

Fruits, Berries, &c., will always be furnished at short notice at the Gardens.
The proprietor returns his thanks for the liberal patronage of the past, and hopes for a continuance of such favors.
A. P. SMITH, Proprietor.

New Invention!
BULKLEY'S STEAM DRY KILN.

THE undersigned takes this opportunity to offer to the citizens of California, Oregon and Washington Territory, the valuable invention hereby announced. One of the greatest wants of California and vicinity, for years, has been the means of preserving her products so as to have a continued supply during the late months. The vegetable products to an immense amount are annually lost at the approach of the rainy season, its long continuance, and the exposure that necessarily results to those products from the season; and the vast quantities that are exposed and accumulated in warehouses and elsewhere, have denuded some means of preserving these immense and valuable crops, that otherwise would be a loss to the producer and to the State. The loss of the Potato and Onion crop last year would count almost a million of money, and the loss the present year will be heavy, without preservation.

The undersigned, holding the "Patent Right of the Steam Dry Kiln," offers this invention with the confident assurance that it is the very thing needed—that it is the *ne plus ultra* for this very want. It has been thoroughly tried and approved, for these products, and for grain also. It has been tried for Lumber, to which it has been more particularly applied in the States, for there the Vegetable products do not require so much care as here. To shippers of Grain this invention removes all the difficulty in sending Grain on long voyages, and under the drying process of this valuable invention our Grain growers can now send their Grain to New York with safety.

The proprietor needs only to append the following certificates. The name of Henry L. Ellsworth, Esq., carries a weight that is convincing to intelligent men, and the other evidences should be satisfactory.

The model machine will soon be placed on exhibition at the office of Warren & Son, where all information can be had.

JOSHUA BUTTS, Proprietor of Patent.

A Diploma and Silver Medal

Was awarded to the inventor at the last New York State Agricultural Fair, held at Rochester, as a testimonial of his superior merits.

Letters from Hon. H. L. Ellsworth.

LAFAYETTE, January 7, 1853.

DEAR SIR: I congratulate you on the completion of your Dryer. I have for a long time urged the importance of extracting the moisture from grain and flour before shipment, to prevent fermentation. Your plan will obviate the difficulties hitherto experienced. There can no longer be any doubt that 15 pounds of water can be taken from a barrel of meal, and 15 pounds from a barrel of flour without affecting the taste or appearance of the same. Experimenters at Lafayette show this. Nor is it a less gratifying circumstance that when the flour or meal is cooked, it absorbs proportionately more water, thus saving freight and the purity of the article. If the moisture is extracted, it must be obvious this meal will keep for long voyages, passing through the hottest climates. To the Navy, your improvement is invaluable. The world has become somewhat skeptical on the subject of patent rights. The simplicity and compactness of your machinery enables you to exhibit a working model, to remove in a moment any doubts as to your ability to sustain your patent and prove its utility. One feature in your plan deserves particular notice; in fact, this constitutes your main claim, viz., not drying by common steam, or by fire heated pans, as has been done hitherto, but by using heated steam. Few persons are aware of the small expansion of steam, and how easily it can be heated to a high temperature with little confinement. You will be able to raise a stream to the point of ignition, say 600 or 700 degrees, though a far less heat will answer all your purposes. I will only say that European prejudice against Indian corn is fast dying away, and we may anticipate large shipments both for man and beast. The great fertility of the West, and the reduction of freights both inland and on the ocean, justifies this anticipation. Wishing you success,
I remain, yours respectfully,

HENRY L. ELLSWORTH, late Commissioner of Patents.

To Henry G. Bulkley, Esq., Kalamazoo, Michigan.

LAFAYETTE, March 20, 1853.

DEAR SIR—I am highly pleased with your Dryer for lumber by heated steam. It seems almost incredible how soon even green lumber can be prepared for use. Twenty-four hours is all that is required. Steam has hitherto been used to advantage, but heated steam has not been applied for this purpose before your improvements. Every manufacturer of lumber would find it profitable to erect a cheap dryer on your plan. Full one-third of the weight of some kinds of lumber is removed by drying; the saving in cartage will more than repay the expenses of drying. When the difference between seasoned and unseasoned lumber is considered, no one who regards good work will regret the trifling expense of preparing the raw material.

Yours respectfully, HENRY L. ELLSWORTH.

To H. G. Bulkley, Esq., Kalamazoo, Michigan.

BARRISBURG, Pa., July 12, 1853.

I hereby certify that I have had charge of one of W. O. Hickok's shops where the most of his wood work is done, that I put up and have used H. G. Bulkley's Patent Kiln, and heartily approve of everything W. O. Hickok has said about it, and am certain that no recommendation can be too strong in praise of said kiln.
[17] W. H. SULLENBERGER.

Money and Gold Dust received in Special Deposits, and General Deposits, received from merchants, mechanics, and others. 3 ADAMS & CO.

The Pacific Loan and Security Bank.

MONEY will be received on deposit in sums of Ten Dollars and upwards, for which Certificates of Deposit will be issued, bearing date the first or fifteenth of the month, payable on demand, or at specified times, at the option of the depositors. If payable on demand, they will be without interest, unless the money remain on deposit one month, in which case they will draw interest of one per cent. per month, but no interest for fractional parts of a month. If deposited for specified times, certificates will be issued bearing one and a half per cent. per month interest for such time. Interest will cease at maturity; so that if depositors desire to continue their deposits after their certificates fall due, they must be presented for payment and renewal; otherwise interest ceases.

The money deposited is used only in loans guaranteed by us and in all cases amply secured by Mortgages, State, County and City Stocks, Merchandise, and other safe collateral, taken in the name of "MARRIOTT & WHEELER, Trustees for Depositors with Pacific Loan and Security Bank."

A register is kept at all times open to depositors for inspection, in which appear their names, the number of certificates of deposit issued, and the securities upon which the money deposited has been placed. Depositors thus not only have the personal security offered by all banks, but in addition have the benefit of the securities taken and guaranteed by us, and the facility of knowing what disposition has been made of their deposit.

FREDERICK MARRIOTT,
ALFRED WHEELER.

SOLIDIFIED MILK.

MANUFACTURED BY
SAMUEL T. BLATCHFORD.
FOR SALE BY
BINGHAM & REYNOLDS,
201 Sansome street.

THE PRESERVED MILK is made from PURE FRESH MILK, combined with crushed sugar, and when reduced to liquid, as stated in the directions, can be used for all purposes for which Milk is used, as it is simply Pure Milk and Sugar. The Tablet weighs one pound and is equal to five pints of pure milk. The proprietor recommends with confidence the article to all persons going to sea, its properties of self-preservation having been fully tested during the last eighteen months. To the WHALING interests its value is incalculable, and to travelers by land or sea, (especially when accompanied by young children) it recommends itself by its portableness and the facility with which it may be used.

Certificates.

The proprietor would call the attention of the public to the following certificates:

New York, April 4, 1854.

Mr. S. T. Blatchford—

DEAR SIR: In answer to your inquiries relative to the preparation of Solidified or Preserved Milk, having used it on my last voyage to San Francisco, I can with the utmost confidence recommend it to sea-faring men as being the best article of the kind I have ever seen or used, retaining, as it does, the taste and flavor of fresh milk.
Yours, &c.
O. R. MUMFORD,
Master of Clipper Ship "Tornado."

Extract from a letter from a Californian, }
Dated May 31, 1854. }

"In regard to the Solidified Milk which you introduced to me for the purpose of testing the merit of the preparation, I can with confidence say that it has proved entirely satisfactory. I have a portion of it yet remaining in its good condition as when you gave it to me, and it will, I have no doubt, keep for years. The preparation will be a great luxury to the sailor, as it will enable him to enjoy an article of food that has hitherto been supposed could only be had on shore."
Very respectfully, yours, &c. EARL BARTLETT."

Extract of a letter from Rev. M. Williams, }
Dated Valparaiso, Aug. 2, 1853. }

"But the Tablets of Milk prepared by S. T. Blatchford & Co. were the climax of comfort. I would say, let no one go to sea without them. I have a few now left in my room as perfect as when first made."
April, 1853.

Mr. Samuel T. Blatchford—

DEAR SIR: Some twelve months since I heard of your preparation of Milk and procured a sample, a portion of which I tried at the time and found it good. When preparing for sea last December, I tried the balance, which proving equally as good as months before, I procured several pounds, and during the voyage to and from Europe, have had the milk on the table every day, and have found it excellent.

I have used several preparations of milk, and have no hesitation in pronouncing yours the best. I consider it just the thing. In future voyages I shall endeavor to have a supply of it.

Yours, very respectfully, RICH S. CORNING.

v3-4 Master of Clipper Ship "Rapid."

Boston Clipper Steel Plow,

Manufactured by Ruggles, Nourse & Mason.

THIS splendid Plow is made after the style and form of the famous Eagle Plow, so universally known. This form of Plow in all its parts has been considered the most perfect yet invented, having taken premiums in every State in the Union; also at the World's Fair.

The present Plow has been manufactured by Messrs. Ruggles, Nourse & Mason, with great care, and in the most finished style, of the very best steel, and may now be considered the highest finish and most complete Plow; and the undersigned with the cultivators of California to call and examine the same at their place of business. TREADWELL & CO.,

N. R.—Branch House at Marysville. All orders promptly attended to. v3-5

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!

Hurrah for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE's who wishes PERFECT LIKENESSES? Because he has now the best arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has the largest light in the world, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely, in order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.
Prices as reasonable, and work superior to any in the city.

Don't forget the place.

New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. 17

ADAMS & CO'S

CALIFORNIA AND ATLANTIC EXPRESS.

OUR Atlantic States Express will leave San Francisco on the 1st and 15th of each month, by the Pacific Mail Steamship Company's Steamers, and the Treasure crosses the Isthmus under the charge of a strong guard. The Treasure forwarded by us to the Philadelphia Mint, is always deposited there previous to that sent by any other conveyance. Our rates are lower than those offered by any other House, with the same security.

We also forward Treasure on the 1st and 15th of every month to ENGLAND, by the P. M. S. Co's steamers to Panama, and from Panama by the West India Mail steamers.

We draw Bills of Exchange on any of our Houses in the following places:

Boston, New York, Philadelphia,

Baltimore, Washington, St. Louis,

Cincinnati, Pittsburgh, Louisville,

New Orleans, London, &c., &c.

Also, payable at any of the following Banks:
Mechanics' and Farmers' Bank Albany.
Alex. Mitchell, Fire and Marine Insurance Co. Milwaukee.
Commercial Branch Bank of State of Ohio Cleveland.
Utica City Bank Utica.
Bank of Syracuse Syracuse.
Bank of Auburn Auburn.
Bank of Attica Attica.
Rochester City Bk. Rochester.
Geo. Smith & Co. Chicago.
Michigan State Bk. Detroit.
Clinton Bank Columbus, O.

In the NORTHERN MIXES we run Expresses, in our own name, always accompanied by faithful Messengers, to and from the following places:

San Francisco, Sacramento, Marysville,

Benicia, Grass Valley, Nevada,

Coloma, Placerville, Mormon Islands,

Georgetown, Hangtown, Salmon Falls,

Greenwood, Shasta City, Auburn, &c., &c.

And every other part of El Dorado, Placer and Shasta counties.

Through LANGTON & BRO'S YUBA EXPRESS, to and from the following places in Yuba, Sierra and Nevada counties:

Long Bar, Deer Creek Crossing, Park's Bar,

IMPROVING OUR SOCIAL CONDITION.

NO. II.

SAN LUIS OBISPO, Feb. 9, 1855.

COL. WARREN: It is clear to be seen, that if our legislature were to grant us, in addition to a charter, a respectable donation to aid us in establishing our Female Emigrant Society, that the money would only be loaned, and at good interest. As soon as each lonely squatter, or bachelor farmer, miner, merchant or trader, were provided with suitable help-mates, new life and ambition would be instilled, into every bosom, and avenue of trade and industry—instead of a transient and restless population, we would have permanent settlers—our thousands of bachelor halls would soon be converted into SWEET HOMES, with all the enjoyments of social life.

Then, the money spent in sinks of sin and dissipation, would be husbanded, and laid out for useful purposes—not only increasing, by several fold, the property now taxed, but hundreds of quarter-sections over which grizzlies now roam, would soon become the residence of happy families. Hence, a compound and perpetual interest would accrue in the State on the capital loaned to the Society—to the humane cause. But this is only a dollar and cent calculation—the real value of a State consists more in the MORAL worth of its citizens, indeed without which it would be difficult to affix any value, on anything pertaining to life, or even life itself. Without morality there could be no inducement to live, no society worth living for, no religion to cheer our careworn spirits and point our souls to Heaven as their final abode.

But it is useless to speak of morals without Woman—without them, all our hopes were blasted—we would accomplish nothing—man would lose both his ambition and identity. If it was "not good for man to be alone" in lonely Eden—if he could not enjoy the beautiful feast, where all was beautiful and fair, and where the blight of sin was unknown, how can we expect enjoyment, when the earth beneath our feet is cursed and we are hedged in by thorns and briars, without Woman. And if when men do enjoy the society, good offices, and the angelic smiles of women, they find it hard stemming opposing currents, what folly to expect men to stem them alone.

Society in California is just what should be expected, without female society; a more heaven-favored country—as rich in soil and climate as it is in gold—is not to be found; and, it only needs that men do their duty, to make it prosperous and lovely as a State. But introduce plenty of virtuous women, and vice and folly would shrink, and the iron countenances of men would be annealed into pliability, and made companionable.

Our scheme or measure, is not only a duty to

ourselves, our Country and our God, but it is an especial duty we owe, to the women, by way of reparation, for having ran off and left them behind. We hope no gentleman will be backward, in aiding us in this work of reparation, and Social Reform.

We further hope our scheme will be adopted in all the new States, as a mutual relief measure, and as an equalization measure for the disparity of the sexes. The superabundance of females in the North and East has been spoken of since our boyhood, and regretted; but no one there seemed to think of a remedy, while those who have been much in the new States, can see at once, reason and plausibility in our scheme.

The greatest difficulty seems to be in the delicacy of the matter—girls have been taught that they must not venture out, without a suitable protector; hence young women's minds are not prepared to leave the society of strangers alone. While such is strictly proper, in home circles, and for those who never intend to leave their native town or county, yet we contend that in these progressive times, young and ambitious females should not remain bound by home-circle law, since they are in each other's way at home, and their presence is so much needed abroad. The purpose of our Society would be to stand with open arms, to receive all that might venture to come to our care, properly vouchered for as to MORAL CHARACTER, and to be to them thence as father and mother, or standing guardian.

The officers of the packets and steamers are supposed to be honorable men—indeed their position demands that they act honorably; whether inherently or not; hence, while we could not advise a lonely lady to trust herself with them, yet we can advise them to do so by sixes, or by the dozen.

And we would advise them to organize into companies and appoint or elect one of their number—the most spirited and business-like one—to act as captain or agent for the rest of the company, to see that they have their rights and are not imposed upon; which captain or agent to report to the Society immediately on their arrival here, so that legal steps may be taken, if necessary, to punish those who may have become liable. To this end we would have a clause in our charter making the Society the legal guardian of all such immigrants, and that such guardianship commence with the embarkation of the emigrants. And to be systematic, we would have some friend take on board emigrants, including the name and number of such, with their effects, and a duplicate of the bill or bills forwarded to us by mail.

In our extensive perambulations we have seen very many females traveling, self-protected, so that we anticipate no serious difficulty in getting emigrants through safe, under our care and direction. We had the satisfaction once of seeing an impertinent fellow shipped over by a lady, in the cabin of a passenger steamer, and never have we heard such a hearty burst of applause. In a company of strange men, the ladies always find protectors and helpers.

We propose that the Society be composed of those who may contribute to its support, but that it be managed exclusively by a directory of the ladies and married gentlemen of San Francisco, or vicinity; and that agencies be established in all suitable localities in the State.

We do not design our guardianship to cease with simply finding situations of homes for such as come to the State through our agency or influence, but that in case of maltreatment, bad luck, misfortunes or otherwise, they may always return back, if needs be, to the Society, or command its assistance and protection. To this end, we propose making permanent arrangements, or establishing an Asylum in or near San Francisco for a permanent home for all female immigrants with their offspring, that may fail to, or cannot succeed in providing for themselves.

While we aim at ample provision for emigrants after they arrive here, we do not, at first at least, propose to pay the passage of any to California. We presume that those wishing to come, and who have not the means, will find generous and humane friends at home to provide a passage for them; indeed I am persuaded that the steamship companies, packet owners, &c., will be very moderate in their charges for such emigrant passengers. And we believe also, that many will come who have the means to pay their own expenses, but will come to the care of the Society in the absence of suitable friends to receive and care for them here, or until they can find friends that they may have here. In addition to inviting young, or single ladies, to come to our care, we propose inviting widows with their children.

Yes! Our own LOVELY WOMEN—Whose form and whose soul Are the spell and the light, of each path we pursue— Whether sunned in the tropics, or chilled at the pole, If Woman be there, there is happiness too!

Respectfully, THOMAS J. HARVEY.

P. S.—If such a Society as we propose was in operation, we have no doubt but that many wealthy persons, and such as have no heirs, would take pleasure in bequeathing to the Society something with which to bless society after they have passed away from earth.

We would further add, that while we would call the attention of the public to our proposition, we would be happy to hear and answer any objections, made in a proper spirit; and also to receive such friendly suggestions as the good people may see proper to make, whether ladies or gentlemen.

We are on the eve of moving to the city (of San Francisco), where we can not only enjoy mail facilities, but where we can give our personal attention to the formation of the Society. We are not writing for amusement or pastime, we mean to do as well as any—activity, utility, and usefulness, being our motto.

Now.—We most cheerfully throw open our columns for the valuable suggestions of our correspondent at San Luis Obispo. The plan is a noble one and we sincerely hope the suggestions will not pass unheeded. We trust others will think of it, will speak of it, will write for and of it, and keep the subject before the mind of the people. We need immigration—we need families, and we need companions, to make social life what it might be, what it ought to be, what it can be with right effort. We agree with our friend in the great measure, for it will prove a real blessing to our country. From the moment Woman entered PARADISE, to the present time, all that has been, or is, of moral worth or beauty; all the blessings of social life, owe their birth to Woman—and had it not been for the presence of virtuous Woman upon these Pacific shores, the condition of society would have been such that life would hardly have been worth possessing. "The gold would have become dim"—but our Golden State has been saved, by her presence thus far, and we look to her for a more glorious future.

MILLET FOR SOILING OR FODDER.

The Country Gentleman publishes the following article on this subject, from a correspondent at Wilmington, Del.:

I have seen frequent recommendations to sow Indian corn for soiling. I have tried it several times, but I have always found that my cattle would not eat it when they had other food, and that my cows invariably failed in their milk when soiled with it. For this purpose, and for dry fodder, I prefer Millet by far. The latter may be sowed, in our latitude, from the first of May to the last of June. If sown during a dry spell, the seed will remain uninjured in the ground until a sufficient quantity of rain has fallen to make it shoot up. It is excellent as green food for cows, and first rate dry fodder for horses and for all kinds of cattle. The quantity of seed should be from twenty to twenty-eight quarts per acre, according to the condition of the soil. It is apt to grow coarse when sowed too thin on rich ground. Plow and harrow, then sow, cover with light seed harrows followed by the roller. If intended for fodder, it should be cut with the naked scythe, when the heads and stalks are

getting yellow and the blades are still green. The mowers should lay it lengthwise of the swath, which they will do easily with a little practice. It should be left in the swaths, in favorable weather until nearly dry, then gathered in bunches with the hands, turned upside down and left to dry again before binding; but should there be wet weather it may be shocked before it is dry, and will remain safe until there is opportunity of drying; great care, however, should be taken not to take it up before it is perfectly dry, as it is very apt to ferment and to get mouldy. It may be thrashed by machine, but I prefer the flail. Trashing lightly without unbinding, only turning the sheaves, will take off all the perfect seed. By these means seed enough is obtained to pay for the greatest part, if not the whole, of the expense, and you have from two to four tons of excellent fodder per acre, having the ground in good order for putting in wheat after a single plowing. If used rather than fodder, is the object, it should be sowed rather thin, and cut when perfectly ripe.

A. B.

DEEP PLOWING AND LARGE CROPS.

The following extract from the address of Thomas Allen, of St. Louis, before the Franklin County Agricultural Society, Missouri, furnishes a strong proof of the benefits of deep plowing and thorough pulverization, a mode of treatment which is doubtless specially applicable to the deep soils of the West. As for stirring the soil in a dry season, proving detrimental to the crop, we could cite many instances in proof of its great advantages, provided it is thoroughly and efficiently done—if superficial and imperfect, it may be of little use, and we have known it under peculiar circumstances to prove injurious. We mention here but a single case of the beneficial results of thorough and constant pulverization, during the past unprecedentedly dry summer. A nurseryman in Western New York who has been remarkably successful in the growth of his young trees, which did not appear to be retarded in the slightest degree through the late intense drouth, informed us that he employed about double the usual amount of labor through that critical period, to keep the soil constantly in motion—and he discovered that it always came up moist, while in all other places, differently treated, the earth appeared as dry as ashes.—Country Gentleman.

Seven acres was enough for a Roman farm, and two and a half acres in Flanders is deemed sufficient to support a man with a wife and three children. We have an example of a gentleman in Bracken county, Ky., who has produced this season, it is said, notwithstanding the drouth, seventy-five bushels of corn to the acre, on a field of one hundred and twenty-five acres, and this he has done by sub-soil plowing. Suppose each family in Franklin county had made their twenty-acre acres produce as well. Each family would have had a crop of 1,575 bushels, making 3,150,000 bushels in the county, or more than six times as much as your entire corn crop of 1850. This possibly might have been the result, had each family in your own county just spring put in twenty-one acres of corn, and in plowing the land had simply put the plow into the ground up to the beam or perhaps better, instead of turning up the sub-soil, had merely pulverized it by a sub-soil plow. Yet this result would not have been equal to the capacity of the soil. In that same year 1850, there were nine competitors for the premium corn crop of Kentucky, each of whom cultivated ten acres, and their average crop was 122 bushels per acre. Many suppose that much stirring of the soil, particularly in a dry season, is detrimental to the crop, whereas the true philosophy of the matter seems to be, that another earth is something like a sponge, ever ready to absorb moisture and gases from the dews and the atmosphere, and thus favor disintegration, and the development of the alkali, and other ingredients which give nutriment to the roots of plants; and this she is the more apt to do when the surface is really spongy by being, and not packed and baked and rendered impervious, by the tramp of feet, the beating of storms, and scratching, rather than plowing surface. Spade husbandry is an illustration of proof of the benefits of deep plowing. The advocates of deep plowing do not mean to say, that the process gives any new ingredients to the soil, except what comes by air and moisture, but rather, renders more available the latent virtues which it already possesses. Hence, it will not do to rely on that process alone, because the soil will soon become exhausted. But by rotation of crops, by returning to the soil, in manure, some of the ingredients you have taken from it, and by deep plowing, together, you are in the way of producing the best results. And this is no new theory. It is older than Virgil, and Cato, and Cincinnatus, and Pliny, and Columella. "Quid est agrum bene colere?" said Cato:

Horticultural Department.

AMERICAN APPLES.—It is conceded that the best apples in the world are produced in the United States; and that the best winter apples grow north of 38 deg north latitude. Within a few years past, several thousand barrels of fresh apples have been shipped from New York to Liverpool and London, at highly remunerative prices, the best quality, in good condition, bringing from \$8 to \$10 a barrel, and in some instances, even \$20 a barrel. The charges for freight, by clipper ships, are from thirty to fifty cents a barrel, and by steamer from two to three dollars.

The best varieties for shipping are the Newtown Pippin, Baldwin, Esopus Spitzenburg, Tompkins County King, Lady Apple, and Red Canada. There are probably other sorts of hardy apples, not yet tried, which would succeed well.

A PREMIUM ORCHARD.—The Oneida County Agricultural Society awarded a premium of \$15 to J. Talcott, of Rome, N. Y., for his orchard of 385 trees, the largest of which were planted in 1849, and are now sixteen inches in circumference. The following statement is from the report of the Society:

The land on which Mr. Talcott's orchard is planted, is mostly a sandy or gravelly loam with a clay subsoil. Previous to planting, it was plowed in back furrows, and the holes were dug along the ridges, thirty feet apart, three feet in width, and eighteen inches deep. In each hole was put a large wheel-barrow load of compost, made of stable-manure, lime, ashes, and muck (decayed forest-leaves would have been as good,) under cover the year before. In planting the trees, surface soil was placed about the roots. The orchard ground has been cultivated to hoed crops. Once a year the trees have been pruned, and washed with strong soap-suds, a moolen cloth being used for this purpose. This washing has given the stems a clean, healthy look, and has tended to keep away the insects. At the approach of winter the soil has been heaped up about a foot around the trees. This kept away the mice.

CHERRY, PEACH, AND PLUM PITS.—Pits of hardy trees should be placed in a position where they will freeze during the winter, which prepares them for planting early in the spring.

Apple, pear, and quince seeds, may be sown in the drills where they are intended to grow, and covered an inch deep, or put in boxes with earth, and exposed to the action of the frost during the winter, to be sown in the spring. The publishers of "Life Illustrated," New York, will procure and forward to any person or place, every variety of fruit seeds to be found in that market which may be desired.

BEST SOIL FOR FRUIT TREES is that just cleared of a forest. The surface should be rolling or descending, and moderately dry and rich. The roots of the forest trees as they decay, keep the ground loose and mellow, and afford the exact food necessary for a rapid and healthy growth of the fruit trees; and the soil abounds plentifully in those elements which are requisite to form the most perfect fruit.

WELL-FORMED PEAR TREES.—We have a special dislike to long legged fruit trees. They are bad looking, likely to be injured by hot sun, hard to ascend for the fruit, and sure to occasion severe bruising to every fruit that falls. The best form is from twenty to twenty-five feet high, their lower branches only three feet from the ground; when they are loaded with fruit, the lower ones bend to the earth.

LARGE VINE AT SELLWOOD PARK.—The following notes about the large vine at Sellwood Park, Sunninghill, Berks, England, are taken from London's Gardener's Magazine, Vol. 6. Says a writer in the Country Gentleman, when we saw the vine last, in 1851, it was then in full vigor, and a noble crop of fruit on it. Its length was then, we believe, 125 feet, and the gardener had tried to get more added to it.

It was brought from Sion Hill gardens, then the Duke of Marlborough's, in 1810. It was then a small plant, which had been struck that season from an eye. For the first year or two nothing remarkable was noticed in its growth, except a very healthy appearance.

About the fourth of fifth year, it had nearly filled the small house it was in. Another twenty feet was added; in about two years it had nearly filled this up, with strong bearing wood. The house was then again, and has been since, lengthened. The present length of the house is 90 feet, (1830), breadth 13 feet; number of bunches on the vine 1,100; and it is intended to add 36 feet more next autumn. The vine has a beautiful straight stem, upwards of 6 feet in height; and then branches off every way horizontally, with nine principal leading shoots. Its roots may be said to be both in and out of the house, as it is planted inside, but the front wall being on arches, many of the roots are in the old asparagus bed in front.

A CURIOUS FACT.—The Magazine of Horticulture, says, what is in common language termed a bulbous root is by Linnaeus termed the Hybernacle, or Winter Lodge of the young plant. These bulbs in every respect, resemble buds, except in being produced under ground, and include the leaves and flower in miniature, which are to be expanded in the ensuing spring. By cautiously cutting, in the early spring, through the concentric coats of a tulip root, longitudinally from the top to the base, and taking them off successively, the whole flower of the next summer's tulip is

beautifully seen by the naked eye, with its petals, pistil and stamens: the flowers exist in other bulbs, in the same manner, but the individual flowers of others being less; they are not so easily dissected, or so conspicuous to the naked eye. In the bulbs of the *Daphne Mezereon*, and in those of the *Hepatica*, and at the base of the *Osmunda lunaria*, a perfect plant of the future year, may be found, complete in all its parts.

The Argan Tree.

The following letter, descriptive of the Argan tree, by the British Acting Vice Consul at Mogadore, will be read with interest. The tree is valuable in dry countries as furnishing what is there much wanted, a supply of food for cattle in seasons of drought.

The Argan tree grows more or less throughout the States of Western Barbary, but principally in the province of Haha, and south of this town.

The soil on which it is found, is light, sandy, and very stony. It is usually found upon the hills, which are barren of all else, and where irrigation is impossible.

I should imagine from the appearance of some of the trees, that they are from one to two hundred years old; and a remarkably large one in this neighborhood, I should say, is at least three hundred. This tree measures round the trunk twenty-six feet; at the height of three feet, it branches off, (one of them measures eleven feet near the trunk;) these branches rest upon the ground at about fifteen feet from the trunk, and again ascend. The highest branch of this tree is not more than sixteen to eighteen feet: the outer branches extend to a circumference of 220 feet. This is the largest I am aware of.

The system of propagation in this vicinity is mostly by seed. When sowing, a little manure is placed with it, and it is well watered until it shoots, from which period it requires nothing farther. It bears fruit at from three to five years, which ripens from May to August, (according to the situation of the tree.) The roots extend to a great distance under ground, and shoots make their appearance at intervals, which are allowed to remain, thus doing away with the necessity for transplanting or sowing. As the fruit ripens, herds of goats, sheep, and cows are taken out; a man beats the tree with a long pole, and the nuts fall and are devoured voraciously by the cattle. In the evening they are driven home, and when comfortably settled in the yard, they commence chewing the cud and throw out the nuts, which are collected each morning as soon as the cattle have departed upon their daily excursion. I have heard it remarked that the nut passes through the stomach of the animal; but this is only a casuality and not a general rule. Large quantities are collected by women and children, which are well dried; the hull is taken off and stored for the camels and mules traveling in the winter. They are considered very nutritious.

The process of extracting the oil is very simple. The nuts are cracked by the women and children. The kernels are then parched in a common earthen vessel, ground in hand-mills of this country, then put in a pan, a little cold water sprinkled upon it; then it is well worked by the hand—much the same as kneading dough—until the oil separates itself, when the refuse is well pressed, which completes the process. The oil is let stand and the sediment removed. The cake, in which a good deal of oil remains—is generally given to the milch cows or goats. Some of these Argans are in clusters, others single trees.

PAMPAS GRASS.—A species of grass known by this name is, at the present time, attracting considerable attention in Europe. Although a true grass, it is likely to form one of the most useful of garden ornaments. In stature it is said to rival the bamboo, growing in its native plains, nearly twenty feet in height. The leaves are hard, wiry, very rough at the edge, not half an inch broad at its widest part, and of a dull grey-green color. The flowers appear in panicles, averaging two feet in length, resembling those of the common reed, but of a silvery whiteness, being covered with long colorless hairs, and consisting of colorless membranous glumes. It is established beyond doubt that it will bear any degree of cold ever experienced in the neighborhood of London, without injury. "Let the reader," says the *Gardener's Chronicle*, "conceive of one individual of a reedy grass of such magnitude, whose grey hard warm leaves curve most gracefully from the centre to the circumference, forming a thin, but huge tuft: add to this many slender flower-stems, darting into the air, and gracefully poisoning on their summits a white airy mass of light scales, whose polished surface can only be rivalled by the delicate work of the silversmith: place this a little above the eye in rocky ground, let it be well backed up some dark foliage, and a faint idea may be formed of the general appearance of the Pampas Grass." The botanical name of this grass is *Gynerium argenteum*, and was originally brought from the vicinity of Rio Janeiro.—*Magazine of Horticulture*.

HAPPINESS.—An eminent modern writer beautifully says: "The foundation of domestic happiness is faith in the virtue of a woman. The foundation of political happiness, is confidence in the integrity of a man. The foundation of all happiness, temporal or eternal, is reliance on the goodness of God."

A READY APPLICATION.—A mother admonishing her son—a lad some seven years of age—told him that he should never defer till to-morrow what he could do to-day. The little urchin replied—"Then, mother, let's eat the rest of the plum-pudding to-night."

Miscellany.

THE PAST.

Il passato è passato, e per sempre!—AZELIO.

The Past is past! with many a hopeful morrow
In errors and its good works live with God;
The agony is over of joy of sorrow;
The flowers lie dead along the path we trod.

The past is past! in solemn silence taking,
Alike, the sunny and the rainy day;
On the life altar, of the fond heart breaking
Full many an idol built on feet of clay.

The past is past! and our young selves departed
Upon the flashing whirl of those fleet years;
Its lessons leave us sadder, stronger hearted,
More slow to live, less prodigal of tears.

The past is past! and knowledge taught suspicion
To dim the spirit with its soul, cold shine;
For many a hue and truth thing finds admission
Amid the wisdom learnt from life and time.

The past is past! and in that twilight valley
Dwell slow repentance and the vain regret;
Fears for the future from those shadows rally,
And hang around the path before us yet.

The past is past! and ah! how few deplore it;
Or would re-live the time had they the power;
Though nature sometimes weepeth o'er it,
At memory of some wrong or happier hour.

The past is past! There's bitter joy in knowing
'Tis gone for ever; dead and buried deep,
It lies behind, and on life's stream is flowing,
Where the dark waters of the Dead Sea sleep.

The past is past! in faith and patience, taking
Its lessons let us lay them on our hearts;
The chain's attenuated links are breaking;
Be earnest!—use the present ere it's past!

A Hero and a Bully;

OR, THE TRIAL OF COURAGE.

ONE evening, a short time after the battle of Fontenoy, (1745,) a group of the king's body-guard was congregated near the Latona basin, at Versailles, listening to two of their number discussing a subject which at that period was rarely a matter of controversy in military circles.

"Refuse a duel after a public affront!" exclaimed the tallest of the speakers, whose bronzed features were rendered almost ferocious by the thick red moustache; "it is a stain that all the waters of the deluge would not wash away."

"I repeat, Monsieur de Malatour," replied the other in a calm, polite tone, "that there is more true courage in refusing than in accepting a duel. What is more common than to yield to passion, envy or vengeance; and what more rare than to resist them? Therefore it is a virtue when exhibited at the price of public opinion; for what costs nothing is esteemed as worth nothing."

"A marvel! Monsieur d'Argentre, I would advise if ever the king gives you command of a company, to have engraven on the sabres of the soldiers the commandment—'Thou shalt do no murder.'"

"And wherefore not? His majesty would have better servants, and the country fewer plunderers, if we had in our regiment more soldiers and fewer bullies. Take, as an example, him with whom you seem so much incensed; has he not nobly avenged what you call an affront by taking, with his own hands, an enemy's colors, while your knaves most likely formed a prudent reserve behind the baggage?"

"Towards themselves have their moments of courage."

"And the brave also their moments of fear."

"The expression is not that of a gentleman."

"It is that of Monsieur de Turenne, whose family equalled either of ours, and who avowed that he was not exempt from such moments. Everybody has heard of his conduct towards a braggadocio, who boasted in his presence that he had never known fear. He suddenly passed a lighted candle under the speaker's nose, who instantly drew back his head to the great amusement of the bystanders, who laughed heartily at this singular mode of testing the other's assertion."

"None but a marshal of France had dared to try such pleasantry. To our subject, sir, I maintain that your friend is a coward, and you—"

"And I—" repeated d'Argentre, his eyes flashing and his lips firmly compressed.

"Holla, gentlemen!" exclaimed a third party, who, owing to the warmth of the argument, had joined the group unperceived. "This is my affair," said he to Monsieur d'Argentre, holding his arm; then turning to his adversary, added: "Monsieur de Malatour, I am at your orders."

"In that case, after you, if necessary," said d'Argentre, with his usual calmness.

"By my honor you charm me, gentlemen! Let us go!"

"One moment," replied the new comer, who, young as he was, wore the cross of St. Louis.

"No remarks. Gentlemen, hasten."

"Too great haste in such cases evinces less a contempt for death than an anxiety to get rid of his phantom."

"I listen, sir!"

"Monsieur d'Argentre just now stated that the bravest have their moments of fear. Without taking as serious his anecdote of Monsieur du Turenne, I shall add that, with the exception of the difference that exists between muscles and nerves, the courage of the duelist is more an affair of habit than of principle; for it is the natural state of man to love peace, if not for the sake of others, at least for himself. Do you wish me to prove it?"

"Enough, sir: we are not here to listen to a sermon."

"Yet a moment. Here is my proposition: we

are all assembled this evening previous to our leave of absence; I invite you, then, as also these gentlemen present, to a bear hunt on my estate, or rather amongst the precipices of Clat, in the Eastern Pyrenees. You are very expert, Monsieur de Malatour—you can snuff a candle with a pistol at twenty paces, and you have no equal at the small sword. Well, I shall place you before a bear, and if you succeed—I do not even say in lodging a ball in his head, but merely in firing upon him—I shall submit immediately after to meet you face to face with any weapons you choose to name, since it is only at that price I am to gain your good opinion."

"Are you playing a comedy, sir?"

"Quite the contrary. And I even repeat that this extreme haste shows more the courage of the nerves than of the true courage arising from principle."

"What guaranty have I, should I accept your proposition, that you will not again endeavor to evade me?"

"My word, sir, which I take all my comrades to witness, and place under the safeguard of their honor."

There ran through his auditory such a buzz of approbation that De Malatour, though with a bad grace, was obliged to accede to the arrangement. It was then agreed that on the 1st of September all present should assemble at the Chateau du Clat.

Whilst the young lord of the manor is making the necessary preparations for their reception, we shall explain the accusation of which he was the object, yet which had not branded him with any mark of disgrace among a class of men so punctilious on the point of honor.

The young Baron de Villetteon in entering amongst the gentlemen who formed the household guard of the king of France, carried with him principles which remained uncorrupted amidst all the frivolities of one of the most licentious courts in Europe. Such, however, is the charm of virtue, even in the midst of vice, that his exemplary conduct had not only gained him the esteem of his officers, and friendship of his companions, but had attracted the attention of the king himself. One alone among his comrades, Monsieur de Malatour, took umbrage at this general favor, and on the occasion of some trifling expression or gesture, publicly insulted him. Villetteon refused to challenge him, as being contrary to his principles, but determined that this seeming cowardice, in not fighting a well-known duellist, should be redeemed by some action of *clat* during the campaign just commenced. That moment had arrived, and for his noble conduct in taking the English colors at the battle of Fontenoy, he received the cross of St. Louis from the king's own hand on the field, the eulogium of Marshal Saxe, and a redoubled enmity on the part of De Malatour.

The first care of the young baron, on arriving at his estate, was to call his major-domo, an old faithful servant.

"I have business with thee, my master," said he, cordially shaking him by the hand.

"Speak, monseigneur," replied the parure, who was deeply attached to his young lord; "you know the old hunter is yours to his last drop of blood."

"I never doubted it, my old friend. Did you receive my letter from Paris?"

"Yes, sir; and those gentlemen, your comrades, will have some work before them."

"Are there bears already on the heights then?" asked Villetteon, extending his hand in the direction of one of the lofty peaks, whose summit, covered with snow, glittered in the morning sun."

"Five in all—a complete *menage*—father, mother and children; besides an old bachelor, whom the Spaniard had driven to this side."

"In less than a week we shall go in pursuit of them. Do you know, parure, some of my comrades are rather rough sportsmen? there is one of them who is able to snuff a candle with a pistol at twenty paces."

"Easier, perhaps than to snuff a bear at four," replied the old man, laughing.

"That is what I said also. But as I should wish to judge for myself of his prowess, you must place us together at the same post—at the bridge of Maure, for instance."

"Hun!" said the parure, scratching his ear, "it would better please me to have you elsewhere."

"Why?"

"Because to guard this post, a man ought to be in a state of grace, for he will be between two deaths—the bears and the precipice."

"I know the one, and do not fear the other; thanks to your lessons."

"I am sure of that. But, with your leave, I should like to guard the bridge myself."

"You are sure, then, that the bears will pass this way?"

"Sure—yes; but quite sure—no. Recollect that they are sullen and prudent beasts, which never confide their plan of route to any one one."

"It is agreed on. I shall guard the bridge with my comrade. Now, go and have the trackers ready."

"Very well, very well," murmured the parure, as he retired; "I shall have my eye on him."

Eight days afterwards, all those invited, not excepting Monsieur de Malatour—who, despite the delicate attention of the host, preserved a cold reserve—were assembled at the chateau. The magnificent grandeur of the Pyrenees, their shining summits relieved against the blue sky of Spain, was unlooked-for pleasure to the greater number of the guests, who for the most part belonged to the rich and fertile plains of the interior.

The morning following their arrival a body of trackers and scouts, provided with all manner of discordant instruments—trumpets, saucapans,

drums, &c., &c., were assembled under the walls of the chateau, with the pareur at their head; while by his head stood the mandrin, who promptly granted a dozen large mastiffs, held in leash by his vigorous helpers. The young baron and his friends, armed with carbines and hunting knives, had scarcely appeared, when, by a sign from the pareur, the whole troop moved silently forward. The dogs themselves seemed to understand the importance of this movement, and nothing was heard but the confused tramp of feet, blending with the noise of the distant torrent, or, at intervals, the cry of some belated night-bird, flying heavily homeward in the doubtful glimmer of the yet unopened day.

As the party reached the crest of the mountain which immediately overhung the chateau, the first rays of the sun breaking from the east glanced on the summit of the Pyrenees, and suddenly illuminating the landscape, discovered beneath them a deep valley, covered with majestic pine trees, which murmured in the fresh breeze of the morning.

Opposite to them the foaming waters of a cascade fell some hundreds of feet through a cleft which divided the mountain from the summit to base. By one of those caprices of nature which testify the primitive convulsions of our globe, the chasm was surmounted by a natural bridge—the piles of granite at each side being joined by one immense flat rock, almost seeming to verify the fable of the Titans; for it appeared impossible that these enormous blocks of stone could have ever been raised to such an elevation by human agency.

Sinister legends were attached to the place, and the mountaineers recounted with terror that no hunter, with the exception of the pareur, had ever been posted at the bridge of Maure, without becoming the prey of either the bears or the precipice. But the pareur was too good a Christian to partake of this ridiculous prejudice; he attributed the fatality to its real cause—the dizziness arising from the sight of the bears and the precipice combined, by destroying the hunter's presence of mind, made him aim unsteady, and his death the inevitable consequence. He could not, however, altogether divest himself of fears for his young master, who obstinately persevered in his intention of occupying the bridge with his antagonist.

After placing the baron's companions at posts, which he considered the most advantageous, the pareur rejoined his men, and disposing them so as to encompass the valley facing the cascade, commanded the utmost silence to be preserved until they should hear the first bark of his dog. At that signal the mastiffs were to be unleashed, the instruments sounded and all to move slowly forward, contracting the circle as they approached the cascade. These arrangements being made, the pareur and his dog, followed by the mandrin alone, disappeared in the depths of the wood.

For some minutes the silence had remained unbroken, when suddenly a furious barking commenced, accompanied by low growling. Each prepared his arms, the instruments sounded, and the mastiffs being let loose, precipitated themselves pell-mell in the direction of the struggle. Their furious barking was soon confounded with the cries of the hunters and the din of the instruments, mingled with the formidable growling of the bears, making altogether a hideous concert, which, rolling along the sides of the valley, was repeated by the distant echoes. At this moment the young baron regarded his companion, whose countenance, though pale, remained calm and scornful.

"Attention, sir," said he in a low voice. "The bears are not far from us, let your aim be true, or else—"

"Keep your counsels for yourself, sir!"

"Attention!" repeated Villette, without seeming to notice the surly response—"he approaches."

Those who were placed in front of the cascade, the animals directing their course to the bridge cried from all parts, "Look out, look out, Villette!" But the breaking of branches, followed by the rolling of loosened stones down the precipice, had already given warning of the animal's near approach. Malatour became dantly pale; he, however, held his carbine firmly, in the attitude of a resolute hunter.

A bear at length appeared, with foaming mouth and glaring eyes, at times turning as if he would vainly struggle with his pursuers; but when he saw the bridge, his only way of escape, occupied, he uttered a fearful growl, and raising himself on his hind legs, was rushing on our two hunters, when a ball struck him in the forehead and he fell dead at their feet.

Malatour convulsively grasped his gun—he had become completely powerless. Suddenly new cries, louder and more pressing were heard.

"Fire! fire! he is now on you!" cried the pareur, who appeared unexpectedly, pale and agitated, his gun to his shoulder, but afraid to fire, lest he should hit his master.

The latter, perceiving his agitation, turned round; it was indeed time. On the other side of the bridge, a bear much larger than the first, was in the act of making the final rush. Springing backward, he seized the carbine of his petrified companion, and lodged its contents in the animal's breast, ere he could reach them. He rolled, in the death-struggle, to where they stood. All this was the work of an instant. The knees of the hardy old pareur shook with emotion at the escape of his young master; as for Malatour, his lived paleness, and the convulsive shuddering of his limbs, testified the state of his mind.

"Take your arms," said the young baron, quickly replacing in his hands the carbine; "here are our comrades—they must not see you unarmed; and, pareur, not a word of all this."

"Look!" said he to his companions, as they gathered around, pointing to the monstrous beasts—"one to each. Now, Monsieur de Malatour, I wait your orders, and am ready to give the satisfaction you require."

The latter made no reply, but reached out his hand, which Villette cordially shook.

"That evening a banquet was given to celebrate the double victory. Towards the end of the repast a toast to the 'vanquishers' was proposed, and immediately accepted.

Monsieur d'Argente, glass in hand, rose to pledge it, when Malatour, also rising, held his arm, exclaiming: "To the sole vanquisher of the day!—to our noble host! It was he alone who killed the two bears; and if, through his generosity, I have allowed the illusion to last so long, it was simply for this reason: The affront which I gave him was a public one, the reparation ought to be public likewise. I now declare that Monsieur de Villette is the bravest of the brave, and that I shall maintain it towards all and against all."

"This time, at least, I shall not take up your gauntlet," said Monsieur d'Argente.

"There's a brave young man!" cried the pareur, whom his master had admitted to his table, and who endeavored to conceal a furtive tear. "Nothing could better prove to me, sir, that, with a little experience, you will be as calm in the presence of bears as you are, I am sure, in the face of an enemy."

Fixing the Attention.

WHAT is commonly called *abstraction in study*, is nothing more than having the attention so completely occupied with the subject in hand, that the mind takes notice of nothing without itself. One of the greatest minds which this or any other country ever produced, has been known to be so engrossed in thinking on a particular subject, that his horse had waded through the corner of a pond; yet, though the water covered the saddle, he was wholly insensible to the cause of his being wet. I mention this, not to recommend such an abstraction, but to show that he who has his attention fixed, and the power of fixing it when he pleases, will be successful in study.

Why does the boy who has a large sum upon his slate, scowl, and rub out, and begin again, and grow discouraged? Because he has not learned to govern his attention. He was going on well, when some new thought floated into his mind, or some new object caught his eye, and he lost the train of calculation. Why has the Latin or Greek word so puzzled you to remember, that you had to look it out in your dictionary ten or a dozen times? And why do you not look at it as at a stranger, whose name you ought to know, but which you cannot recall? Because you have not yet acquired fully the power of fixing your attention. That word would have been remembered long since, if it had not passed as a shadow before your mind, when you looked at it. A celebrated authoress, who states that she reserves all her *i's* to be dotted, and her *e's* to be crossed on some sick day, might have given a more philosophical reason; and that is that she could not bear to have her attention interrupted a single moment, when writing with the most success.—*Student's Manual.*

HON. EDWARD EVERETT'S OPINION OF RUSSIA. As far back as 1833—nearly twenty-two years ago—Edward Everett, in an Oration before the Phi-Beta Kappa Society of Yale College, said, in allusion to the progressive dominion of the Czar: "It is true that some prejudices exist against that Government, at the present time, in the minds of the friends of liberal institutions. But let it not be forgotten that within the last century as great a work of improvement has been carried on in the Russian Empire as was ever accomplished, in an equal period, in the history of man; and that it is doubtful whether in any other way than through the medium of such a Government, the light of the mind could penetrate to a tenth part of the heterogeneous materials of which that Empire is composed."

It is quite within the range of political probability that the extended dominion of the Czar will be the immediate agent of regenerating Western Asia. If so, I care not how soon the Russian banner is planted on the walls of Constantinople. No man can suppose that an instantaneous transition can be made in Asiatic Turkey from the present condition of those regions to one of pure republican liberty. The process must be gradual and may be slow. If the Russian power be extended over them, it will be a civilized and Christian way. Letters, law, and religion, will follow in the train; and the foundation will be laid for further progress, in the advancing intelligence of the people."

CONFIDENCE IN ONE'S SELF.—When a crisis befalls you, and the emergency requires moral courage and noble manhood to meet it, be equal to the requirements of the moment, and rise superior to the obstacles in your path. The universal testimony of men whose experience exactly coincides with yours, furnishes the consoling reflection that difficulties may be ended by opposition. There is no blessing equal to the possession of a stout heart. The magnitude of the danger needs nothing more than a greater effort than ever at your hands. If you prove recreant in the hour of trial, you are the worst of recreants, and deserve no compassion. Be not dismayed nor unmanned when you should be bold and daring, unflinching and resolute. The cloud whose threatening murmurs you hear with fear and dread, is pregnant with blessings, and the frown whose sternness now makes you shudder and tremble, will ere long be succeeded by a smile of bewitching sweetness and benignity. Then be strong and manly,

oppose equal forces to when difficulties keep up a stout heart, and trust in Providence. Greatness can only be achieved by those who are tried. The condition of that achievement is confidence in one's self.—*Richmond Post.*

BEAUTIFUL.—It is refreshing to encounter, occasionally, in the great sea of political strife, some little green isle like the following, of which the Boston Atlas claims the right of discovery. It reminds us, remarks the Post, that amidst the cares of State, the distracting and chaotic confusion of political warfare, the mind of man may yet preserve its wonted serenity, and that the "bright eye misleading" may still occasionally "in a fine frenzy roll." The author is the Hon. Henry J. Gardner, recently chosen Governor of Massachusetts:

SONNET TO A BURGUNDY ROSE.
Fairest of flowers, by fairest lady given!
Thine only fault, that thou wilt quickly fade—
Though early plucked, yet blessed to be given
From thine own stem, and on her bosom laid,
Like as a pearl in gold, a star in heaven!
Oh! I would dream, were I not half afraid—
That ere, in some thought-wildered, happy hour,
Ere while, ere thou wert given me, fair flower,
A kiss perchance may have impressed on thee,
And I would dream that some mysterious power
Had kept the blessing in those leaves for me!
So would I ply thee with a venturesome lip,
The nectar of thy hidden thing to sip,
And dream the while of rose-lipped loveliness and thee!

Ladies' Department.

PENCILLINGS.

BY MRS. E. A. W.

IN No. 6 of our Journal, we copied from the Sacramento Union, a sketch from the pen of this gifted writer. In haste, and purely unintentional, our compositors omitted to give the initials of the writer. For this omission we hope forgiveness. To-day we have the pleasure of laying before our readers an Original Sketch, written for the FARMER. We feel highly gratified that we are able to add so talented a correspondent to the Ladies' Department of our Journal.

The early sunshine of a bright, beautiful, morning is pouring a golden flood upon the hill-tops, and though the valleys still lie in the shadow, they smile happily in the promise of the bright day that is to follow.

February in California, may fearlessly throw down the gauntlet with any of the spring months in the Atlantic States; even now the spring is stirring through her veins, though snow is on her brow; an unseen hand is carpeting the vales with green and tender foliage—the delicate germ is leaving its wintry tomb of darkness—and the little buds are folled into cones, as if to cleave their way to heaven. I yesterday—in the open air—plucked flowers to strew upon the grave of one who a few weeks ago joyed to be upon the earth, but has passed to that land of silence where the good and beautiful dwell together, and the shadow of the grave lies between him and me.

To one who has been bred among the ice-bergs at the North, the present winter months are charming beyond description. I would not be set down as an enthusiast, but I should be quite ashamed of my own stolid nature, could I remain unmoved by so many genial and soul-stirring influences; I take the liberty often, to indulge in audible emotion, nor would I suppress the promptings of an ardent nature, for days like these are inflorescent with romance, poetry, and spiritual existence.

To a heart at all allied to the divine—a love of nature and her beauties, grows with their growth and strengthens with their strength; they are a part of nature rather than admirers of it, and their minds are often bright or shadowy, as the outer world varies in its expression. It seems as if their own throbbled in unison with the great heart of nature—not a murmur of its sweet, low melody, is in discord—her temples become to them the "holy of holies."

The tidings of your sunny skies, and smiling landscapes, reached me in my far off secluded home; I had heard the fame thereof, but the half was not told! Let me enjoy them while I may, for the "bird of passage" will soon adjust her weary pinion beneath the vine and fig tree of her "Father Land."

The death angel has so recently visited our city, under such appalling circumstances, that the pall of gloom which enshrouded its very atmosphere, has scarcely rolled away. I have witnessed many pageants both civic and military, but never any so sublimely solemn. The public sympathy was so universally felt and expressed, that it will be long ere the sad rites are obliterated from their minds. But the busy throng swarm the resounding streets, and the sun shines as smilingly over the new made graves, as though a hearth had never been made desolate! The breath of spring

will sweep over the little green hillocks, laden with the incense of sweet flowers, and in a far off home the wail of the widow will come up before the Lord of Sabaoth. I would there were erected over those mouldering remains, a monument, that will tell when the present actors in life's drama shall be forgotten. I would be scarcely less honorable to the living than the dead. It is seldom that I indulge in homiletics, but sometimes under the influence of the prosing impulse, I fall into sentiment, and forget to extricate myself.

Your little paper comes to me each week as fresh and sweet as a "bride adorned for her husband." Its interesting pages seem like old friends from a distant country. With a prayer, for its extensive circulation, and the choicest of heaven's blessings on its readers, I subscribe myself, a sincere friend,
SACRAMENTO, Feb. 17, 1855. E. A. W.

THE FAMILY BONN.—There is no bond so pure and holy, so capable of the highest earthly enjoyment, as that which binds families together. Let the rude world jostle and push without, here around the hearth-side, mutual confidence, sympathy, and love prevail. Let things go awry if they will; at home, at least there are true friends—true enjoyment. Your sorrows are their sorrows, as well as your joys. How sunny earth looks when we view it through such a medium; it seems akin to the home of angels. Do children from such homes go out into the world to fill it with crime and bloodshed? Are the inmates of prisons reared in such an atmosphere? Far different, sadly different indeed. Oh, does not the parent, who binds closely around the heart of the child the strong ties of home affection, bequeath to that child a sure preventative from vice, and a strong inducement to virtue? There is no tie, we verily believe, so lovely and yet so neglected, as the love of brothers and sisters. Turn where we may, if we turn aside from the love of a sister, we may not find its equals. For who like a sister, will trust, confide, cheer, and love, until, may be, sin and misery? Whose love so unselfish, so purely seeking not its own? The wife may, perhaps, weary, flee from your side; but the sister pleads, "he is my brother!" and careth for him still.

ADVICE TO MOTHERS.—Do all in your power to teach your children self-government. If a child is passionate, teach him by gentle means to curb his temper. If he is greedy, cultivate liberality in him. If he is sulky, charm him out of it by encouraging frank good humor. If he is indolent, accustom him to exertion, and train him so as to perform even onerous duties with alacrity. If pride comes in to make obedience reluctant, subdue him, either by counsel or discipline. In short, give your children the habit of overcoming their besetting sins.

Valuable Recipes.

TO DRY PUMPKIN.—Cut it round horizontally in tolerably thin slices, peel them and hang them on a line in a warm room. When perfectly dry, put them away for use. When you wish to use it, put it to soak over night; next day pour off the water, put on fresh water, stew and use it as usual, &c.

Another, and as some think, a much better way, is to boil and sift the pumpkin, then spread it out thin in tin plates, and dry hard in a warm oven. Prepared in this wise it keeps good all the year round, and a little piece boiled up in milk will make a batch of pies.

TO REMOVE WINE OR FRUIT STAINS FROM LINEN.—If the stain be of long continuance it may be removed by rubbing the soiled parts, on each side, with yellow soap; then lay on a mixture of starch in cold water, very thick; rub it well in, and expose the linen to the sun and air till the stain comes out. If not removed in three or four days, rub that off and renew the process. When it is dry, it may be sprinkled with a little water.

APPLE FRUITERS.—Pear and core some fine large pippins, and cut them into round slices. Soak them in wine, sugar, and nutmeg, for two or three hours. Make a batter of four eggs; a table-spoonful of milk; thicken with enough flour stirred in by degrees, to make a batter; mix it two or three hours before it is wanted, that it may be light. Heat some butter, and fry them brown; sift powdered sugar, and grate nutmeg over them.

TO COOK ONIONS.—It is a good plan to boil onions in milk and water; it diminishes the strong taste of that vegetable. It is an excellent way of serving up onions, to chop them after they are boiled, and put them in a stew-pan, with a little milk, butter, salt, and pepper, and let them stew about fifteen minutes. This gives them a fine flavor, and they can be served up very hot.

SUBSTITUTE FOR CREAM, IN TEA OR COFFEE.—Beat the white of an egg to a froth, put to it a very small heap of butter, and mix well. Then turn the coffee to it gradually, so that it may not curdle. Properly done, it will be an excellent substitute for cream. For tea, omit the butter, using only the egg.

This might be of great use at sea, as eggs can be preserved fresh in various ways.

DOOR MATS.—Nearly every kind of mat has been tried in the public schools at Columbus, O., and the rope mats (made of oakum) are found the most desirable.

FROM THE EAST.

The Venezuelan Government has put into execution its design of taking possession of the Bird Islands, a cluster of gum-covered rocks in the Caribbean Sea. The invading force drove away two American vessels that were taking in cargoes, one of which has arrived at Boston. All the Americans on the islands embarked on board the vessels. The sloop-of-war Fulmouth, at St. Thomas on the 6th of Jan., would sail in a few days to watch the movements of the Venezuelans.

It is stated that the proposal on the part of the Allies, which induced Prince Gortchakoff to ask for time to consult his Court, embraced the destruction of the Russian fortress of Jomael, on the Danube; the construction of a neutral fortress in lieu of it, to be garrisoned by the Five Powers, and the demolition of the forts and arsenal of Sebastopol.

The Hon. Luther Severance, late U. S. Minister at Honolulu, and the projector and for a long time editor of the "Kennebec Journal," died recently at his residence in Augusta, Maine.

An amendment to the army bill has been passed appropriating \$30,000 for the importation of Dromedaries for military purposes, and to extend the provisions of extra pay of the soldiers of the Pacific coast to those of Fort Laramie.

J. Ross Browne recommends to the Secretary of the Treasury, the substitution of Inspectors of Customs at Sacramento and Stockton. In regard to the Indian affairs, a continuance of the system established by Lieut. Beale. He censures Lieut. B. however, for some of his official acts, but does not impute criminality to him. He recommends the remodeling and enlargement of the San Francisco Mint, the letting out of the assay by private contract, and the increase of the salaries of its officers.

Lee Martin, formerly District Attorney of Yuba County, has been appointed U. States Consul at Mazatlan.

A Permanent Claim Commission is coming out to California.

FROM THE SOUTH.

KERN RIVER MINES.—The steamer America arrived here on the 24th ult., bringing later intelligence from the Kern River Mines, fully corroborating the previous reports of the extensive discovery of gold in that region. As the number of miners increase the news becomes more favorable as to their extent and richness. A few of the miners had returned to Los Angeles to buy goods, bringing with them plenty of dust.

Los Angeles and vicinity are comparatively deserted, the excitement being as great as that of '49. The average yield of the mines is from \$8 to \$20 per day, and big strikes of daily occurrence; another statement is, from \$5 to \$8 per day. The richest localities found thus far, are high up in the mountain gulches, where the snow at present makes it very difficult to work. Parties have located themselves upon rich claims thus situated, and are awaiting the advent of warm weather to commence operations.

A Southern paper speaking of the mines, says: "Although we still speak of 'Kern River Mines' as applying to the mining region, but comparatively few persons are now as high up; the country south and east has been discovered to be far richer. We may safely say that there are thousands now scattered over these mines, and that gold is found wherever prospected, and we have no doubt whatever but that others will be opened in the mountains overlooking our valley, vying in richness with any in the State."

The road is thronged with adventurers, wagons, mules, cattle, sheep, and staves, all bound for the mines. Many have gone out from Los Angeles, but few returned, and these with dust for provisions, tools, &c. Rumors of exceeding rich strikes are numerous. At a place called Rich Gulch, \$100 a day per man, was taken out at first, and the claim still pays an ounce. This, it appears, is the richest spot yet discovered, but it is said there are "secret" diggings even richer than this.

A private letter from Los Angeles, says, transportation is very difficult. The distance from Los Angeles is 160 miles, and no house is to be found on the road. The trip from San Francisco to San Pedro costs \$25; from San Pedro to Los Angeles, \$5; and from Los Angeles to within some forty miles of the diggings by stage, \$30.

The steamer Goliah had a rough time on her up trip, and was finally compelled to put into Santa Barbara in distress, where she awaits the return of the America, with coal. She has sustained no serious damage—split rudder-head, and some other slight damage to her light outer works from heavy seas. The America left here on the morning of the 25th, for San Diego and intermediate ports, taking down the requisite supply of coal to enable the Goliah to prosecute her voyage to San Francisco, and a large number of passenger, en route to the mines.

MARRIED.

On the 22d Feb., in this city, by Rev. Mr. Willey, Hamilton C. Harrison, Esq., and Miss Abbie A.; and Josiah Howell, Esq., and Miss Adeline, daughters of Col. Warren, of this city. On the 22d Feb., in this city, by Rev. Fred. Buel, Charles A. Langham and Agnes Dean, all of this city. On the 19th Feb., in this city, by Rev. F. Moosink, Mr. John Hamerich and Miss Margaretta Hegel. On the 18th Feb., in this city, by Rev. S. H. Willey, Mr. Wm. Roberts and Miss Isabelle More. On the 21st Feb., in this city, by Rev. Dr. Thurston, Dr. Prescott V. Richardson and Miss Rachel Darrach. On the 20th Feb., in this city, by Rev. Mr. Gallagher, Mr. Peter Henry Astor and Miss Hannah Maria Hekey. On the 23d Feb., in Sonoma, Mr. Rodolphus P. S. Pope and Miss Johannah McCarty.

DIED.

On the 19th Feb., at age, Capt. B. F. Austin, of the 6th. Old Follow. He was knocked overboard while steering his vessel in a gale. On the 23d Feb., on board the ship Sweetstakes, Wm. Butler, of Nova Scotia.

SAN FRANCISCO MARINE LIST.

ARRIVALS.	
Feb. 21—Clipper ship Sweetstakes, Lane, New York, 110 days, with mules.	
Bark Parvatham, Prescott, Fort Simpson, 14 days, with ice.	
Brig Colorado, Hurns, Humboldt Bay, 4 days; lumber.	
Brig Jane, Kingston, Humboldt Bay, 1 day; lumber.	
Humboldt, Ross, Steer, Vancouver Island, 14 days; coal.	
Schr Mt Vernon, Smith, Santa Cruz, 3 days; lime and oats.	
Schr Odd Fellows, Austin, Santa Cruz, 3 days; produce.	
Schr Loo Choo, Higgins, Santa Cruz, 3 days; lime.	
Feb. 22—Steamship Sierra Nevada, Belchen, San Juan, 12 days, with passengers, mules, etc.	
Clipper ship Southern Cross, Hurns, Boston, 118 days; mules.	
Brig Francisco, Smith, Oregon, 8 days, with flour, etc.	
Feb. 23—Clipper ship Bald Eagle, Treaswell, New York, 117 days; mules.	
Clipper ship Phantom, Peterson, New York, 122 days; mules.	
Ship Hunsor, Whitson, New York, 135 days; mules.	
Br bark Inchinim, Ennis, Hong Kong, 55 days; mules, and 215 passengers.	
Brig Greenin, Kisson, Sydney (N S W), 87 days, via Tahiti 48 days; coal.	
Schr J M Ryerson, McCarty, Pajaro, 2 days; produce.

Schr Sorcerer, Vancouver, Pajaro, 2 days; produce.	
Feb. 24—Steamship American, Haley, San Diego, 3 days; mules.	
Dutch ship Blacklock, Munge, Car diff, 148 days; coal.	
Fr ship Monelle, Alfred, Bonifacio, 169 days, via Valparaiso, with mules.	
Schr Francis Helen, Leeds, Humboldt, 26 days; mules.	
Feb. 25—Ship Indigo, Wilmington, Hong Kong, 43 days; mules.	
Feb. 26—Ship Juliet, Cobb, Boston, 165 days; mules.	
Fr ship Paquebot des Mers du Sud, Huayna, Havre, 151 days, with mules.	
Humboldt ship, Reimer, New Castle (K), 193 days, via Valparaiso 63 days; coal.	
Ship Sumner G. Curtis, Norton, Liverpool, 165 days; mules.	
Br bark Equinox, David, London, 150 days; mules.	
Br bark Niagara, Johnson, Glasgow, 150 days; mules.	
Brig Mary A Jones, Barnes, Tahiti, Dec. 30, and Honolulu 22 days; mules.	
Schr Laura Bern, Morton, San Pedro, 2 days; grape vines.	
Feb. 26—Clipper ship Loma, Leckie, Boston, 124 days; mules.	
Feb. 27—Humboldt ship, Miller, Ruiz, Manzanillo (Mexico), 24 days; mules.	
Schr Olivia, Thomas, Monterey, 50 hours; 500 lbs potatoes.	

CLEARANCES.

Feb. 21—Fr ship Paragon, Surinam, for Valparaiso.
Feb. 22—Br bark Druid, Scott, for Valparaiso and ports in the Pacific.
Feb. 21—Steamships Uncle Sam, Beldin, for San Juan; America, Haley, San Pedro; schr Lawrence, Gaskins, Guayaquil.

SPECIAL NOTICES.

To the Farmer.—Healthy crops, fruitful trees, and sound stock, are esteemed the blessings of the farmer, yet how often while laboring for such blessings he forgets himself, and while establishing health in everything else on his farm, is doing himself ill. Dr. Devine's Compound Pitch Lozenges, sold by LITTLE & CO., No. 137 Montgomery street, will cure that cough he is suffering from. As he sows this remedy, so will he reap health. v39

Southwick's Raffle.—A Splendid Dairy Prize.—Of all the Raffles proposed, we know of none that has a better or more influential prize than Southwick's Dairy Prize. The prize is our hundred and twenty-two cows—this is prize No. 1. There are also many other valuable prizes. Mr. Southwick, the proprietor, is a gentleman of responsibility, well known throughout Sacramento Co., and there can be no doubt but the Raffle will be conducted in good faith and fairness. It will be drawn in a few weeks. Good and responsible Agents wanted. Terms made known by application at the office of the CALIFORNIA FARMER.

Native Pines, Oaks, &c.—Cones of the Native Pines, Acorns from our Mountain Oaks, Seed of all our Mountain Shrubs, and all species of Valuable Tree or Shrub; for these the full price will be paid, if satisfactorily labelled, classified and arranged, at the Office of the "CALIFORNIA FARMER," Masonic Hall Building, Montgomery street.

Our New Office.—We invite our friends to our new office in the "Masonic Hall," on Montgomery street, opposite to Court & Shreve. We can show them many wonderful specimens, such as are rarely seen, and we especially invite them to call and examine the various schedules and invoices we have to offer for sale. Trees, Seeds, Plants, Grains, Houses, Lands, Inventions, Works of Art of all kinds, these we are happy to show, and can interest our friends if they will but call and see us. WARREN & SON.

Flowers! Flowers!
GOLDEN GATE NURSERY,
Corner Fourth and Folsom streets.
Office 170 Washington street, San Francisco.
PERSONS desirous of embellishing their gardens or conservatories, will find at this establishment the largest stock and greatest variety of plants to be found on the Pacific coast. Among which are:
Camellia Japonica, in 70 varieties; Perpetual Roses of all the classes; fragrant and fancy Geraniums; Passifloras, Heliotropes, Verbenas, Honeysuckles, Abutilons, Myrtles, Oleanders, Jasmines, Fuchsias, Dahlias, Daffodils, Bulbous Roots, Ornamental Strawberry; and a general assortment of Green House and Hardy Plants.
Orders for shipment to any part of the State will be carefully executed by addressing D. Nelson, 170 Washington street, or the proprietor, Box 1,957 Post-office. v39-4m W. C. WALKER.

Osage Orange.
The Best and Cheapest Fence.
The following resolution was passed at the great State of Ohio Agricultural Meeting, at which sixty counties were represented by nearly three hundred delegates:
Resolved, That we recommend to the farmers of Ohio, the Osage Orange as most valuable plant for hedging, superior in every respect to any other plant which has yet been introduced in Ohio, for economical and enduring fences.
100,000 strong, healthy plants, for sale at \$30 per 1,000, by the undersigned on the Pringles Ranch, near the San Francisco Embarkadero. All orders sent to the Stenberger Post-office; or by Adams & Co's Express; or to Mr. Nicol, corner of Clay and Davis streets, San Francisco, will be punctually attended to. v39 WM. PAUL.

Fresh Garden Seed.
RANSE and put up at Smith's Botanical Garden and Nursery, in the American river, three miles above Sacramento. A large stock of every variety of Garden Seeds, raised the present season, and of the best quality, and all sure to grow, at wholesale or retail, put up in the neatest manner in packages to suit purchasers.
Also, Fruit and Ornamental Trees, consisting of Apple, Pear, Peach, Cherry, Plum, Apricot, Nectarine and Quince Trees, Grape Vines, Oregon Raspberries, Strawberries of finest varieties, Highbush and Arbutus Roots.
Also, a large stock of choice varieties of Green House Plants, Flowering Shrubs and Vines, Bulbous Roots, Flower seeds, &c. All orders, accompanied by cash, will be punctually attended to. Trees or Seeds will be securely packed and sent to any part of the State. v39 A. P. SMITH.

Page, Incon & Co.
WE will receive Drafts, Certificates of Deposit, or Checks for funds there, on the above house, at par, for does to us; or for Trees, Plants, Seeds; or in any business for which call or enquire. WARREN & SON.

To Printers.
FOR SALE.—One Second-hand Hoe's DOUBLE CYLINDER PRESS. Size of bed, 44 by 28. Apply to F. BLAKE, 88 Merchant street. v38-1m

MISCELLANEOUS.

DR DEVINE'S COMPOUND PITCH LOZENGE
FOR THE CURE OF
COUGHS AND COLDS
AND
BRONCHIAL AFFECTIONS
LITTLE & CO
AGENTS
137 MONTGOMERY ST.
SAN FRANCISCO.

TO PREVENT COUNTERFEITS, EACH BOX OF GEN. DEVINE'S PITCH LOZENGES, will in future bear the Written Signature of "Little & Co."

THIS CELEBRATED REMEDY

Hydraulic Pumps.

AN invoice of new patterns of Hydraulic Pumps received at our office.

WABHREN &

Soliloquy of a Loafer.

LET'S see, where am I? This is—coal I'm laying on. How'd I get here? (reflects) Yes, I mind now. Was comin' up street—met a wheelbarrow comin' tother way—it was drunk—and one on us fell into the cellar—don't mind which now—guess it must a been me. I'm a nice young man, yes I am—tight! tore! shot! drunk! Well, I can't help it—'taint my fault—wonder who's fault 'tis? Is it Jones' fault? no. Is it my wife's fault? well it isn't. Is it the wheelbarrow's fault? n-o-o. It's whiskey's fault. Who's whiskey? Has he a large family? Got many relations? All poor I reckon. I think I wont own him any more. I'll cut his acquaintance; I've had that notion for about ten years, and always hated to do it for fear of hurtin' his feelings—I'll do it now—I think liquor's hurtin' me—it's spoilin' my temper.

Sometimes I get mad when I'm drunk, and abuse Betz and the Brats—it used to be Lizzie and the children; that's some time ago though, I can just mind it; when I'd come home evenin's she used to put her arms around my neck and kiss me, and call me dear William. When I come home now she takes her pipe out of her mouth long enough to tell me something like this: "Bill, you drunken brute! shut the door after you. There's no fire, and we're cold enough 'bout lettin' the snow blow in that way." Yes, she's Betz and I'm Bill now. I ain't a good bill neither; think I'm counterfeited—won't pass—a tarren, without goin' in and gettin' drunk. Don't know what Bank I'm on; last Sunday I was on the river bank, drunk; I'm on a pile of charcoal, just now.

I stay out pretty late—no, sometimes I'm out all night; fact is I'm pretty much out altogether, and all orer—out of friends, out of money, out at the elbows, out of whiskey, and out-rageous dirty, so Betz says—but then she's no judge, for she's never clean herself. I wonder why she don't wear good clothes any more; perhaps she hasn't got 'em; whose fault's that?—'taint mine—it must be whiskey's.

Sometimes I'm in, however—in-toxicated now, and in somebody's coal cellar. But there's one good principle I've got—I won't get in debt, and everybody helps me to, keep my resolution by refusing to trust me.

One of my coat tails is gone—got tore off I expect when I fell down here—I'll have to get a new suit soon. A fellow told me the other day I'd make a good sign for a paper mill; if he wasn't so big I'd licked him. I've had this shirt on for nine weeks, and am 'fraid it wont come off without injurin' it. People ought to respect me more than they do, for I belong to the hole-y order—I mint a dandy though my clothes are pretty near greasy (c)ian style. I guess I tore this window shutter in my pants the other night when I sat down on the wax in Ben Sugg's shop—I'll have to get it mended up or I'll catch cold—I ain't very stout—tho' I'm full in the face, as the boys say—about as fat as a match, and as healthy as the small-pox. My best hat is a standing guard for a window pane that rent out the other morning at the invitation of a brickbat. It's getting cold down here; wonder how I'll get out; I mint able to climb—if I had a drink I could think better; let's see, I mint got three cents; wish I was in a tavern I'd sponge one. When any body treats and says "come fellers," I always think my name's "fellers," and I've got too good manners to refuse. Well, I mint leave this, or they'll arrest me for an attempt at burglary. I mint come to that yet. Anyhow, it was the wheelbarrow did the harm, not me.

POLITENESS.—On the last night of the Vermont Legislative session, while the school bill was under discussion, a member complained that school-boys had lost their politeness. Mr. Bartlett, of Lydon, replied: "I acknowledge the truth of the gentleman's remarks. I was forced to take off my cat-skin cap to every passer-by. Now, no boy uncovers his head. A few years since I was riding through Orleans county in a sleigh, and overtook a boy who had attained the age of nine years. He stepped out of the road to let me pass. There he stood upon the crust, erect, bold, and aspiring. He did not prepare to doff his beaver—not he. Said I, 'My lad, you should always take off your hat to a gentleman.' Said he, 'I always do, sir.'"

GLOVES.—A Paris paper says that in that city there are annually consumed one million six hundred thousand kid and lamb skins for the manufacture of gloves; eight hundred thousand in Bruxelles; eight hundred thousand in Grenoble, and three million two hundred thousand in Annouay, making a total annual consumption in the four cities of six million four hundred thousand skins. To dress these requires over a million dozen eggs.

In the days of the patriarchs, a woman's conduct was the index of her heart. When, for example, the father of Rebecca asked her if she would go with the servant of Isaac, she immediately replied, "I will go." Had she been a daughter of the nineteenth century, she would have answered, "Pshaw! go with him! Why, Mr. Isaac must be sick! Go with him! Of course I won't." And then she would have gone with him.

A VERY GOOD REASON.—Prince Albert was blaming a little boy at Eton for not having learnt more at his age. "It's not my fault, sir," replied the boy, "for we have a holiday every time a prince is born."

HORTICULTURAL, &c.

17,000 Premium Strawberry Plants:

From the Shell Mound Nurseries and Fruit Gardens, Near San Antonio, Alameda County.

WE offer for sale the following List of Plants, viz.:
1,000 Boston Pine, at \$70 per 100
5,000 British Queen, " 35 " "
1,000 Burr's New Pine, " 35 " "
500 Black Hudson, " 35 " "
5,000 Large Early Scarlet, " 15 " "
2,000 Hovey's Seedling, " 15 " "
1,000 Freckle Hand, " 15 " "
1,000 Black Prince, " 15 " "
500 Crimson Cone, " 15 " "

Plants from "Shell Mound" received a premium at the late Fair of the California State Agricultural Society. Several of the varieties named are believed to be remarkable for their fruitful qualities, having been cultivated for several years by Mr. Sanford, at his gardens in Wayne county, N. Y., with special reference to the production of fruit.

Orders received for any number of plants, (not less than 100) and promptly executed. On invoices of \$500, and over, a discount of twenty per cent. from the above prices will be allowed.

Address, J. L. SANFORD, Cultivator,
Shell Mound, near San Antonio;
or, R. W. WASHINGTON, Proprietor,
Care of Wells, Fargo & Co., San Francisco.

K street, cor. Th. d. Sacramento.
Branch store, P. street, cor. Third.

New Invention!

BULKLEY'S STEAM DRY KILN.

THE undersigned takes this opportunity to offer to the citizens of California, Oregon and Washington Territory, the valuable invention hereby announced. One of the greatest wants of California and vicinity, for years, has been the means of preserving her products so as to have a continued supply during the late months. The vegetable products to an immense amount are annually lost at the approach of the rainy season, its long continuance, and the exposure that necessarily results to these products from the season; and the vast quantities that are exposed and accumulated in warehouses and elsewhere, have demanded some method of preserving these immense and valuable crops, that otherwise would be a loss to the producer and to the State. The loss of the Potato and Onion crop last year would count almost a million of money, and the loss the present year will be heavy, without preservation.

The undersigned, holding the "Patent Right of the Steam Dry Kiln," offers this invention with the confident assurance that it is the very thing needed—that it is the *ne plus ultra* for these products, and far from also. It has been tried for Lumber, to which it has been more particularly applied in the States, for there the Vegetable products do not require so much care as here. To shippers of Grain this invention removes all the difficulty in sending Grain on long voyages, and under the drying process of this valuable invention our Grain growers can now send their Grain to New York with safety.

The proprietor needs only to append the following certificates. The name of Henry L. Ellsworth, Esq., carries a weight that is convincing to intelligent men, and the other evidences should be satisfactory.

The model machine will soon be placed on exhibition at the office of Warren & Son, where all information can be had. JOSHUA HUTTS, Proprietor of Patent.

A Diploma and Silver Medal.

Was awarded to the inventor at the last New York State Agricultural Fair, held at Rochester, as a testimonial of his superior merit.

Letters from Hon. H. L. Ellsworth.

LAFAYETTE, January 7, 1853.

DEAR SIR: I congratulate you on the completion of your Dryer. I have for a long time urged the importance of extracting the moisture from grain and flour before shipment, to prevent fermentation. Your plan will obviate the difficulties hitherto experienced. There can no longer be any doubt that 18 pounds of water can be taken from a barrel of meal, and 15 pounds from a barrel of flour without affecting the taste or appearance of the same. Experiments at Lafayette show this. Nor is it a less drying circumstance that when the flour or meal is cooked, it absorbs a proportionately more water, thus swelling freight and the purity of the article. If the moisture is extracted, it must be obvious that the meal will keep for long voyages, passing through the hottest climates. To the Navy, your improvement is invaluable. The world has become somewhat skeptical on the subject of patent rights. The simplicity and compactness of your machinery enables you to exhibit a working model, to remove in a moment any doubts as to your ability to sustain your patent and prove its utility. One feature in your plan deserves particular notice; in fact, this constitutes your main claim, viz., not drying by common steam, or by fire heated pans, as has been done hitherto, but by using heated steam. Few persons are aware of the small expansion of steam, and how easily it can be heated to a high temperature with little confinement. You will be able to raise a stream to the point of ignition, say 600 or 700 degrees, though a far less heat will answer all your purposes. I will only say that European prejudice against Indian corn is fast dying away, and we may anticipate large shipments both for man and beast. The great fertility of the West, and the reduction of freights both inland and on the ocean, justifies this anticipation. Wishing you success, I remain, yours respectfully,
HENRY L. ELLSWORTH, late Commissioner of Patents.
To Henry G. Bulkley, Esq., Kalamazoo, Michigan.

LAFAYETTE, March 20, 1853.

DEAR SIR—I am highly pleased with your Dryer for lumber by heated steam. It seems almost incredible how soon even green lumber can be prepared for use. Twenty-four hours is all that is required. Steam has hitherto been used to advantage, but heated steam has not been applied for this purpose before your improvements. Every manufacturer of lumber would find it profitable to erect a cheap dryer on your plan. Full one-third of the weight of some kinds of lumber is removed by drying; the saving in cartage will more than repay the expenses of drying. When the difference between seasoned and unseasoned lumber is considered, no one who regards good work will regret the trifling expense of preparing the raw material. Yours respectfully,
HENRY L. ELLSWORTH.
To H. G. Bulkley, Esq., Kalamazoo, Michigan.

HARRISBURG, Pa., July 12, 1853.

I hereby certify that I have had charge of one of W. O. Bulkley's shops where the most of his wood work is done, that I put up and have used H. G. Bulkley's Patent Kiln, and heartily approve of everything W. O. Bulkley has said about it, and am certain that no recommendation can be so strong in praise of said kiln.
W. H. SOLLENDER, JR.

NURSERIES, &c.

Golden Gate Nursery.

Corner of Folsom and Fourth streets, San Francisco.
OFFICE—No. 170 WASHINGTON STREET.

THE attention of the public is requested to a large collection of the flowering plants, now for sale at this establishment, embracing the most extensive assortment in the State; among which may be found—

Camellia Japonica, in seventy varieties;
Perpetual blooming Roses, of all the classes;
Moss and climbing Roses, do do;
Pachistima, a choice collection; Heliotrope, in variety;
Roses and Lemon Geraniums;
Lemon-scented Vetches, flowering do, Arabidiums, Azuleas, Oleanders, Passifloras, Honeyuckles, Carnations, Dahlias, Balbousa Roots, &c., &c.; and a general collection of Green-house plants and ornamental shrubbery.

Catalogues for 1855 will be ready on the 1st of December, and will be forwarded on application.

Orders for any part of the State, will be promptly attended to, on application to D. Nelson, No. 170 Washington street—or to the proprietor.
(7-3m) W. C. WALKER.

Smith's Pomological Gardens,

Banks of the American River, ten and a half miles from Sacramento city.

THE proprietor of the Gardens would respectfully invite all who are engaged in "Nursery and Gardening" to visit his grounds. He will be happy to show to them, ready for sale, this fall, as fine a collection of

Fruit Trees, Ornamental Trees, Grape Vines, Shrubs, Flowering Plants, and Green House Plants,

as can be found in all the great Sacramento Valley.

The proprietor would call particular attention to his collection of Peaches, believing that the specimens exhibited by him in Sacramento and San Francisco markets have been unsurpassed in size, quality, or flavor.

The collections of Pear Trees will equal any in the country; these, with all the new varieties, will be offered this autumn.

The undersigned believes his collection worthy a visit to his grounds of all who are interested in Gardening and Orcharding.

The subscriber will offer this autumn Five Tons Vegetable Garden Seeds, that have been raised upon his own grounds. These seeds have been grown with care and will be sold at wholesale for the present, at the Gardens.

Persons in want are invited to call upon us, and we will make reasonable terms.

Fruits, Bouquets, &c., will always be furnished at short notice at the Gardens.

The proprietor returns his thanks for the liberal patronage of the past, and hopes for a continuance of such favor.

A. P. SMITH, Proprietor.

San Jose Nursery.

WE are prepared to supply the trade with the best varieties of Fruit Trees, Grape Vines, Roses, Plants, &c., in all their varieties; and are disposed to sell at a low price, that we may suit the times. Our Trees are cultivated with great personal care. Those who desire to make Nurseries and Gardens will do well to visit and see for themselves our ability to supply what we advertise. Trees will be carefully labelled and packed for any season or distance.

The following Trees we offer this season:

Peach Trees, 41 varieties;	Strawberries, 7 varieties;
Pear do 44 do	Fig Trees;
Apple do 54 do	Pomegranates;
Plum do 15 do	Walnuts;
Apricots 6 do	Chestnuts;
Almonds 2 do	Locust Trees, very large
Quinces do 2 do	Rose Acacias, } for hedges.
Cherry do many do	Orange Orange,
Grapes 12 do	

In addition to our Fruit and Ornamental Trees, we offer ten thousand finest Roses, comprising more than one hundred varieties, all of the best known kinds. Our plants are too numerous to specify in an advertisement. Hoping visitors will come and see us, we refer them to our agent in San Francisco, Mr. DELABRIGNE, 121 Sansome street, where we shall have a collection of plants in the season as samples. The nursery is situated in the city of San Jose, immediately above the City Mills.

We are also permitted to refer to Warren & Son, who have examined our grounds, and who, as a testimony of the character of our nursery, and who will receive and forward orders to us.

Every order promptly and speedily attended to.

(8-1st) L. PREVOST & CO.

Pacific Nursery,

MISSION DOLORES AND ALAMEDA.

HAVE always on hand and for sale, the largest collection of choice ROSES to be found in the State. Also, Grape Vines, Fruit and Ornamental Trees in great variety; 500,000 Strawberry Plants, including thirteen varieties of all the best known kinds. For sale cheap, in lots to suit purchasers.

All orders left with us at the Mission Dolores, or at our Nursery at Alameda, or with Warren & Son, at the office of this paper, will be promptly attended to.

Prices guaranteed at the lowest market rates, and everything sold fully warranted to be correct.

H. A. SONNTAG & CO.

SOLIDIFIED MILK.

MANUFACTURED BY

SAMUEL T. BLATCHFORD.

FOR SALE BY

BINGHAM & REYNOLDS,

201 Sansome street.

THE PRESERVED MILK

is made from PURE FRESH MILK, combined with crushed sugar, and when reduced to liquid, as stated in the directions, can be used for all purposes for which Milk is used, as it is simply Pure Milk and Sugar.

The Tablet weighs one pound and is equal to five pints of pure milk. The proprietor recommends with confidence the article to all persons going to sea, its properties of self-preservation having been fully tested during the last eighteen months.

To the WHALING interests its value is inestimable, and to travelers by land or sea, (especially when accompanied by young children) it recommends itself by its portableness and the facility with which it may be used.

Certificates.

The proprietor would call the attention of the public to the following certificates:

NEW YORK, April 4, 1854.

Mr. S. T. Blatchford—

DEAR SIR: In answer to your inquiries relative to the preparation of Solidified or Preserved Milk, having used it on my last voyage to San Francisco, I can with the utmost confidence recommend it to sea-faring men as being the best article of the kind I have ever seen or used, retaining, as it does, the taste and flavor of fresh milk.

Yours, &c.,

O. R. MUMFORD,

Master of Clipper Ship "Tornado."

Extract from a letter from a Californian, }
Dated May 31, 1854.

"In regard to the Solidified Milk which you entrusted to me for the purpose of testing the merit of the preparation, I can with confidence say that it has proved entirely satisfactory. I have a portion of it yet remaining in as good condition as when you gave it to me, and it will, I have no doubt, keep for years. The preparation will be a great luxury to the sailor, as it will enable him to enjoy an article of food that has hitherto been supposed could only be had on shore."

Very respectfully, yours, &c.

EARL BARTLETT.

Extract of a letter from Rev. M. Williams, }
Dated Valparaiso, Aug. 9, 1853.

"But the Tablets of Milk prepared by S. T. Blatchford & Co. were the climax of comfort. I would say, let no one go to sea without them. I have a few now left in my room as perfect as when first made."

April, 1853.

Mr. Samuel T. Blatchford—

DEAR SIR: Some twelve months since I heard of your preparation of Milk and procured a sample, a portion of which I tried at the time and found it good. When preparing for sea last December, I tried the balance, which proving equally as good as months before, I procured several pounds, and during the voyage to and from Europe, have had the milk on the table every day, and have found it excellent.

I have used several preparations of milk, and have no hesitation in pronouncing yours the best. I consider it just the thing, in future voyages I shall endeavor to have a supply of it.

Yours, very respectfully,

RICH. S. CORNING,

Master of Clipper Ship "Rapid."

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!

Hural for Vance's new Daguerrean Gallery!

Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE's who wishes

PERFECT LIKENESSES? Because he has now the

best arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses

more perfect, and with greater power than any ever before used in this country.

2d. Because he has the largest light in the world, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different focal features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with blue clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

Prices as reasonable, and work superior to any in the city.

Don't forget the place.

New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's.

INDIAN MUMMY.

ONE of the most interesting specimens of preserved humanity is now open for exhibition at the office of the CALIFORNIA FARMER. The certificate of Dr. Evans, U. S. Geologist, furnishes sufficient data to prove its authenticity and value; the certificates of five of our most distinguished medical men furnish facts that should awaken a general interest in our community to see this valuable and positive proof of the earlier races of the aborigines of California.

The Mummy now exhibited is supposed to be a highly distinguished chief of some tribe of the "Flat-Head Indians." This man has left no record, and the present tribes have no knowledge of the race of which this is a representative. Capt. Russell, the discoverer, is familiar with the Indians of the same vicinity, speaks their language, and has been years with them; yet neither they nor himself can find any trace by which to recover the history of the present relic.

The Chief now measures 5 feet 5 inches in length—full size—the feet are 9 inches long. The body presents a natural appearance, and as it lays in the canoe, surrounded by the materials usually deposited with chiefs, together with other bones and skulls found with the Mummy, it is indeed a most interesting specimen.

Captain Russell has expended much in bringing this specimen to the city and preparing it for the States, and it is now offered for exhibition in hopes that a sufficient sum can be raised to retain it here, as it is a record of the early history of California.

The Mummy will be exhibited at the office of the CALIFORNIA FARMER, for a short time. Admission 50 cts.; Children half-price. The Press, Medical and Scientific men, and Clergymen, are invited Free, as the object is diffusion of knowledge.

C. J. W. RUSSELL, Proprietor.

Useful Sciences.

NO. 10.

It appears that while a wide classification should be adopted by the State and County Societies, a large premium should be offered for the best conducted experiment, carried on for at least three years, in making crosses between the different breeds, and thus determine which is the best for a general breed of fine-wooled sheep. There are plenty of men in the State to undertake such an enterprise, and the owners of imported sheep would be glad to help them along.—*Wool Grower and Stock Register.*

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SAN FRANCISCO, THURSDAY, MARCH 8, 1855.

The Agriculture of France.

WHAT makes the Agriculture of France so prosperous? Read the history of her success, look at the picture of her smiling vineyards, her bending orchards, her cultivated lands, her princely gardens, and sketch the history of her renowned grains. The perfection she has attained in her products for the kitchen, has no equal; and when we speak of her flora, we are refreshed by the perfume that memory recalls of the beautiful.

The Agriculture, Horticulture, and Floriculture, of France have been made honorable, aye, noble, by the Government bounties to encourage, public approbation, and rewards, emblems of distinction, and the highest tokens that the soldier of the Imperial Guard can win for bravery and love and devotion to his country, the "Cross of the Legion of Honor," is publicly bestowed upon those who by discoveries and labors advance the interests of Agriculture in France.

Agriculture and kindred sciences in France, and England, are esteemed as they should be. The royal family and nobility attend the exhibitions of the Societies for promoting their interest, and this gives them a character that insures success. When the Farmers of California take a proper interest and raise the character of Agriculture by esteeming it the most honorable employment in the world, then we shall have the nobility of our land with us, for the nobility of our country are the citizens.

Massachusetts Horticultural Society.

We have received from our old friend Eben Wight, Esq., corresponding secretary, the reports of the committees for 1854, of the above society, with the schedule of prizes for 1855. They contain many interesting facts, and data of great value. We extract the following amount of prizes:

Prospective Prizes,	\$750
For Gardens, Greenhouses, &c.,	200
For Fruits,	700
For Plants, Flowers and Designs,	700
For Floral Designs, at the Annual Exhibition,	200
For Vegetables,	250
	\$2800

We commend the following rules and regulations on visiting grounds, offered for premiums by this society, as worthy of attention among horticulturists. Valuable hints can be gathered from them:

1st. All applications for a visit must be made to the chairman, on or before the first of May, stating the extent of grounds, number of fruit trees, whether offered for a prize, and such general outline as to give to the committee some idea of the premises.

2d. No Fruit Garden or Grounds of less than one acre (and this well stocked and under fine cultivation) can occupy the time of the Committee.

3d. No farm will be visited, unless there should be connected with it a fine Fruit Garden, Vegetable Garden, Greenhouse, or Graperies, in which case these alone will be examined.

4th. It shall be the duty of the Committee to select for the applications those which may seem most deserving of notice, and to visit as many places, and as often, as they may deem expedient and necessary.

5th. In making all examinations, the utmost regard must be paid to economy and general thrift; in cases, however, of pleasure, landscape, or fancy grounds, more allowance must be made for taste and design, and a gratuity or complimentary notice may be made at the discretion of the Committee.

6th. No place will be visited officially, with reference to my award, without a written invitation.

7th. All visits will be conducted without previous notice to the owner; and if made out of season, or under unfavorable circumstances, due allowance will be made.

8th. No person shall be a competitor for the highest prize for more than two years out of seven.

9th. The Committee may, at their discretion, give gratuities or substitute gratuities for prizes, in either case which may best serve the objects of the Society, and meet special cases, always of course within the limits of the appropriation.

10th. Competitors for the prizes shall furnish to the Committee, if required, a written statement of their mode of cultivation, quantity and kind of manure applied, amount of labor, including their own, and other particulars called for, under the penalty of a forfeiture of such prize if withheld.

11th. The expenses of the Committee shall be paid by the Society, and a record shall be kept by the chairman of all places visited.

A new and splendid Fire Engine arrived in the clipper ship "Antonia," for the "Weber Company No. 1" of Stockton. It was built by Mr. James Smith, of New York, and is similar to the "Knickerbocker," of this city. Its capacity is 8 1/2 inch cylinders and 6 inch stroke.

[For the California Farmer.]

How to Prevent Wheat from Smut.

VINE SPRINGS RANCHO, Columbia, Feb. 23rd, 1855.

GENTLEMEN: I am much obliged to you for your agricultural journal, which I am much pleased with, and consider it a good paper and one that does much credit to the State, and shall become one of your subscribers. It would give me pleasure to obtain subscribers for your paper, but I have only miners for neighbors and they take no interest in agriculture, but, on the contrary, appear to think it an antagonistic occupation.

I notice in the number sent me (vol. III, No. 7) an article headed "Smutty Wheat," and you request the opinions and practical experiments of California agriculturists. Since I began to raise wheat in this country, I have had no opportunity of making any experiment on the subject, for I have seen no smut; but I did not suppose that experiments were necessary, as I thought both the cause and the preventive had been discovered and were well known. Not having the authority with me I cannot give you chapter and verse, but if my memory is correct, you will find it in Sir Arthur Sinclair's Code of Agriculture, a work of almost as high standing in that science as Napoleon's in Commerce. Sinclair discovered that the smut in wheat was caused by an insect, and on trying many substances to destroy it, he found lime perfectly successful. It is said that "brevity is the soul of wit," and it is certain that it is very important in an agricultural communication, for most farmers think they have no time to read a long article. I shall therefore merely add my own experience on the cure of smut, which has been such that I should not hesitate in sowing smutty wheat, fully confident that I should raise a clean crop.

In the Atlantic States, in 1806, I sowed wheat (spring wheat, for at that time we raised no other.) The seed was obtained from a neighbor. It was soaked in beef pickle, made of salt and water, with a certain portion of saltpetre, (nitre) twenty-four hours. It was then drained dry and afterwards finished drying with slaked lime. The quantity soaked was not sufficient to sow the piece of ground, and being pressed for time, a part of it was sowed with unsoaked and unlimed wheat from the same lot. The whole of the wheat raised from that soaked with pickle and dried with lime was perfectly free from smut, whilst that sown dry or without pickling and liming was nearly worthless from smut, and our neighbors raised from the same seed, also sowed without soaking or liming, wheat not fit to eat. This was, I think, before the publication of Sinclair's work, and was done from the belief that soaking in pickle prevented smut. The lime was used merely to render the grain dry enough to sow. If Sinclair's work had been published, it had not at least made its appearance in that part of our country. The next year our seed wheat was prepared in the same manner, and with the same success. In 1808, not having lime, we dried our wheat (after soaking it as usual) in ashes, and the crop proved to be a little smutty, which led us to suppose that it might be the lime that prevented smut, and we continued preparing our wheat by soaking in pickle and drying with lime till 1818, always having a perfectly clean crop. In 1818 I soaked the seed as usual, but wet weather coming on directly after the pickle had been turned off, and fearing the seed might be spoiled if left in its state, I partially dried it with ground gypsum (plaster of Paris), and when the ground was dry enough to sow, my grain had become too dry to use lime, and a portion of it was sowed without liming. The plastered grain produced a very large crop, (the largest I ever knew in that part of the country,) but it was slightly smutty. That dried with lime had no smut. From 1818 to 1850 I continued to raise wheat, and always pickled and dried with lime, and never had any more smut.

So much for smut. In 1852 I saw on the edge of my barley field a plant of wheat that was a come by chance. It was so very fine that I secured it, by putting stakes round it, in order to ascertain what it might prove. In the fall, when ripe, I pulled it up, and found it proceeded from only one kernel. The produce was half a pint, or a little less, and weighed a little short of half a pound. I sowed it in 1851, in drills, and its yield was sixty pounds, although I lost some by the fowls. I have now sowed the sixty pounds broadcast, and what the yield may be I will let you know in the fall. The quality of the wheat, judging from appearance, is the finest I have ever seen: the berry is large, full and very light colored. In glancing over what I have written,

I perceive that I have omitted to mention that we soaked some of our wheat in simple water, and then dried it in lime, and it destroyed the smut equally as well as when pickle was used.

Yours truly,

En. S. JANVIS.

[For the California Farmer.]

A Worthy Man—Results of Rain, etc.

SONOMA, March 1, 1855.

Messrs. EDITORS: As we often hear of accounts of work done in other sections of the State, for which great praise is awarded, I call your attention to the following, and challenge a single man in this or any other State to beat it:

A gentleman farmer of our county had, from the 1st November last up to the 24th of February, plowed, sowed and harrowed one hundred acres of wheat. He has done all of the work himself, with a team of unbroke California horses. Fifty acres of the land were sod, the other fifty were broken last year. Now, sir, I think this farmer is richly deserving of an especial premium from the State Agricultural Society. The Committee should inspect the work done, and the farmer-like manner in which it is done; for this purpose he invites them to visit his place. The Committee can inquire for Major Robt. Beck, Sonoma, and they will see the man who has accomplished the above little job, and has not done working yet.

The good effects of the late rains are already visible. The hills are all dressed in deepest green, and fruit trees present their gayest colors. Fruit will be abundant this season, the peach, especially.

While following the peaceful pursuits of country life, we hear of the crash of banks in your city and of the consequent distress, but as we are so remote from the scene of action, and innocent of having any deposits, we do not feel the shock of tumbling institutions.

Yours truly,

J.

NOTE.—We feel much pleased to receive the above communication from our correspondent. We assure him we, as an officer of the State Society, shall feel it a special duty to lay this matter before the Executive of the State Society. Such examples of earnest industry deserve especial notice.

We would suggest to our friend the immediate organization of a County Society for the promotion of Agriculture in Sonoma. Surely such a county should have an efficient Society.

We fully agree with "J." in relation to banks. We refer him to our last issue, where he will find we state, *there are banks that always pay, and the farmers are the Directors.* Will "J." please make himself known.—Ed.

AGRICULTURAL WORKS.—*De Bow's Journal of Agriculture.*—We have been favored with the first number, new series, of this highly interesting and valuable work, published at New Orleans and at Washington city, D. C. This is a work of great interest, being particularly a review of the vast industrial resources of the South and West. We shall be glad to copy from time to time, from so valuable a work, and are happy to add to our exchanges so valuable an auxiliary to the science of Agriculture.

The Farmer, of Amherst, Mass.—We receive the new series of this interesting publication. The Farmer is published at Amherst, Mass., by J. A. Nash, Esq., and contains a vast amount of valuable agricultural data. The journal is got up in handsome style, and reflects great credit upon the proprietors, both as to its typographic, and its editorial skill and taste.

MORE GOLD SAVED.—Every domestic product that we raise or manufacture, which has heretofore been imported, is so much gold saved to our State, and so much added to the real wealth and prosperity of California. While at Sacramento the past week we called on Messrs. Warner & Co., grocers, near the Plaza, our good old friends and sweetest LARNS we have ever seen, white as new fallen snow, and sweet as June butter, very neatly put up and in 20-lb. tins. This we like, this California Lard is a progress; so much saved—and we commend all to give preference to our Home Manufactures, this will build up our country.

E. W. TRACY & CO., SHASTA.—It is a pleasure to hear the commendations bestowed upon this express house at Shasta; they acted well, performed their duty nobly, and have won universal favor, and have now the people with them. A large business is done at Shasta, and those having business can rely upon E. W. Tracy & Co., of Shasta.

John A. Sutter.

"O shame, where is thy blush."

We have called California the Golden State, the bright and beautiful, the "Eureka" State, and have lauded her to the skies; and for her natural beauties, her agricultural and mineral resources, her bays and rivers, and for the ample means she possesses to make herself great—for all these she deserves a bright and glorious name; but as the sun in all its brightness and glory is often obscured by clouds, and even when cloudless has spots upon its own clear face, so our own Golden State has dark stains made by her base "ingratitude" to her earliest Pioneer and her noblest friend. We believe there is no nation under heaven that would have permitted a benefactor to have suffered as John A. Sutter has suffered. When the discovery of the precious ore was made at Sutter's mill race, and thousands flocked hither, who fed the hungry and clothed the naked and sheltered the houseless? John A. Sutter. The first discovery of gold was upon his own property, and yet instead of clutching it with the eager grasp of the miser, he rejoiced, believing good would come to the many; and while his own grounds were cut up and lost to him, and his own fields trod down and destroyed, he murmured not, but with a noble and disinterested benevolence, stood at his world-renowned "Fort," welcoming all who came; if money was wanting, he gave it; if clothing, they had it; if sick or destitute, they were made welcome and cared for. A great heart was beating for the good of his fellow man. The rush for gold and for city lots soon changed the scene. The wide fields of golden grain passed away, and a city appeared. That Fort, that should have been kept as sacred as the "Temple of Jerusalem," is a ruin, and the fair fields have passed into the hands of those whose idol is gold, and he who once swayed thousands in kindness yet in power, has passed from his home and his Fort, and is now destitute and neglected. California forgets her duty. California is ungrateful. England loaded with wealth and honor the man who discovered the gold fields of Australia; and California permits John A. Sutter to pine in want, aye permits the sheriff to take away the very woodpile at his door, (for there are men, in California that are heartless.)

Shall such things be? Where is the humanity of our citizens? where the gratitude? Is there no heart pulse? We would entreat, if not for humanity, for the honor and reputation of our State. Let it no longer be said that Republics are ungrateful. Let it not be said that monarchies have more heart than freedom. John A. Sutter's mill race revealed the gold that has changed the destinies of thousands and altered the current of trade of a world, and the author of the mill race should not be forgotten. His name should be remembered with gratitude, not for this only, but for his unbounded hospitality and his universal kindness to all who came within reach of his kindness.

California owes much to this noble Pioneer, and let her requite her obligations while life and hope are his; then shall her name and fame grow brighter, and she will deserve to be hailed as the Golden State.

Water Works—Plaza—Sacramento.

THE Water Works of Sacramento city are very handsomely situated upon, and facing south down, the Levee. What is now needed is to improve the Plaza in front.

We would suggest to the Honorable the Mayor and Council the laying out of the square in front in a style suitable to the position and character of the city. We trust they will not, however, take pattern by the city of San Francisco. It is always bad enough to see trees and plants die in dry weather, but to see such a collection of "dry bones" as ornament (?) the Bay City, and especially in the rainy season, is rather piteous.

We trust Sacramento will set an example that will be worthy of her, when she builds her "Public Garden." A garden can be made, but the maker should understand his business in that work, as well as the architect of any great public building; for it is a great work to lay out grounds and establish them as they should be for futurity, and this should always be borne in mind in public grounds—not how they will look now only, but how in future years.

READ the advertisement of Dr. Devine's Pitch Lozenges, in another column. This celebrated remedy has a remarkable efficacy in curing coughs, colds, hoarseness, and all pulmonary complaints. Sold by Little & Co., in San Francisco, and by druggists all over the State.

[For the California Farmer.]

Business of California.

"What dire results from trivial causes spring,
What mighty empires rise from little things!"

A short review of the business of California takes us back to last summer, when a few persons in Marysville were compelled to build a small steamboat to protect themselves from a crushing combination. That accomplished, freights on our shores were reduced to \$1 per ton, which caused every up country trader to push his credit and invest all the money he could command to take advantage of so ruinously low freights; this crowded the business of four months into as many days, and of course made a great stir in San Francisco.

This was caught hold of (by a too meddling press into business affairs generally, and which is the source of woes unnumbered to the regular merchant of California,) and paraded before the Atlantic community, with all the coloring necessary to make a glowing account of the briskness of trade, without stating the cause of it; this too at a time when people abroad had about given up California as a field for commercial adventure, but too eager to retrieve past losses in California, and rampant to plunge into any new adventure caused by the stagnant state of things at home, they quickly caught the bait and cried, "lay on the ships, now's our time."

Well, the result of all this is, some fifty or sixty heavy clippers were dispatched, and are now arriving to a poverty stricken community with half its traders "burst up," and the rest hardly able to muster money enough to pay a couple clippers, freights! Truly, here's an anomalous state of things! Merchants have struggled for two years past hoping for better times, while it was obvious that there were too many in, and a constant diminution of trade, but with little or no increase of population, the consumption of the same people was growing beautifully less. Yet for all this in comes New York, Boston and Europe with their ventures to press the last life blood out. Something must be done. The strife is between outside shippers (through their agents, some half a dozen commission merchants, who must live if not by commissions, why then by storage and such other charges as they can make,) and the resident merchants of the country, who are numerous enough and able enough to keep the country supplied; both classes can't live; they are in deadly antagonism; either the merchants of the country must stand and continue identified with the interests of California, or else retire and leave the field to outside jockeys, and make the business of California, once so boasted, the contempt of honest men.

Well we are not seeing what I've seen,
Seeing, what I see.

FORTYNINER.

DUNCAN'S ART UNION.—A visit to this splendid establishment should be the first object of every stranger that comes to our city, for there is no public place where an hour or two can be spent with more content and pleasure than in these spacious rooms. By recent arrivals Mr. Duncan has added an immense collection of paintings, engravings, statuary, and rich wares and goods of all kind, all of which are to be soon disposed of in the great drawing room to come off. That most wonderful collection of wax figures executed by Mrs. Pelby, is also on exhibition at Duncan's, and these alone are worth a walk of miles to see; and those who can visit these rooms have a little of that itching wish for a prize or two—'tis no use,—there's no such thing as resisting it. We must just try a few. We may draw that beautiful painting, or that diamond necklace, or the opal and diamond set,—the last we must have. Reader have you seen it?

PACIFIC EXPRESS CO.—We take pleasure in calling the attention of our readers to this new company. Some of the most enterprising business young men that were most familiar with the express business and the customers of the renowned Adams & Co.'s express, are now associated under this name. By a reference to their card and by a long experience with many of those who are to be associated in this company, the public have a sure guarantee of getting their business of expressing promptly and well done. The Pacific Express Co. will confine themselves exclusively to the express business. We wish them every possible success.

JAMES KING OF WM. & CO.—Once more unfurl our banner to the breeze! So says James King of Wm., and that his friends may "Reed" his purpose in so doing, a gentleman long and favorably known as one of the most active in the late house of Adams & Co., is now associated

with Mr. King. The firm of James King of Wm. & Co. now occupy the conspicuous and eligible site on the corner of Montgomery and Washington streets—formerly Borgeyne and Co.'s banking house. The name of James King of Wm. requires no enlogium to call friends around him, and the company can rally a host that will be glad to welcome him to his new position. Feeling confident we do not err in saying that this new firm will gain favor day by day and soon be enjoying the full trade of the public confidence and favor, we wish them success.

MANSFIELD & Co.—This extensive clothing warehouse on Montgomery street, San Francisco, attracts much attention. It is really worth a visit. The vast amount of stock on hand is all of the very best, one would suppose that this house had a stock that would last a year. Yet every steamer brings them more, and so great is the demand by their customers that they find it difficult to keep up their stock. This house is connected with a part of the celebrated house of John G. Wyman & Co., New York city, whose fame as drapers and tailors are known throughout the union. Reader go and see.

FAVORS RECEIVED.—Early attentions and full files of up-river papers have been furnished us daily by the attentive messenger of the Pacific Express Company. Fred Howard and his co-laborers as messengers of the now great and leading Express Company of California, give us their kind favors always.

From Messrs. Murray & Co., booksellers, full files of Foreign and State papers and magazines.

To our Senators and Representatives at Washington we are under obligations for many valuable documents.

To the Noisy Carrier's Hall we are thankful for especial favors of various pamphlets, &c.

TEMPERANCE MEETING.—Rev. M. C. Briggs will deliver a temperance lecture next Sabbath afternoon at 2 1/2 o'clock, in the Sons of Temperance Hall, on Washington street, between Montgomery and Sansome.

FROM THE EAST.

The Mail steamer Sonora arrived at this port on Friday Morning last, with dates from New York to Feb. 5, and from Europe to Jan. 20. Among the passengers was the celebrated actress Miss J. M. Davenport, also Mr. and Mrs. J. B. Booth, as well as a large number of old Californians with their families. The Panama Railroad is said now to be in excellent order, and the cars go from Panama to Aspinwall in three hours. We make a brief summary of the news:

An expedition was being organized in New Orleans by the Government, for the purpose of securing further information relative to a railroad route to the Pacific. Capt. Pope, with a force of 150 troops, is to proceed to Buenos Estero to ascertain whether water is obtainable there by means of Artesian wells.

Lieut. G. C. Hunter, late in the command of the U. S. brig Bainbridge, has been dismissed the service by the President, for disobedience of orders. The action of the administration is called unjust and oppressive by the eastern press.

The bark Argyle, from Glasgow, with a cargo of pig iron, was wrecked off Squam Beach, N. J., on Sunday, Feb. 4, and only one out of eleven was saved.

Charles Durkee, a thorough going abolitionist and land reformer, has been chosen United States Senator from Wisconsin for the ensuing term, from March 4, by a majority of one.

M. Victor Considerat arrived in New York by the Union, on the 3d of February, on his way to establish a colony in Texas. The association of which he is the President, is on the Fourierite plan, and has \$1,000,000.

Mr. Seward reported to the Senate on the 1st of February, a joint resolution that a weekly mail to and from San Francisco, from some point on the Mississippi, be established, the trip to be fourteen days, the postage on the letters to be fifty cents per half ounce and prepaid, the mail not to weigh over two hundred pounds, and the remuneration to be \$6,000 a trip; the contract to be commenced within one year and to be continued five years. It was ordered to be printed.

The Pacific Telegraph bill was taken up in the House of Representatives, Feb. 1. Mr. Richardson offered a substitute for the bill, striking out the grant of two million acres of land, reserving the right of way, and extending the penal laws of the United States over the line for its protection. The substitute was agreed to, and the bill passed, by a vote of 110 against 70.

A bill passed the House on Monday, Jan. 29, providing that the people of the territory of Oregon be authorized to form a constitution and State Government, and be admitted into the Union on an equal footing with the original States in all respects whatever, by the name of the State of Oregon.

The Rutland and Burlington Railroad was sold Jan. 29, at Bellows Falls, Vt., for one mill per share. This the first and only bid. Its capital

stock, all honestly subscribed for, was \$2,200,000. This stock sold by the sheriff under attachment, brought \$22. This road, which has been for years, and is still operative, furnishes a most striking example of that railroad fever which pervaded New England in 1843.

Henry Wilson has been elected U. S. Senator from Massachusetts, to succeed Julius Rockwell, who filled the vacancy occasioned by the resignation of Hon. Edward Everett.

The steamer Eliza sank on the 28th Jan. in the Mississippi, at Plum Point Bend, a little below Memphis. It is feared about thirty lives were lost.

The west wing of the Asylum near Quebec, was destroyed by fire on the 20th of February. The institution contained nearly 200 patients who fortunately escaped.

The Governor and Legislature of the Territory of Minnesota are at loggerheads—on his refusing to deliver his message at the opening of the session.

The U. S. Senate on the 1st of February, passed a bill to raise 3,000 troops, to wage an exterminating war against the Indians.

The U. S. Frigate Sabine, whose frame was originally laid in 1823, was launched from the Brooklyn Navy Yard on the 3d of February.

A large fire occurred at New Orleans on the 25th January; loss \$125,000, fully insured.

FROM EUROPE.

There is little news from the seat of war, and things remain about as at last previous advices. Peace negotiations appear to be growing into favor. At Sebastopol there had been no movements of much importance. The last dates are up to the 10th of January. Omer Pacha was on the 5th, at the camp of the Allies, where measures were concerted between him and Lord Raglan and Gen. Canrobert, and on the 5th he returned to Varna. Reinforcements continue to reach the Allies, and over 3,000 of the French Imperial Guards and English Infantry are now at sea, on their way to the Crimea. Lord Raglan has sent to India for the 10th English Hussars. The Turks in the Crimea are to be made up to 60,000 before the end of January. The Russian reinforcements are advancing by forced marches through Bessarabia. The weather was frosty and the roads passable, although snow had fallen, but the frozen ground retarded the works of the besiegers.

The Russians crossed the Danube at Tultscha, and favored by the obscurity of the night, they reached the right bank in their boats, and surprised one of the weakest garrisons, and after making great carnage, recrossed the river laden with booty, and taking with them a number of prisoners. There was considerable loss on the part of the Russians, as the Turks fought with desperate courage. Among the slain is a Pasha, but his name is not mentioned. The inhabitants of Tultscha fled into the country with their wives and children, and did not return again until long after the departure of the Russians.

The French and English Ministers at Vienna have received the necessary powers to enable them to re-open negotiations. This intelligence is derived from a telegraphic dispatch, dated Vienna, the 18th January. Letters from that city state that the policy of the Allied Powers will be to retard negotiations, in the hope that in the meantime the fall of Sebastopol will happen, to influence the decision of the Czar.

An approaching Congress of Nations is more and more confidently talked of. The London Daily News says: "We may be induced to repose some confidence in the result of that Congress' deliberations if the United States are invited to take part in them, and accepts the invitation."

Russia is also preparing for a spring campaign. Gen. Sieven is charged with the organization of a Baltic army—having Mittan for head quarters.

The Patriotic Fund (for the relief of the widows and families of the British sufferers in the war,) now amounts to £550,000, of which £170,000 is invested in the funds.

The Paris Exhibition, which certainly opens on May-day, is likely to be crowded, almost inconveniently, with the produce of national art and industry from most parts of the world. The United States, as in London in 1851, will be most inadequately represented. The Charivari says that Brother Jonathan will have more commissioners than exhibitors. Queen Poinare, who is to visit Paris during the Exhibition, will probably not wear shoes and stockings, having a decided objection to those portions of civilized attire.

The Pacha of Egypt has hitherto opposed the formation of a ship-canal through the Isthmus of Suez. The Sultan, however, has now issued a firman authorizing it.

Louis Napoleon and his wife will certainly pay a visit to Queen Victoria, at Windsor and Osborne, early in April. It will be a strictly private affair—but the corporation of London will scarcely let Louis Napoleon leave England without feasting him at Guildhall. A man-of-war, now called the Marlborough, of 131 guns, which will be launched in April, is to be named La France, the Empress Eugenie officiating as sponsor, at Portsmouth.

There is a positive declaration in the Brussels papers that the restoration of Poland is seriously determined on by the allies—that the Archduke Louis, brother of the Emperor of Austria, will be elected king—and that the Czartoryski family, who have some pretensions to the crown, have intimated their willingness to accede to the archduke's elevation.

Every franc of the new French loan has already

been subscribed for. 500,000,000 francs were required, and 21,750,000,000 were offered.

The whole required amount of this French loan was twenty millions sterling: the actual amount offered to the French government was eighty-seven millions. There were 177,000 persons tendering to supply this vast sum. It is not improbable that, as money seems so plenty, Louis Napoleon will have the loan augmented to thirty millions sterling.

THE KERN RIVER MINES.—From the Southern Californian of the 1st inst., we extract the latest particulars on this important subject.

Hall & Co.'s stages arrived from the mines on the evening of the 24th February. Mr. Smith, the superintendent of this route, brought his stages from Elizabeth Lake to this city in one day, a distance of sixty miles.

The proprietors of the line are now perfecting their arrangements for stables and relays of teams upon the road, with a view of making the trip through in two days; and by running two lines of stages, connecting with the mines twice a week. An addition to their stock of vehicles is expected on the next boat in the way of two first-class Concord coaches. The stages from the river brought in but one passenger—every one of the numerous parties in the diggings preferring to remain where they are.

Reports of rich strikes continue to come in. One miner took out, with his own hands, \$160 in a day. A friend of ours, just returned, informs us that in less than two months he took out by his own labor, \$900.

Large numbers are still wending their way to the promised land.

The miners are rapidly making their mark in Los Angeles. The dust begins to roll in to our merchants, who have once more drawn forth from their half forgotten lurking places the scales that did such good service in the halcyon days of '49 and '50. Miners and speculators are busily engaged in selecting their stores and merchandise, and transferring the stocks of our merchants to the mines. Scarcely a day passes without witnessing the departure of heavily loaded wagons, and mule trains, or the rapid flight of the stage coach with its crowd of passengers. In fact we are really becoming a mining town—rapidly putting on all the characteristics peculiar to the northern cities before their mines "give out."

A gentleman informs us that a company of five men took out, in ten days, the unguessed sum of \$4,500. Of this there is no doubt. Numerous parties are averaging \$25 per day.

The Anador Sentinel says it is estimated that the past week's rain has helped the mining interests more than the bank failures have injured it.

Why the Farmer should give Hoed to the Man of Science.

The following judicious remarks form the conclusion of an able lecture by Prof. Tuomey, upon chemistry as applied to agriculture:

In conclusion, allow me to say one word upon the apparent indifference with which agriculturists, as a body, listen to the teachings of science.

Rural pursuits are far less favorable to speculative states of mind than those of the manufacturer, and hence whilst the latter has pressed chemistry into his service, the cultivator of the soil is too often contented to pursue his own chance-directed processes unaided by the light of science.

This unnatural divorcement of science and agriculture has often arisen from not distinguishing between agriculture as a science and agriculture as an art. The man of science investigates one department, and the cultivator of the soil practices the other. Odium is often brought upon what is called scientific farming by the failure of men of science when they attempt the practice of agriculture. Now, I believe that, in general, it will be found that it was not the science but the common sense of such men that was at fault. The practice requires a different training, and however sound his principles, the mere man of science fails, for want of it when he attempts to try his own principles practically. Liebig, I apprehend, would make but a sorry ploughman, yet the world has listened to his teachings. In all the arts of civilization this division of labor is recognized. The anatomist points out, from his knowledge of the hoof, the best mode of shoeing horses, but no one would think of employing him to put his own principles in practice. The chemist informs the tanner of those substances that contain the largest amount of tannin, and explains the rationale of all his processes, yet the chemist is rarely expected to be able to produce leather from the raw hide, nor is the utility of knowledge called in question on this account.

Now, let this but be properly understood amongst us, and there will be an end to the sneers at "book-farming," nor shall there be any longer cause to complain of the proverbial tardiness with which practical agriculturists avail themselves of the discoveries of chemical science.

It only remains for me, in conclusion, gentlemen, to bid you God speed in the great work that you have commenced, of constructing for the south a southern system of agriculture; everything around you calls for it—your climate, not less than your staple productions, calls for it. You can scarcely apply to your soils the experience of any other country. You must conduct experimental researches for yourselves, and upon these, guided by the willing hand of science, you may erect a system that will elevate the agriculture of our country to the position that nature has plainly indicated the south should occupy.

Horticultural Department.

The Victoria Regia.

BY HARLAND COMSTOCK.

This splendid plant is a native of the tropical parts of South America. On account of its beauty, magnitude and rarity, it has been styled the "Queen of Flowers." It is found floating on the broad waters of the Amazon and its tributary streams. It also grows in Bolivia and British Guiana and is consequently widely distributed over the interior of South America.

The Victoria Regia was first discovered by Hænke, a German naturalist, in 1821; but, although he collected specimens and described the plant, it remained unknown to European naturalists, because Hænke never lived to return to his native country, but, unfortunately for the cause of botanical science, died at the Philippine Islands.

In 1828, D'Orbigny, a distinguished French naturalist, came across the Victoria Regia whilst descending the river Parana, in South America. He immediately sent specimens to the Museum of Natural History in Paris. In his published work, entitled "Travels in Tropical America," D'Orbigny describes the Victoria Regia as covering the surface of the Parana, with its large round floating leaves, for more than a mile, its white and rose-colored flowers, upwards of a foot in breadth, reposing on the water amidst this expanse of foliage, and diffusing a delightful fragrance all around. The fruit which succeeds these flowers consists of a number of roundish succulent seeds, embedded in the cavities of an enlarged top-shaped receptacle. These seeds are collected by the natives, who roast and eat them. On this account it has received the Spanish name of *Mais del Agua*, or Water Mais. "I was never weary," says D'Orbigny, "of admiring this colossus of the vegetable kingdom, and reluctantly pursued my way to Corrientes, after collecting specimens of flowers, fruits and seeds."

In 1837, Sir Robert Schomburgk, found the Victoria Regia in British Guiana, whilst exploring that country, for the Royal Geographical Society of London. He immediately transmitted specimens and drawings of the plant to the Botanical Society in that city, and having the royal permission, named it Victoria Regia, in honor of the English Queen. His letter, which was read at a meeting of the London Botanical Society, held September 7th, 1837, is dated "New Amsterdam, Berbice, May 11th, 1837." New Amsterdam is situated on the east bank of the river Berbice.

Mr. Schomburgk says "it was on the first of January, this year, while contending with the difficulties opposed by nature to our progress up the river Berbice, in British Guiana, that we arrived at a point where the river expanded and formed a currentless basin; some object on the southern extremity of the basin attracted my attention. It was impossible to form any idea what it could be, and animating the crew to increase the rate of paddling, we were soon opposite the object which had excited my curiosity; a vegetable wonder! All calamities were forgotten. I felt as a botanist, and felt myself rewarded. A gigantic leaf from five to six feet in diameter, of a light green above and a vivid crimson below, resting upon the water; a flower consisting of many hundred petals, passing in alternate tints from pure white to rose-pink. The smooth water was covered with them. I rowed from one to another, and observed always something new to admire."

The Victoria Regia grows in water, from four to six feet in depth, producing flowers which rapidly decay and give place to others. The leaves are circular, from five to six feet in diameter, their margin being elevated into a rim from three to five inches in height. The upper surface of the leaves is smooth; their under surface, as well as the coverings of their long stalks which anchor them in the water, is thickly covered with thorns about three-quarters of an inch long. The stalk is attached on the centre of the leaf. The flower stalk is about an inch in thickness. The leaves of the calyx are four in number, and about seven inches in length, white inside, and reddish brown and prickly on the outside. The diameter of the calyx, when fully expanded, is from twelve to thirteen inches; on it rests the magnificent flower which, when it opens, completely covers the calyx with its hundred petals. At first the petals are decked in virgin white, changing gradually as they advance in age to the beautiful color of the rose. Hence flowers may be observed at the same time in different stages of transition between the two colors. The flower generally lasts for three days. When these plants are numerous, their immense circular leaves almost cover the surface of the water, one leaf touching another. Beautiful aquatic birds are described by travelers as frequenting the plant and walking with ease on the surface of its leaves, supported by their buoyancy.

The first attempt to cultivate the Victoria Regia in England did not succeed. The seeds germinated and the leaves expanded, but the flowers did not make their appearance. This led to a more careful study of the conditions under which the plant was developed in its native country. An artificial pool or aquarium was provided, of the proper depth, the oozy soil was prepared, and the whole was enclosed under glass, and the atmosphere within the conservatory was kept at a tropical temperature. These additional efforts again resulted in failure and disappointment. It was now suggested that the water required to be kept continually flowing like that of the rivers of its native clime. Again the aid of art was invoked, and the necessary motion was given to the

surface water, by means of a small water-wheel, turned by the stream supplying the aquarium, which was now kept constantly overflowing. This time the experiment succeeded, and this magnificent flower which, for countless ages, had bloomed in the forest wilderness of South America, opened in all its glorious beauty for the first time in a foreign land.

The seeds which developed the flowers were sent from South America to the Royal Botanical Gardens at Kew, in the neighborhood of London. They were put up in vials filled with pure water, and thus they reached their final destination in a state of complete preservation. It was under the auspices of the Duke of Devonshire that the Victoria Regia was first brought to its complete development in Europe. This interesting event, which may be truly regarded as one of the most splendid achievements of modern horticulture, created a great sensation in England. The "Queen of Flowers" would only show herself after every attention had been paid to her accommodation. At Chatsworth, the seat of the Duke of Devonshire, science, aided by princely magnificence, had to construct her palace, and prepare her watery bed; and there, for the first time, she floated with her lovely flowers as in her native wilds.

Mr. Caleb Cope, of the city of Philadelphia, was the first American gentleman who was successful in the cultivation of the Victoria Regia in this country. He has displayed great kindness in admitting not only his personal friends, but the public, to his splendid conservatory. He is one of our wealthiest merchants, and we take much pleasure in saying that his name will go down to posterity as a liberal noble-minded citizen and a friend of science.

One more remark, gentle reader, and we have done. The beautiful "lily house" constructed for the reception of the Victoria, by Mr. Paxton, gardener to the Duke of Devonshire, suggested to him the plan of the crystal palace, of which he was the architect.

Miscellany.

First Experience of a Debt.

BY INCHES.

NEVER did I feel prouder or richer than when my father said, "Harry, that calf is yours; I'll give you Bossy; she shall be yours." He was standing whittling in the old barn-door, while I, his oldest son, was marking with delighted interest, Bossy's frisky movements in the yard; how she would snuff in the morning air, then whisk her tail and caper around, if not with all the grace, with far more gladness and naturalness than a ballet queen. Bossy seemed to think it a very pleasant thing to live. Much as I loved the creature before, I was seized with a fresh puff of love at my father's generous announcement.

"Nep!" I cried, "Nep, that is my calf! see to it, sir, that you treat her like a gentleman, and not mark at her or bite at her when you fetch the cows from pasture."

Neptune looked up, wagged his tail, and glanced at Bossy, as much as to say, "Yes, yes, I understand the matter." To my brothers and sisters—and there were five younger than myself—I was not long in communicating the important intelligence that "Bossy was my calf; father said so."

"Mother," said I, "look out the window and see this calf; well she is mine; Bossy is mine; father said so." She thought it was a nice little calf, and as she was charming, she offered to do my churning for me, when Bossy's age should require such services.

"You shall, mother!" I shouted with a glad laugh at the thought of it, "and though it will be my better, you shall have it all," and I am sure the words "my" and "mine" had a significance unknown before. Beside Bossy, we had the old cow, Bossy's mother, "Star," a two-years' old heifer, a yoke of oxen, a few sheep and plenty of fowls; these, with six children, made quite a family to be stabled and fed by our little family among the Vermont hills.

I did not go to school that summer, for the boy's services were needed in the fields,—ah, those glorious fields and hill-sides, and maple groves, and fir briars, tall and high, what do many boys imprisoned in the city know of the light, and liberty, and litheness of God's free sunshine among the hills. "They seldom pass their brick wall bounds."

"To range the fields and treat their lungs with air;" and yet the "country wins me ever," not only as the heritage of my early memories, but the hoped-for retreat of life's declining days.

I think I worked with a new alacrity now that I owned Bossy; I felt like a man, and a man with more than a life-interest in the world, for when the farmers grouped together and talked about their stock, I always wanted to add a few words about my calf.

"Mother," I said, one pleasant twilight, as she came and sat in the door, while I threw myself on the turf; "mother, I want just one thing to make me just as happy as can be."

"And that is I hope," said she, with one of her sweet smiles, "to be a good boy, like Joseph and little Samuel; then I am sure you will be a happy child."

I blushed and rolled over in the grass, for certainly nothing was then farther from my thoughts than Joseph or little Samuel. "No mother," I answered at length,—half ashamed to own what it was, after this expression of her maternal hope,—"not exactly that, though I do want to be a good boy and nobody can say I don't, but now I was thinking of something else; oh, mother," mustering up my courage, "I want a pail! a little

tin pail! mine?" squatting on my bare toes before her and looking earnestly into her face. "And where is it to come from, Harry?" she asked. Alas, it was a question more easily asked than answered.

"The peddlers!" I roared triumphantly, supposing I had gotten over the mount of difficulty; "the peddlers! the next time one comes won't you buy me a tin pail—my pail!—to milk my calf in?" "Harry forgets how little we have to buy with," said my mother. "But, mother, you know Bossy will give milk soon and she must have a pail, and then I can milk, and it will help you so, mother."

How weighty my arguments might have seemed, had she had the wherewithal for the purchase, I have no means of knowing; as it was, she patted me on the head saying, "by-and-by, Harry will be able to earn one himself, and that will help mother."

And this was the first and the last of Bossy's pail.

The next person to whom I wanted to communicate my good fortune was, Joshua Pepper; but his home being some miles distant, no opportunity occurred for this purpose until the following Sunday, when I suddenly seized him by the jacket in the porch of the old meeting-house, as he was about following his father up the aisle. "You don't know what I've got!" I whispered excitedly in his ear, but not so low as to escape the hearing of his father, who turning round and taking his boy by the hand, abruptly, terminated our intercourse. Joshua and I were friends when the winter school kept and we attended. This season we were both at work, and consequently seldom met except on Sabbath, when during the short interval of Sabbath services, we often strolled away and ate our dinners together in a neighboring grove, or on the grass-grown graves of the churchyard, or in the cool shade of the long shed built for the accommodation of all church-going horses. For in these days there were no Sabbath schools to pasture the lambs of the flock, so that we were, perhaps, sometimes in danger of becoming goats. How I longed for the close of morning service, and when over, how I tried to moderate my eagerness to find him.

"Here I am," he cried, twitching me by the sleeve, "come," and he led the way to a neighboring well, while I lost no time in setting him a guessing.

"Well," he cried, impatiently, "I can't guess. Now tell us what it is. I should think it was most likely to be a new knife, only you say it isn't."

"No! no!" I shouted, charmed with his ill success, "no! it is a calf! our loss! Father has given her to me; he said so; she's mine!"

"Boss yours!" and he looked delightfully incredulous. "You got a calf? How good it was in your father. I suppose you know I've got a lamb?" "I know it."

"And now, Harry," he stopped and took me by the sleeve, as if a great thought was striking him, "will the calf's calves be yours? That's the question. Will Bossy's Bossies be your stock too? Boy, you'll have a drove soon!" Respect and admiration twinkled in his little grey eyes as he surveyed me.

"Yes! a drove soon!" and he gave an emphatic nod.

"A drove! I shall, sha'n't I!" starting up at the full comprehension of this prolific idea.

"Now make a good bargain with your father," said my friend, with a shrewd wag of his head; "tell him as Boss is yours, her calves will be yours also. Have it understood."

"Yes, I will. That's a fact." And I felt profoundly that two heads were better than one.

Here unhappily was food for the remainder of the day. Every now and then during the afternoon service I looked hard into the minister's face, and tried to hear what he said—for my mother fixed our attention and refreshed our memories by making us review to her the instructions of the Holy Day—when lo! my drove came rushing like a band of cavalry upon the field of mental vision, setting sermon and ministers to flight.

The great question relative to the disposal of Bossy's children could not be asked that day, for the Sabbath was revered and held as sacred time in my distant mountain home. And never did it seem long and wearisome, diversified as it was by the Catechism and Bible stories, and sweet psalm singing; never as least until this Sabbath, when I longed for the sun to go down and rise again, for my truant heart was more full of Bossy than the Bible. "To-morrow, and that matter shall be settled!" was the last waking thought.

I was awake and up before Monday's sun, and tumbling over Ben, ran into the kitchen shouting lustily, "Father!" He had gone to the barn, away I scampered, crying impetuously as soon as I saw him "Father! father, will Bossy's children be mine or yours? Can't my calf's calves be mine, Father? Won't they be mine?"

"We'll see about it," was his quiet reply.

"Well, father, but if Bossy is mine. I don't see why her calves won't be mine," determined to bring my father to a definite agreement in the important point.

"Well," he said.

"Well, and what does that mean, father? They are mine, are they? all Bossy's children; they are mine."

"As likely as not, Harry; but better wait till they come."

I jumped enthusiastically up, exclaiming, "Oh what a drove!" How I longed to race over the

hills, and tell the satisfactory adjustment of the case to Joshua. But that was out of the question, and I contented myself with strutting around Boss, patting her sides, affectionately slinking her tail, examining her small teats, until, forgetting altogether the dignity becoming to the master of a drove, I suddenly threw my arms round Bossy's neck and kissed her. Bossy made some show of surprise, and coyly attempted to withdraw from my embrace. Sometime during that day, under a generous impulse, I determined to give a calf to each of my brothers and sisters, just as my father had given Bossy to me; "and they shall choose for themselves," I said, "the best and handsomest, if they please." Never did I feel richer, and what was better, generous as rich; and in these affluent circumstances, I continued, for several happy days.

One morning, in the succeeding week, my father sent me into the field with a basket of potatoes for planting, promising soon to follow. I began to drop them into the hills, and went on dropping, dropping, dropping, until the basket was quite empty, ever and anon looking towards the house, and wondering what had become of my father. He did not come, and, having finished this part of the work, I concluded to cut across the barley field and run home for the hoe. In the yard I saw a man, whom I instantly remembered my father more than once to dodge, and I also, instinctively, began to edge off, until I caught sight of Bossy with a halter round her neck, on the point of being led away. When father saw me he turned and went behind the shed.

"What are you going to do with her?" I asked, as the man jerked Bossy along. He looked back, but made no answer.

"What are you carrying off my calf for?" I demanded, boldly marching after him.

"Your calf?" he echoed, sneeringly.

"Yes, it is my calf! Father said so."

"Your calf!" he repeated, and I shall never forget his tones.

"What are you leading her off for?" I asked, passionately, as he drew her farther and farther down the hill. "She don't want to go, she don't?" "Tisn't as she says, I guess," said the man in a surly tone.

I still ran after, hardly knowing what to do or think. To go back and ask of father an explanation, and I should risk losing sight of Bossy, and to lose sight of Bossy could not be thought of.

"Where are you going to take her?" I demanded, courage rising with the painful emergency "she's mine!"

"She's not yours, youngster, she's Mr. Gibbs'." I have just taken her for a debt. I'm the sheriff, and I shall take you soon, if you don't leave off," and quickening his pace, he tugged Bossy after him. "The sheriff!" I stopped, frightened at my own boldness, and still more the fate of Bossy. The sheriff was a formidable and dreaded functionary—I did not exactly know how or why, only that he had been mysteriously connected with much agitation on the part of my father and with the occasional disappearance of hens from the coop, pigs from the pen, and lambs from the fold. This, then, was the sheriff! I stood still, afraid to go farther, and straining my eyes in the direction of my captive favorite, as they were about to make a bend in the road, I roared out in a kind of wild excitement, "Bossy! Bossy!" She pricked up her ears and turned around; then the man jerked the halter, and both disappeared behind the trees. I shall never forget my feelings, impetuous boy that I was, when the last vestige of Bossy's tail was lost to my view. I pressed my hands to my eyes to stifle the hot tears, while I manfully tried to master the cry of agony that rushed up my throat. Then I ran back to the house. Father was nowhere to be seen; the voices of the younger children were heard in the distance; and I went wildly in quest of my mother. "Oh, mother!" I sobbed, and unable to restrain my feelings, I leaned my head against the window and burst into a hearty fit of crying.

"My son," she said, well divining the cause.

Just then the children came running in; "Oh, Henry!" they began, but she hushed and motioned them all away.

"I tried to stop my tears and sat down on a block." "Mother," I at length asked, breaking the mournful silence, "what did the sheriff take Bossy off for?"

"For a debt which your poor father could not pay," she answered sorrowfully.

"And can they take anything for a debt?" I asked with anxious interest.

"Any thing, even to the house over our heads, though I pray God it may never come to that," and her voice trembled a very little.

"Then I will never be in debt!" the current of my feeling abruptly turning, "never! never! never!" I cried with fierce energy; "never! if they can take what we love best," and Bossy's dear image again dimmed my eyes with tears. "And shall I never see her again?" it was sometime before I could venture on this question, and then, tremulously enough.

You can go down to Mr. Gibbs' and see her, but you must try to keep up heart, Harry," she added with a forced cheerfulness; "perhaps things will go better by-and-by, and may be, if you are a good and industrious boy, you can earn a calf yourself."

"And if I do, never a sheriff shall lay a finger on her!" and with a proud sorrow I went back to the field. I could not go to pasture that night. Ben and Neptune brought home the cows. Neither could I trust myself with a sight of the barn yard, and slender appetite had I for my bread and milk, for was it not Bossy's mother's milk? Before going to bed, I crept round the house to take a peep where Bossy used to be. There

was the "Oh, cow!" and there "Star," chewing their evening end in sorrowful loneliness. I took a mournful pleasure in going where Bossy had been, and I almost hoped, by some strange turn of fortune's wheel, she might still be found behind the shadows. "Ah, it's no use; Bossy has gone—my dove is gone, and nothing is left. When I grow up no sheriff comes near me—I'll never be in debt. No taking my Bossy, Mr. Sheriff! No, Mr. Sheriff! No, sir!" and I shook my finger at the ideal image of that respectable official in stern defiance.

After going to bed, I could not sleep for thinking of the day's history. "Joshua is best off; he's got his lamb; and I—I have lost my whole dove, and Bossy into the bargain. There is one thing—I'll never be in debt! Never! I wonder where Bossy is—Bossy—Bossy!" and sleep bore me off with Bossy in my heart to the land of dreams.

Such was my first experience of a debt.

EXTRACT FROM "THE ANDES," AN UNPUBLISHED POEM, BY C. W. B.

NO. XI.

Dove-eyed Beauty, like an angel, dwells
In this majestic home. Her sparry caves,
Whose grottoes weep, unpurged dewy tears;
Where wonder strays in glittering solitudes,
Her sweet wild-flowers, that spring like spirits
From the mouldering stones, and the unseen,
Causing cadences, that leaves no ache behind,
Her gurgling streams, that flow through forest shades,
Wooing luxurious repose—all these,
Like music, breathe a calmness o'er my heart,
That yields to beauty, as the soul to song.

Man's cursed ambition, that despoils all climes,
And greed of gold, o'er crossed wave, first led
The cruel Spaniard, to the Andes' base—
Where bloodiest deeds, that o'er in human hearts,
Fulfilled horror's Bane, became their sport.
Their history's page, grew to a book of blood,
And nations cursed their name and memory.
Victorious battles, heaped the earth with slain,
But freed them not from fœdora's myriads—
For all were heroes, and—anger for death—
Upon the Spanish spears, rushed, believing
The warrior's soul, who in battle fell,
Would, with the sun, in his bright course career,
Onward ever, through the azure heavens.
What's baleful star, in its red sweep, glared
Never, on such scenes of blood, and horror.
Phantom armies, of the slaughtered braves,
At midnight bawled with their savage foes;
And in their dreams, the fury tyrants died,
The tortuous deaths, they made the weaker feel.
Conquest, did not suffice to glut, their thirst
Insatiable for gore; they slain would blot
From out the book of time, their victim's name,
And strove to entomb, their tombs, and temples,
In desolation's grave—to rear their crosses,
A mockery! o'er a ruined nation's wreck,
And left a desert, where in Eden bloom'd.
On Andean steeps, that seem eternal,
And in vales, where verdure, luxuriant
Springs up, 'neath tropic suns, age after age—
Cyclopean ruins stand—scattered o'er
With hieroglyphics—more strange than Egypt's
Might chiseled on mysterious tablets.
Mightier, are they, than the pond'rous stones
Of Pharaoh's wondrous realm. Sad relics
Of a ruined race, whose iron kings,
Now reign alone, in the half-fabled past;
Whose sacred rites, and worship of the sun
(God's image in the heavens,) their savage
Conquerors changed, by waste of blood, and gave
A mock religion, whose emblems, loved saints,
The hideous crucifix, and statues, are.

O'er these temples old, and structures huge,
(Where, from every moor, and crumbling stone,
Looks gloomily the spirit of the just)
Dismissing age, with solemn silence
Reigns in lordly majesty.

Like castles

High, moated and massive, whose ivy mantled
Walls—no longer crowded with mail'd champions
Silently decay; or like the loveless
Sterility of despairing hearts, they seem,
That ne'er again 'neath summer suns revive.
There is in ruin, that which chills the heart;
A saddening influence o'er the scene steals,
When gazing on white or decay has touched,
Thus, the temple shrouded in dark ivy folds;
The proud ship, stranded on a rocky shore;
A tree decay'd, and dead, o'er my mind,
A cloud of melancholy casts, anon,
Where spread a sunny gleam.

The London Merchant.

MR. BOURCAULT'S SKETCHES OF EUROPEAN
SOCIETY.

John Oakheart and Son are Baltic merchants. Young John entered his father's office as a clerk at sixty pounds a year, of which he paid his mother forty for his board, lodging, and washing, and clothed himself with the odd twenty. Do not imagine that Mr. Oakheart's establishment required this assistance. The old gentleman desired to make his son feel independent—he was a man, he earned his own livelihood, and should feel that he supported himself. At twenty-five years of age, young Oakheart marries, receiving with his wife a moderate sum of money. He wants to purchase a share in his father's business; they cannot come to terms. Young John can make a better bargain with a rival house in the trade. The old man hesitates: he likes the sound of J. Oakheart and Son, but business is business. Had his son married a penniless girl, the father would have given him what he now refuses to sell; but now business is business, and as a calculation, he can't do it. So young John becomes chief partner in a rival firm to that which must one day be his, and trades against the old man, whose only aim is to lay up wealth for his son.

Every day, at 4 o'clock, leaning against a par-

ticular corner on "Change, stands the elder merchant, his hands deeply sunk into his dog-eared pocket. A young city man approaches; they exchange a quiet, careless nod.

"Feel inclined to a discount for 1,200 at long date?"

"What name?" asked old John.

"My own. I will give 4 per cent."

"I should want more than that, as money goes—say 4 5-8 per cent."

"The brokers only ask 4 1-2," replies the young man.

"Then give it." And they separate with an indifferent nod. That was father and son.

Every Sunday young John and his wife dine at Russell Square, in the same house where old Oakheart has lived for thirty years. His name has been cleaned out of the brass plate on the door. This house young John still looks upon and speaks of as his home. All the associations of his childhood are there—every piece of furniture is an old friend—every object is sacred in his eyes, from his own picture, taken at four years old, with its chubby face and fat legs, to the smoke-dried print of Gen. Abercrombie. They form the architecture of that temple of his heart—his home.

After dinner the ladies have retired. The crimson curtains are comfortably closed. The crackling fire glows with satisfaction, and old John pushes the bottle across to his son, for, if old John has a weakness, it is for tawney port.

"Jack, my boy," says he, "what do you want with 1200 pounds?"

"Well, sir," replies young John, "there is a piece of ground next to my villa at Brixton; and they threaten to build upon it—if so they will spoil our view. Emily," meaning his wife, "has often begged me to buy it, and inclose it in our garden. Next Wednesday is her birthday, and I wish to gratify her with a surprise; but I have re-considered the matter—I ought not to afford it—so I have given it up."

"Quite right, Jack," responded the old man, "it would have been a piece of extravagance," and the subject drops.

Next Wednesday, on Emily's birthday, the old couple dine with the young folks, and just before dinner, old John takes his daughter-in-law aside, and places in her hand a parchment—it is the deed of the little plot of ground she coveted. He stops her thanks with a kiss, and hurries away.

Ere the ladies retire from the table Emily finds time to whisper the secret to her husband. And the father and son are alone. Watch the old man's eyes fixed on the fire, for he has detected this piece of affectionate treachery, and is almost ashamed of his act, because he does not know how to receive his son's thanks. In a few moments a deep, gentle feeling broods upon the young man's heart, he has no words—it is a prayer syllabled in emotions that makes his lip tremble, he lays his hand upon his father's arm, and their eyes meet.

"Tut, Jack, sir! poop, sir! it must all come to you some day. God bless you, my boy, and make you as happy at my age as I am now."

In silence the souls of these men embrace. But who is that seraph that gathers them beneath her outspread angel wings? I have seen her linking distant hearts, parted by the whole world. She is the good genius of the Anglo-Saxon family, and her name is home.

"Who is Fanny Fern?"

A PLAIN STATEMENT OF FACTS.

"Spunk of me as I am; nothing extenuate,
Nor set down ought in malice."—OTHELLO.

In consequence of the recent issue of a work of fiction, the distinguishing feature of which is an attempt to embody, in the guise of a romance, a partial account of the public and private history of the literary star whose name graces the lead of this article,—we consider it due to our readers, who were the first to form the acquaintance of "Fanny" as a writer; due also to ourselves, to the public generally, and, above all, to the personal friends and relatives of the lady in question, to answer, in as plain and concise a manner as possible, the oft-repeated inquiry—"Who is Fanny Fern?"

Fanny's maiden name was Willis. She is the daughter of Mr. Nathaniel Willis, one of our most industrious and respectable townsmen,—now a man well advanced in years.—It is scarce necessary to add that she is sister to Mr. N. P. Willis, the brilliant essayist and poet.

Mr. Willis, senior, "commenced life" as a mechanic, and, at the time of his marriage, worked at the case as a journeyman printer. He afterwards published the Eastern Argus, in Portland, Meeting with reverses in that city, he removed to Boston, where he established, and, for many years, edited, the "Recorder," the oldest religious paper in New-England.

Mr. Willis has met with a singular experience to that of most men in his calling. He never made a fortune at publishing. At the present time, although aged and infirm, he finds it necessary to devote his failing energies to the publication of that agreeable juvenile, the "Youth's Companion." Yet, notwithstanding his narrow means, Mr. Willis contrived—at how great a sacrifice, only parents can guess—to give his sons and daughters that education which is a poor man's noblest legacy.

In accordance with the course he had wisely planned for his children, Sara Willis—the veritable "Fanny"—was favored with an early introduction into the seminary of Miss Catharine Beecher, in Connecticut. At this well-conducted establishment—the most popular in the country, at that time—Miss Fanny received her first

strong impressions of life and the world. We have never heard her spoken of as a very apt or studious pupil. Staid works of philosophy and learning were not much to her taste. But from the prohibited pages of romances and poems, eagerly devoured in secret, her craving genius derived an active stimulus. Already she had become a keen dissector of the human heart, and she found plenty of pleasant practice for the scalpel of her criticism among the young ladies of the school. Here, too, the novel and startling experiences of boarding-school flirtation gave their warm coloring to her future life. Fanny possessed a large capacity for this description of knowledge, and her writings show a better memory for those more pleasant branches of female education, than for the dry rules of syntax and prosody. In fact, the best of her sketches are transcripts of her school-girl life—for Fanny writes well only when giving the concentrated vinegar and spice of her own vivid experiences.

Our limits compel us to pass over the interval between Fanny's graduation at Miss Beecher's school, and the next important step, to which young ladies look forward with such anxious interest. At a period of well-matured womanhood, Sara Willis became Sara Eldredge. The fortunate husband of the yet undeveloped genius, was an only child—the son of the late Dr. Eldredge, a highly-esteemed physician in one of our suburban towns. Two daughters, the fruit of this union, now reside with their mother in New-York. One is about ten, and the other we should judge from her appearance to be some fifteen years of age.

Mr. Eldredge enjoyed a handsome income, from his services as cashier of the Merchants' Bank, the largest institution of the kind in this city. Now, we esteem the domestic virtues of economy and prudence; but a penurious mode of life is not so readily pardoned as the opposite extreme of lavish expenditure; and the devoted husband of so spirited a young wife, may certainly be excused for "living" to the extent of his means. But as Othello very properly observes, "Who can control his fate?" Had the young banker been as wise as he was generous and indulgent, he would have looked forward through the long, bright vista of the present, to that proverbial "rainy day," liable at any time to befall. In the prime of manhood he was cut off by a sharp, quick stroke from Death's remorseless hand; and the wife and mother, awaking suddenly from her gay dreams, saw affliction and widowhood descend upon her like a pall.

Fortunately for the subject of our sketch, her father, though poor, as we have said, hastened to make what provision he could afford for the comfort of the broken family. Nor did Dr. Eldredge turn a deaf ear, or pass by on the other side. Some bitter thoughts were doubtless occasioned by the remembrance of the luxuries of which she had been so suddenly bereft; it was hard to sink like a star behind the hills of adversity—to pass suddenly from a gay and splendid career into the obscurity of a more common-place and quiet life; and we can excuse the sensitive Fanny for some unreasonable complaints; but, thanks to her own, and her husband's father, she had the consolation and treasure of a home—a home, which, however modest, was in every respect comfortable, and not altogether inelegant.

Sara Eldredge was now in the full flush and vigor of womanhood—and a widow! It is a wise provision of nature which ordains that the most deeply wounded heart shall not always bleed. Hope springs from the ashes of grief. Time buries the dead past, and lifts the curtain from the glowing future. Night comes, that another morning, with all its glory and freshness, may dawn upon the earth. Why then waste the energies of youth in mourning over graves? They will not give up their dead; already the spirit of the lost one looks down upon us from blissful spheres, and says, "Be happy!" to our sorrowing hearts. Such a voice came to the young widow. She called reason and faith to her aid. She saw herself still blooming and attractive; the same inviting world lay all around her; she longed for sympathy, for change, for life. Her first matrimonial venture had proved a happy one; and the memory thereof prompted her to risk another voyage on Wedlock's perilous sea. Thus it might have been the very power of love that bound her to her first husband, which threw open the welcoming doors to the advances of a new suitor.

Mr. Farrington, a merchant of Boston—a man of energy and upright character—made an offer of his hand. He had himself enjoyed matrimonial experience—was himself a parent—and was well qualified to sympathize with the young widow. They sought mutual consolation in marriage. But scarce was the honeymoon over, when that mutual consolation was followed by mutual surprise. Fanny learned to her sorrow that all husbands are not equally fond and indulgent; and the bridegroom discovered that Mrs. F. No. 1. wasn't the exact counterpart of Mrs. F. No. 2. The contrast was, in fact, so vast and amazing, that it seemed to require solitude and quiet, to consider it in all its bearings. Accordingly, Mr. Farrington resorted to travel and a change of scene; journeyed westward; and has not since been seen on the down-east slope of the continent. The slender tie of affection between the happy pair, thus long drawn out, like a thread of Indian-robber, finally snapped. From the auction-mart of one of our western courts, it is said, that Mr. F. gave out three warnings; cried—"Going!—going! gone!" and knocked down his wife with the hammer of divorce. Fanny was regularly sold. So the story goes. It is also rumored that she was at one time connubially advertised in the papers. We state these items as mere reports, although we have them from seemingly authentic

sources. Should there be a mistake anywhere, it will be cheerfully corrected.

In our next number we shall publish an account of Fanny Fern's literary career—comprising full particulars of her first efforts with her pen, and of the publication of her first volume, together with a sketch of her personal appearance. We shall also have a word or two to say descriptive of her house and style of living after the separation from her husband; so that earnest sympathizers, who have wept over thrilling pictures of "gloomy attics, scant fare and cross land-ladies," may breathe more freely, dry their eyes, and see how much stranger truth is—to some people—than fiction.—*Boston True Flag.*

A MOTHER'S LOVE.

BY E. PORTER HYER.

I do marvel how a mother,
In the midst of numerous cares,
Can contrive as well to manage
All her family affairs.

From the early dawn of morning
Till the hour of evening rest,
Who can tell the thoughts and counsels
That are busy in her breast?

What apparel must be furnished,
And what stitches must be set?
What an endless round of duties
By her labors must be met.

Then the queer and various questions
Which her little children ask,
She will answer with affection,
Though 'tis not an easy task.

She will list their sad complaints
When affliction gives them pain,
She will kiss the wounded finger,
So to make it well again.

If her little baby's crowing,
Is sweet music in her ears,
And her dim of love flows deepest
For the child of sixteen years.

Who will blame the tender mother
For an instant of her heart,
If against her roguish children,
She shall take the baby's part?

Yet she who the children's reverence,
While their hearts are very young,
By her gentleness of manner,
And the kindness of her tongue.

Yes I marvel, yes I marvel,
How a mother's spirit hears
All the burdens of the household,
And its never-ending cares.
And I know to that deep wisdom
Which, when first our race began,
From a crumpled rib of Adam
Made a "help" so "meet" for man.

No Sabbath.—In a "Prize Essay on the Sabbath," written by a journeyman printer of Scotland,—which for singular power of language and heauty of expression, has rarely been surpassed—there occurs the following passage. Read it, and then reflect for a while what a dreary and desolate page would this life present if the Sabbath were blotted out from our calculations: "Yoke-fellow I think how abstraction of the Sabbath would hopelessly enslave the working classes with whom we are identified. Think of labor thus going on in one monotonous and continued cycle—limbs forever on the rack, the fingers forever plying, the eye-balls forever straining, the brow forever sweating, the feet forever plodding, the brain forever throbbing, the shoulders forever drooping, the loins forever aching, and the restless mind forever scheming. Think of the beauty it would efface; of the merry-heartedness it would extinguish; of the giant strength it would tame; of the resources of nature that it would exhaust; of the aspiration that it would crush; of the sickness it would breed; of the projects it would wreck; of the groans it would extort; of the lives it would immolate; and the cheerless graves that it would prematurely dig! See them, toiling and moiling, sweating and spinning, stewing and gathering, mowing and reaping, grading and building, digging and planting, unloading and storing, striving and struggling—in the garden and in the field, in the granary and in the barn, in the factory and in the mill, in the warehouse and in the shop, on the mountain and in the ditch, on the roadside and in the wood, in the city and in the country, on the sea and on the shore, and on the earth in days of brightness and of gloom. What a sad picture would the world present if we had no Sabbath!"

A CASE OF REAL DISTRESS.—A Philadelphia correspondent says: A police officer, on Saturday morning, observed a decent looking man take a small piece of beef off a butcher's stall in the market, and conceal it under his cloak which he wore. The officer notified the butcher of the fact, but the latter said that so decent a man must have been driven by want to the commission of the act. The officer determined to watch the needy man, and following him for a considerable distance, observed him going into a house in the upper part of the city. The policeman knocked at the door, which was opened by the man, who, upon seeing the badge, begged the officer "for God's sake not to arrest him." The officer went into the house, where he found a scene of destitution, in the midst of which were four shivering children, eagerly devouring the raw meat. This dark picture is somewhat relieved by the fact, that the officer returned to the butcher, and told him of the sight he had witnessed, when the kind-hearted fellow gathered up among his friends fifteen dollars in money, and a large basket of provisions, and sent them to the famishing family.

Received at our office.

HORTICULTURAL, &c.

Seeds! Seeds!!

THE undersigned is desirous of calling the attention of the public to the following collection of fresh seeds, &c., which he has for sale:

Apple seed,	Nutmeg Musk-Melon,
Angel Wurtzel Beet,	Green citron
White sugar "	Cantaloupe,
Early drum head Cabbage,	Large yellow Dutch Onion,
" ox heart "	" red "
" sweet leaf "	White Portugal "
Large York "	Sliver skin "

J. P. DRIGMAN, Secretary.

v3-11

HOTELS.

Orleans Hotel.

Second, between J and K streets, Sacramento.
THIS Hotel, occupying a space of 85 by 150 feet, in the most central part of the city, built of brick and three stories high, offers inducements to travelers not surpassed by any establishment in the State.

The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.

The Table will be found at all times supplied with the choice of the market.

At the Reading Room can always be found the daily papers of the State and the latest notes from the Atlantic and Europe.

The Billiard Saloon is furnished with fine excellent tables, superintended by a competent keeper.

The Bar will be supplied with the best Liquors and Wines.

The second and third stories of the building are set apart for Parlor, Family Rooms and Chambers, comfortably furnished.

We have also located the large brick building corner of K and Front streets (formerly known as Sackett's Hotel) set apart for Lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.

The "Orleans" is also the Depot and Office of the California Stage Co., from which place Stages leave daily for all parts of the State.

HARDENBURGH & CORSE, Proprietors.

v3-2

Rassette House.

SAN FRANCISCO, CALIFORNIA.
THIS HOTEL offers inducements to persons visiting San Francisco, unexcelled by any on the Pacific Coast.

Gentlemen can be accommodated with single rooms, or families with suites of rooms.

The House is entirely new, built of brick; all the rooms are furnished in a style of comfort hitherto unknown in the Hotels of California, and the House is capable of accommodating over five hundred boarders.

22 3m

Murray's Fifty-cent Western House.

Corner of Second and D streets, MARYSVILLE.
THIS HOUSE is entirely devoted to the wants of the traveling public and to all who will favor us with a call, entire satisfaction will be given.

[v7] R. J. MURRAY.

American Hotel

NAPA CITY, CALIFORNIA.
L. A. & W. W. CHAPMAN, Proprietors.
GOOD accommodations for families, and on reasonable terms. Saddle and buggy horses kept for hire. Horses kept on board, by the day or week, and well taken care of.

v3

Premium Sheep for Sale.

THE fine Road Toll Asotic Sheep that attracted so much attention at the Fair are now offered for sale. Four full grown Bucks; handsome lambs, six months old. The subscribers will give all information and furnish the stock, acting for the owner.

WARREN & SON.

v3-1

First Premium Daguerreotypes.

R. H. VANCE just awarded the FIRST PREMIUM for the best Daguerreotypes exhibited at the California State Fair. Mr. V. would be happy to wait upon any one wishing a PERFECT LIKENESS. The arrangement of his Rooms and Lights are superior to any in the State.

Rooms—New Building corner of Sacramento and Montgomery streets, entrance on Montgomery street, next door to Austin's.

16

Dennis' Wire Works.

ORDERS executed for Wire Cloth for Flour Mills, Fanning Mills and Threshers. Also, for every description of Fancy Wire Work.

Wire Fencing put up in the best manner. Staples for Fencing, on hand.

Every style of Bird Cages, Coal Screens, Meat Scales, Sieves, &c., on hand and for sale by the Agents,

CHAPIN & SAWYER,

Nos. 127 and 129 Sansone street.

MISCELLANEOUS.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!

Varieties.

A YANKEE STORY.—A friend of ours tells one of the most capital stories, illustrative of Yankee shrewdness in driving a bargain, we have ever heard. It is the well-known practice of New England farmers, living in the vicinity of small towns, to send their produce to some merchant residing there and receive all sorts of goods in exchange. Sometime during the last war with the mother country, when many and all kinds of goods were scarce, a tall, heavy Green Mountain boy, walked several miles into town with an egg which his mother had sent him with to exchange for a darning needle. The bargain was concluded, but still the countryman tarried in the store, looking silently and wistfully about him, with his wide mouth half open, until he spied at the farther end a decanter of old West India rum; this sight was too exciting for longer endurance and overcame his bashfulness at once—

"Look here, mister," Jonathan exclaimed, "don't you always treat when you've made a trade?"

"O yes," the merchant replied, good-naturedly, "help yourself to a glass."

The tempting beverage was prepared with its quantum of sugar and water, and tasted; but still the fellow held the glass irresolutely in his bony fingers—the preparation was not to the point of satisfaction, which the storekeeper perceiving, inquired if it was not good.

"It's sick, it is," says Jonathan, "but I'll tell what, mister, an egg beat up in it would make slicker, well it would."

The merchant was amused and humoring the fancy, handed him back the identical egg he had received for the needle. Jonathan broke it into his rum and water, and perceiving it had two yolks, cried out with great energy—"By gosh, mister, you ought to have given me two needles for this egg!"

LAW OF HEALTH.—Children should be taught to use the left hand as well as the right. Coarse bread is much better for children than fine.

Children under seven years of age should not be confined over six or seven hours in the house, and that should be broken by frequent recesses.

Children and young people must be made to hold their heads up and their shoulders back while sitting or walking.

The best beds for children are of hair, and in winter of hair and cotton.

Young ladies should be prevented from bandaging the chest. We have known three cases of insanity, terminating in death, which began in this practice.

Every person great and small, should wash all over in cold water every morning.

Rending aloud is conducive to health.

The more clothing we wear, other things being equal, the less food we need.

Sleeping rooms should have a fire place, or some mode of ventilation besides the windows.

Young people and others cannot study much by lamp light with impunity.

The best remedy for eyes, weakened by night use, is a fine stream of water frequently to them.

"Don't you see that notice there?" said the captain of a Mississippi steam-boat to a man who had a "long-nine" in his mouth, and three similar segars in his left hand; "do n't you see that writin', or can't you read writin'?" "No gentlemen permitted to smoke on the after-deck," "God bless you, for no gentleman; but the way I like to smoke is a caution. Got used to it, cap'n, years and years ago. Take one, cap'n?" But "the rule must be enforced," and the smoker walked "forward" where he could enjoy his "weed" unmolested.

THE KING OF THE FOREST.—A correspondent of the Florida News says: "Amid the vegetation of the swamp land, the cypress tree towers lordly and majestic, and I doubt whether in size the giant trees of California and Oregon can equal it. The writer of this has measured one cypress tree, which at its base is between thirty and forty feet in circumference. Standing upon the bark of a narrow, forest shaded creek, with hundreds of the same kind, from five to ten feet in diameter, it seems to have been placed there to king it over them all."

TRAVELING.—A strong lazy fellow, who preferred begging to work, called on a gentleman in the city, and asked for cold victuals and old clothes. The man asked him what he did for a living. "Not much," said the fellow, "except traveling." "Traveling! Then you can travel pretty well?" "Oh yes," said the beggar, "I'm very good at that." "Well, then," said the gentleman coolly opening the door, "let's see you travel."

"DEAR sir," hissed a great lady, in a watered silk, at the World's Fair, "have the goodness to inform me if there are any noblemen in the United States?" "Yes ma'am," answered Jonathan "I am one of them."

Wisdom allows nothing to be good, that will not be so forever; no man to be happy, but he that needs no other happiness than what is within himself; no man to be great or powerful, that is not master of himself.—Seneca.

SKATING is fashionable among the ladies in the neighborhood of Boston. The men say it is fun to see them skate, but distressing to see them fall.

A young stock-broker having married a fat old widow with \$100,000, says it wasn't the face that attracted him so much as the figure.

HORTICULTURAL, &c.

17,000 Premium Strawberry Plants!
From the Shell Mound Nurseries and Fruit Gardens, Near San Antonio, Alameda County.

WE offer for sale the following List of Plants, viz:

1,000 Boston Pine,	at	\$70 per 100
5,000 British Queen,	"	35 "
1,000 Burr's New Pine	"	35 "
500 Rival Hudson,	"	35 "
5,000 Large Early Scarlet,	"	15 "
2,000 Honey's Seedling,	"	15 "
1,000 Profitee Harbony,	"	15 "
1,000 Black Prince,	"	15 "
500 Crimson Cone,	"	15 "

Plants from "Shell Mound" received a premium at the late Fair of the California State Agricultural Society. Several of the varieties above named are believed to be remarkable for their fruitfulness, having been cultivated for several years by Mr. Sanford, at his gardens in Wayne county, N. Y., with special reference to the production of fruit.

Orders received for any number of plants, (not less than 100) and promptly executed. On invoice of \$500, and over, a discount of twenty per cent. from the above prices will be allowed.

Address, J. L. SANFORD, Cultivator,
Shell Mound, near San Antonio;
or, R. W. WASHBURN, Proprietor,
Care of Wells, Fargo & Co., San Francisco.

Seed! Seeds!! Seed!!!

WE are constantly receiving the most complete assortment of Garden Seeds to be found in the State, received by express, among which are—

Also Received.

Timothy seed; White and Red Clover seed; Kentucky Blue Grass and other grass seeds; a large variety of Peas and Beans;

Long Island Corn; **SHAKER HERBS**, such as Wormwood, Golden Seal, and numerous other kinds.

For sale wholesale and retail, by
J. M. MOORE & CO.,
v3-6 Corner California and Leidesdorff streets.

GARDEN SEEDS, GROWN IN 1854.

FRESH AND GENUINE, per "Express."—Just received and constantly arriving—

500 lbs. Yellow Onion Seed

100 " Red "

100 " White "

200 " Top Onions for sets.

Fruit Seeds, &c., of 1854; Peach, Apple, Plum, Cherry, Pear, Locust, White Birch, Elm, Orange, Raspberry; together with a complete assortment of Shaker and California Garden Seeds. Also, Flower Seeds, Californian and Eastern.

Wholesale and Retail by
C. MORILL, Druggist,
K street, cor. Third, Sacramento.

And agent for the sale of the New Lebanon Shaker Seeds, Botanical Herbs and Extracts.

Branch store, P. street, cor. Third.

New Invention!

BULKLEY'S STEAM DRY KILN.

THE undersigned takes this opportunity to offer to the citizens of California, Oregon and Washington Territory, the valuable invention hereby announced. One of the greatest wants of California and vicinity, for years, has been the means of preserving her products so as to have a continued supply during the late months. The vegetable products to an immense amount are annually lost at the approach of the rainy season, its long continuance, and the exposure that necessarily results to those products from the season; and the vast quantities that are exposed and accumulated in warehouses and elsewhere, have demanded some method of preserving these immense and valuable crops, that they would be a loss to the producer and to the State. The loss of the Potato and Onion crop last year would amount almost to millions of money, and the loss the present year will be heavy, without preservation.

The undersigned, holding the "Patent Right of the Steam Dry Kiln," offers this invention with the confident assurance that it is the very thing needed—that it is the *exclusif* solution for this very want. It has been thoroughly tried and approved, for these products, and for Grain also. It has been tried for Lumber, to which it has been more particularly applied in the States, for there the Vegetable products do not require so much care as here. To shippers of Grain this invention removes all the difficulty in sending Grain on long voyages, and under the drying process of this valuable invention our Grain growers can now send their Grain to New York with safety.

The proprietor needs only to append the following certificates. The name of Henry L. Ellsworth, Esq., carries a weight that is convincing to intelligent men, and the other evidences should be satisfactory.

The model machine will soon be placed on exhibition at the office of Warren & Son, where all information can be had.

JOSHUA BUTTS, Proprietor of Patent.

A Diploma and Silver Medal

Was awarded to the inventor at the last New York State Agricultural Fair, held at Rochester, as a testimonial of its superior merits.

Letters from Hon. H. L. Ellsworth.

LAFAYETTE, January 7, 1853.

"DEAR SIR: I congratulate you on the completion of your Dryer. I have for a long time urged the importance of extracting the moisture from grain and flour before shipment, to prevent fermentation. Your plan will obviate the difficulties hitherto experienced. There can no longer be any doubt that 18 pounds of water can be taken from a barrel of meal, and 15 pounds from a barrel of flour without affecting the taste or appearance of the same. Experiments at Lafayette show this. Nor is it a less gratifying circumstance that when the flour or meal is cooked, it absorbs proportionately more water, thus saving freight and the purity of the article. If the moisture is extracted, it must be obvious this meal will keep for long voyages, passing through the hottest climates. To the Navy, your improvement is invaluable. The world has become somewhat skeptical on the subject of patent rights. The simplicity and compactness of your machinery enables you to exhibit a working model, to remove in a moment any doubts as to your ability to sustain your patent and prove its utility. One feature in your plan deserves particular notice; in fact, this constitutes your main claim, viz., not drying by common steam, or by fire heated pans, as has been done hitherto, but by using heated steam. Few persons are aware of the small expansion of steam, and how easily it can be heated to a high temperature with little confinement. You will be able to raise a stream to the point of ignition, say 600 or 700 degrees, though a far less heat will answer all your purposes. I will only say that European prejudice against Indian corn is fast dying away, and we may anticipate large shipments both for man and beast. The great fertility of the West, and the reduction of freights both inland and on the ocean, justifies this anticipation. Wishing you success,

I remain, yours respectfully,

HENRY L. ELLSWORTH, late Commissioner of Patents.

To Henry G. Bulkley, Esq., Kalamazoo, Michigan.

LAFAYETTE, March 20, 1853.

"DEAR SIR—I am highly pleased with your Dryer for lumber by heated steam. It seems almost incredible how soon even green lumber can be prepared for use. Twenty-four hours is all that is required. Steam has hitherto been used to advantage, but heated steam has not been applied for this purpose before your improvements. Every manufacturer of lumber would find it profitable to erect a cheap dryer on your plan. Full one-third of the weight of some kinds of lumber is removed by drying; the saving in cartage will more than repay the expenses of drying. When the difference between seasoned and unseasoned lumber is considered, no one who regards good work will regret the trifling expense of preparing the raw material.

Yours respectfully,

HENRY L. ELLSWORTH.

To H. G. Bulkley, Esq., Kalamazoo, Michigan.

HARRISBURG, Pa., July 12, 1853.

I hereby certify that I have had charge of one of W. O. Hickok's shops where the most of his wood work is done, and I put up and have used H. G. Bulkley's Patent Kiln, and heartily approve of everything W. O. Hickok has said about it, and am certain that no recommendation can be too strong in praise of said kiln.

W. H. SULLENBERGER.

[17]

NURSERIES, &c.

Golden Gate Nursery,
Corner of Folsom and Fourth streets, San Francisco.
OFFICE—No. 170 WASHINGTON STREET.

THE attention of the public is requested to a large collection of the flowering Plants, now for sale at this establishment, embracing the most extensive assortment in the State; among which may be found—

Camelia Japonica, in seventy varieties;
Perpetual blooming Roses, of all the classes;
Moss and climbing Roses, do do;
Fuschias, a choice collection; Heliotropes, in variety;
Rosa and Lemon Geraniums;
Lemon-scented Verbenas, Flowering do, Arbutus, Azaleas, Orlendore, Passiflora, Honeysuckles, Carnations, Dahlias, Bulbous Roots, &c., &c.; and a general collection of Green-house plants and ornamental shrubbery.

Catalogues for 1853 will be ready on the 1st of December, and will be forwarded on application.

Orders for any part of the State, will be promptly attended to, on application to D. Nelson, No. 170 Washington street—or to the proprietor.

(7-3n) W. C. WALKER.

Smith's Pomological Gardens,

Banks of the American River, two and a half miles from Sacramento city.

THE proprietor of the Gardens would respectfully invite all who are engaged in "Nursery and Gardening" to visit his grounds. He will be happy to show to them, ready for sale, this fall, a fine collection of

Fruit Trees, Ornamental Trees, Grape Vines, Shrubs, Flowering Plants, and Green House Plants, as can be found in all the great Sacramento Valley.

The proprietor would call particular attention to his collection of Peaches, believing that the specimens exhibited by him in Sacramento and San Francisco markets have been unsurpassed in size, quality, or flavor.

The collections of Pear Trees will equal any in the country; these, with all the new varieties, will be offered this autumn.

The undersigned believes his collection worthy a visit to his grounds of all who are interested in Gardening and Orchard.

The subscriber will offer this autumn Five Tons Vegetable Garden Seeds, that have been raised upon his own grounds. These seeds have been grown with care and will be sold at wholesale for the present, at the Gardens.

Persons in want are invited to call upon us, and we will make reasonable terms.

Fruits, Berries, &c., will always be furnished at short notice at the Gardens.

The proprietor returns his thanks for the liberal patronage of the past, and hopes for a continuance of such favors.

A. P. SMITH, Proprietor.

San Jose Nursery.

WE are prepared to supply the trade with the best varieties of Fruit Trees, Grapes Vines, Roses, Plants, &c., in all their varieties; and are disposed to sell at a low price, that we may suit the times. Our Trees are cultivated with great personal care. Those who desire to make Nurseries and Gardens will do well to visit and ascertain for themselves our ability to supply what we advertise. Trees will be carefully labelled and packed for any reason or distance.

The following Trees we offer this season:

Peach Trees, 44 varieties;

Pear do 44 do

Apple do 54 do

Plum do 15 do

Apricots 6 do

Almonds 2 do

Quinces do 2 do

Cherry do many do

Grapes, 12 do

In addition to our Fruit and Ornamental Trees, we offer ten thousand finest Roses, comprising more than one hundred varieties, all of the best known kinds. Our plants are too numerous to specify in an advertisement. Hoping visitors will come and see us, we refer them to our agent in San Francisco, Mr. DeLamotte, 121 Sansome street, where we shall have a collection of plants in the season as samples. The nursery is situated in the city of San Jose, immediately above the City Mills.

We are also permitted to refer to Warren & Son, who have examined our grounds, and who, on testily of the character of our nursery, and who will receive and forward orders to us.

Every order promptly and speedily attended to.

8 lat L. PREVOST & CO.

Pacific Nursery,

MISSION DOLORES AND ALAMEDA

Also, Grape Vines, Fruit and Ornamental Trees in great variety; 500,000 Strawberry Plants, including thirteen varieties of all the best known kinds. For sale cheap, in lots to suit purchasers. All orders left with us at the Mission Dolores, or at our Nursery of Alameda, or with Warren & Son, at the office of this paper, will be promptly attended to.

Prices guaranteed at the lowest market rates, and everything sold fully warranted to be correct.

18 H. A. SONNTAG & CO.

SOLIDIFIED MILK

MANUFACTURED BY

SAMUEL T. BLATCHFORD.

FOR SALE BY

BINGHAM & REYNOLDS,

201 Sansome street.

THE PRESERVED MILK is made from PURE FRESH

MILK, combined with crushed sugar, and when reduced to liquid, as stated in the directions, can be used for all purposes for which Milk is used, as it is simply Pure Milk and Sugar. The Tablet weighs one pound and is equal to five pints of pure milk. The proprietor recommends with confidence the article to all persons going to sea, its properties of self-preservation having been fully tested during the last eighteen months. To the WHALING interests its value is inestimable, and to travellers by land or sea, (especially when accompanied by young children) it recommends itself by its portableness and the facility with which it may be used.

The proprietor would call the attention of the public to the following certificates:

New York, April 4, 1854:

Mr. S. T. Blatchford—

"DEAR SIR: In answer to your inquiries relative to the preparation of Solidified or Preserved Milk, having used it on my last voyage to San Francisco, I can with the utmost confidence recommend it to sea-faring men as being the best article of the kind I have ever seen or used, retaining, as it does, the taste and flavor of fresh milk.

Yours, &c.,

O. R. MUMFORD,

Master of Clipper Ship "Tornado."

Extract from a letter from a Californian, }
Dated May 31, 1854.

"In regard to the Solidified Milk which you entrusted to me for the purpose of testing the merit of the preparation, I can with confidence say that it has proved entirely satisfactory. I have a portion of it yet remaining in as good condition as when you gave it to me, and I will, I have no doubt, keep for years. The preparation will be a great luxury to the sailor, as it will enable him to enjoy an article of food that has hitherto been supposed could only be had on shore.

Very respectfully, yours, &c.

EARL BARTLETT."

Extract of a letter from Rev. M. Williams, }
Dated Valparaiso, Aug. 9, 1853.

"But the Tablets of Milk prepared by S. T. Blatchford & Co. were the climax of comfort. I would say, let no one go to sea without them. I have a few now left in my room as perfect as when first made."

April, 1854

Mr. Samuel T. Blatchford—

"DEAR SIR: Some twelve months since I heard of your preparation of Milk and procured a sample, a portion of which I tried at the time and found it good. When preparing for sea last December, I tried the balance, which proving equally as good as months before, I procured several pounds, and during the voyage to and from Europe, have had the milk on the table every day, and have found it excellent.

I have used several preparations of milk, and have no hesitation in pronouncing yours the best. I consider it just the thing. In future voyages I shall endeavor to have a supply of it.

Yours, very respectfully,

RICH. S. CORNING,

Master of Clipper Ship "Rapid."

THE STUDY OF AGRICULTURE.

MR. EDITOR: I was right glad to read in the
Farmer of last week, your editorial, calling the
attention of farmers and others to the importance
of Agriculture being taught in our common
schools.

When we consider that about seven-eighths of
our population are engaged in agricultural pur-
suits, that this art is the basis of all other arts,
and coeval with the first dawn of civilization,
and that its successful prosecution depends upon a
knowledge, in the cultivation of the soil, of the
principles of natural science, is it not to be ve-
getted that we have not long since established
schools, in which our youth may be taught the
principles and practice of their future business
life, on which more than any other branch of
business, the fortune of our country, moral, polit-
ical, and national, depends?

In almost all the other departments of life, we
require a preparatory study, before the student is
qualified for his part. And yet agriculture, the
great nucleus upon and around which all other
departments of industry, hinge, and derive their
vitality and importance, we have regarded as not
of sufficient importance to be taught in our dis-
trict schools. We admit, that in order to the
successful prosecution of the different professions,
the doctor, minister, lawyer, manufacturer, and
the mechanic, should all be well educated for
their particular calling.

But the farmer, whose products feed all, and
clothe all, is uncared for, unprotected and left to
struggle along, single handed and alone. Can it
excite surprise, that under such circumstances,
working on a farm should be avoided by our
young men?

But we hope and believe, better times are
coming, when agriculture will be introduced in
the studies of all our schools. Let us inquire
what would be some of the benefits arising from
this course of education; or let us look a mo-
ment at it, as now viewed by our young men.
To till the trees, clear the surface, plow, plant,
and gather the harvest, is the routine of farm
operations. Now in all this there is a great out-
lay of bawl physical strength and to one who
looks only upon the outside, there is no wonder
that they see no form nor comeliness in it. But
let him understand and know something of the
compounds and elements that enter into the trees
and plants he cultivates, and the natural laws
which govern them, and he will soon begin to see
order and beauty all around. He will learn to
connect the sterile rock, with the fertile field. As
he takes the little pebble upon which he has
often thoughtlessly trod, he will see in embryo
much that goes to nourish the sturdy oak of the
forest, as also the lovely violet that blooms at its
base.

But we shall be told, that there are neither
teachers nor books of the right stamp. Be it so.
A few years ago, civil engineers were not to be
found among us, but a demand for them created
a supply. So it would be here. Let agricultural
chemistry become a branch to be studied in our
schools, and in a very short time teachers and
books would be found in abundance.

I hope, Mr. Editor, others will send in their
thoughts on this important subject. Let it be
discussed in the papers, the farmers' clubs, and
by the fireside.—B. Shattuck, in Granite Farmer.

TENANT LABOR.

In many sections of our country, and particu-
larly in the long settled portions, there is a com-
plaint of the scarcity of laborers to secure the
harvest. In our love for large farms and the pos-
session of much land, we apprehend, lies the true
source of this want; and it can only be remedied
when means are provided by which this labor
shall be retained in the country. A friend who
is one of the most successful farmers in Western
New York, having been for many years annoyed
by the difficulty of securing good and efficient
help in summer, has resorted to the plan of hav-
ing what may be called "tenant labor." He has
several small houses suitable for a laboring man
and family, which he rents at a fair price per an-
num, on the condition that he shall have the first
refusal of service at the stipulated price per day
or month, as the case may be. In this way he is
free from the care and trouble of providing for a
large number of hired men on his own homestead,
and his better half is not worn down and wearied
out by the labor of cooking and washing for them.
Mr. C. P. Holcomb, in his address before the
Montgomery County (N.Y.) Agricultural Society,
suggests the same practice, and we copy a portion
of his address relating thereto.—Genesee Farmer.

"Let me now address you on a topic second,
perhaps, to no other in connection with the occu-
pation we follow—I mean labor."

Among the rules of the Royal Agricultural So-
ciety of Great Britain, setting forth its object, is
the following:

"To promote the comfort and welfare of the
laborers, and to encourage the improved manage-
ment of their cottages and gardens."

If I was called on to name or point out upon
what agricultural success more depended than upon
anything else, I should say, upon the labor
of the farm—the hands, and the judicious direc-
tion of them.

Good tillage, working crops, well, and in season
will not always insure great production on all
land, but the husbandman may undoubtedly so
thoroughly cultivate, by "pulverizing, pulverizing,
pulverizing," as Jethro Tull has it, as to obtain
the last particle of the phosphates and alkalies
the earth contains, while the perfect till of the
surface thus exposed, will invite the rain and the
dews in their descent to dress his fields with a
substitute for Peruvian guano.

What, then, is the best kind of labor for us?
Those who have them, and have them in sufficient
numbers, may use their own domestic servants,
which is undoubtedly good labor; but they are
generally quite inadequate to the supply of the
labor necessary in the now improved condition of
our farms—an addition of fifty to one hundred
per cent, more labor being now required in car-
rying on the system of high cultivation that has
been, and is being generally adopted, than before
our agriculture was so improved. I speak particu-
larly of the northern counties of Maryland and
of Delaware.

I believe that the English description of farm
labor is the best we can have. I mean the labor
of tenants—"cottagers," as they are called in Eng-
land—living on the estate. What is the objection
to our having this description of labor? These
English cottagers come here; the German, the
Swiss, and the French come. We have but to
domiciliate them on our estates as they were
domiciliated before they came. When first ar-
rived, entertaining high expectations, it may be
necessary to let them look about awhile; but in
the end, if a comfortable cottage, with its wattle
garden and neat surroundings of shade and water
invites them, they are likely to settle down con-
tented, and be satisfied with moderate wages, es-
pecially now since the price of produce is so ad-
vanced that the laboring man, even at city wages,
or the price paid by manufacturers, finds it hard
to feed his family out of city markets at retail
prices, and will appreciate the advantages of a
rural home, where the necessities of life may be
had so much cheaper. This state of things will
probably continue, and the landed proprietor, who
has so long been overbid by other interests, is
likely to command an abundance of this descrip-
tion of labor.

But to get a selection of the best of these labor-
ers—those trained from their youth up in all the
details of a careful and neat husbandry—it might
almost justify a trip to Devonshire, where farm
labor is said to be cheaper than in any other part
of England. But I would not, by any means,
cowline the choice to foreigners. Our own coun-
trymen, either white or black, when they could
be had would often be preferable.

We must take an interest in them, and make
their homes comfortable. The English proprietor
takes a great interest in his tenants—his "cot-
tagers," as he calls them—and is proud to show
you their neat, comfortable dwellings; and will
take care, at the end of time, to let the guide wife
show you her neat, clean cottage, her ruddy chil-

dren, and embowards filled with crockery ware;
the latter—the crockery ware—in the opinion of
the owner of both, seeming, however, to challenge
the most admiration!

This tenant labor is what we, in Delaware, a
good deal depend upon at present, especially
among the large cultivators. Twenty-five dollars
a year is the price usually allowed the landlord
for the rent of the house and garden; and fifty
cents a day, and board, is paid for labor, furnish-
ing regular work, all fair days, for nine or ten
months. Sometimes through harvest, harvest
wages are paid; or where the tenant is hired by
the year, \$130, \$140, or \$150; or \$10 or \$12 a
month is paid, as the parties may bargain.

These laborers, lodging themselves, are less in
the way than young men. Then they are much
easier paid; it is felt less, as they are paid, to a
considerable extent, off the farm—thus making a
home market. Then they are reliable; they are
always there, for their families are there, and
sometimes the wife, or the junior members of the
family, may be of service, and can be called on in
the hurry and press of harvest, or at other times,
for light jobs or for domestic labor. To be sur-
rounded by an industrious economy of this kind,
comfortably fed and lodged, should be gratifying
to the proprietor, and will make him feel strong
for executing business on the farm. The relation
is patriarchal, and is an interesting one; but the
interest of the proprietor should not be confined
to getting work out of his men, and even paying
them fairly for it. He should interest himself to
know that they spent their means wisely, inquire
how they were getting on, how they were, likely
to made the ends of the year meet, he sure that
the garden was well cultivated, that garden seeds
were provided, and even propose, with all or any
of his tenants, a generous compensation for pro-
ducing the best and earliest vegetables; thus, by
a little address, exciting their emulation, and in-
suring an abundance on their humble but neat
spread boards. The tenant will soon realize that
he is getting on well, and will be contented; and
the contented man is always best prepared to dis-
charge his duties. Is this personal interest in
his laborers and tenantry too great a tax on the
proprietor? On the contrary, he should find his
happiness in it, for he should often realize that
while thus promoting his own ends, he was dis-
charging high Christian duties, the duties of phil-
anthropy and benevolence. There is a certain
kind of society, too, to be found by the well-regu-
lated mind, in intercourse with these unlettered
sons of toil. The man who always preserves his
own self-respect will never be in danger from any
familiarity of, not receiving the respect of others.
Such permanent tenants got to take an interest in
the farm and in the success of its operations, for
they feel their own is identified with it. That
these views may not seem to rest merely on the-
ory, I may add that I have a half dozen of these
tenants on my own estate, who have been with
me, most of them, for several years; and I have
found the relation, as I have described it, one of
the best that can exist in the absence of other
labor, between the proprietor and the hands on
his farm."

WHEAT-GROWING IN MASSACHU- SETTS.

Some twenty-five years ago, it was well known
that wheat could not be raised in Massachusetts,
except in a few favored spots on Connecticut
river. The reason was the land was too old; that
wheat could only be raised profitably on new
lands. Yet wheat has always been raised in the
old "countries," in England, in Italy, in Germany,
in Russia, in as broad a range of latitude as our
whole country, from New Orleans to Pembina
in 49°.

But since the establishment of Agricultural
Societies and the increased circulation of farming
newspapers, in consequence of which it is no
longer held as treason, or even as a high misde-
meanor, to suggest new hints or express new
ideas upon the business of farming, it has been
really suggested that wheat might be raised on
our soil, and the experiment, bold as it may seem,
has been tried. The result of the experiment is,
we believe, that wheat, though not considered so
certain or so profitable a crop as corn, may, not-
withstanding, be raised to advantage in the State.

We believe it is a fact and rather a singular
one, of which we shall presently suggest the cause,
that in no part of our extended country, with all
its variation of climate and diversity of soil, have
so good crops of wheat been raised as in England.
From Maine west to Iowa, and from Virginia
north to Michigan, we think there has been no
tract of country that has produced on the aver-
age as much wheat in quantity, as in some of the
wheat counties in England, Kent for instance.
In Mr. Colman's book on European Agriculture,
though he says that in some statistical works 26
bushels have been put down as the average, and
though there are persons who insist that it should

be put lower, yet he could never find a farmer
who would allow his own yield to be put at the
low rate. He says that under good cultivation
he has rarely known it less than 32 bushels. He
has found it 40,—and is informed on the very
best authority, that the yield is often from 56 to
64. Indeed, he reports that instances greatly ex-
ceeded that, where it appeared that 38 and 40
bushels were several raised by Mr. Barclay, M.
P., and a Kentish laborer represented that about
35 or 40 bushels are raised there, as an average
crop. We believe our best wheat crops have
been in Michigan, and in some parts of Wiscon-
sin, Iowa, and Northern Illinois. But the aver-
age in the best of these would not come up to the
Kent county standard as we have stated it.
In Virginia it is greatly below it.

As we have such a variety of climate in the
wheat-growing districts, our short-ccomings must
be attributed to one of two causes, soil or seed.
There are two principal requisites in soil, for
wheat. According to the opinion of most farm-
ers, the soil should be rather a stiff, tenacious,
clayey soil, and not mellow, light, or loose. We
think it should not be too rich, also. In a mel-
low, light and rich soil, it makes straw at the
expense of the grain. But the main requisite in
the soil for allment of the plant, is phosphate of
lime. To this condition or to the seed, or to both,
the greater success in England, in wheat growing,
is to be attributed. England is a limestone coun-
try, and the farmers use bone manure, which
furnishes the phosphate of lime, on their fields.
The most of the western wheat-growing lands
are in a limestone country, but the soil is too
light and mellow, favoring straw too much. So
much for the soil. Now every farmer knows that
there is a great difference in the measure of dif-
ferent kinds of wheat grown on a given number
of stalks. In some kinds the kernel or berry is
larger and heavier, and in some kinds, there are
a greater number of kernels to an ear, than in
other varieties. Let the best kind be selected,
that which is of the best quality, and bearing
the largest ears, the Kent county wheat, if it
may be procured, or some other productive vari-
ety, and let it be sown in sufficient quantity,
(our farmers do not seed so heavy as the English,
our rule being 1-4 to 1-2 bushels to the acre,
the English 2 to 2-1-2) on a tenacious, still soil,
not too rich, only in good heart,—supplying to
the ground those articles which make the con-
stituents of the plant, and if full sowing, on a
northern declivity, early in September; and we
cannot but think the product will be materially
increased.

As to the seed, the Siberian wheat is much ap-
proved in some of the wheat farms in Iowa.
Others use what they call the Ohio white, a bald
wheat with white husk. In other parts, the va-
riety known as Club wheat, having the kernel
set horizontally on short ears, is preferred, for
the reason that it is there considered not liable
to the rust, which has greatly shortened the crops
of other varieties. The Winter Blue Stein is also
raised with success, even on quite light lands, in-
clining to sand.

Mr. Colman names several varieties raised in
England, and their product in certain fields, as
follows:

Essex Brown, sown 40 bushels	61	per bushel
Bury White, sown 30 bushels	61	" "
Brown, (called clover), sown 40 bushels	62 1/2	" "
Snow drop, White, sown 30 bushels	63	" "
Burwell Brown, sown 45 bushels	63	" "
Wiltshire White, sown 38 bushels	62	" "

W. Miles, Esq., raised 48 bushels; 42 bushels,
2 pecks; 47 bushels; 35 bushels, 3 pecks, and
49 bushels.

P. Pusey, 37 3-4, 45 1-2, 47 1-2 bushels. Sam-
ples of the whole field. W. L. Kidd, M. D., of
Armagh, Ireland, obtained at the rate of 50
bushels of 62 pounds per acre, and there were
larger crops in his neighborhood. The wheat
was red wheat. Quality such as to command the
highest price. The soil was a stiff clay recum-
bent on limestone.

Mr. Colman mentions other products in other
countries coming up to these rates. In Glouces-
tershire, the product on several acres was from
46 to 49 bushels weight from 59 to 62 1-2 pounds.
In Worcestershire, in a field of 130 acres, the
crop was nearly 47 bushels per acre.

In the Western States much of the wheat is
under 60 pounds. It is considered the best
weight at 60 pounds, and few crops go above that.
We think no wheat has ever been grown in this
country at 64 pounds. The white wheats yield
the greatest proportion of flour, the flint wheats,
the greatest proportion of gluten, which is the
most nutritious part of wheat. The white is
preferred for making the superfine flour and
extra-fine bread, though the bread is less nutri-
tious than that containing more gluten. The
southern wheat generally contains the most
gluten, though the proportion of this element is
much affected by the kind of fertilizers used. No

THE milk last drawn from a cow is from ten to
twelve times richer than the first.

crude animal manure should be applied directly to the wheat, but to the previous crop. If the land is mellow, the wheat should be rolled.—N. E. Farmer.

Horseback Exercise.

Riding on horseback is, perhaps, of all others, the most manly, elegant and efficient form of exercise. In the first place, it cannot be taken without being out of doors; then it enables you to breathe a larger amount of fresh air than if walking, because you pass through a greater space in less time, and consequently a greater number of layers, or rather sections of fresh air, come in contact with the nostrils, with less fatigue. Another advantage is, that all the muscles of the body are exercised in moderation, and, to a certain extent, equally so. And then again, while thus exercising, and while every step forward gives you a fresh draught of pure out-door air, the mind is entertained by every variety of objects, new things being constantly presented. The only thing to be guarded against is a feeling of chilliness; this is essential, for every chill is an injury; whether a man be sick or well, a chill must necessarily be succeeded by a fever, and fever is disease.

Horseback exercise to be highly beneficial, should be active—a "hand gallop," or a trot; and, if practicable, a different road should be travelled every day, so that the mind may be diverted by novelties, and compelled away from bodily ailments.

The English as a nation, are a stout, robust and hearty race. The nobility have a long list of names who have lived to the age of seventy, eighty, and even ninety years; but horseback exercise with them is a national amusement; many of them make a ride on horseback as much a matter of course as a daily dinner. Almost the only gentleman seen on horseback in New Orleans, is the English merchant, showing the power of a national habit, and its influence abroad, as well as at home.

If parents could be made to comprehend the full advantages of a constant breathing of pure air to their children, and lie at pains to impress their young minds with its high importance; were they to pay more attention to their physical training, requiring them to take active exercise, four hours every day, on foot and on horseback, there would be some probability that, notwithstanding the heat and impurities of a city atmosphere, those children would grow up in healthfulness, and live to a good old age, instead of paleing away, as they do, long before their prime, growing prematurely old, from a constitution blasted in the bud.—*Journal of Health.*

The Stockton Republican says that from thirty to fifty persons leave Stockton daily for Kern river.

A nugget, weighing 43 3-4 ounces, was found at Jiu Cross Canon, Sierra county, on the 1st inst.

The Columbia and Stanislaus Water Company will commence work on the 1st of April.

A Quartz Mill near Cold Springs, El Dorado county, yielded in the first three days of last week, 120 ozs. Nearly all the mills have done exceedingly well since the rains set in.

MINING IN NEVADA.—The Grass Valley Telegraph says that the last week has been a brisk one in the diggings. There is no longer any lack of water. The gold is being taken out in excellent quantity as well as quality. The Star Company has found one nugget of solid gold weighing three and three fourths pounds.

MINING AT PLACERVILLE.—The Democrat says: The miners are now abundantly supplied with water and the industrious are busily engaged in taking out the precious stuff. The rain and the Kern river excitement have cleared our city of idlers.

The Tuolumne County Water Company have declared a dividend of three per cent, for the month of February, payable at the banking house of D. O. Mills & Co., Columbia.

Talbert & Co.'s flouring mill, on the Tuolumne River, a short distance below the town of La Grange, was destroyed by the late rise of water, together with a large amount of flour and grain. The mill itself was valued at \$30,000.

THE BIG LUMPS ARE COMING.—The Sonoma Herald says: We are informed, just previous to going to press, that Selah Lewis & Co., took out of their claim in this city, yesterday, a ninety-five ounce lump of gold.

THE ARTESIAN WELL.—Messrs. Hogan & Farmer have now sunk their shaft over five hundred feet, almost entirely through a solid bed of blue clay. After a short cessation in their operations, they are now preparing to prosecute their work with renewed vigor to any depth, and until a bountiful supply of water is obtained. We hope such perseverance may not go unrewarded, and that a never-failing supply of pure water may be realized.—*Los Angeles Star.*

THE SUTTER CLAIM.—The Law Report of the Chronicle of the 13th inst., says: It has been decided to resubmit this claim on written briefs, and the case will consequently not be delayed by awaiting an oral argument. We have heard from various sources that the disagreement of Commissioners Felch and Thompson was as to the quantity of land, and that the two concurred that the title should be confirmed, although our information does not come in an authentic shape.

We rejoice to note the above; it will do more to effect good than anything that has been done in California for years. The delay of this title alone has cost more waste of time and money than all the disasters of the late financial crisis.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SAN FRANCISCO, THURSDAY, MARCH 1, 1855.

Agricultural Fair and Industrial Exhibition of 1855.

THERE is no State in the Union where there could be so grand a display of the products of the earth as in California. From her vast grain fields, her fruit orchards and gardens, her vineyards, and the most wonderful display from the vegetable kingdom—we venture to assert that the present year California could make a display that cannot be excelled, if it could be equalled in the world.

When we reflect that about six years since this State was a barren waste, almost wholly uninhabited, except by the gallant and noble pioneer, Gen. Sutter, at the embarcadero at Sacramento, and a few scattered settlers; and with the exception of the adobes at San Francisco, the trading port of those who came to California to buy hydes and tallow. Sacramento, Marysville, Benicia, Nevada, Placerville, and scores of other cities were unknown. When we think all this, and now see the busy throng at this great commercial mart, the steamers plying upon the rivers, loaded with merchandise to stock cities, and the trading posts in the mountains and valleys, and contrast them with the rich and fertile fields and fruitful gardens, it seems to us like an imaginary dream.

We can see, too, springing up on every side, manufactories and workshops, where the industrious thrive and prosper, all bespeaking future success and permanency; and it is to these sources of wealth and happiness to the people that we appeal for an assurance, a confident assurance, that the present year will reveal evidences of greatness that, without being seen, could hardly be believed. They can be shown, and if all our citizens, in every department, would join and aid in making the present State Fair what it ought to be, that exhibition could not be surpassed the world over.

Bring hither, then, to this annual Fair, all the varied products of the field and garden. Bring the "pets" from hill and valley; bring specimens of the handiwork of the mechanic from the manufactory and the workshop. Aye, bring from the "home and the fire-side," evidences of "domestic industry and skill." Let the arts grace the rural and festive scene, and then gather together the proud products of the dairy and the loom, and let the people come and see that in despite of all the trials and troubles that befall us, God has given us a goodly heritage.

It is to a matter of vast moment that we now invoke the attention of our citizens in all parts of the State. Now is the time to begin. An interest should be felt in every dwelling in our land, for it is to the home industry and the home products of California that we must look for the permanent upbuilding of this State. And we would also ask our Legislators to look with earnestness to these matters, for we feel confident they will most cheerfully give it their God-speed aid by a generous co-operation in legislative acts and counsels with their constituents; for in union their is not only strength, but safety.

To our Sacramento Subscribers and our Sacramento Agencies.

WE have a goodly number of subscribers at this goodly city, and it is our earnest wish to know that they are promptly supplied with the CALIFORNIA FARMER. Sacramento city is now the permanent seat of government for California, and will always exert a commanding influence in all the internal relations of the citizens. Sacramento will soon be the grand entrepot from whence will diverge rail roads, stage routes and various means of communications, all of which will tend to build up that city and make her influential, and while San Francisco will hold her commanding influence as the great commercial emporium, so Sacramento will hold a position second only to the Bay city in point of size, population and wealth. For these reasons we look to those influences that will affect all her internal relations.

The Annual Exhibition of the State Agricultural Society, and the Annual Cattle Show, together with an Exhibition of Manufactures and Mechanic Arts, will be held the coming Autumn at Sacramento city, as will be seen by the report of the doings of the Executive of the Society. This is a matter that should and will benefit particularly every citizen of that city and county, —all should feel interested in it,—all should take part in it.

That all may know the particulars relative to

it, we ask our subscribers at Sacramento to examine from time to time the plans proposed, and to co-operate with the Society, and to suggest such matters as will tend to the good of all interested. Messrs. Cardiner & Kirk, booksellers, on Second street, are agents of the CALIFORNIA FARMER, where copies can always be had. The FARMER is the constituted organ of the State Society, and will publish all the doings, and contain lists of all the premiums offered. It will also contain all the doings of all the various County Societies of Agriculture as far as can be obtained; and the cultivator should keep himself posted up in these matters. All interested in milling, machinery, manufacturing and the mechanic arts, should be familiar with these great interests, and we commend to them for this purpose the CALIFORNIA FARMER. Messrs. Cardiner & Kirk are widely known, and on steamer days will have this journal ready for those who wish to send to their friends in the States a true condition of the ability of this State to make a prosperous home. We say to all send the CALIFORNIA FARMER as your steamer paper, for it contains what will most interest those who are looking for a permanent home.

We have also appointed Mr. R. H. Lee, our agent for that city to call upon the citizens, merchants, traders, manufacturers, mechanics, artists, gardeners, cultivators of our city lots and upon every family, for we shall strive to make our paper a welcome guest in every family. We have a portion of our paper devoted to Horticulture and amateur gardening, and those who cultivate a "pet spot" will always find a hint to aid. We have a Ladies Department, and here some item of interest, and we invoke an interest in all who love Home to lend us their influence and aid.

Mr. R. H. Lee will call on them all, and we ask a generous cooperation in the work of awakening an interest in the value of our home blessings and those thousand means that are now being developed to make this State great and prosperous. Mr. R. H. Lee will also visit Sacramento and Yolo counties, and we trust our friends will use their influence to extend the circulation of our journal, that the interests it advocates may be as rapidly advancing as possible.

We would hope that each one of our friends will try and induce a friend or neighbor to become a subscriber, and thus awaken a deeper and more wide spread feeling in regard to the coming Fair, and all those interests that will be advanced by it. We especially commend our Agents to those who desire to communicate any facts touching the Fair, as through our Agents, they can often communicate with us.

Alfalfa.

THIS wonderful grass (*Trifolium*), commonly known as a Peruvian clover, is beginning to be appreciated in California. Two years since we urged attention to it; but with that kind of faith which the mass had in this climate, that "nothing could grow here," it was lightly esteemed. Many now deeply regret the losses they have experienced for want of it. There is now abundant testimony scattered over the State that all we said has been more than fulfilled, and that the half of the virtues of this valuable grass was not revealed.

We saw lawns of it at the grounds of Captain Walsh, at Benicia, the past week, that were fourteen inches high, and had full, heavy stalks. Capt. Walsh informs us that from a small plantation he has abundant food for cows and goats, and saves all the expense of buying meal or bran; that every few weeks it can be cut, and the habit of this clover is such that when one stalk is cut down, from six to ten spring from the roots in its place. We counted from twelve to twenty stalks from many bunches, and the roots penetrate the earth from two to three and a-half feet in depth. When the ground is properly cultivated—deep and well plowed—no drouth can affect it.

We saw a fine plantation of the same clover at the grounds of Col. Foreman, postmaster at Sacramento. We find it in many places; and if our farmers should plant acres of it for their stock, especially their dairy cows, they would find that a large item of expense in the purchase of bran, meal, shorts and other expensive food would be saved, for the clover could be cut and fed green every four or six weeks. We trust those who have tried the grass will communicate with us upon its merits.

ARTESIAN WELLS.—R. C. Moody has commenced a flour mill on the Coyote River, a mile east of San Jose, the mill being wholly supplied by water obtained from artesian wells, dug in San Jose.

COMMUNICATIONS RECEIVED.—From W. S. G., T. B., and S. S., too late for this week, but they will appear in due time.

State Agricultural Society.

At a called meeting of the Board of Managers of the California State Agricultural Society, held at the house of the President, on the 1st inst., the decease of A. Frierison, Esq., late treasurer of the society, was officially announced, whereupon the Board proceeded to elect a successor. On the first ballot Mr. A. P. Smith, proprietor of the "Pomological Garden and Nursery," was unanimously elected.

O. C. WHEELER,

Rec. Sec. Cal. State Ag. Soc.

Sacramento, March 9, 1855.

MESSRS. EDITORS: You will see by the foregoing that the Board of Managers and the Executive Committee of the Agricultural Society, are in active movements for the furtherance of this great staple interest of the State.

The list of premiums for the ensuing fair is in course of preparation and will soon be published. Great pains are taking by the committee to so arrange this list as to do the greatest possible good to all the interests of the State which are within the province of such a Society. The amount placed at the disposal of the committee is not large, and hence much discrimination is necessary in selecting objects and graduating premiums. Any suggestions on this point from gentlemen of experience, published in the FARMER, or addressed privately to either member of the committee, (C. I. Hutchinson, W. W. Stowe, J. L. L. F. Warren, O. C. Wheeler, A. P. Smith,) will be gratefully received, and tend to the perfection of this work.

If the inquiries and the interest manifested by large numbers of those with whom we have conversed, indicate the general feeling of the cultivators of the soil throughout the State, we may justly anticipate an exhibition at the Annual Fair next September, of which both the present and the future of our State may well boast.

Please accept the sincerest thanks of myself and those other friends to whom you recently sent collections of seeds received by you from the Patent Office.

Permit me also to say, that as I have an arrangement for constant exchanges of seeds, bulbs, roots, shrubs, trees, &c., with the Superintendent of the Patent Office at Washington, I shall be happy to transmit anything of rare and interesting character that any friend of Agriculture or Horticulture may be disposed to thus contribute to the general interest. It is this system of exchanges now so rapidly extending over the whole world that is doing more than any other one modern improvement, to cultivate, and enlarge, and enrich our grain, fruit, vegetable and floral interests.

O. C. WHEELER.

At a meeting of the Executive Committee of the California State Agricultural Society, held on the 23d Feb. 1855, the following resolutions were unanimously adopted:

Whereas, An act of Divine Providence has taken from us by death, the late treasurer of the California State Agricultural Society, Angus Frierison, Esq. Therefore,

Resolved, That by the death of Mr. Frierison, the agricultural interests of this State and the Agricultural Society of the State sustain the loss of a warm friend, an able officer, a chief pillar, while the Board of Managers and the Executive Committee deplore the removal of an amiable associate, a tried, trusty and efficient condutor.

Resolved, That we tender to the bereaved widow and surviving friends, unfeigned sympathy in their season of irreparable loss.

Resolved, That the foregoing be spread upon the book of records of this society, be published in the CALIFORNIA FARMER, and a copy duly certified be forwarded to Mrs. Mary A. Frierison, surviving consort of the deceased.

Attest: O. C. WHEELER.

Rec. Sec. Cal. State Ag. Soc.

Sacramento, March 9, 1855.

THE VOICE OF A FORTYNINER.—(These remarks were intended to accompany the article over the signature of "Forty-niner," published last week, but were accidentally omitted.)—The communication is worthy the most attentive perusal of every permanent settler and well wisher of California. The writer we know to be one of our most substantial merchants, one whose strict attention to business and honorable course have made him wealthy; yet he feels a deep interest in all that affects the great interests of the State. He writes as one that knows, and knowing, writes truly. We rejoice to see this spirit, and shall be glad to have our merchants continue to talk thus. If we would build up our own State, we must regard her interest as paramount to all others, and do what we can to give preference to all the "Home Industry" and "Home Interests." Heartily we thank Fortyniner, and shall be happy to hear from him often.

Benicia.

BENICIA, once the bold competitor in the field for the Commercial Emporium of California, and for a time the presumed or real capital of the State, is now a quiet seaport town, and yet of some considerable importance. Benicia is the U. S. military station, and also the head quarters of the Pacific Mail Steamship Company, with their immense iron works.

The military station gives life and animation to the place by the various duties and employments necessary for the protection of our coast, and being a convenient point, troops can be sent to any place, ready for any emergency. The head quarters of Maj. Gen. Wool, is Benicia; his name and fame are a sure guarantee that the duties and responsibilities of a true American officer will be most honorably fulfilled. Probably no station in the United States can boast, as to numbers, more honorable, courteous, or better qualified officers and troops than Benicia.

The Pacific Mail Company's steamer depot and their Iron Works have given employment to a large number of workmen; at present a less demand has caused a decreased amount of labor and consequently of business. There is probably no city in the State that has felt the late depression more than Benicia. The removal of the capital two years since greatly affected the value of real estate at Benicia. Many business men and transient persons left at that time; those now at Benicia are undoubtedly permanent fixtures of the place, and although many left, there are at Benicia about 1,500 inhabitants, and all the various departments of business are quietly progressing. Hotels are commodious and well prepared for the reception of visitors. The "American Hotel," for many years under the charge of Col. Davis, whose ever prompt attention to his duties has won him a sure business, and the able assistance he has at the hand of his accomplished lady, who has charge of the household department, renders this house the head quarters of the traveling community, and at the American Hotel the traveler is sure to receive every attention needed.

The stranger in looking to Benicia from the steamers as they pass, would suppose it a lonely place with but little life or business, or even with but few of the social pleasures that make life what it should be; but it is a hasty judgment. Benicia is better than what it seems, especially in those social enjoyments which, like angel visits, are few and far between in California. A very large number of families and a greater interest in social life and its enjoyments, have made this place better than other cities and towns that have outstripped it in size and appearance.

Considerable attention has been paid to the cultivation of the earth. Pleasant cottages and gardens meet you as you ride through the place. Among those we visited were the gardens of Capt. Walsh; these grounds are celebrated for many very fine specimen plants, introduced from other parts of the world. As a shipmaster for many years, Capt. Walsh has had opportunity to collect many plants and seeds; these he has introduced into his own grounds, and we noticed many very handsome and valuable kinds which were a great ornament to his beautiful grounds. One magnificent specimen of the *Australian Acacia*, known abroad as the "Black Wattle," is one of the finest specimens we have ever seen. It is now about fifteen feet high; its dark green shining foliage and yellow blossoms gracefully mingled present a beautiful appearance. This tree must become one of our best ornamental trees. Capt. Walsh has also several other varieties of the *Acacia*, and many superior climbing plants, which are gracefully trained to the sides of the house. We noticed in this garden a handsome collection of roses, bulbous roots and flowering plants, together with fine fruit trees and garden products, all in a high state of cultivation and reflecting credit upon Capt. Walsh, who now prefers "plowing the soil" to "plowing the sea," and we verily think there is vastly less danger and far more pleasure.

We enjoyed a rich treat when within the residence of Capt. Walsh, in examining one of the finest collections of rare and beautiful shells that has been made. These are the results of more than twelve years' constant care, and in this beautiful and rare group may be seen many that cannot be found in any other collection in our country. These have been most tastefully arranged in rich cases by the lady of Capt. W., whose excellent taste in such matters is proverbial.

Capt. W. always takes pleasure in proving how easy it is to make a good garden even at Benicia, when proper care is bestowed. For courtesy and attention shown us we are truly grateful.

PAGE, BACON & Co.—The card below is a proof that this most able and distinguished house is about to resume business again. No news that could be made known, could give more pleasure than to say that the Banking House of Page, Bacon & Co. has resumed. There are circumstances over which human beings have no control and upon which human foresight cannot exert an influence to prevent an impending calamity, circumstances which though apparently evil and evil only, yet so connected with future results as to lead to great final good—and the late crisis which has transpired we believe to be one of them. The calamity that has befallen this community upon its monetary affairs, we believe to be one of these events, and when the cloud that we have overhead shall have passed, we shall see the good clearly. The House to which we have alluded has bowed before the storm, but it is not destroyed; the storm has bent it fiercely upon it; some of its leaves and branches may seem to have been crushed and broken—but the gleaming of sunshine will quickly vivify and restore, new leaves and branches will appear, and soon the sturdy tree will appear again as though no storm ever touched it. Believing most earnestly this, and as earnestly believing that good will come to the community, we gladly look to the resumption of this House as the signal of a restoration of a better confidence, better business, and better times:

BANKING HOUSE OF PAGE, BACON & Co.,
San Francisco, March 13th, 1855.

This Day and "To-morrow" are especially set apart for the issuing of our TIME CERTIFICATES, and all parties are earnestly requested to call at our office, corner of Montgomery and California streets, and receive the same within that time.

PAGE, BACON & CO.

EXPRESS COMPANIES.—We insert with much pleasure the annexed cards of the Messrs. Langton, of Downville, and also of the Messrs. Everts. To the Express Companies of our State the whole community are deeply indebted for valuable facilities; and the press and the public should make a generous return. Messrs. Langton and Messrs. Everts have done wisely and well in reinstating themselves in business. We are confident that the public will most readily and cheerfully sustain them,—and each of these houses are so well known that their names and influence are a sufficient guarantee that what they undertake they will do and do it right.

A Card to the Public.—The undersigned would respectfully announce to his friends and the public generally, that he has re-organized the Express and Forwarding Business in his own name, and under the style of "LANGTON'S PIONEER EXPRESS." He would therefore ask a continuance of that public favor and confidence, hitherto so liberally bestowed on him.

Having been first to establish regular express facilities in Yuba and Sierra counties, he has always been flattered by the trust reposed in him by a scrutinizing and appreciative public—a confidence which he has labored hard to deserve. In coming again before the public, at a time when the wreck of confidence consequent upon the late Banking calamity, is so general, he would only refer his friends to his past conduct, assuring them that no pains will be spared to give satisfaction to all who may entrust their business to him.

S. W. LANGTON.

N. B.—All matters entrusted to the Pacific Express Company will be promptly attended to.

Downville, March 6, 1855.

A Card to the Public.—Although many embarrassing circumstances surround us in presenting ourselves again before the public for their confidence and patronage; having been more or less affected by the sad calamity which has befallen the House of Adams & Co., and consequent the ruin of injured public; yet we have the consciousness of knowing that so far as our own efforts could avert losses to those who entrusted business to our care, we were prompt and ready to relieve them. We feel deeply the crushing adversities that have overtaken a relying community, and although the Big Ship is lost, we cling to our little Life Boat.

In the wreck of confidence, there are still Public Wants, hence we have a duty to perform, and in tendering our services we can only offer our past conduct, that is before a scrutinizing and appreciative public, as a guarantee for future fidelity.

F. D. EVERTS.

U. C. EVERTS.

LITTLE & Co., APOTHECARIES HALL.—

'Tis said, the everlasting hills
Will never change one jot or tittle,
So with the fame of Devine's Pills,
That you should go and buy of Little.
That sudden cold, that hectic cough,
That fever spot upon your cheek,
A box or two will drive it off,
Your voice again will clearly speak.
Just think, how quickly health's restored,
And see how trifling was the cost—
One dollar—what a rich reward,
Delay not, or a life is lost.
If colds or coughs, or feverish blood,
Disturb your rest, then quickly go,
'Tis Devine's Lozenges will do you good,
And they are found at Little & Co.

ACKNOWLEDGEMENTS.—We are indebted to the proprietors of Noisy Carrier's Hall, No. 77 Long wharf, and Messrs. Geo. W. Murray & Co., Montgomery Block, for late New York, Boston, and New Orleans papers.

We are under obligations to Hon. P. L. Edwards, for legislative documents; to our members in Congress for valuable favors; to Pacific Express, and to Messrs. Wells, Fargo & Co. for many favors.

SPECIMENS RECEIVED.—California is constantly giving evidence of her ability to produce every species of tree, plant, shrub, vine or seed, the most useful and proper attention is given to them. We have received the present week from Messrs. Bowman & Gibbons, of Alameda, very handsome specimens of the following, which are on exhibition at our rooms: African Millet, Chinese Millet, Cammy Seed—all very fine specimens; also superior Sweet Corn, (same for sale extra for seed;) also the Blood Beet, weighing thirty-six pounds. These are the proofs that California can sustain herself.

SOUTHWICK & Co.'s DAIRY RAFFLE.—This large and valuable dairy and the lands connected therewith, which are to be disposed of by raffle, will be decided about the 31st of this month. The disarrangement of the various expresses and the recent circumstances of a public kind, have prevented the proprietors from calling in their returns from their various agencies, so as to enable them to complete their labors, and to have had the drawing as contemplated, this month. The standing and reputation of the owners of the dairy, and the property of the raffle, are an ample guarantee that the raffle will come off at an early day; and we would suggest to those who desire an opportunity to "hope" for the "cream" of the dairy prizes, that they should make an early call. Tickets for sale at our office.

A NEW deal letter office for California, Washington and Oregon Territories, has been established in this city. There are said to be already 23,279 dead letters accumulated.

FROM THE EAST.

THE Nicaragua steamship Cortes arrived on Friday evening last, with 200 passengers, and news one week later from the Atlantic States.

The revolution in Nicaragua is fast approaching a crisis. The Government party have possession of all the chief places, with the exception of Leon, to which city the revolutionists have retired. San Juan del Sur was taken by Chamorro on Feb. 20. He was said to be in Virgin Bay when the Cortes left.

The most intense cold weather was experienced in the Northern States during the week preceding the sailing of the steamer. In Massachusetts, on the 6th of February, the thermometer in many localities was 20° below zero. Boston harbor was frozen over as far as the Fort, which has not occurred since the last of January, 1844. On the 7th February, at sunrise, the thermometer at Boston fell 21° below zero, which is the lowest temperature ever remembered in that city. The New York papers also abound with particulars of the cold. On the 7th ult. at 9 o'clock, the thermometer in Broadway is said to have marked 16° below zero.

The storm and the cold at the West appears also to have been quite as noticeable in Boston and in New York. At Rochester the storm had been raging with great severity for more than a week, snow falling for ten consecutive days, with high wind, and the thermometer very low.

Wm. H. Seward was re-elected on February 6, by the legislature of New York, to the U. S. Senate, by a majority of ten votes.

Lyman Trumbull, anti-Nebraska Democrat, was on the 8th Feb. elected U. S. Senator from Illinois, in place of Gen. Shields.

In the U. S. Senate, Feb. 5, Mr. Gwin introduced a bill for the establishment of a semi-monthly line of steamers from San Francisco to Puget Sound.

Hon. Augustus C. Dodge, of Iowa, has been appointed Minister to Spain, in place of Mr. Soule.

Col. Fremont's claim to the Mariposa land grant was to come up in the Supreme Court the week after the steamer left New York.

A dispatch from New Orleans, dated Feb. 9, states that a portion of an expedition against Cuba is understood to have left that and other Southern ports during the past few days, and the remainder are to follow shortly. The total enlistment in this enterprise, it is said, reaches 3,500 men. The proceedings were very secret.

The New York papers of Feb. 9, state that drafts of Messrs. Burgoyne & Co. of this city, had been protested by their agent in New York, in consequence of not receiving remittances.

The N. Y. Tribune, of Feb. 7, announces officially that Pago & Bacon, of St. Louis, would resume on the 15th of February. It says this resumption has been brought about by the liberal friendship of a number of gentlemen, mostly of that city, who have come forward and made that house a loan, upon such securities as it had to offer, to an extent fully equal to meet the demands which might be made upon it upon resumption of payment.

Affairs before Sebastopol remain quite unchanged. The British army is in a most wretched state, arising from the most flagrant mismanagement. Dates are to the 14th of January. The Russians had made two sorties, but were repulsed with considerable loss. Sickness was increasing in the English and French camps.

The advices from England indicate the rapid approach of the fall of the Aberdeen Ministry, Lord John Russell having retired from the Cabinet. The general opinion is that the whole ministry must go out of office.

Table of Distances.

The annexed tables we publish as a permanent guide for our readers. They should commit them to memory as far as possible, and they will be found very useful. The distances were measured with a vintometer, by Capt. Warner, of the United States Topographic Engineers, in the summer of 1848:

From San Francisco to	Mission Dolores.....	24 1/2 miles.
" " "	" Sanchez Ranch.....	17 "
" " "	" San Mateo.....	21 "
" " "	" Santa Clara.....	48 "
" " "	" San Jose.....	51 "
" " "	" Murphy's.....	70 "
" " "	" San Juan.....	94 "
" " "	" Salinas River.....	113 "
" " "	" Monterey.....	126 "
" " "	" Mission of Soledad.....	126 "
" " "	" Ojitos.....	206 "
" " "	" San Miguel.....	237 "
" " "	" Brakes Ranch.....	258 "
" " "	" Santa Margarita.....	265 "
" " "	" San Luis Obispo.....	276 "
" " "	" Capt. Dimas.....	299 "
" " "	" Los Alamos.....	321 "
" " "	" Santa Inez.....	340 "
" " "	" Gavilan Pass.....	352 "
" " "	" Arroyo Honda.....	359 "
" " "	" Dos Puentes.....	370 "
" " "	" Santa Barbara.....	387 "
" " "	" Carpinteria.....	398 "
" " "	" Union.....	402 "
" " "	" Buena Vista.....	415 "
" " "	" Santa Clara River.....	421 "
" " "	" Gage.....	475 "
" " "	" Los Angeles.....	185 "
" " "	" Los Cuyos.....	184 "
" " "	" Santa Ana.....	513 "
" " "	" Juan Avila.....	535 "
" " "	" San Juan Capistrano.....	542 "
" " "	" Los Flores.....	562 "
" " "	" San Luis Rey.....	573 "
" " "	" San Diego.....	612 1/2 "

The following table is compiled from Mr. Sprague's bill, introduced into the Senate, delineating the legal distances from the County Seats to Sacramento, the Lunatic Asylum, and the State Prison. The figures are not always correct, but represent about the distances referred to:

COUNTIES.	COUNTY SEATS.	Sacramento.	Stockton.	San Quentin.
Alameda.....	Alvarado.....	17 1/2	18 1/2	50
Battle.....	Battle.....	75	120	230
Calaveras.....	Mokelum Hill.....	69	55	220
Colusa.....	Colusa.....	140	185	295
Contra Costa.....	Martinez.....	110	130	45

THE KERN RIVER MINES.—The tide appears to have turned, in relation to these mines, and we now have as many stories crying them down, as formerly to cry them up. Quite a number of disappointed adventurers came up on the America, on her last trip, who give very discouraging accounts. The Los Angeles papers still continue to give glowing reports of the richness of the mines; but the small amount of gold dust yet received from thence, is pretty strong evidence that the article is scarce in that direction.

MINERS' EXCHANGE BANK.—A meeting of Doctor Wright's creditors was held on Saturday, when a proposition was agreed to, by which the Miner's Bank will in a measure, be resumed. The plan is, for the creditors to appoint two Trustees, who shall jointly with Dr. Wright assume control and have the disposition of all the assets of the concern. The property except the banking house is to be disposed of within twelve months, and a pro rata dividend paid out of the proceeds of such property in four, eight and twelve months after the sale. The banking house shall be held in trust for the term of eighteen months, at the end of which time it shall be sold, and the proceeds applied towards paying the balance that may then remain due to the depositors.

LOSS OF THE STEAMER MAJOR TOMPKINS.—Capt. Nash, of the brig Sarah McFarland, which arrived here Tuesday from Victoria, Vancouver Island, reports that the steamer Major Tompkins, Capt. Hunt, was wrecked on the night of the 10th February, at the mouth of Victoria Harbor. The Major Tompkins went to pieces within three hours after striking. No lives were lost. The Captain and crew succeeded in reaching the shore after the utmost difficulty.

MARKET REPORTS.

We should say that there were no markets. The principal thing is for people to find enough to go to market with. Business is generally very dull. Produce is lower—little or nothing doing. Goods arriving—no money to pay for freight. That is the cry in the city; but in the mountains all is merry—miners are cheerful—gold is rolling in plentifully, and the future promises a golden harvest. Farmers look more cheerful; the hope of a paying harvest inspires them, and they work now with a better heart. The late rains have given assurance that "good time and harvest shall never fail."

Horticultural Department.

Vineyards of the Ohio.

The following was prepared by R. Buchanan, Esq., for the Columbian, and condenses much useful information upon the grape culture and manufacture:

At your request I present you with the following account of this year's vintage in the vicinity of Cincinnati, and statistics of vine culture in the West, prepared from data in the possession of the Cincinnati Horticulture Society and the Wine Growers association of this city, and from my own personal knowledge and observation. It may be relied on as nearly accurate.

Within a circle of twenty miles around Cincinnati, about 1,200 acres are planted with the vine, some 800 acres of which were in bearing this year, and produced on an average 400 gallons to the acre—an aggregate of 320,000 gallons of wine. Some of the best vineyards yielded 600 to 800 gallons to the acre; but others, in localities where the "rot" prevailed, did not average over 150 gallons per acre. The season was considered very favorable, and the crop unusually large.

The new wine sells at \$1 to \$1 10 for the best, 75 to 90 cents for second-quality, and 40 to 50 cents per gallon for inferior. The average yield for a series of years may be safely estimated at 200 to 250 gallons to the acre from vineyards in this vicinity.

Product of a few of the vineyards the present year:

Sebastian Blintz, 5 1-2 acres, -	5,300 gallons.
T. H. Yeatman, 7 1-2 " -	5,600 "
H. Duhme, 16 " -	10,000 "
Jacob Mummet, 1 1-2 " -	1,224 "
R. H. Hanges, 1 " -	830 "
R. Buchanan, 5 " -	4,236 "

Dr. Rehfuß, David Ross, Mr. Beandt, Mr. Sleath, and some others make about the same average. This shows what the vine can be made to produce in good seasons by careful attention and judicious cultivation.

Estimated number of acres in vineyard culture in the

& Son, H. H. Southgate, J. D.		
Park, and others, supposed	120,000	

Total, - - - 205,000

What is not bottled is sold by the cask in the city and elsewhere, generally within a year or two after it is made, at from \$1 to \$1 50 per gallon. So great has been the demand for these wines that it is difficult to find any old wines for sale. The consumption keeps pace with the production, and instead of the increased cultivation reducing prices, they are rather on the advance.

It may be safely assumed that this branch of agriculture will ere long take rank as an important item in American industry.

Many persons believe that the introduction of pure light wines of native growth, at cheap rates, will do more to aid the cause of temperance than stringent legislative enactments; but this is a matter of opinion, in which, of course, the ultra temperance men will not coincide.

Vineyard Culture, Statistics, Position, and Soil.—A warm hill-side, a ridge, or any undulating surface, is preferred to a flat one, and a dry calcareous loam, rather than a rich soil. Good under drainage is essential.

Planting, &c.—The ground is trenched with the spade two feet deep, or worked deeply with a sub-soil plow. Cost of spading \$50 to \$150 per acre; of plowing much less.

The vineyard is planted in April, with cuttings (\$2 50 per 1,000) or roots one year-old (cost \$25 per 1,000), usually three feet apart by six feet in the rows; 2,420 vines to the acre.

Culture.—The first year after planting, in March, the vine is cut down to a single eye, or bud; the second year to two, and a stake six or seven feet long driven down by each vine; the third year a small crop may be expected; and the fourth year a good one. The ground is kept clean with the iron plow, or cultivator, the vines tied up to the stakes, and superfluous shoots removed. After the fourth year the bow and spur system is adopted.

The vine bears no fruit on the wood of the preceding year's growth; two shoots are always trained for bearing in the ensuing year. One of these is cut down in the spring to six or ten joints, and bent in the form of a bow, and fastened to the stake with a willow tie. This is to bear the fruit. The other is cut back to two joints, as a spur, to produce bearing wood for the next year, and also a few bunches of grapes. Summer pruning and hoeing requires prompt and judicious attention. A bushel of grapes in bunches will weigh about forty-five pounds, and the average yield of juice is three and a half gallons to the bushel.

The whole cost of a vineyard up the fourth year will range from \$200 to \$550 per acre.

Gathering the fruit and making the wine may form subject-matter for another article, if desired. The Catawba is our great wine grape. Scarcely any other variety is now planted here. It is a native of North Carolina, was introduced into notice by Major Adlam, at Washington city, and by Mr. Longworth, in the West, thirty-three years ago. Of this grape we make two kinds of wine, the sparkling, and the still or dry wine. The first resembles Champagne, and to make it requires very deep, well-arched stone cellars; huge casks of 1,000 to 5,000 gallons, the supervision of an experienced wine cooper from Europe, and a large outlay of capital. The effervescence in this wine is caused by arresting the second fermentation, and sweetening with syrup of rock candy. It takes a year to ripen, and the usual breakage is about ten per cent. The price is \$12 per dozen.

The still wines are generally the pure juice of the grape, without any admixture. The bottling requires but little art, and the wine will keep good in any good, common cellar. The cost is \$5 to \$8 per dozen, as to quality.

The New Rochelle Blackberry.

EDITOR N. E. FARMER: I notice some remarks in the January number of your paper, in regard to the price of the New Rochelle Blackberry. The price at which they are sold is by no means extravagant, as they are only propagated by shoots from the roots, which all must be aware, is a slow process. The only two persons who raise them for sale—Mr. Lawton, of New Rochelle, and Geo. Seymour & Co., of Norwalk, Ct.—are trying to raise for their own transplanting; for after the first or second years' transplanting, they will raise more than a dollar's worth of the fruit, and the demand for the fruit is greater than the supply, and will be for years to come.

I exhibited last year in New Haven, from Messrs. Geo. Seymour & Co., at our Horticultural Exhibition, very fine specimens. One of the berries measured four by three and a half inches in circumference, the size of a pullet's egg. Some of the specimens were taken from a plant in Mr. Smith's private garden in Norwalk. I think it had been planted out three or four years, and should judge it had on it nearer one-half a bushel than a peck of berries; so that a dollar a plant cannot be a very great price under these circumstances.—P. Trowbridge, New Haven, Ct.

Striding Cuttings.

One of the most important as well as the most delightful occupation of the amateur or lady gardener, is just now downing on us; namely, propagating plants for the decoration of the flower garden during summer. Many, doubtless, think increasing their stock by means of slips or cuttings, an art only to be practiced with success by the best gardeners. For the information of that numerous class of readers, who cannot command the services of an experienced gardener, and who nevertheless desire to have their "door-yards" look gay with nature's gems during the summer months, we beg to say it is not so, and offer the following as a guide to the inexperienced.

To get ordinary bedding plants to take root from cuttings, the great secret is, to place them in such an atmosphere as will check the evaporation of the juices of the cuttings, till such times as they have formed roots of their own, and become perfect plants. This is secured in the following manner: Get four pieces of board, an make an oblong box, of any size from a foot upwards, having the back part six inches high, and the front four inches. The sides being made to correspond, and so form a miniature frame resembling those used for hot-beds; nail a piece of board at the bottom, and perforate it with small holes to drain off superfluous moisture. If of a small size, one pane of glass without sash, may be used to cover it; if large, a small sash made the proper size with glass bedded in. The box should now have two inches of the best white sand evenly spread over the whole, and water sufficient to moisten all through.

Take off the points of the plants intended to be increased, about three inches in length; cut clean with a sharp knife, so that there shall be no bruising, just under the lower leaves, and trim off the first and second tier of leaves. Before the cuttings get any way wilted from exposure, take a pointed stick and set them in to the bottom of the sand, just thick enough to touch each other. Give a gentle watering, and place on the glass. They will want but little attention now till the roots are formed, merely picking out any dead cutting or leaf that may show itself, and watering if they become at all dry. The latter should be done in the morning preceding a bright sunny day. With the assistance of such a thing as this, *Verbena*, *Heliotropes*, and the like, will strike readily in a sunny window, after the middle of February, or sooner if in a greenhouse. The after treatment in our next.—Edgar Sanders.

Miscellany.

The Worsted Stocking.

The following thrilling adventure is from an English Magazine:

"Father will have done the great chimney to-night, won't he mother?" said little Tom Howard, as he stood waiting for his father's breakfast, which he carried to him at his work every morning.

"He said he hoped all the scaffolding would be down to-night," answered his mother, "and that'll be a fine sight; for I never like the ending of those great chimneys; it's so risky; thy father's to be the last up."

"Oh, then, but I'll go and see him, and help 'em give a short afore he comes down," said Tom.

"And then," continued his mother, "if all goes on right, we're to have a frolic to-morrow, and go into the country, and take our dinners, and spend all day amongst the woods."

"Hurrah!" cried Tom, as he ran off to his father's place of work, with a can of milk in one hand and some bread in the other. His mother stopped at the door, watching him as he went merrily whistling down the street, and then she thought of the dear father he was going to, and the dangerous work he was engaged in, and then her heart sought its sure refuge, and she prayed to God to protect and bless her treasures.

Tom, with a light heart, pursued his way to his father, and leaving him his breakfast, went to his own work, which was at some distance. In the evening, on his way home, he went round to see how his father was getting on. James Howard, the father, and a number of other workmen, had been building one of those lofty chimneys which, in our great manufacturing towns, almost supply the place of other architectural beauty. This chimney was one of the highest and most tapering that had ever been erected; and as Tom, shading his eyes from the slanting rays of the setting sun looked up to the top in search of his father, his heart almost sunk within him at the appalling height. The scaffolding was almost all down; the men at the bottom were removing the last beams and poles. Tom's father stood alone on the top. He looked all around to see that every thing was right, and then waving his hat in the air, the men below answered him with a long, loud cheer, little Tom shouting as heartily as any of them. As their voices died away, however, they heard a very different sound—a cry of alarm and horror from above! "The rope! the rope!" The men looked round and, coiled upon the ground, lay the rope, which before the scaffolding was removed, should have been fastened to the top of the chimney for Tom's father to come down by! The scaffolding had been taken down, without their remembering to take the rope up. There was a dead silence. They all knew it was impossible to throw the rope up high enough, or skillfully enough to reach the top of the chimney; or if it could, it would hardly have been safe. They stood in silent dismay, unable to give any help, or think of any means of safety.

And Tom's father. He walked round and round the little circle, the dizzy height seeming every moment to grow more fearful, and the solid earth further and further from him. In the sudden panic he lost his presence of mind, and his senses almost failed him. He shut his eyes; he felt as if the next moment he must be dashed to pieces on the ground below.

The day had passed as industriously and as swiftly as usual, with Tom's mother at home. She was always busily employed for her husband and children, in some way or other; and to-day she had been harder at work than usual, getting ready for the holiday to-morrow. She had just finished all her preparations, and her thoughts were silently thanking God for her happy home, and for all the blessings of life, when Tom ran in. His face was as white as ashes, and he could hardly get his words out: "Mother! mother! He canna get down!"

"Who, lad? Thy father?" asked his mother. "They've forgotten to leave him the rope," answered Tom, still scarcely able to speak. His mother started up, horror-struck, and stood for a moment as if paralyzed; then pressing her hands over her face as if to shut out the terrible picture, and breathing a prayer to God for help, she rushed out of the house.

When she reached the place where her husband was at work, a crowd had collected round the foot of the chimney, and stood there quite helpless, gazing up with faces full of sorrow. "He says he'll throw himself down," exclaimed they, as Mrs. Howard came up. "He is going to throw himself down."

"Thiee munna do that, lad!" cried the wife, with clear, hopeful voice; "thiee munna do that. Wait a bit. Tak' off thy stocking, lad, and unravel it, and let down the thread with a bit of mortar. Dost bear me, Jen?"

The man made a sign of assent, for it seemed as if he could not speak; and, taking off his stocking, unravelled the worsted thread, row after row. The people stood round in breathless silence and suspense, wondering what Tom's mother could be thinking of, and why she sent him in such haste for the carpenter's ball of twine.

"Let down due end of the thread with a bit of stone, and keep fast hold of the other," cried she to her husband. The little thread came waving down the tall chimney, blown hither and thither by the wind, but at last it reached the outstretched hands that were waiting for it. Tom held the ball of string, while his mother tied one end of it to the worsted thread. "Now pull it up slowly," cried she to her husband, and she gradually unwound the string as the worsted drew it gently up. It stopped—the string had reached her

husband. "Now, hold the string fast, and pull it up," cried she, and the string grew heavy and hard to pull, for Tom and his mother had fastened the thick rope to it. They watched it gradually and slowly uncoiling from the ground, as the string was drawn higher.

There was but one coil left. It had reached the top, "Thank God! Thank God!" exclaimed the wife. She hid her face in her hands in silent prayer, and, trembling, rejoined. The rope was up. The iron to which it should be fastened was there all right; but would her husband be able to make use of them?—would not the terror of the past hour have so unnerved him, as to prevent him from taking the necessary measures for his safety? She did not know the magic influence which her few words had exercised over him. She did not know the strength that the sound of her voice, so calm and steadfast, had filled him with—as if the little thread that carried him the hope of life once more, had conveyed to him some portion of that faith in God, which nothing ever destroyed or shook in her true heart. She did not know that, as he waited there, the words came over him, "Why art thou cast down, O my soul? and why art thou disquieted within me? Hope thou in God." She lifted up her heart to God for hope and strength. She could do nothing more for her husband; and her heart turned to God, and rested on Him as on a rock.

There was a great shout. "He's safe, mother, he's safe," cried little Tom. "Thou'st saved me Mary," said her husband, folding her in his arms. "But what ails thee? Thou seem'st more sorry than glad about it." But Mary could not speak; and if the strong arm of her husband had not held her up, she would have fallen to the ground—the sudden joy, after such great fear, had overcome her. "Tom," said his father, "let thy mother lean on thy shoulder, and we will take her home." And in their happy home they poured forth their thanks to God for His great goodness; and their happy life together felt dearer and holier for the peril it had been in, and for the nearness that the danger had brought them unto God. And the holiday next day—was it, not, indeed, a thanksgiving day?

Recovering a Fortune.

Lord H—, an English nobleman, ruined by the extravagance of London fashion, had counted on a handsome inheritance to pay off his debts and enable him to pass the remainder of his days in wisdom and quiet. But the expected inheritance came not—and the young lord, rendered desperate by his disappointment, and finding himself doomed to the most precarious condition, deprived of all hope of fortune, full of misery, resolved on blaving out his brains.

The loaded pistol was in his hand, when, most unaccountably, Lord H— suddenly remembered that the Epsom races were soon to come off. Too superstitious to believe that chance had inspired him with such a thought in such a moment without a motive, he dropped his pistol and began calculating his chances of regaining his fortune in the approaching contest. His critical situation was not known, his credit in the sporting clubs was unlimited, and he availed himself of it by unscrupulously engaging in very heavy bets with some of the amateur sportsmen. If fortune favored him, all would go well, but if he lost, he could then execute his project and make use of the pistol. It was a last resort—but Lord H—, in his peculiar way of thinking, thought his faults would be effaced by the expiation, and that the fashionable world would pardon his weakness and errors if he should compensate them by a voluntary death.

He therefore deposited the pistol in its case and went to the club to engage the heaviest bets on three or four of the horses more reliable in his opinion. It was far more than fortune, it was his life which these rapid comers were to bear.

The sum total of his bets amounted to £50,000 sterling. He presented himself with a calm and firm face on the race course. Not a cloud obscured the serenity of his features. No one in beholding him, could have suspected the serious position in which he was placed. He appeared like a wealthy gentleman, who only risked a portion of his surplus, and could easily drown any loss in a glass of champagne. His courage was rewarded. His winnings allowed him to live.

He had won more than money—for wisdom came to him out of this dreadful struggle. A short time afterwards he married a fortune, and he became scrupulous as to his winnings at Epsom. He thought his money wrongfully got. Assembling all who had been his adversaries in betting on the races, he said to them: "I have only just discovered by an examination of my accounts, that the state of my affairs did not permit me to back the bets we once made together. If fortune had been unfavorable, I should not have been in a situation to pay my losses. These bets are then, in fact, null, and delicacy obliges me to return you the money."

Some hesitated to accept it; but Lord H— insisted so resolutely they were compelled to yield, and the fifty thousand pounds were rightfully distributed.

REMEMBRANCE.
Take the bright shell
From its home on the lee,
And wherever it goes
It will sing of the sea;
So take the fond heart
From its home and its hearth,
'Twill sing of the lord
To the ends of the earth.

TO SEW NEW AND STIFF CLOTH EASILY.— Pass a cake of white soap a few times over it, and the needle will penetrate easily.

SEPARATION.

My soul thy sacred image keeps—
My midnight dreams are all of thee;
For native then in silence sleep,
And silence hoods o'er land and sea,
Oh, in that still, mysterious hour,
How oft from waking dreams I start,
To find thee but a fancy flower,
Thou cherished idol of my heart.
Thou hast each thought and dream of mine—
Have I in turn one thought of thee?

Forever thine my dreams will be,
Whenever may be my fortunes here;
I ask not love—I claim thee free
Only our love, a gentle tear,
My dear best visions from above
Thy brightly round thy happy heart,
And many the beams of peace and love
Ne'er from thy glowing soul depart.
Farewell! my dreams are still with thee—
Hast thou one tender thought of me?

My joys like summer birds may fly,
My hopes like summer blooms depart,
But thou art one flower that cannot die—
Thy holy memory in my heart.
No dew that flower's cup may fill,
No sunlight to its leaves be given,
But it will live and flourish still,
As deathless as a thing of heaven.
My soul greets thee, unmasked, unsought—
Hast thou for me one gentle thought?

Farewell! farewell! my far-off friend!
Between us broad, blue rivers flow,
And forests wave, and plains extend,
And mountains in the sunlight glow;
The wind that breathes upon thy brow
Is not the wind that breathes on mine,
Those star-beams shining on thee now
Are not the beams that on me shine.
But memory's spell is with us yet—
Canst thou the holy past forget?

The bitter tears that you and I
May shed whenever by anguish bowed,
Exhaled into the moonlit sky,
May meet and mingle in the cloud;
And thus, my much beloved friend, though we
Far, far apart must live and move,
Our souls, when God shall set them free,
Can mingle in the world of love.
This was an ecstasy to me—
Sny—would it be a joy to thee?

Business Endurance.

Men of genius without endurance, cannot succeed. Men who start in one kind of business may find it impossible to continue therein all their days. Ill-health may demand a change. New and wider fields of enterprise and success may be opened to them; new elements of character may be developed. Men may have a positive distaste for some pursuits, and to succeed may demand a change. None of these cases, fall within the general rule. Men may have rare talents, but if they are "every thing by turns and nothing long," they must not expect to prosper. No form of business is free from vexations; each man knows the spot on which the harness chafes; but he cannot know how much his own neighbor suffers. It is said that a Yankee can splice a rope in many different ways; an English sailor knows but one method, but in that method he does his work well. Life is not long enough to allow any one to become real master of more than one pursuit.

The history of eminent men in all professions and callings proves this. The great statesman, Daniel Webster, was a great lawyer. His boyhood was marked with uncommon industry; as a speaker he did not excel in early life. With great deliberation he selected the law as his profession, nor could he be deterred from his chosen pursuit. While a poor student, not the tempting prize of fifteen hundred dollars a year, as a clerk of the courts, then a large sum, gained with great difficulty for him by the zeal and influence of his father; nor could all the persuasions of the father turn him from the mark he had set for himself. And his great eulogist, the Attorney General of Massachusetts, is another marked illustration of resolute endurance and indomitable industry—life long—entering in one profession, making him one of its chief ornaments; if not its head in the United States.

Our late distinguished Ambassador at the Court of St. James, Hon. Abbott Lawrence, whose wealth has been poured out for all benevolent purposes in donations like unto the sea, can recall the time when he had his profession to select and the first dollar of his splendid fortune to earn. He chose deliberately a calling; he pursued the occupation with integrity and endurance, through dark days and trying seasons, and the result is before the world. The case affords an apt illustration of the proverb of the wise man, that "a man diligent in business shall stand before kings, and not become mean among men."

The late John Jacob Astor, as he left his native Germany, paused beneath a linden tree not far from the line that separated his native country from another, and made three resolutions which he intended should guide him through life. 1. He would be honest. 2. He would be industrious. 3. He would never gamble. He was on foot—his wealth was in a small bundle that swung from the stick laid on his shoulder. The world was before him. He was able to carry them out. His success is the best comment on his endurance.

Stephen Girard at the age of 20 years, was in quite moderate circumstances; being but a captain of a small coasting vessel upon the river Delaware, and part owner of the same. No single trait in his character was more marked than his endurance, and this trait gave him a fortune.

All men who have succeeded well in life, have

been men of high resolve and endurance. The famed William Pitt was in early life fond of gambling; the passion increased with his age; he knew that he must at once master the passion; or the passion would master him. He made a firm resolve that he would never again play at a game of hazard. He could make such a resolution—he could keep it. His subsequent eminence was the fruit of that power.

William Witherforce, in his earlier days, like most young men of his rank and age, loved the excitement of plays of hazard. He was one night persuaded to keep the faro bank. He saw the ruin of the vice of gaming as he never saw it before; he was appalled at what he had beheld. Sitting among gaming, ruin, and despair, he took the resolve that he would never again enter a gaming house. He changed his company with the change of his conduct, and became one of the most distinguished Englishmen of his age.

Dr. Samuel Johnson was once requested to drink wine with a friend. The doctor proposed tea. "But drink a little wine," said his host. "I know abstinence—I know excess—but I know no medium. Long since I resolved as I could not drink a little wine, I would drink none at all." A man who thus supports his resolution by action, is a man of endurance, and that element is well displayed in this incident as in the compilation of his great work.

When Richard Brinsley Sheridan made his first speech in parliament, it was regarded on all hands as a most mortifying failure. His friends urged him to abandon a parliamentary career, and enter upon some field better suited to his ability. "No," said Sheridan, "no—it is in me, and it shall come out!" And it did, and he became one of the most splendid debaters in England.

Loyola, the founder of the order of Jesuits, the courtier, the man of gallantry and dissipation, obtained such mastery over himself by labor and endurance, that, to illustrate the fact, he stood several hours apparently unmoved, in a pond of ice and muddy water up to his chin.

Perhaps no other nation in Europe at that time, could have won the battle of Waterloo, except the British, because no other could have brought to the conflict that amount of endurance needed to win. For many hours that army stood manfully before the murderous fire of the French until column after column fell; while not a gun was discharged on their part. One sullen word of command ran along the line as thousands fell. "File up—file up!" "Not yet—not yet!" was the Iron Duke's reply to earnest requests made to charge and fight the foe. At length the anticipated time of action came. The charge was given, and victory perched upon the standard of England.

HOMESPUN.—The Hon. Mr. Bacon left on Monday last for Washington; and it is with great pleasure we add, that he was dressed in a full suit of HOMESPUN, manufactured in this town, and a part of it by his amiable and patriotic lady.—*Pittsfield Sun, Dec. 1869.*

What would the present ladies of members of Congress think if their husbands were to ask them to manufacture a suit of "homespun"?

At a later period another Representative from the Berkshire district wore "homespun." In 1838 Mrs. Geo. N. Briggs, spun and wove a piece of cloth, for which she obtained a premium at the Berkshire Agricultural Fair, and this premium cloth was made into a dress coat and worn by her husband in Washington, where he had the reputation of being the only member for whom his wife spun and wove his coat. It was a beautiful piece of cloth.—*Ez.*

BE ALWAYS BUSY.—The more a man accomplishes, the more he may. An active tool never grows rusty. You always find those men who are the most forward to do good, or to improve the times and manners, always busy. Who starts our railroads, our steamboats, our machine-shops, and our manufactories? Men of industry and enterprise. As long as they live they work—doing something to benefit themselves and others. It is just so with a man who is benevolent—the more he gives, the more he feels like giving. We go for activity—in body, in mind, in everything. Let the gold grow not dim, nor the thoughts become stale. Keep all things in motion. It is better that death should find us sealing a mountain than sinking in a mire.

DISAPPOINTMENT.—Who has not been disappointed? Who has not felt the blighting power of withered hopes and faded joys in disappointment? No one. How many are the bright plans and golden anticipations, that we almost make real in our ideal fancy, suddenly blighted by disappointment. The boy, in his innocent sports; the youth, in his efforts to win love or fame; the man, in strife for honor and glory; the aged, in past recollections and present wants—all are alike made wretched by disappointment. No one escapes its fearful presence; for the man is prone to hope and anticipate bright visions of the future, which are often blasted by disappointment. And he who can so live to anticipate the worst, should the bright visions of his future hopes fail him, is the happier man when disappointed.

TO REMOVE INK FROM COTTON AND LINEN.—Dip the spotted part of the linen into melted tallow, wash out, and the spots will disappear, and leave the linen as white and as pure as before it was soiled.

COUNSELLOR Rudd, of the Irish bar, was equally remarkable for his love of whist and the dingy color of his linen. "My dear Dick," said Curran to him one day, "you can't think how puzzled we are to know where you buy all your dirty shirts."

Ladies' Department.

Influence of Woman.

THE utter subjection of woman to the arbitrary will of man is characteristic of countries steeped in ignorance, barbarism and tyranny. The elevation of woman to the intellectual dignity of man is characteristic of countries blessed with knowledge, civilization and liberty. Let the despotic nations of the East regard the tender sex as slaves only to their uncontrolled dominion; but let the free nations of Europe prove their superiority in justice, refinement and religion, by sharing with that sex all the mental pleasures of which they are as capable as ourselves. If incompetent legislators make bad laws, women are as deeply injured by their operation as men; if competent legislators secure good laws, women are as much benefited by the blessings they produce as men; independently of which, if even men alone were subject to the evil or the good, how could woman be indifferent to the happiness of their husbands, fathers, brothers, or sons, of whom such men must consist? From the lips of woman every infant hears the first accents of affection, and receives the first lessons of duty in tenderness and love. For the approbation of woman the grown-up youth will undertake the boldest enterprise, and brave every difficulty of study, danger, and even death itself. To the happiness of woman the man of maturer years will devote the best energies of his mind and body; and from the soothing and affectionate regards of woman, the man who is become venerable by years derives his chief consolation in life's decline. Who, then, shall say that the one-half of the human race, and they confessedly the most virtuous and the most amiable, may not be trusted with an intelligence and an influence equal to our own? To them, when sorrow afflicts us, we consign half our sufferings, and they cheerfully relieve us by lightening them. When joy delights, we give the half of our pleasures, and they as readily consent to share them. They lessen by their sympathy the pangs of all our privations, and they increase by their participation the ecstasy of all our delights. They deserve, therefore, the full enjoyment of every privilege that it is in our power to confer on them.

Conversation.

AMONG a large proportion of young women, and especially among those who are not remarkable for the strength of their understandings, and who have not been accustomed to estimate the worth of objects according to the standard of reason and religion, conversation loaded with flatteries, as silly as they are gross, too often finds welcome hearers. Hence, also, discourse is confined, in circles of this description, to scenes, topics and incidents, which embrace little more than the amusements of the preceding or ensuing afternoon; the looks and the dress of the present company, or of their acquaintance; petty anecdotes of the neighborhood, and local scandal. Is it wonderful, then, that the wish prevalent in most men, and especially in young men, to render themselves acceptable in social intercourse to the female sex, should betray them into a mode of behaviour which they perceive to be so generally welcome? Is it wonderful that he who discovers trifling to be the way to please, should become a trifle? that he who, by the casual introduction of a subject which seemed to call upon the reason to exert itself, has brought an ominous yawn over the countenance of his fair auditor, should guard against a repetition of the offence? But it is not only to women of moderate capacity that hours of trifling and flippant conversation are found acceptable. To those of superior talents they are not infrequently known to give a degree of entertainment greater than, on slight consideration, might have expected. The matter, however, may be easily explained. Some women, who are endowed with strong mental powers, are little inclined to the trouble of exerting them. They love to indulge a supine vanity of thought; listen in nonsense without dissatisfaction, because to listen to it requires no effort; neither search, nor prompt others to search, deeper than the surface of the passing topic of discourse; and were it not for an occasional remark that indicates discernment, or a look of intelligence which gleams through the listlessness of sloth, would scarcely be suspected of judgment and penetration. While these persons rarely seem, in the common intercourse of life, to turn their abilities to the advantage either of themselves or their friends; others, gifted with equal talents, are tempted to misapply them by the consciousness of possessing them. Vain of their powers, and of their dexterity in the use of them, they cannot resist the impulse which they feel to lead a pert and coxcombical young man, whenever he falls in their way, to expose himself. The prattle which they despise, they encourage; because it amuses them by rendering the speaker ridiculous. They lead him on, unsuspecting of their design, and secretly plucking himself up on his happy talents in rendering himself agreeable, and delighted the most when he is most the object of derision—from one step of folly to another. By degrees they contract an habitual relish for the style of conversation which enables them at once to display their own wit, and to gratify their passion for mirth, and their taste for the ludicrous. They become inwardly impatient when it flags, and more impatient when it meets with interruption. And if a man of grave aspect and more wakeful reflection, presumes to step within the circle, they assail the unwelcome intruder with a volley of brilliant railery and sparkling repartee, which hears down knowledge and learning before it, and convulses the delighted auditors with peals of laughter, while he labors in his heavy accoutre-

ments, after his light-armed antagonist, and receives at every turn a shower of arrows, which he can neither parry nor withstand.

The True Wife.

Sue is no true wife who sustains not her husband in the day of calamity, who is not, when the world's great frown makes the heart chill with anguish, his guardian angel, growing brighter and more beautiful as misfortunes crowd along his path. Then is the time for trial of her gentleness, then is the time for testing whether the sweetness of her temper beams only with a transient light, or like the steady glory of the morning star, shines as brightly under the clouds. Has she then smiles just as charming? Does she say, "Affliction cannot touch our purity, and should not quench our love?" Does she try, by happy little inventions, to lift from his sensitive spirit the burden of thought?

There are wives—nay, there are beings who, when dark hours come, fall to repining and upbraiding—thus adding to outside anxiety the harrowing scenes of domestic strife—as if all the blame in the world would make one hair white or black, or change the decree gone forth. Such know not that our darkness is heaven's light; our trials are but steps in a golden ladder, by which, if we rightly ascend, we may at last gain that eternal light, and bathe forever in its fullness and beauty.

"Is that all?" and the gentle fire of the wife beamed with joy. "Her husband had been on the verge of distraction—all his earthly possessions were gone, and he feared the result of her knowledge, she had been so tenderly careful for all her life! But, says Irving's beautiful story, 'a friend advised him to give not sleep to his eyes nor slumber to his eyelids until he had unfolded to her all his helpless case.'

"And that was her answer, with the smile of an angel—'Is that all?' I feared by your sadness it was worse. Let these beautiful things be taken—all this splendor let it go; I care not for it—only care for my husband's love and confidence. You shall forget in my affection that you were ever in prosperity—only still love me, and I will aid you to bear these little reverses with cheerfulness."

Still love her! she a man must reverence, awe, and liken her to the very angels, for such a woman is a revelation from Heaven.

Home Influence.

Wouldst thou listen to his gentle teaching,
All thy restless yearnings it would still;
Love, and father, and mother here are preaching,
Thine own sphere, though humble, first of all.

Truly has it been said, that "our duties are like the circles of a whirlpool, and the innermost includes home." A modern writer has designated home "heaven's fallen sister;" and a melancholy truth lies shrouded in those few words. Our home influence is not a passing but an abiding one; and all powerful for good or evil, for peace or strife, for happiness or misery. Each separate Christian home has been linked to a central sun, around which revolves a happy and united band of warm, loving hearts, acting, thinking, rejoicing and sorrowing together. Which member of the family group can say, I have no influence? What sorrow, or what happiness, lies in the power of each?

"A lighted lamp," writes McChesney, "is a very small thing, and it burns calmly and without noise, yet it giveth light to all who are within the house." And so there is a quiet influence, which, like the flame of a scented lamp, fills many a home with light and fragrance. Such an influence has been beautifully compared to "a carpet, soft and deep, which, while it diffuses a look of ample comfort, renders many a creaking sound. It is the curtain which, from many a beloved form, wards off at once the summer's glow and the winter's wind. It is the pillow on which sickness lays its head and forgets half its misery." This influence falls as the refreshing dew, the invigorating sunbeam, the fertilizing shower, shining on all with the wild lustre of moonlight, and harmonizing in one soft tint many of the discordant hues of a family picture.

DEXTERITY OF LOVE.—A young lady of Namur, of good family, having a gallant, was at a loss in conducting the correspondence which was to fix their repeated assignations. A hair-dresser, not an unusual messenger of love, was chosen as the agent; but how escape the vigilance of her father, a widower, who had a perpetual eye on her conduct? Singular as it may appear, the old gentleman's wig was chosen as the letter-box. He wore a sort of pocket attached to the wig, which his daughter used to take off every evening when he called for his night-cap, and was sure to find a billet from her lover, which the hair-dresser had placed there in the morning, and which the old gentleman had unsuspectingly carried about all the day. She had sufficient time to peruse it and replace her answer, which the hair-dresser withdrew in the morning, to deliver to her lover.

DOMESTIC DUTIES.—The most minute details of household economy become elegant and refined when they are ennobled by sentiment. To furnish a room is no longer a common-place affair, shared with upholsterers and cabinet-makers; it is decorating a place where I am to meet a friend or a lover. To order dinner is not merely arranging a meal with my cook; it is preparing refreshments for him whom you love. These necessary occupations, viewed in this light by a person capable of strong attachments, are so many pleasures, and afford her far more delight than the games and shows which constitute the amusements of the world.—*Mary Wortley Montague.*

MARRIED.

On the 10th March, in this city, by Rev. Mr. Rollinson, Mr. G. O. Wilson and Miss M. Amelia Sanderson, all of this city.
On the 13th March, in this city, by Justice Haller, Mr. John Christian Koch and Mrs. Habetta Hickman Koch, all of this city.
On the 21st March, in Sacramento, by Rev. Mr. Benton, J. O. Moore and Miss Cynthia Allington, all of Sacramento.
On the 31st March, in Nevada, by Rev. C. A. Lennan, Mr. W. W. Gessaway and Miss Charlotte Lyons, all of Nevada county.
On the 4th March, in Auburn, by Rev. J. A. Rogers, Mr. R. O. Carver, of Yankee Jam, and Miss Mary Jane Robinson, of Wisconsin Hill.
On the 11th March, in this city, by Rev. F. Mooshake, Edward Helitz, of Marysville, and Miss Elizabeth Mueller, of this city.
On the 5th March, in this city, by Rev. Dr. Scott, Thomas C. May, and Miss Annie Ryan, both formerly of New York.
On the 24th Jan., in St. Louis, Mo., Henry B. Haight, of San Francisco and Miss Anne E., daughter of Capt. L. Bissell, of St. Louis.

DIED.

On the 8th March, in San Jose, the wife of Mr. John W. Patrick, of paralytic, in the 54th year of her age.
On the 8th March, in Sacramento, Elizabeth Jones, only daughter of T. S. and Ellen Wilkinson, aged 2 months and 2 weeks.
On the 7th March, in Nevada, Mrs. Mary J. Ludwig, wife of Mr. Godfrey Ludwig, formerly of Cincinnati, Ohio.
On the 6th March, at French Corral, by the caving in of a bank of earth, Norman Vandoren, formerly of New York, aged 25 years.

SAN FRANCISCO MARINE LIST.

ARRIVALS.
MARCH 7—Schr Empire, Davis, Shalwater Bay, 8 days; oysters.
Schr Iowa, Gragg, Pajaro, 20 hours; 800 sacks potatoes.

SPECIAL NOTICES.

Religious Notice.—There will be PUBLIC MEETINGS held at the Hall of the Sons of Temperance, on Washington street, between Sansome and Montgomery, every Sabbath day, viz.: a Prayer Meeting at ten o'clock, A. M., and a Temperance Lecture at half-past two, P. M.
v3-11

NATHL THURSTON.

Native Plines, Oaks, &c.—Cones of the Native Plines, Acorns from our Mountain Oaks, Seed of all our Mountain Strubs, and of every species of Valuable Tree or Shrub; for these the full price will be paid, if satisfactorily labelled, classified and arranged, at the
Office of the "CALIFORNIA FARMER,"
Masonic Hall Building, Montgomery street.
13

To the Farmer.—Healthy crops, fruitful trees, and sound stock, are esteemed the blessings of the farmer, yet how often while laboring for such blessings he targets himself, and while establishing health in everything else on his farm, is dying by disease. Dr. Drine's Compound Pitch Lozenges, sold by LITTLE & CO., No. 137 Montgomery street, will cure that cough he is suffering from. As he sows this remedy, so will he reap health.
v3-9

Southwick's Raffle.—A Splendid Dairy Prize.—Of all the Raffles proposed, we know of none that has a better or more utilitarian prize than Southwick's Dairy Prize. The prize is one hundred and twenty-two cows—this is prize No 1. There are also many other valuable prizes. Mr. Southwick, the proprietor, is a gentleman of responsibility, well known throughout Sacramento Co., and there can be no doubt but the Raffle will be conducted in good faith and fairness. It will be drawn in a few weeks.
Good and responsible Agents wanted. Terms made known by application in the office of the CALIFORNIA FARMER.

Catawba Grape.

WE have received an invoice of this celebrated Grape, from which the famous "Sparkling Catawba" is made. Gardeners in want of any will do well to call and secure them.
v3-11

WAIREN & SON.

A RANCHO in the county of San Luis Obispo, within eight miles of the Port, containing 3,000 Acres Level Land, now covered with a heavy crop of Oat Grass, and having an abundance of water for stock and planting. Title confirmed. Will be sold for \$2,500.
Apply to
v3-11

"Take no thought for the morrow."

THIS TEXT MEANS, BE NOT UNREASONABLY anxious or disturbed by future cares. It is an advice easily adopted, if we take such steps as prudence suggests. Suppose we are troubled with Coughs or Consumption, the temper is cooled, and the good dispositions of the soul languish, the mind suffers; but obtain bodily relief from the use of Dr. DEVINE'S COMPOUND PITCH LOZENGES, and the mind and soul repose in that tranquil reliance on DIVINE PROVIDENCE which the text commends. Price 50 cents a box, or 3 for \$1. Sold by
v3-11

LITTLE & CO., Apothecaries.

Southwick & Co.'s Grand Raffle!
\$48,540!!
FIRST GRAND PRIZE \$30,000!!

THE Proprietors of the above Raffle, having sold a sufficient number of their Tickets to justify them in fixing the "Day of Drawing" for Saturday, 10th day of March next, have much pleasure in informing their friends and the public generally, that the drawing will be by wheel, in which the numbers of every Ticket which has been issued will be drawn, and the first twenty drawing numbers will be Prizes, the fortunate holders of which will receive the Prizes immediately after the drawing, or they will be held in trust for those at a distance by a Committee of Ticket Holders, elected by these present at the drawing, and who will superintend the same and fully represent all Ticket holders who may not be able to attend the drawing.
Tickets Sold and Raffle for day and night up to the hour of drawing, at the principal office in Sacramento, or can be secured by application to the various Agents in all parts of the Northern and Southern States, San Francisco, &c.
Remember—Saturday, 10th day of March next. Secure your Tickets without delay.

An examination of the Goods will show that a fair business
profit is realized and no more.
The distribution will be conducted by a Committee of the
Shareholders, and every care will be taken to give the same
satisfaction to the public that has continued from year to year
their confidence in our house.
The GALLERY OF PAINTINGS is now open to the public
without charge. v3-10

PACIFIC EXPRESS COMPANY.

THE late employees of ADAMS & Co., in consequence of the
disruption of that firm, have organized themselves into a
joint stock company, under the above name and title, for the
purpose of conducting a General Express and Forwarding
business in all its branches, throughout California, Oregon and
the Pacific Coast generally.

The business will be strictly and solely a forwarding one,
having no connection with banks and bankers, and will be con-
ducted on safe and economical principles.
The Expresses will leave the office at the north-west corner
of Washington and Montgomery streets, daily, at regular hours,
for Sacramento and the Northern Mines, Stockton and the
Southern Mines, San Jose, San Juan and Santa Cruz, Mon-
terey, San Pedro and the Southern Coast generally, as well as
to the Northern Coast of California and Oregon.

We will also run a regular Express for Freight, Small Par-
cels and Letters to and from the Atlantic States by every
steamer.

The parties who have organized this company are well
known to the community as old and experienced express men,
and hope it will be acknowledged generally, understand their
business thoroughly. They think they are not saying too much,
when they attribute much of the success of the late firm of
Adams & Co. in the express business to their exertions and
personal energies.

In conclusion they would solicit a fair share of the favors of
the public, pledging themselves to exert their best endeavors to
transact such business as may be entrusted to them in a prompt
and business-like manner.
Collections of all kinds will be promptly attended to at any
of the points mentioned above.
San Francisco, March 1st, 1855. R. G. NOYES, President. v3-10

INDIAN MUMMY.

ONE of the most interesting specimens of pre-erred human-
ity is now open for exhibition at the office of the CALIFOR-
NIA FARMER. The certificate of Dr. Evans, U. S. Geologist,
furnishes sufficient data to prove its authenticity and value; the
certificate of five of our most distinguished medical men furnish
facts that should awaken a general interest in our community
to see this valuable and positive proof of the earlier races of the
aborigines of California.

The Mummy now exhibited is supposed to be a highly dis-
tinguished chief of some tribe of the "Flat-Head Indians." This
race have left no record, and the present tribes have no knowl-
edge of the race of which this is a representative. Capt. Rus-
sell, the discoverer, is familiar with the Indians of the same
vicinity, speaks their language, and has been years with them;
yet neither they nor himself can find any trace by which to re-
cover the history of the present relic.

The Chief now measures 5 feet 5 inches in length—full size—
the feet are 9 inches long. The body presents a natural ap-
pearance, and, as it lays in the canoe, surrounded by the materials
usually deposited with chiefs, together with other bones and
skulls found with the Mummy, it is indeed a most interesting
specimen.

Captain Russell has expended much in bringing this specimen
to the city and preparing it for the States, and it is now offered
for exhibition in hopes that a sufficient sum can be raised to
return it here, as it is a record of the early history of California.

The Mummy will be exhibited at the office of the CALIFOR-
NIA FARMER, for a short time. Admission 50 cts.; Children half
price. The Press, Medical and Scientific men, and Clergymen,
are invited Free, as the object is diffusion of knowledge.
v3-4 C. J. W. RUSSELL, Proprietor.

Artesian Well Boring.

WE would respectfully inform the public that we are fully
prepared to take contracts in the above operations in a
manner to guarantee satisfaction or no charge will be made.
SMITH & VAN DYKE having associated themselves with an
old and experienced operator from the East, who challenges the
world to compete with him in all the branches connected with
the above business, are fully confident to guarantee success in
all contracts that we may undertake, and warrant the work for
one year. We have also implements for boring through stone
to any depth, and all work done on the most reasonable terms.

For the satisfaction of those wanting anything in the above
line, we would refer to Thomas Fallon, San Jose; Rufus S.
Edels, of Hayward & Edels; M. A. Sullivan, New Custom House;
Wright & Co., 137 Jackson street, &c., &c.

We can do work cheaper than any other operators, for two
reasons:
1st. Because we are prepared to work on a most extensive
scale.
2d. Because we understand all branches connected with the
above business, and are, therefore, able to work with certainty.
All orders left at the What Cheer House will be promptly at-
tended to.
SMITH & VAN DYKE, Contractors,
118 San-ome street.

N. B.—We also refer to Warren & Son, publishers of the
"California Farmer," who have seen and known the character
of the work done. 7

Pottery! Pottery!!

NOW ready and for sale at the SACRAMENTO POTTERY,
on J street, near Suiter's Fort, a large assortment of Plain
and Fancy Flower Pots; Butter, Preserver, Bread and Cak
Jars, with covers; Cream Pots, Churns, Milk Pans, Jugs and
Stovepipe Safes, of superior quality; with everything else in
the line. Wares made to order. Dealers are particularly sol-
icited to call and purchase. Orders to be left at the Pottery, or
No. 264 J street.
v3-2

T. R. FREER, Agent.

Cabbage Seed.
WE have received an invoice of fresh Drum-head Cabbage
seed, from Philadelphia—about 200 lbs., and guaranteed fresh.
will be sold low by the entire invoice.
v3-10

WARREN & SON, Montgomery street.

BANKERS.

JAMES KING OF WM. & CO.

THE undersigned have this day associated themselves for the
purpose of conducting a general financial agency in the
name of JAMES KING OF WM. & CO. They invite the at-
tention of their friends to their card annexed, and pledge their
efforts in the prompt and faithful execution of every order left
with them. Our charges are extremely small, and we hope by
attention to business to receive a share of public patronage.
JAMES KING OF WM.,
HENRY REED.

General Monetary Agency,

Southeast corner Montgomery and Washington streets.
Deposits of money or other valuables, Deeds, Bills, Cash
Boxes, &c., &c., received as per terms annexed.
Loans negotiated, Notes collected, and all orders relating
thereto attended to with dispatch, at very moderate charges.
Exchange on New York for sale in favor to suit.

Special Deposits.—Money and valuable parcels received
under seal, with name of owner thereon, for which receipts
will be given, under a charge of 1/2 per cent. per month.
Cash boxes properly labelled with name of the owner, can
be stored in our vault, and received and delivered daily, at a
charge of \$2 per month.

Deeds, Bills and other valuable papers, properly marked, re-
ceived for safe keeping, at a charge of \$1 per month each.
General Deposits.—Persons desiring to make general de-
posits to be drawn for by check, can do so at the following
charges:

For opening the account \$2.
For continuing the same, 60 cents per thousand dollars, on
the amount deposited.

As we make no use of the funds received on general account,
we cannot of course afford to receive and disburse the same
without charge, and we trust the security we offer—namely,
the identical coin deposited, and as nearly approachable a
special deposit as the nature of the case will admit—will be a
sufficient inducement to pay us our very small commission.

A daily statement, under oath, of our affairs, open for inspec-
tion of Depositors, and as soon as we can contrive some plan
by which the privacy of our customers' accounts can be guar-
anteed, we shall make monthly statements under inspection of one
of the State courts. And this we shall continue from month to
month, until some agent appointed by the Legislature shall ap-
pear for that duty.

JAMES KING OF WM. & CO.

A Card.—The above advertisement declares the nature of
our present business, but, in addition thereto, we propose,
when the proper time shall arrive, to open a Savings Depart-
ment, to be conducted as follows:

Deposits to bear interest at the rate of 10 per cent. per an-
num, for which books or certificates will be issued, payable at
different dates, but no deposit received for a shorter period than
two months, nor will bear any interest after maturity. And all
sums then due and uncalled for, will be transferred to the ac-
count of Special Deposits and charged accordingly. Monthly
statements made as with the general deposits.

Our project is a new one. It has caused us much thought
and reflection, and we believe it to be the only feasible plan of
conducting this kind of business at this time. At present we
do not expect any application in the savings department, but
the plan is respectfully submitted for consideration. If it stands
the test of present criticism, well. If not, we will not under-
take it, and in the meantime our general business, we hope, will
meet with favor.

JAMES KING OF WM.
HENRY REED.

GOMERY STREETS.

THEODORE PAYNE AUCTIONEER.

MEAS. PAYNE & CO. respectfully inform the public
that they have established themselves as above, for the purpose
of transacting the

Real Estate business, in all its branches.

For the conducting of which they esteem themselves peculiarly
qualified, by having given it their special attention for over two
years past, and made themselves familiar with all questions
affecting titles, &c., &c.

They will give their special attention to the public sales of
estate, by Administrators, Assignees, Receivers, Mortgagees,
&c., carefully complying with the terms of law.
A Register for Property, at either public or private sale
always open at their office. 20 1/2

Ingham's Improved Small Machines.

THESE Machines combine all the apparatus necessary to
cleanse Grain, rendering it unnecessary to have any other
machinery for that purpose in the mill. They are portable and
occupy about four feet square on the floor, by eight and a
half feet in height; and will clean the worst samples of Smutty
Grain, also remove short straw, white caps, seeds and other
foul substances in the most perfect manner. All of the oat
worth saving is collected in a reservoir, while the oat and
light dust are passed out of the mill, allowing the machine to
be put on the same floor with the flour chests or wherever
most convenient, without being enclosed. It is a California im-
provement and designed to meet the wants of this country;
western machines having been found to be inadequate to that
purpose. It has received the highest recommendation from
all using them, among whom are Peit & Hodgekiss, Brighton
Mills, Sacramento; Brooks & Hall, Happy Valley Mills, San
Francisco; Wm. Sharp, American Mills, San Francisco; Bab-
bit & Hale, Sierra Nevada Mills, San Francisco; U. S. Hill,
Washington Mills, San Francisco.

These building Mills can save expense and room by using
this machine, as they will avoid all the machinery ordinarily
used for that purpose.

Orders filled on short notice. SHOP on L street, between
Front and Second, Sacramento. H. B. INGHAM.
N. B.—All information given, and orders left at WARREN &
SON, San Francisco, will be attended to.

The following certificate is among the number received
others can be referred to in quantities:

This is to certify that I have one of H. B. Ingham's Improved
Small Machines, and believe it to be superior to any other. I
need no other fixture for cleansing grain, except the machine
itself; it makes no dirt in the mill; occupies but little room;
requires less power, and does the work more perfectly than
any other I have ever seen or used before.

WM. SHARP, Agent American Mills,
Pine street, San Francisco. v3-5

HORTICULTURAL, &c.

 W. C. WALKER.

Osage Orange.
The Best and Cheapest Fence.
 THE following resolution was passed at the great State of Ohio Agricultural Meeting, at which sixty counties were represented by nearly three hundred delegates:

"Resolved, That we recommend to the farmers of Ohio, the Osage Orange as a most valuable plant for hedging, superior in every respect to any other plant which has yet been introduced in Ohio, for economical and enduring fences."

100,000 strong, healthy plants, for sale at \$20 per 1,000; or 5,000 and upwards at \$15 per 1,000, by the undersigned on the Putnam Ranch, near the San Francisco Embarcadero.

All orders left with Warren & Son, Masonic Hall Building, Montgomery street; or sent to the St. Louis Post-office; or by Adams & Co's Express; or to Mr. Nicol, corner of Clay and Davis streets, San Francisco, will be punctually attended to.
 W. M. PAUL.

FLOURING MILLS.
Happy Valley Flour Mills,
 Corner of First and Mill streets, San Francisco.

Encourage Home Industry and Home Production.

THE attention of dealers and consumers of Flour is respectfully invited to the Superior Article manufactured at the above establishment, from California Wheat of the growth of 1854, selected and prepared with the greatest care. These Mills have been in successful operation for nearly two years, during which time the proprietors have received such satisfactory assurances from those who have tested the quality of their Flour, that they can confidently recommend it as being fully equal to any brand in the market. Among the many evidences of the superior excellence of the Flour manufactured by them, the proprietors would direct attention to the substantial testimonials received at the 170th Annual Meeting of the State Agricultural Society, premiums have been awarded at both Fairs for the superior specimens of Flour from the Mills.

Domestic Flour.—A superior article for family use, manufactured from selected Wheat—a constant supply always on hand at the Mill, or at the Depot of the Proprietors, 35 Sacramento street.

A liberal allowance made to the trade.

MISCELLANEOUS.

San Francisco ahead of the World!

Ever on, on space with the Age and Times!

Gallery for Vanee's new Daguerrean Gallery!
 Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE's who wishes
PERFECT LIKENESSES! Because he has now the
 best arranged Gallery on the Pacific Coast, and not to be sur-
 passed by any in the world. Instruments containing lenses
 more perfect, and with greater power than any ever before
 used in this country.

2d. Because he has the **largest light in the world**, from which
 he can form three distinct lights—top, side, and half side lights
 —but now enables him to create the great difficulty which
 every artist in this city has to contend with—namely: In order
 to obtain perfect likenesses, different features require
 differently arranged lights.

3d. Having the **largest light**, he is enabled to make pictures
 in half the time of any other establishment in the city; there-
 fore they must be more perfect, for it is well known, the shorter
 the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating
 of pure silver which produces the clear, bold and lasting picture
 that is so much admired, and which cannot be produced on the
 common plates, as they are now used by other artists.

5th. Because he has of late, after much expending brought
 his chemical preparations to perfection, being composed en-
 tirely of different from anything ever before used in the art, which
 enables him to produce perfect likenesses, at every sitting, with
 that clear, soft and beautiful tone, so much admired in all his
 pictures.

All those wishing perfect likenesses will do well to call before
 starting elsewhere, and judge for themselves.

6th. Prices as reasonable, and work superior to any in the
 city.

Don't forget the place.
 New Building corner of Sacramento and Montgomery
 streets, entrance on Montgomery, next door to Amelia's.

TREADWELL & CO.

CORNER OF CALIFORNIA AND BATTERY STREETS

 promptly.
 WARREN & SON.

Varieties.

A WIFE WANTED.

Yr fair ones attend, I've an offer to make you—
In Hyacin's soft bonds I'm anxious to live,
For better, for worse, a companion I'll take you,
Provided you'll fill the description I give.

I neither expect nor can hope for perfection,
For that never yet was a bachelor's lot,
But in choosing a wife, I'd make a selection
Which many in my situation would not.

I'd have—let me see—I'd not have a beauty,
For beautiful women are apt to be vain;
Yet, with a small share, I would think it a duty
To take her, be thankful, and never complain.

Form must be good, without art to constrain it,
And rather above than below middle size;
Something—it puzzles my brain to explain it—
Like eloquent language, must flow from her eyes.

be must be well-bred, or I cannot respect her,
Good natured and modest, but not very coy;
Or mind well informed—in the principal sector
That sweetens the cup of hymental joy.

er home she must love, and domestic employment,
Have practical knowledge of household affairs,
And make it a part of her highest enjoyment
To soften my trouble and lighten my cares.

er age, I would have it at least to be twenty,
But not to exceed twenty-five at the most;
And the girls of that age being everywhere plenty,
I hope to get one of that numerous host.

fortune I ask—I have no predilection
For glitter or show, or the pomp of high life;
I wish to be bound by the ties of affection,
Now I have you the sketch of a wife.

"LITTLE DAM BROOK."—A clergyman seeing a little boy playing in a small stream by the road side, inquired for his father. "He's over to the little dam brook," exclaimed the lad. "What?" said the reverend gentleman, shocked at the boy's profanity, "can't you speak without swearing?" "Well, he is over to the little dam brook, any how," persisted the boy, as he went splashing through the water and mud after a butterfly. "He's been to the little dam brook all day, and if you don't believe it, you can go up to the house and ask mother." The clergyman sought an interview with the mother, immediately, and complained of the profanity of the child. After telling her, however, what the lad said, she laughingly informed him that "little dam brook" was the title by which the stream was called, to distinguish it from "big dam brook," situated a few miles further to the eastward. He now felt that he had wronged the boy, and, therefore, owed him an apology. Hurrying back to the spot, he exclaimed: "Boy, I wronged you in accusing you of swearing; but you should have told me that 'little dam brook' was only the name of a stream, and then I would not have scolded you." "Well, 'taint no difference," said the happy youngster, as he held aloft a struggling frog that he had speared with his mother's clothes stick. "There's a big dam on big dam brook, and a little dam on little dam brook, and we would have a little dam on this brook, only I 'spect it's so small it ain't worth a dam."

THE TOMB OF LA FAYETTE.—A recent letter from Paris says: "We went in the direction of the Faubourg St. Antoine; as it was not very far from the Rue Piepus, and I wanted to see the grave of La Fayette, and S— having never seen it, we drove thither. It is not far from the Barrier du Trône. It is a very small, obscure spot, beyond a beautiful garden belonging to a body of RELIGIEUSES. It contains the tomb of some of the oldest and most celebrated of the French nobility—the Montmorencies, &c. All the family of La Fayette repose here. He is side by side with his wife, and at their head is the stone slab of G. W. La Fayette. They are all stone slabs. La Fayette's is the last, close to the stone wall, and the rest on stones and pebbles. Not a single blade of grass grows near it. I felt sorry to see it so neglected. I asked our guide if it was visited by many people. He said 'No; sometimes the Americans visit it.'"

PAT ON NATURAL HISTORY.—Van Amburgh's elephant, being enveloped in a huge blanket, was picking up the fugitive straws of hay upon the ground, by poking his trunk through an opening in his covering, observing which, a son of the Emerald Isle, who just entered, exclaimed: "And what sort of a baste is that atin hay with his tail?"

A WESTERN editor thus delivers himself: "We would say to the individual who stole our shirt off the pole, while we were lying in bed waiting for it to dry, that we sincerely hope the collar may cut his throat."

"I thought you was born on the first of April," said a Benedict to his lovely wife, who had mentioned the 21st as her birth day. "Most people might think so, from the choice I made of a husband," she replied.

DIVERTING DIALOGUE.—"Mamma, can a door speak?" "Certainly not, my love." "Then why did you tell Anne, this morning, to answer the door?" "It is time for you to go to school, dear."

Wax is a colt getting broke like a young lady getting married? Give it up. Because he is going through the brittle ceremony.

REMEMBER that the Human Constitution is one that cannot be amended by a two-thirds vote!

The way to make a tall man "short," is to ask him to lend you a thousand dollars.

HORTICULTURAL, &c.

17,000 Premium Strawberry Plants!
From the Shell Mound Nurseries and Fruit Gardens,
Near San Antonio, Alameda County.

WE offer for sale the following List of Plants, viz.:
1,000 Boston Pine, at \$70 per 100
5,000 British Queen, " 35 " "
1,000 Burr's New Pine " 35 " "
500 Rival Hudson, " 35 " "
5,000 Large Early Scarlet, " 15 " "
2,000 Hovey's Seedling, " 15 " "
1,000 Prof. H. H. Hovey, " 15 " "
1,000 Black Prince, " 15 " "
500 Crimson Cone, " 15 " "

Plants from "Shell Mound" received a premium at the late Fair of the California State Agricultural Society. Several of the varieties above named are believed to be remarkable for their fruitful qualities, having been cultivated for several years by Mr. Sanford, at his gardens in Wayne county, N. Y., with special reference to the production of fruit.

Orders received for any number of plants, (not less than 100) and promptly executed. On invoices of \$500, and over, a discount of twenty per cent. from the above prices will be allowed.
Address, J. L. SANFORD, Cultivator,
Shell Mound, near San Antonio;
or, R. W. WASHBURN, Proprietor,
Care of Wells, Fargo & Co., San Francisco.

GREEN ANTICHOKE; and all other varieties of German Seeds, too numerous to mention in an advertisement.

Also Received.
Timothy seed; White and Red Clover seed; Kentucky Blue Grass and other grass seeds; a large variety of Peas and Beans; Long Island Corn; SHAKER HERBS, such as Wormwood, Golden Seal, and numerous other kinds.

For sale wholesale and retail, by
J. M. MOORE & CO.,
Corner California and Leidesdorff streets.

GARDEN SEEDS.

FRESH AND GENUINE, per "Express"—Just received and constantly arriving—
500 lbs. Yellow Onion Seed
100 " Red " "
60 " White " "
200 " Turnip Seeds for sets.

Fruit Seeds, &c., of 1851: Peach, Apple, Plum, Cherry, Pear, Locust, White Birch, Elm, Orange, Raspberry; together with a complete assortment of Shaker and California Garden Seeds. Also, Flower Seeds, Californian and Eastern.
Wholesale and Retail, by
C. MORRILL, Druggist,
K street, cor. Third, Sacramento.
Branch Store, P. T. Lee, cor. Third.

New Invention!
BULKLEY'S STEAM DRY KILN.
THE undersigned takes this opportunity to offer to the citizens of California, Oregon and Washington Territory, the valuable invention hereby announced. One of the greatest wants of California and vicinity, for years, has been the means of preserving her products so as to have a continued supply during the late months. The vegetable products to an immense amount are annually lost at the approach of the rainy season, its long continuance, and the exposure that necessarily results to those products from the season; and the vast quantities that are exposed and accumulated in warehouses and elsewhere, have demanded some method of preserving these immense and valuable crops, that otherwise would be a loss to the producer and to the State. The loss of the Potato and Onion crop last year would cost almost a million of money, and the loss the present year will be heavy, without preservation.

The undersigned, holding the "Patent Right of the Steam Dry Kiln," offers this invention with the confident assurance that it is the very thing needed—that it is the *ne plus ultra* for this very want. It has been thoroughly tried and approved, for these products, and for grain also. It has been tried for Lumber, to which it has been more particularly applied in the States, for the Vegetable products do not require so much care here. To shippers of Grain this invention removes all the difficulty in sending Grain on long voyages, and under the drying process of this valuable invention our Grain growers can now send their Grain to New York with safety.

The proprietor needs only to append the following certificates. The name of Henry L. Ellsworth, Esq., carries a weight that is convincing to intelligent men, and the other evidences should be satisfactory.
The model machine will soon be placed on exhibition at the office of Warren & Son, where all information can be had.
JOSHUA BUTTS, Proprietor of Patent.

A Diploma and Silver Medal
Was awarded to the inventor at the New York State Agricultural Fair, held at Rochester, as a testimonial of its superior merits.

Letters from Hon. H. L. Ellsworth.
LAFAYETTE, January 7, 1853.
DEAR SIR: I congratulate you on the completion of your Dryer. I have for a long time urged the importance of extracting the moisture from grain and flour before shipment, to prevent fermentation. Your plan will obviate the difficulties hitherto experienced. There can no longer be any doubt that 18 pounds of water can be taken from a barrel of meal, and 15 pounds from a barrel of flour without affecting the taste or appearance of the same. Experiments at Lafayette show this. Nor is it a less gratifying circumstance that when the flour or meal is cooked, it reabsorbs proportionately more water, thus saving freight and the purity of the article. If the moisture is extracted, it must be obvious this meal will keep for long voyages, passing through the hottest climates. To the Navy, your improvement is invaluable. The world has become somewhat skeptical on the subject of patent rights. The simplicity and compactness of your machinery enables you to exhibit a working model, to remove in a moment any doubts as to your ability to maintain your patent and prove its utility. One feature in your plan deserves particular notice; in fact, this constitutes your main claim, viz., not drying by common steam, or by fire heated pans, as has been done hitherto, but by using heated steam. Few persons are aware of the small expansion of steam, and how easily it can be heated to a high temperature with little confinement. You will be able to raise a stream to the point of ignition, say 600 or 700 degrees, though a far less heat will answer all your purposes. I will only say that European prejudice against Indian corn is fast dying away, and we may anticipate large shipments both for man and beast. The great fertility of the West, and the reduction of freights both inland and on the ocean, justifies this anticipation. Wishing you success,
I remain, yours respectfully,
HENRY L. ELLSWORTH, late Commissioner of Patents.
To Henry G. Bulkley, Esq., Kalamazoo, Michigan.

LAFAYETTE, March 20, 1853.
DEAR SIR—I am highly pleased with your Dryer for lumber by heated steam. It seems almost incredible how soon even green lumber can be prepared for use. Twenty-four hours is all that is required. Steam has hitherto been used to advantage, but heated steam has not been applied for this purpose before your improvements. Every manufacturer of lumber would find it profitable to erect a cheap dryer on your plan. Full one-third of the weight of some kinds of lumber is removed by drying; the saving in cartage will more than repay the expenses of drying. When the difference between seasoned and unseasoned lumber is considered, no one who regards good work will regret the trifling expense of preparing the raw material.
Yours respectfully,
HENRY L. ELLSWORTH.
To H. G. Bulkley, Esq., Kalamazoo, Michigan.

Kalamazoo, Pa., July 12, 1853.
I hereby certify that I have had charge of one of W. O. Hickok's shops where the most of his wood work is done, that I put up and have used H. G. Bulkley's Patent Kiln, and heartily approve of everything W. O. Hickok has said about it, and am certain that no recommendation can be too strong in praise of said kiln.
(17)
W. H. SULENBERGER.

NURSERIES, &c.

Golden Gate Nursery.

Corner of Folsom and Fourth streets, San Francisco.
OFFICE—No. 170 WASHINGTON STREET.
THE attention of the public is requested to a large collection of the flowering Plants, now for sale at this Establishment, embracing the most extensive assortment in the State; among which may be found—

Cuculla Japonica, in seventy varieties;
Perpetual blooming Roses, of all the classes;
Moss and climbing Roses, do do;
Fuschia, a choice collection; Heliotropes, in variety;
Rose and Lemon Geraniums;
Lemon-scented Verbena, flowering do, Arbutus, Azalea, Oleander, Passiflora, Honeysuckle, Carnations, Dahlias, Bulbous Roots, &c., &c.; and a general collection of Green-house plants and ornamental shrubbery.

Catalogues for 1855 will be ready on the 1st of December, and will be forwarded on application.
Orders for any part of the State, will be promptly attended to, on application to D. Nelson, No. 170 Washington street—or to the proprietor.
(7-3m) W. C. WALKER.

Smith's Pomological Gardens.

Banks of the American River, two and a half miles from Sacramento city.

THE proprietor of the Gardens would respectfully invite all who are engaged in "Nursery and Gardening" to visit his grounds. He will be happy to show to them, ready for sale, this list, as fine a collection of

Fruit Trees, Ornamental Trees, Grape Vines, Shrubs, Flowering Plants, and Green House Plants, as can be found in all the great Sacramento Valley.

The proprietor would call particular attention to his collection of Peaches, believing that the specimens exhibited by him in Sacramento and San Francisco markets have been unsurpassed in size, quality, or flavor.

The collections of Pear Trees will equal any in the country; these, with all the new varieties, will be offered this autumn.

The undersigned believes his collection worthy a visit to his grounds of all who are interested in Gardening and Orcharding.

The subscriber will offer this autumn Five Tons Vegetable Garden Seeds, that have been raised upon his own grounds. These seeds have been grown with care and will be sold at wholesale for the present, at the Gardens.

Persons in want are invited to call upon us, and we will make reasonable terms.
Fruits, Bouquets, &c., will always be furnished at short notice at the Gardens.

The proprietor returns his thanks for the liberal patronage of the past, and hopes for a continuance of such favors.
A. P. SMITH, Proprietor.

San Jose Nursery.

WE are prepared to supply the trade with the best varieties of Fruit Trees, Grapes Vines, Roses, Plants, &c., in all their varieties; and are disposed to sell at a low price, that we may suit the times. Our Trees are cultivated with great personal care. Those who desire to make Nurseries and Gardens will do well to visit and ascertain for themselves our ability to supply what we advertise. Trees will be carefully labelled and packed for any season or distance.

The following Trees we offer this season:
Peach Trees, 44 varieties;
Pear do 44 do
Apple do 54 do
Plum do 15 do
Apricots 6 do
Almonds 2 do
Quinces 2 do
Cherry do many do
Grapes, 12 do

Strawberries, 7 varieties;
Fig Trees;
Pomegranates;
Walnuts;
Chestnuts;
Locust Trees, very large
Rose Acaciae, for hedges.
Orange Orange, for hedges.

In addition to our Fruit and Ornamental Trees, we offer ten thousand *Junos* Roses, comprising more than one hundred varieties, all of the best known kinds. Our plants are too numerous to specify in an advertisement. Hoping visitors will come and see us, we refer them to our agent in San Francisco, Mr. DELANDINE, 121 Sansome street, where we shall have a collection of plants in the season as samples. The nursery is situated in the city of San Jose, immediately above the City Mills.

We are also permitted to refer to Warren & Son, who have examined our grounds, and who, on test of the character of our nursery, and who will receive and forward orders to us.

Every order promptly and speedily attended to.
S. J. L. PREVOST & CO.

Pacific Nursery.
MISSION DOLORES AND ALAMEDA
HAVE always on hand and for sale, the latest collection of choice ROSES to be found in the State. Also, Grape Vines, Fruit and Ornamental Trees in great variety; 500,000 Strawberry Plants, including thirteen varieties of all the best known kinds. For sale cheap, in lots to suit purchasers.

All orders left with us at the Mission Dolores, or at our Nursery at Alameda, or with Warren & Son, at the office of this paper, will be promptly attended to.

Prices guaranteed at the lowest market rates, and everything sold fully warranted to be correct.

18 H. A. SONNTAG & CO.

SOLIDIFIED MILK
MANUFACTURED BY
SAMUEL T. BLATCHFORD.
FOR SALE BY
BINGHAM & REYNOLDS,
201 Sansome street.

THE PRESERVED MILK is made from PURE FRESH MILK, combined with crushed sugar, and when reduced to liquid, as stated in the directions, can be used for all purposes for which Milk is used, as it is simply Pure Milk and Sugar.

The Tablets weigh one pound and is equal to five pints of pure milk. The proprietor recommends with confidence the article to all persons going to sea, its properties of self-preservation having been fully tested during the last eighteen months. To the WILLING interests its value is inestimable, and to travelers by land or sea, (especially when accompanied by young children) it recommends itself by its portableness and the facility with which it may be used.

The proprietor would call the attention of the public to the following certificates:
New York, April 4, 1854.

Mr. S. T. Blatchford—
DEAR SIR: In answer to your inquiries relative to the preparation of Solidified or Preserved Milk, having used it on my last voyage to San Francisco, I can with the utmost confidence recommend it to sea-faring men as being the best article of the kind I have ever seen or used, retaining, as it does, the taste and flavor of fresh milk.
Yours, &c.,
O. R. MUMFORD,
Master of Clipper Ship "Tornado."

Extract from a letter from a Californian, }
Dated May 31, 1854.
"In regard to the Solidified Milk which you entrusted to me for the purpose of testing the merit of the preparation, I can with confidence say that it has proved entirely satisfactory. I have a portion of it yet remaining in as good condition as when you gave it to me, and it will, I have no doubt, keep for years. The preparation will be a great luxury to the sailor, as it will enable him to enjoy an article of food that has hitherto been supposed could only be had on shore.
Very respectfully, yours, &c.
EARL DARTLETT."

Extract of a letter from Rev. M. Williams, }
Dated Valparaiso, Aug. 9, 1853.
"But the Tablets of Milk prepared by S. T. Blatchford & Co. were the climax of comfort. I would say, let no one go to sea without them. I have a few now left in my room as perfect as when first made."

April, 1853.
Mr. Samuel T. Blatchford—
DEAR SIR: Some twelve months since I heard of your preparation of Milk and procured a sample, a portion of which I tried at the time and found it good. When preparing for sea last December, I tried the balance, which proving equally as good as months before, I procured several pounds, and during the voyage to and from Europe, have had the milk on the table every day, and have found it excellent.

I have used several preparations of milk, and have no hesitation in pronouncing yours the best. I consider it just the thing. In future voyages I shall endeavor to have a supply of it.
Yours, very respectfully,
RICH S. CORNING,
Master of Clipper Ship "Rapid."

Valuable Newspaper Routes.
WE have several very valuable Newspaper Routes for sale. Enquire at the office of CALIFORNIA FARMER, Masonic Hall Building, Montgomery street.

MISCELLANEOUS.

HAT STORE

COLLINS & CO., PRACTICAL HATTERS, (PREMIUM HAT STORE.)

157 Commercial street, San Francisco.

THE undersigned would take this opportunity to return their thanks to their friends and the public generally for the very liberal share of patronage which they have received. They take pleasure in now announcing that they are determined that no one shall surpass them in the beauty, or finish, or quality of a Hat; that no gent shall wear a finer Hat than can be found at COLLINS & Co's Warehouse.

The proprietors of this establishment exert themselves to manufacture to order the latest styles and most approved patterns. The stock of HATS and CAPS, of every kind, now on hand, cannot be surpassed in this city.

17 COLLINS & CO.

WYMAN & CO'S SUPERFINE CLOTHING!

WM. MANSFIELD & CO., 151 Montgomery street, Offer their Large and Elegant Stock of

FALL AND WINTER CLOTHING, OF THE LATEST STYLES, AT GREATLY REDUCED PRICES.

In order to make room for an entire new stock for the Spring and Summer Season.

ALSO, Every description Fine Furnishing Goods; Fine Calf, Patent Leather and Water-Proof Boots.

W. M. & CO., would also invite dealers in the country and the city generally to call and examine their stock.
v3-14

gress is the shortness of leases, and above all the absence of any security for the farmer at the expiration of his lease. We are in this respect in a much inferior position to that of trade, so true it is that with us every thing is yet to be done.

"The famous clause of Lord Kames ought to be introduced into our leases for who would trust to the soil if he have no security for the morrow? Who would make improvements requiring so many years, for the results of which one must wait so long, (let that rather be asked of Grignon,) if at the end of ones lease a person has no right or title to demand a continue of indemnity? Yet what could be more just and proper? So long as we do not enter resolutely upon this course of improvements, we shall remain disputing in an evil ring.

"If an example of what agriculture can do when successfully managed were needed, we might cite the beautiful and industrious *Department du Nord*, whose entire riches depend upon the cultivation of the soil. On leaving Lille or Valenciennes are we not struck with admiration at witnessing on all sides the air obscured by the smoke of the manufactories of various kinds. Manufactories for sugar and for radive (*chicoree*) breweries, distilleries, &c., almost piled on top of one another in every village? On the highways where it not unfrequently is difficult to get along on account of the number of wagons, cereals, sugar, alcohol, manure, lime, coal from the pit and black cattle, are busily transported. What life, what cheering animation! Then on the farms they maintain three or four times as many cattle as with us, for the pulp of the beet-root enables them to feed stock and make manure at a cheap rate. There is never any respite for the laborer. Farming operations need his arms every day of the year, and this work is more useful to him than if he were building palaces, for in augmenting the riches of the ground he is increasing his own wealth. If the whole of France resembled this beautiful District, our country would be the first in the world. Why then, seek elsewhere new countries? Wherefore favor the emigration of those hands of which the mother country stands so much in need? We think that there is now enough at home for seventy millions of inhabitants. The benefits arising from the manufacturing of sugar have produced this result in the North. From the day on which French agriculture shall have become prosperous—and this end it will attain by producing meat—it will bring forth miracles."

Government in view of the high prices of alcohol, grain and oil, has just passed a decree the object of which is a reduction of the import duties on sugars, molasses, raisins, grains and oils the seeds of sesamum, caruations and wild cabbage. We will publish this decree in our next number. For the present French agriculture is not interested in the question. Its interest will not be affected by these rights newly established provisionally, until they are enforced under different circumstances to those in which we now find ourselves situated.

BASS-WOOD PAPER.—The Albany Evening Journal is trying the experiment of using paper made of bass-wood shavings. It is represented as containing no admixture of rags or other material, and has no sizing. Its appearance is very fair, but somewhat darker than the ordinary cotton paper. Although there is no sizing in it, it can be written upon without any "spreading" of the ink. No printer need be ashamed of the article for newspaper purposes. The bass-wood paper is manufactured by an invention of G. W. Beardslee of Albany. The Journal says it will work a revolution in paper making, and compel rags to abdicate. It adds:

But Mr. B. is not restricted to basswood. He has made experiments which leave no doubt upon his mind that a paper even superior in texture to that which he has already produced from that wood, can be produced from other native woods, found in equal abundance.

The pulp is manufactured very cheaply, and by a very simple process—known, of course, to himself alone. It can be packed in bags, as compactly as cotton, and sent us readily to any part of the country or world, and at rates which (if it shall prove available,) must ultimately drive rags entirely out of the market.

Thus far Mr. B. has only manufactured so much pulp as was necessary for the prosecution of his experiments. But he purposes, as soon as arrangements can be perfected, to enter largely into the manufacture of the article for market. It can be used in any paper mill, furnished ready for the finishing engine, and capable of producing a weight of paper equal to the weight of pulp used. Consequently, in adopting it, no new machinery will be required, but a great deal of the most cumbersome now used, and much of the more unpleasant part of the work of making paper from rags, may be dispensed with.

CELEBRATION OF ST. PATRICK'S DAY.—The anniversary of the birth day of St. Patrick, the Patron Saint of Ireland, was celebrated with a great deal of spirit by the Irish population. The principal festivities were an excursion to Russ' Garden, where an oration and poem were delivered, and a dinner at the St. Nicholas Hotel. In the evening, the "Sons of Erin" had a ball at Musical Hall.

According to the *Miners' Advocate*, the school in Diamond Springs numbers forty pupils. At Newtown there is a school with thirty scholars, and schools are about organizing at Weberville, Pleasant Valley and Grizzly Flat, making, in all, five within the township.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SAN FRANCISCO, THURSDAY, MARCH 22, 1855.

Encouragements to Agriculture.

WHEN we look abroad and see the condition of Agriculture, the advance it has made and the success which rests upon it in the older nations of Europe, and even among the despotic governments of the old world, and when we select the States of our own glorious Union that excel in this noble science, we cannot but believe that prosperity to have arisen in a great degree from the generous sympathy and encouragement which has been bestowed upon it by those Governments where it has prospered most. It does not require other proof of this than the great facts which stand out so prominent in the History of Agriculture.

England, Ireland, Scotland, France, Belgium and other nations bestow rich bounties and gifts continually, and richly endow those institutions that advance the agricultural knowledge and wealth of their several kingdoms. Schools and colleges of Agriculture are established and supported by the principle governments of Europe, and this science is made a fundamental study in their schools. France has seventy-five agricultural institutions, Germany too, and Italy; the Autocrat of Russia, even in that frigid clime, has sixty-eight agricultural schools and colleges sustained by the government; and these all throughout Europe have the sympathy and approbation of the people, not only of the masses but of the nobility and those in power and influence, and whenever this is the case, Agriculture prospers, and where Agriculture is prosperous the masses of the people are so. When we look at home, when we examine this subject in our own country, we find the parallel holds good, and those States that have done most for Agriculture are the most prosperous in all their rural districts and among the great masses of the people. We would refer to Massachusetts, the "Old Bay State," and to the report of their Board of Agriculture, which speaks of her success. We refer also to Vermont, the interest that this State feels, and the fact of her introducing standard works of Agriculture into all her schools. We would refer to the fact that the State of Maine makes an annual appropriation, and a liberal one, to every County Agricultural Society in the State, as an encouragement to greater effort, and this liberality has largely increased the value of agricultural lands and the taxable property of the State, and thus brings back into the coffers of the State large returns for its wise liberality. New York, Ohio, and other States, have their State Boards of Agriculture, generously aided by the government, and these institutions in return reveal sources of wealth and revenue that would otherwise have never been made known.

We would earnestly urge these facts upon those who are guardians of our public interests. We would ask them to contrast the success of this great interest where it is cherished and protected with paternal care by the Government, with the depression that exists where it is not. California has resources within herself far richer than any other State in our glorious Union; like a child richly endowed by God and nature with intellectual gifts and a sound physical constitution, who needs a wise and skillful training, so this fair State in all her varied resources needs from the parent government watchful care and generous aid, and she will well repay for the care and kindness bestowed; for all that can be done she will return a thousand fold. California will never prove ungrateful to those who legislate or labor for her advancement; the reward may not come in the gold which all men seek, but a nobler reward in having the consciousness, as a citizen, of having aided to advance her prosperity and greatness.

SUPERB BUTTER.—We have received from the hands of Mrs. Abbot, near San Antonio, a box of most superb butter, for which we tender our best acknowledgements. We have proved the butter by the best of all tests—the tasting—and we assure our friends that we need not import butter, for we have a better quality made by our own dairy-women here, than can be imported, be it ever so good. We learn that from this dairy of thirteen cows, a very handsome income is received, enough to satisfy for all cost and care.

The largest specimen of pure gold ever found in California, it is said, weighing two hundred and fifty ounces, was found on Scott's bar, Siskiyou county, on the top of the ground, and 380 feet from the river.

Sonoma County Agricultural Society.

We are pleased to notice the action of the friends of Agriculture in Sonoma. Good must always be the result of county organizations, when the cultivators shall congregate often to consult upon their interests, and for an interchange of sentiment, for mutual conference, and to make known the result of their labors. We feel assured all will notice a speedy improvement in many of their systems of labor. It is highly important that the government of county societies should be efficient. It is of the utmost moment that such societies should have officers that have their "hearts in the work"—real working men, and such men only can build up a society. County organizations should be in constant correspondence with each other and with the parent society, by and through their corresponding secretaries; in this way a valuable fund of information can be diffused from society to society, and thus through the entire State.

We heartily wish success to Sonoma, and shall be glad to hear from this new society, and will cheerfully do all we can to promote their best interests. For the information of Sonoma, we would mention that Napa, Santa Clara and Sacramento, have each organized, and each of these societies should be in correspondence with each other. We trust also that the society will furnish us with their doings regularly, and we shall be happy to make them known, and we hope also that each member will do us the pleasure to add his name to our subscription list.

ONION LICE.—We have received information from various sources on the American flats, in the gardens, and on the ranches in Sacramento county, that many are losing their onion crops by a small yellow louse that cuts the top and eats into the stock of the onion, and causes it soon to wither and die. In some instances whole crops of the onion are lost, and the danger is increasing. This insect has never been seen in this district before, and it is important that those who know any remedy should communicate with us, that we may spread the information as widely as possible. This insect has been known in England, but we have no remedy in mind at the present moment that has been applied. From the nature of the plant and the description of the insect, we would suggest a strong application of lye, made from wood ashes. Wood ashes is always good as a dressing for onions, and a lye will be of great service in removing insects.

PEACH CUTTINGS.—We have often met with instances of raising Peach Trees from slips taken off in early Spring. Upon a recent visit to Benicia we found ocular proof of the fact at the gardens of Capt. Walsh, and trees of three feet high in bloom, raised last year from slips. His process was to take the slips off in January or February, and making a narrow trench of twelve inches deep, put in about four inches of sand. Into this place the cuttings of about fifteen inches long, inserting the cutting into the sand and pressing it about the foot—fill up the trench—the sand absorbing the moisture without clogging or rotting the cutting: it soon sends out its fibrous shoots, takes root and grows freely. Having seen trees grown in this way we suggest further experiments by those who desire to try, and should be glad to know the results.

GUANO AS A FERTILIZER.—In Europe guano is the chief ingredient used to enrich the soil, and it is used in all experiments in horticulture and floriculture; also used especially upon grains and grasses. Guano is used to a large amount in the Eastern and middle States; yet it has not been used in California to our knowledge, although it could be procured easily from our islands in any quantity. We are frequently inquired of from many sections of this State, if it can be had here. Should there be any of our cultivators who have used it, we should like to know the results; and if any persons have guano for sale, we should like to be informed of it. Any information upon the subject will be gladly received, that all facts relative to it may be promulgated.

FAVORS RECEIVED.—Messrs. Wells, Fargo & Co. furnished us promptly with Eastern papers. We are constantly indebted to our friends the messengers of the Pacific Express Company.

Valuable documents and parcels of seed were received from Hon. M. S. Latham, our able representative in Congress.

From Messrs. Murray & Co., booksellers, a handsome supply of pictorials, magazines, European and States papers. For favors from all we are greatly indebted.

We thank the gentlemanly proprietors of Noisy Carrier's Hall, for Harper's and Putnam's Magazines for March, and for late papers.

California Wine Wanted.

We invite wine growers to send us their samples, and a statement of the quantity they have made, with all the data appertaining to it. Those that manufacture for sale, by advising us, and by advertising with us, will find ready sale for it.

We have frequent inquiries for this wine, and we wish all the information we can have upon the subject.

Will our friends at Los Angeles please give us the needed information.

Please address the CALIFORNIA FARMER.

We take the following from one of our Massachusetts papers, and we think our California gardeners will indeed think our Eastern friends boast a little too much; and however well it may seem to show a beet described as so wondrous, if the Doctor should but come to California, he would indeed be a "pretty man" to boast any more of beets of twenty pounds weight. Gardeners here never think of talking about beets of twenty or thirty pounds; they don't begin to weigh until they approximate to forty and fifty pounds—in truth it is no uncommon thing to find beets here weighing forty, fifty, sixty, and even seventy pounds each. Let those who doubt read the report of the Fair of the last year at Musieal Hall, and they will be satisfied. But when they challenge California to beat a beet of twenty pounds! This is no beet at all. Go to our market gardeners' grounds; they would call that beet quite small. They could show you, scattered here and there, beets twice and thrice that size. Our Eastern friends would look and stare, and open wide their eyes:

"A Beet—Hard to beat."—We have been shown a mammoth beet, two and one-half feet long, two feet in circumference, and weighing twenty pounds and nine ounces, grown in the garden of Dr. Prettyman, three miles east of this city. We challenge California to 'beat' this beet."

SPECIAL ATTENTION.—We would call particular attention to the following subjects in our present issue, as being worthy of perusal:

The translation of French Agriculture. The doings of the Vermont Legislature to advance the knowledge of Agriculture among the youth of that State, by the introduction of Agricultural books.

We commend the "pencilings," by Mrs. E. A. W. The easy and graceful style of this writer must win for her earnest readers.

Horticulturists will please note the article on the "Lawton Blackberry," also the article on the cultivation of the Pear.

"Duncan's Second Art Union," it will be seen, is to come off on the 26th inst. So is it now anticipated. Secure your chances!

Southwick's & Co.'s great Dairy Raffle is to come off about the 1st of next month. Have you secured your prize ticket?

Please read Dr. Cole's card of his profession. It is worthy of full confidence.

Who will answer the Enigma?

RESUMPTION OF PAGE, BACON & Co.—The present week will be an epoch in the history of banking in California, and the influence of the resumption of this house will be felt for good as widely as the excitement which announced their suspension. That their resumption will be permanent and truly beneficial none can doubt who have carefully examined with an unprejudiced eye, the whole proceedings of the house, upon both the Atlantic and Pacific sides. There is all the evidence needed of ample means and ability to become again the same responsible agents of millions. Although the delay in resuming may have been longer than some would wish, yet it is far better, for all such delays are not dangerous, but wise, and when the doors of this house shall again open wide to perform its former "world of business," we venture to assert that our city will feel the good influence in all the avenues of trade and commerce.

MADAME ANNA BISHOP.—We are highly gratified to see it announced that this distinguished Prima Donna has arranged to gratify her friends by a series of grand performances, upon an entire new plan. We have full confidence they will indeed be grand. The taste and skill of Madame Bishop, with the aid of Bochs, will ensure something unique, grand and beautiful; and we trust will not only be duly appreciated, but amply reward this able artist.

Rev. Mr. Briggs will lecture on temperance, at the Sons of Temperance Hall on Washington street between Montgomery and Sansome, next Sabbath afternoon, 2 1-2 o'clock. The public are respectfully invited to attend.

Agricultural Education.

We learn that the Legislature of Vermont has been the first to pass a law introducing an Agricultural Book into their Common Schools. The title of the law is "An Act to Encourage the Study of Agriculture in the Common Schools," and the book selected for the distribution is "Waring's Elements of Agriculture." The following is a copy of the law:—

It is hereby enacted, &c.

§1. The Governor is hereby authorized to purchase one copy of "Waring's Elements of Agriculture," for each town in the State, and to draw an order on the Treasurer for the payment of the same.

§2. One of these books shall be placed in the hands of the Superintendent of Schools of each town, with instructions to examine it with regard to its merits, and (he) shall report, to the Clerk of the said town, what number of copies, if any, are required for the use of the Common Schools of the said town.

§3. The legal voters of each town shall, at the next annual town meeting, vote whether or not the town shall purchase the number of books recommended by the Superintendent aforesaid, and the Town Clerk shall report to the Governor of the State the result of such ballot.

§4. The Governor shall then order to be manufactured, in such style as he shall deem expedient, a sufficient number of the books to supply the demand by the aforesaid ballot, &c.

The preliminary purchase has been made, and measures are being taken to introduce these books as generally, as even such high sanction seems to justify. This little work will prove a pioneer in the dissemination of agricultural knowledge among the rising generation, and will at least encourage a taste for that class of reading which is most needed by the youth of our country; for while we freely admit that belles lettres acquirement is of use to every one, still we cannot but observe that the general tendency of the public mind is rather instruction of an amusing kind, than that of a more utilitarian order. Why is it that almost every individual is conversant with prominent points of English history, and still know so little of all the useful arts? If we consult the happiness of man alone, irrespective of his immediate profit and consequent comfort, we shall even then find that those who have devoted themselves to so much of the study of the arts and sciences as will enable them to enjoy the observance of Nature's laws, are the happiest, and it is for this reason that boys who have spent part of their life in the country, and have afterwards received finished educations, form that portion of our community who are most observant of truths, and are the prominent men in our legislative halls, mercantile and manufacturing communities, etc. This element of mind, the power to observe truths, is peculiarly observable amongst agriculturists, and if the means are afforded them in early life time, cannot but tend to the progression of the nation at large; thus in rural districts good elementary works on agriculture should be placed in the hands of youth; in manufacturing districts those on mechanical philosophy should hold a similar place, and in one or two generations the peculiar property of the American mind, utilitarian invention, would be rendered the great engine for national advancement. It is by such means that our happy country may approach her destiny, and the world may be presented with the before unknown epoch, of an educated agricultural community.

This young author from having been our pupil, has rendered himself subject to the sarcasm of the few fault-finders of the agricultural press who have attacked us, with or without opportunity; but thus far they have failed to point out a line in his book to which they can object, or an assertion which they can contradict. Its merits will outlive those who have tried to traduce its author, and its present acknowledged quality is such, that while these fault-finders have jeered at him for having rendered himself more competent to produce such a work at an early age than they are at middle life, still the work itself has so commanded their respect, that they have been compelled either to praise it or pass it by in censurable silence. We have not seen one solitary fault attributed to Mr. Waring's production.—*Working Farmer.*

A SUGGESTION.—The use of gas tar, to preserve plants from insects, appears to be attracting general attention. We have noticed several statements, where, accidentally, the odor of this substance had the effect of keeping plants free from insects. In one instance the plants were watered from casks in which this gas tar had been previously kept; in another, the rafters of a greenhouse had been painted with the tar to preserve them; and in another, the tar, in a diluted state, was applied with a swab, fastened to a pole, to destroy caterpillars' nests which it did effectually. Why would this gas water not have the effect of preventing the ravages of the cecidius, if sprinkled over the trees at the proper season? If it has such an effect in green-houses, it may be supposed that it would be as effectual out doors. Is it worth a trial? It should only be tried by the water of the tar, and not the tar itself, which would be apt to kill both tree and insect at the same time.—*Michigan Farmer.*

Try this on the insects upon the Onions.—Ed.

The Democrat says that the Placerville market is furnished with an abundance of vegetables, grown in gardens on the outskirts of that place.

The Marysville Herald has glowing accounts of rich discoveries at Oregon Gulch.

DUNCAN'S ART UNION.—If you would get rid of the blues, go to Duncan's galleries. Ye that are so sadly oppressed with ennui, speed quickly to Duncan's! and ye that find your trade drag heavily, go there and you will find enough to amuse, instruct and elevate the mind. The blues will vanish, ennui will disappear, and your mind will be so happily employed, that hours will pass rapidly, and ere you are aware of it the day will be spent. Then you will be induced to go again which you surely will do; but not alone. At each succeeding visit take some fair friend, and thus enjoy a double pleasure. We would fain speak of all the beautiful things to be seen; but if we did so, some might think they were as pleased by knowing what was there, as if they had seen them. There are a few things so very beautiful that we cannot refrain from speaking of them.

The singing bird—a beautiful gold chase box, that, by touching a secret spring, the lid of the box opens and up springs a little songster with wings of blue and gold; and, sitting upon his golden seat, sings as sweetly as any living bird.

The tree of birds, fluttering and sporting from limb to limb; the merry songsters seem like life, and one imagines himself again among the trees of his country home. Yet they are but works of art!

Then there is the paintings, sculptures—the statuettes of Cupid and Fido—the magnificent vase and other works of Signor Viti & Sons—all worth hours of study. The wax figures of Mrs. Pelby, of the "Last Supper," the "Intemperate Family," the "Reformed Family," the "Trial of Christ," the "meeting of Drs. Parkman and Webster"—are all truly worthy of attention. Added to these is a fine band of music, from 2 to 5 o'clock in the afternoon, and from 7 to 10 o'clock in the evening, as we learn from Mr. Duncan, so placed for the entertainment of his friends—all free to those who wish to examine these splendid works of art. Surely none should fail of appreciating and enjoying them, aside from any wish to possess them. Under these influences all will certainly wish to possess some of these prizes, and such must know that the present week is the last opportunity, as the drawing is announced to come off on the 26th March (Monday next,) at the Metropolitan Theatre. Those wishing shares should visit this week.

THE FAMOUS HORSE GEN. TAYLOR.—The introduction of fine stock into California is of the greatest moment, and its importance we fear is not fully realized. California possesses a climate superior to any other for the successful breeding of stock. Those who manifest a public spirit and take pains to introduce a high order of animals deserve well of the State. It is a public matter, the result is a public good and should be so esteemed. There are many, very many fine animals in California in all classes, and of almost every species. Some of the finest horses known and the fastest are now in California. Of cattle, working oxen, there can be no better, and all have specimens of stock in our dairy's of the Devon, Ayreshire and Durham, that are an honor to any country. But we digress, we were speaking of that noblest of all animals the Horse, and one of the noblest of his kind we believe we can announce in the splendid entire horse advertised in this week's issue.

We would particularly refer all who are interested in stock to the "card" of the Gen. Taylor. All lovers of a noble animal should see him. He is all and more than described, and has speed. He cannot be beat, at least so we as a Yankee would guess.

TRAVIS & VANCE'S COACHES.—By reference to our advertising columns it will be seen that Messrs. Travis & Vance have put on a new line of coaches to run to the International Hotel free of charge, and to any part of the city for one dollar each passenger. Thus all boarders at this hotel ride free on these coaches from the boats. Besides this, all baggage is safe, the proprietors being responsible for it. These coaches are a public benefit, and should receive a full share of patronage. Messrs. Travis & Vance are known as very obliging and attentive, and we feel sure they will receive a good share of the public patronage.

SOMETHING NEW.—The Massachusetts Ploughman suggests to some of his ingenious readers that a good plan to coax cattle to drink in winter, is to warm the water; and to do this he suggests that where the springs are located so that it can be done conveniently, the water should be conducted through a pipe that would pass through an iron back-log in the kitchen fire-place of the farm-house. We give this as one of the new ideas of our eastern contemporaries. It sounds economical, don't it?

FROM THE EAST.

The mail steamship John L. Stephens, arrived at this port early on Saturday morning last, with dates from New York to the 20th ult., and from Europe to the 3d; also 422 passengers.

The firm of Page & Bacon, in St. Louis, resumed according to previous notice. The business of the first day is thus stated: Received of depositors, \$300,000; paid to depositors, \$135,000; making \$165,000 excess of deposits over what was withdrawn.

Page, Bacon & Co.'s last shipment of gold was robbed on the Isthmus, by the substitution of scrap iron in two boxes, valued at \$38,000. The Transit Company are the losers.

An expedition of U. S. troops was about to leave New Orleans to go out to the Llanos de Escondido, on the southern railroad route, to see whether water could be obtained by Artesian wells.

The joint resolution of the Senate to authorize the President to confer upon Gen. Scott the rank of Lieutenant General has passed both houses and been approved by the President. It gives to the General about \$40,000 back pay, and raises his regular pay to about \$10,000 per annum. Upon ascertaining the vote, Col. Preston drove to the War Department and announced the intelligence to Scott. The General dropped his head for a moment, and tears trickled down his cheeks. His reply was as follows: "Let no man say that this country is ungrateful to one who has served her faithfully."

The President has vetoed the French spoliation bill. An attempt to pass it over the veto failed.

The Pacific Telegraph bill has been passed. The grant of land was stricken out, and the bill as now passed grants a right of way of 200 feet wide in perpetuity; and leaves the parties to select their own route, to build in their own time, to fix their own rates of toll, and extends over all the property of the line the penal laws of the United States for its protection.

The bill appropriating \$858,000 to the Collins Mail Steamship line has passed the House; also the Senate bill to promote the efficiency of the navy.

Mr. Gwin, in the Senate, offered resolutions instructing the committee on commerce to inquire into the expediency of constructing light-houses at Crescent City and Trinidad Bay, California; also, a bill to continue the works at Fort Point, San Francisco; also an amendment to the Indian appropriation bill, to increase the reservations in California. Mr. Gwin moved Judge Douglas' Pacific Railroad bill, proposing northern, southern, and central routes, as a substitute for the original bill proposed by the select committee. This was agreed to, and the bill passed by a vote of 24 to 21. It is thought it will pass the House.

The bill establishing the Circuit Court of the United States for California, passed the U. S. Senate on the 12th ult.

At Havana, during the week ending February 10, great excitement existed in consequence of the discovery of a plot to assassinate the Captain General and his advisers, at the opera. On the 8th, Don Ramon Pinto, an intimate friend of Gen. Concha, was arrested, and thirty-five other influential citizens; and on the 9th, forty more. The Governor of Matanzas was also arrested; also Alameda, the rich planter of Trinidad; also Marti, the manager of the opera. A descent upon the island was apprehended from Gen. Quintana, with 8,000 men. The Kinney expedition is now pretty well ascertained to be intended for Cuba.

Great excitement existed in England on the Ministerial crisis. On Monday, Jan. 29, Mr. Roebuck's motion of want of confidence in the Ministry and providing for an investigation into the conduct of the war, was debated and finally passed the Commons by a vote of 305 to 148, whereupon the Ministry resigned. The resignation was accepted and the Aberdeen Ministry only hold office until a new cabinet can be formed.

The news from the theatre of war is two weeks later, and relates chiefly to the condition of the allied army before Sebastopol. The siege of Sebastopol up to the latest dates, Jan. 22, remained about as per last advices. The cold was intense, and the English were still very sickly. The French force now numbers eight divisions of 68,000 men, and the ninth division is on the way to the Crimea. A dispatch from Prince Menschikoff dated Jan. 20, states that during last night a successful sortie was made against the French centre. Several were made prisoners and many killed. Abundant supplies of all kinds, have arrived—shot, shell and clothing, but no houses. The galvanic apparatus for exploding twenty tons of powder against the sunken ships at Sebastopol has arrived at Balaklava, and also the expected corps of divers. It is expected the explosion will damage the foundations of forts Constantine and Alexander.

GEN. SUTTER FOND.—We have heard it said that a fund is to be raised for this noble pioneer, in the form of lots, by a drawing—prizes to be land. Whatever is done we trust it will be done well, and on a scale equal to his merits. A noble soul like Sutter should have a noble reward.

The Tuolumne Water Company, says the Union Democrat, has addressed a note to the revolting miners, stating that if they will aid in enlarging their ditch, (receiving scrip at the rate of four dollars a day, receivable for water,) they will accede to their demands.

KERN RIVER MINES.—The news from Kern River mines is still unsatisfactory. Mr. Bonney, the purser of the Goliah, reports as follows: It appears from all the reliable accounts from the Kern River mines that they are no humbug, but on the contrary, that all the working miners are doing well, and that the snow which has fallen lately and caused a few of the "lookers on," to return disheartened, will only tend to improve the facilities for mining, as it will enable the miners to work the gulches, which they have been unable to do heretofore, on account of the want of water.

The Los Angeles Star of the 10th inst., says: The news from Kern River mines is very unsatisfactory, and many are returning, apparently sadly disappointed in not having realized their expectations. Some of the miners write to their friends here, encouraging accounts, and many of our citizens have yet great faith in the richness of the diggings in that region.

The weather has been cold and unpleasant in the mines, which has discouraged a great many, even after they had arrived in the immediate vicinity of the diggings, from thoroughly prospecting the country, and who have returned here with unfavorable accounts. We cannot rely on the statements of such persons, who have only stopped a day or two in the mines, but we do place confidence in those of our citizens who have been there for the last six or eight weeks, and who with but few exceptions, report very favorably of their success.

MARYSVILLE.—The rains of the last month have infused new life into our mining districts. The vast heaps of auriferous dirt which have been excavated from the tunnels and drifts in Sierra, Nevada, Little and other neighboring counties, are running through a thousand sluices and toms, and our hardy miners are reaping the reward of arduous toil. We anticipate, as a consequence, the speedy advent of very prosperous times in our city. Already the business of the city is improving. Gold dust is coming in fast from the mountains, and our merchants are buying it, some of them having made arrangements below to draft on responsible houses in San Francisco, to any amount. The roads are yet muddy, and there is not much teaming. So soon as the dry weather sets in, our streets will be crowded with wagons and our city with trailers. The good time is coming, and we predict for our business men more business, and for Marysville more prosperity, than we have heretofore enjoyed.—*Marysville Herald.*

PACIFIC RAILROAD SURVEYING PARTY.—Mr. Nevin King, Acting Q. M. of Lieut. J. C. Parke, Pacific Railroad surveying party, arrived in Los Angeles on the 9th inst. Mr. King says that the survey is completed from Benicia to the San Francisco Ranch, in this county, a distance of forty miles from this city. Lieut. Parke is now making a reconnaissance between the Tejon and Galliano Valley, on the eastern base of the Coast Range and may be expected in town in about two weeks, when he expects to be joined by Lieut. Winler, and company, who will proceed with him as escort.—*Los Angeles Star.*

WEATHER IN EL DORADO.—The Mountain Democrat learns that the recent rains rendered the road to Kelsey impassable.

Bartlett's Bridge on the trail leading to Carson Valley, was swept away on the 7th inst.

On Thursday morning the clouds gradually dispersed, leaving a clear, bright sky. Yesterday morning was quite chilly—flee of the thickness of half an inch having been formed during the night. A heavy frost whitened the ground, but the warm sun soon made it pleasant and embracing. Large fires were indispensable for comfort.

MEIGGS IN CHILE.—Victor Seeman, who went off with Henry Meiggs in the America, arrived by the John L. Stephens from Chile, where he left his companions. Seeman says that he was ignorant of Henry Meiggs' forgeries till they arrived at Valparaiso. He says that Meiggs carried away only \$5,340 in cash, and that he appeared to be very unhappy. We hear that Meiggs has established a mercantile house in the city of Concepcion.—*Chronicle.*

CARRIED AWAY.—The large and substantial bridge over the South Fork of the Mokelumne, was carried off this week, the river having risen above the floor, and swept it all away. As the timbers were very heavy, the water must have flowed with terrible force. In consequence of the loss of this bridge, travelers are forced to go round by the way of Independence, to reach this point.—*Cal. Chron.*

FATAL SHOOTING AFFRAY.—In Monterey on Thursday night, Jerry McMason, the brother-in-law of Wm. Roach, late sheriff of the county and Dr. Sanford, husband of the late widow Sanchez, met in the bar-room of McLaren's Hotel, and after exchanging a few words they both drew pistols and fired, each party was shot through the right lung, killing both instantly.

The mail steamer Sonora, which sailed for Panama on the 16th inst., carried \$921,519.27 and about 300 passengers.

MARKET REPORTS.

"Many hands make light work," is an old saying, and at this time a truism, as to business, for their are many hands engaged in trade that have nothing to do, therefore light work. There is no trade. Flour has advanced a little; Wheat is steady at 3 1/2 @ 4c; Barley is firm at 2 @ 2 1/4c; Oats are scarce at 4c; there is no Buckwheat in market; Potatoes bring 2 @ 2 1/2c. Market vegetables are most excellent, and every variety known is now abundant. The prospect, however, amid all the present depression, is favorable for the future.

Horticultural Department.

The Lawton Blackberry.

For something like a year, or perhaps more, we have noticed in the horticultural papers, a cut with descriptions of a blackberry, bearing this name. Having seen an abundance of new things in the line of fruits within the past ten years, which proved on trial to be of no value whatever, we did not feel that we should confer any favor upon our subscribers by being in haste to picture it to them. As it has now, however, received the favorable notice of our most reliable fruitists, and has been introduced by Messrs. Chas. Downing, P. B. Barry, and one of the editors of the American agriculturist, we have sufficient faith in it to direct attention to its claims. Mr. Downing paid it a visit in person during the past season, on the ground of the gentlemanly whom it was introduced to the public. His account of it to the Horticulturist is—

There is no flim-flam about it, and the only wonder is that it has not been more generally introduced and propagated before. The fruit is large and sweet. It is an enormous bearer; indeed, the quantity (considering the large size of the fruit) surprised me, and the berries were perfect. Mr. Lawton informed me that they continue in bearing five or six weeks, and in favorable seasons, much longer. He has some ten or twelve acres, and will have plants to dispose of in the fall and spring.

This berry was first introduced to the public by Mr. Lawton, of New Rochelle, West Chester, New York, who brought it before the Farmer's Club of the American Institute, in August, 1853. Some of the berries presented by him at that time were from three to four inches in circumference. They were taken promiscuously from the canes and were not an unusual sample of the fruit as grown by him. Mr. Lawton's account of the fruit is this:

This Blackberry has been cultivated in small quantities, for several years, in New Rochelle, Westchester county, where I now reside. I have not been able to ascertain who first discovered the plant, and brought it into garden culture, but am informed it was found on the road side, and from thence introduced into the neighboring garden. As it came to me without any name, to distinguish it from the Wild Bramble, I beg leave to introduce it to the notice of the Club as the New Rochelle Blackberry, and at the same time present as a specimen a few quarts of the fruit, gathered this morning, precisely as they came from the bushes, without being selected. I have examined many works, with a view to ascertain if there ever has been any improvement on the well-known wild varieties, but without success. The Double-flowering, Dwarf, or Dwarf Blackberry, the American Upright, and the White-fruited, are all that are named in the Dorrberry is the first to ripen, and the best flavored fruit. The White-fruited seems to be cultivated as a novelty more than for the fruit. The Upright variety fruits late in the season, is of vigorous growth, and under favorable circumstances, produces large mulberry-shaped berries, but the seeds are not thickly imbedded in the pulp, and are so abundant as to impair materially the quality of the fruit. The blackberry seems to adhere to its original character with singular tenacity, for from the many millions of plants which spring up from the seeds annually, this trillium in almost every variety of soil and situation should constantly find new varieties, but proving the wild plant by careful cultivation is one thing, to produce a new variety is another. The fruit now before you I believe to be of the long named character. It is not like the Dorrberry, or long and mulberry-shaped, like the upright blackberry, and the seeds are so imbedded in the pulp as hardly to be noticed. It looks in shape and size, they compare very well with the Navy Seedling Strawberry. The New Rochelle Blackberry is said to be an unusually large and vigorous shoot with lateral branches, all of which under common cultivation will be provided with fine fruit, a portion of which ripens daily in the first week of June, commencing about the middle of July. They are perfectly hardy, all ways thrifty and productive, and I have not found them liable to be injured by insects.

To Kill the Peach-Borer.

W. N. Townsend, an experienced fruit-grower of Western New York, furnishes the following for Moore's Rural New York:

Your late correspondent, Mr. P. D. Prior, on the peach-grub, minutely writes with much practical knowledge on the habits of the peach-grub, or borer. His mode of treatment, so far as it goes, to destroy the grub on a limited and small scale, is a very good one. Although the hot water, practice, as above, alluded to would be a very convenient and safe remedy for a few trees about your dwelling yet for more extended business, I would submit the following mode of managing the peach-grub, which I have practiced for the last fifteen or twenty years.—Some time in April, when the ground has become dry and the weather mild, with a trival of hot remove the earth from the tree sufficiently deep to reach the worms; then with a regular pruning-knife (for no other instrument but a hooked pointed knife is well adapted to the work), remove all the branches that have imbedded themselves under the bark of the tree; then return the earth to the tree. Also heap up around the tree, four or five inches high, a small quantity of decayed or unbleached ashes, or old lime, if these cannot be obtained, earth will accomplish the same object nearly as well. The after-treatment is to remove the wood from

the tree, where you discover any appearance of gum which will give opportunity to scrape off with your knife all the young grubs that have commenced their depredations. The latter process should be performed in the month of September, always keeping the mound up around the trees.

Black Tartarian Cherry.

This splendid variety of the Cherry, which is also known by the name of the Circassian Cherry, Superb Circassian, Black Russian, Frazer's Black Heart, and Ronald's Black Heart, is said to be a native of Spain, having been carried to Russia, thence to England. It is also said to have been brought from Circassia to England, by Mr. Ronald, in 1794. "It is distinguished for its large oblate-heart-shaped, shining purplish-black fruit, and hangs in clusters. It is a cherry of great excellence, bears plentifully, ripens early, and readily commands in the market double the price of the ordinary kinds." The tree grows rapidly, is very ornamental, and is, on all accounts, worthy of general cultivation.

The Cherry Tree (*Prunus Cerasus*), is said to have been introduced into Italy from Pontus, in Asia, by the Roman general, Lucullus. Cherries were hawked in the streets of London in the beginning of the 15th century. There are between two and three hundred varieties under cultivation.—*People's Journal*.

The Cherry is rather uncertain in the South, especially on the seaboard—it succeeds tolerably, however, in many sections of the "up-country," and should receive increased attention everywhere.

INCREASING THE SIZE OF FLOWERS.—A horticulturist of the suburbs of Versailles, in studying the physiology of the vegetable kingdom, conceived the idea that the smallness of certain plants—the violets, for example—was owing to an atmospheric pressure too great for their delicate organs. Having fixed this idea in his mind, the florist conceived the idea of putting his theory into practice. Providing himself with a small balloon, rendered sufficiently tight to prevent the escape of any gas, he launched it into the air, having attached to it a silken cord twelve hundred metres long. Instead of a car, the balloon sustained a flower-pot of Parma violets. This experiment has been going on about two months with the most wonderful results, in the shape of violets large as Bengal roses. It is expected that the above experiment may be turned to some account.

Food for Canaries.

In a very few weeks our friends who raise canaries will find use for the following hints upon the best mode of treatment and care of these household favorites:—

Rape and canary seed are the best kinds to give them as a general diet; the summer rape is to be preferred, not being so hot and oily as that sown in the autumn, which is larger and blacker than the other. When they require rich, stimulating food, as during the moult and breeding seasons, a small proportion of hemp seed should be mixed with the others, and also a little hard boiled yolk of egg chopped small; at such times, too, a little raw lean meat, scraped fine, may be given occasionally. And in some measure to neutralize the heating effects of this rich diet, let them have some green food, such as salad, water cresses, &c.; something of this kind is good for them all through the hottest part of the year, and while it can be had, the cage or aviary should never be without groundsel, of which they are very fond, both green or in the ripe state. A special treat now and then, as you would give a plumcake to your children, is to mix up some milled summer cabbage, and canary seed, with bruised oats or oatmeal, and place it in their feeding vessels; they will enjoy it greatly, as they will a little stale bun or sponge cake, with a small proportion of seed of one or more of the above kinds. As a general rule, however, it is best to keep to plain diet; it is mistaken kindness to overfeed with delicacies a feathered pet. Many are killed by such treatment. The practice of keeping a piece of sugar constantly between the wires of the cage is a bad one; for although some birds will only peck it occasionally, others are immoderately fond of sweets, and will take so much as to clog the stomach, and indispose them for food of a more healthful kind. It is bad for canaries as for children to have too many sweets; they are sure to end in sores. Various recipes for canary paste have been given, but we can scarcely recommend any of them; pastes and powders are apt to turn sour, or become musty, in which state, they are like poison on the birds. Moist food should never be kept over twenty-four hours; in hot weather give it fresh twice a day, and wash out the vessels carefully each time. If you put into the seed vessels more than sufficient for twenty-four hours' consumption, the birds will bedilidly to take on the first day more than is good for them, and afterwards feed on the husks, and thus injure and weaken their digestive organs. To young birds, if they have to feed them by hand, give wheat, bread, crumbed, or biscuit grated fine, and mixed with bruised rape seed and yolk of hard boiled egg. This should be moistened with a little water, so as to make it into a stiff paste, and about four quills given to each bird ten or twelve times a day. If fed by the parents the same preparation may be used, only put the seed, previously boiled, to take away its pithiness, in a separate vessel. As the young birds grow up, and become able to feed themselves, gradually decrease the quantity of paste and increase that of the seed, mixing with it salicy, and a little linseed occasionally; the latter is good for the voice.

TARTAR OR SHANGHAI SHEEP.

Your object being the distribution of the new information connected with the various branches of Agriculture; I wish to place at your disposal a few remarks relative to a new kind of sheep recently introduced into this country, which from peculiar habits are specially adapted to supply the exigencies frequently offered by the human family. I refer to the Tartar, or Broad Tailed Sheep, which, from having been brought directly from Shanghai, have also received the name of Shanghai sheep. They are of good size, with ears drooping forward, prominent noses, agreeably expressive faces, covered with a short and very fine glossy silken hair. The fleece is light, and best adapted for blankets and similar woollen textures. The value of this breed does not, therefore, consist in the fleece, but must be sought for in the remarkable facility it offers to increase the supply of this kind of animal food almost at pleasure, for the ewes have lambs twice a year, not infrequently five at a time. I have a ewe which brought three lambs last February, all of which were raised to maturity. About the middle of November one had two more, and at the same time her two February ewe lambs each brought a lamb, making her progeny in nine months no less than seven, all living and thriving save the February buck, a fine fellow whose head was cracked in the sixth month of his age, by the patriarch of a flock into which he had rashly intruded.

The quality of the mutton is of the highest order, as every one can attest who has eaten of it. When in China several years ago I was not a little surprised to find the eagerness exhibited by every one for mutton, and never did I see a leg brought upon the table of which anything was left but the bone. I attributed this partiality in a great degree to the high price of the meat, the cost of which to foreigners was something like fifty cents per pound. But I have since been convinced that while rarity contributed something to the flavor, there was still more due to the intrinsic qualities of the meat, which is entirely free from any woolly, or other disagreeable taste, and has a delicacy resembling venison. This characteristic of the mutton of the Tartar sheep, with the capacity they afford of furnishing lambs at any time of the year, must make them of great value to those whose chief object is to breed for the shambles.

I have crossed the breed with a good stock of country sheep, and have about twenty-five half bloods, pronounced remarkably fine sheep, by all who have seen them, being rather larger than the full bloods, with much better fleeces. How they are to turn out in the excellence of their mutton and prolific qualities remains to be tested. Probably they will exceed common sheep in the average number of their lambs, but not equal the full bloods in their astonishing prolific qualities, and this to many persons may constitute an improvement.

G. EMERSON,

No. 38 Girard street, Phila.

ROTATION OF CROPS.

* * * THERE is another subject which does not appear to have received the attention of this Society to the extent which its importance would seem to demand. I refer to a well considered system in the rotation of crops best adapted to our climate and markets. Chance or convenience is too apt to determine our course of cultivation, in total disregard of all the principles connected with vegetable habits and growth. Every farmer knows that a continuous cultivation of any plant takes from the soil those qualities essential to its healthy growth, and that to produce it year after year, requires the highest manuring possible, and which, however scientifically applied to meet its wants, fails at least to produce a profitable result. We know too that certain crops impoverish the soil more than others; that all plants ripened for their seed exhaust the land more than those consumed upon it, or removed in a green and incomplete state of growth; that some crops require deeper tillage and are capable of closer and more constant cultivation than others, which cannot be worked upon until ready for the harvest. These are some of the leading facts, taught by long experience, which should govern us in establishing certain rotations in crops, without which a high state of fertility cannot be maintained.

The shortest rotation worthy of mention is the four years' course, that is to say, the whole farm passes under the plow and a summer fallow once in four years. The portion which is in roots the first year is in grain the second, the third in grass, the fourth in grain again, and then goes back to roots, which is the fallow crop; the land then being deeply plowed and brought to its highest condition, and the bulk of the manure of the farm applied to it. Where the land is not sufficiently strong to bear such repeated croppings, the same course is pursued with this difference, that the land is allowed to remain longer in grass, which if properly managed, rests it and prepares it again for another course of tillage. Instead of a four years' rotation it may thus be extended to any number of years, which is equivalent to having less breadth of land under the plow.

To adapt this or any other system to our farms, we should be forced to extend the time of the rotation very considerably, and to substitute in most cases maize for wheat. This would be an advantage to the land, however, because maize has several of the properties of a summer fallow, being a crop requiring careful culture and a plentiful supply of manure. We can therefore lengthen our rotation without injury and probably with profit, if we divide the time the land is to remain in grass, by cultivating on the same portion at the widest intervals, the roots and the maize. In

pursuing some such system as this, we should probably receive the largest return for our manure, and keep our land in a good state of fertility.*

ESTABLISHMENT OF FAIRS.—The establishment of regular markets or Fair days through the country, at the most accessible points, would be a very great advantage to a farming community like ours, the members of which have at almost all times something they wish to sell or to buy, but who have at no one time enough to make it an object to go to the larger markets. To do this, if done at all, this Society should take the initiative. If fixed market days were established, we should soon see the convenience and economy of it, both to purchasers and sellers. Cattle, sheep, pigs and poultry, as well as corn, oats, rye, and other vegetable products would thus be collected together in sufficient quantities to bring purchasers for the larger markets, and a farmer would then be able to sell whatever he had to dispose of at full market prices, as well as to make his purchases there, instead of looking over his whole neighborhood and perhaps unsuccessful at last, either to buy what he wants, or to find a purchaser for what he has to sell, as he is now forced to do.

The fixing of the times and places for holding markets should be done after mature deliberation and solely with a view to the convenience of the agricultural community. Once determined upon and established, we should do all in our power to give them a good start. The danger would be if they were successful, that every town in the country would insist upon having a market day, and, as we have seen in other enterprises, all the benefits of them lost in consequence. If, however, the members of this Society were earnest in the matter, and would agree to uphold those established by it, to the exclusion of all others, it would soon settle into a system not likely to be disturbed.—*Mr. Fay's Address*.

* The mildest rotation that can be established as the practical result of these remarks, would be a ten years' course, which would be based upon the cultivation of one-tenth of the farm in roots, one-fifth or two-tenths in rye, oats or barley, one-tenth in Maize, and six-tenths in grass. Under this course each tenth would be successively cultivated as follows:

1st year.....	Turnips or other roots.
2d ".....	Oats, rye or barley.
3d ".....	Grass.
4th ".....	Grass.
5th ".....	Grass.
6th ".....	Maize.
7th ".....	Oats, Rye or barley.
8th ".....	Grass.
9th ".....	Grass.
10th ".....	Grass.

If the manure heap will admit of it, or fertilizers purchased, it can be arranged so as to get crops of turnips and of fodder corn the same year with the rye, oats or barley, but this should not be attempted without very high manuring and thorough cultivation.

THE VALUE OF THE MEAT WE EAT.—The Cincinnati Price Current calculates the number and valuation of animals consumed by the whole town population of the United States, as follows:—

Value of 800,000 hogs.....	\$10,000,000
2,500,000 sheep and lambs.....	7,500,000
Let us now add to this the hogs consumed	
merco 3,000,000 at \$8.....	24,000,000
	\$71,500,000

If, now, we add to this aggregate the pickle beef, the salt barrels, and labor used in packing pork; and finally the value of wool sold from sheep, we find the commerce in animals amounting in value to full one hundred millions of dollars; an amount greater than the entire cotton crop. Two-thirds of this entire product comes from the States in the valley of the Ohio; and we shall not be beyond the mark in saying, that the States of Ohio and Kentucky create an exchange on the Atlantic States equal to twenty millions of dollars per annum, derived from the commerce in animals.

DEFORMED ROOTS.—The English agriculturists, it is said, are much troubled and annoyed with deformed roots, in their culture of carrots, parsnips, and other roots. They form what are called fingers and toes, instead of the conical and regular shapes useful in successful root-growing. On a large scale this becomes a serious evil. A great amount of dissension has been had in their papers as to the cause of this difficulty and the remedy for it. A late writer in the Agricultural Gazette states that the difficulty is in the seed-growing, and not in the root-culture. His remedy is to cut out the central umbel, in seed-growing, and thus distribute the sap into the lateral ones, when a healthy seed is produced. In this way, "fingers and toes" never disturb him. In using the seed of the central and large umbels he always gets the deformed roots.

JAPAN PEA.—This new and rare article is found to be adapted to our soil and climate, and yields bountifully. The writer has counted on an average 300 pods to each plant—pods containing from two to three peas. They are small, round, of a cream color, and very hard. Should think they might be ground. They are very nutritious. The plant attains the height of about thirty inches; it is stiff and woody—unlike all other peas, it stands independent of all surrounding objects, and upright, like a shrub or small tree. Experience will prove the best manner of cultivating and harvesting. They should be planted or sown about the usual time of planting corn, not earlier, as frost is fatal to the young plants.—*J. W. Briggs in Genesee Farmer*.

FAT OFFICE.—Advocates of a reduction in fees of county officers assert in Sacramento, that the County Recorder's office in San Francisco is worth \$100,000 a year.

Miscellany.

FRIENDS AND HOME.

Oh, there's a power to make each hour
As sweet as Heaven designed it;
Nor need we roam to bring it home,
Though low there be that find it!
We see too high for things close by,
And lose what nature found us;
For life hath here no charms so dear
As home and friends around us!

We oft destroy the present joy
For future hopes—and praise them;
While flowers as sweet bloom at our feet,
If we but stoop to raise them!
For things afar still sweetest are
When youth's bright spell hath bound us;
But soon we're taught that earth hath naught,
Like home and friends around us!

The friends that speed in time of need,
When hope's last reel is shaken,
To show us still, that come what will,
We are not quite forsaken;
Though all was night, if but the light
From friendships' altar crowns us,
T'would prove the bliss of earth was this—
Our home and friends are!

The Hearth Stone Sacred.

It would seem as if a man imbibed with his mother's milk respect for the mother who bore him; it would seem as if the father whose advice counselled, and whose bounty fed, would be entitled to some respect in after years; it would seem as if the secrets of a family should be kept inviolate; as if the marriage vow, though circumstances sometimes warranted its severance, had a meaning and a significance throughout a life time; and as if those who sat by the same fireside and shared the same meal, though differences may sunder the bonds of friendship, if they cannot control their tempers, should restrain their tongues. But now, things are different—on a change tout cela.

There is an instinct natural to man, greater in some and less in others, which at will can either be repressed or increased,—a morbid desire to know the causes of family disputes and, particularly if the parties are well known, to peep behind the veil of secrecy, and lay bare what should be hidden for ever. This instinct is scandal, followed to the top of its bent, which, like a certain animal, loves to feed on what is vile, and perhaps poisonous. It is an instinct which has an injurious and debasing effect upon society, and against which society cannot be too carefully guarded. It tends to lessen our respect for the holiest of all sympathies, and to prevent those feelings which in man are most akin to Divinity.

Not a hundred years ago, a noble lady of England, the talented wife of a more talented baronet, having separated from her husband, favored the world with a detailed account of her grievances through the medium of a work of fiction. She laid no claim to "fitting the coat" herself, but there were insinuations which could not be mistaken, and hints which spoke louder than words. The morbid feeling of which we have spoken procured the work an immense circulation, and though the press condemned it, the mass read it with avidity, and gloated over its details.

In our own country a certain lady has lately given in her experience,—or rather a portion of it—of father, mother, and brother, and not husband, are the objects of animadversion. But how great the difference between the English and American books. The former was a work of decided ability; that of the latter is of a questionable order. The former was condemned by the combined press, the latter, strange to say, received almost universal commendation at the hands of the daily and weekly journals. The former had a great, but the latter an enormous sale. People who read the former held their tongues in regard to it, but as to the latter the daily question is, "Have you read?" The former was banished from every parlor, but the latter is in the hands of every child. What is the moral tendency of works of this nature?

Do they not serve to decrease in your minds those ties of kindred which should break only with the strings of the heart that holds them? Do they not tend to make the hallowed names of father, mother, sister and brother lose their charm upon the heart? Is there not something unfeminine as well as unmanly in intruding upon the world one's real or fancied grievances? He or she must have but a poor opinion of his or her position in the world's esteem, who seeks to promulgate *ex parte* statements, which bear sophistry upon their very face, through the medium of a novel or a romance. The thinking man asks as he peruses such a volume, "Was this man a worthy son? or, was this woman a dutiful daughter? Were the injuries of which they complain brought on by no wrongdoing on their part? Was there no unhappy temper, no self-willed obstinacy, which sometimes set parental authority at defiance, and superinduced the unfortunate state of mind which could prompt such a volume? Did its author fully appreciate the injunction of the fifth commandment?"

We regard works of this nature as perhaps the most pernicious that can be issued. The terrible details of a Newgate Calendar, and the prurient imaginings of George Sand and Paul De Kock sink into insignificance before them. They strike at home and at family, at all that a man is taught to think most dear, at that which most nearly connects him with his Maker.

It may be urged that the public taste, fancies such abortions, and that as they "who live to please, must please to live," that booksellers are in self-defense obliged to suit the tastes of their

patrons. But is it not rather their duty to guide public taste, to refine, correct, and elevate it? Or by constantly pandering to a depraved appetite to pervert it still more, and sink the standard of public taste yet lower? They not only injure the public and themselves, but they do wrong to other authors. The man of talent sees a pseudo-autobiography, in which the sack greatly exceeds the bread, obtaining a large circulation, as well as unqualified commendation, and what resource is left him? Either to turn from the paths of literature and seek to earn his bread in some other mode, or to pervert his own talents, *sua sponte*, and add others to such a degrading list.

Against works of this nature we firmly enter our protest. We believe them as dangerous in their effects, as they are corrupt in their causes; we believe them calculated to undermine those affections and influences, the preservation of which tends to make man's life holier and happier, and with the destruction of which man loses a counsel and an encouragement for his existence. They serve to promote no happy feelings; for the feelings which prompt them are the most unhappy of our nature; they are begotten in sin, and the child is a worthy model of the parent.—*Evening Gazette.*

A Sharp Look Out—A Yankee Story.

A friend of ours related the following anecdote of a friend of his, which is entirely too good to be lost. Our friend's friend was a very worthy and sensible man in his way; nor had he ever done anything for the cause of wit in others, until he accepted the situation of Inspector of Customs at a small port of entry in Connecticut. There was very little business doing at that place, and a foreign arrival was quite an affair of moment; for Zekiel, that was our worthy's Christian name, used to spend his days in fishing off the wharf, and looking out for strange sails in the offing. One day, "a long, low, black schooner," ran into port, dropped anchor, furler her sails, squared her yards, and made all snug aloft and below. Zekiel momentarily expected that her captain would send her boat ashore with his "manifest" for the Custom House, as in duty bound; but as hour after hour passed away, without any indication of such a transaction, he began to be alarmed and suspicious. Determined to sift matters to the bottom, he rolled up his fishing line, jumped into a boat, and pulled off for the schooner, which he boarded. A man was pacing the deck to and fro, with an abstracted air.

"Cap'n, sir?" said Zekiel.

"Yes," was the gruff answer, which did not interrupt the promenader.

"Well, Cap'n, I am the Custom House officer."

"Oh, you are, are you?"

"Yes," said Zekiel, "and I want your manifest."

"Go to thunder."

And with that the Captain resumed his march, Zekiel following hard upon his heels, and looking over his shoulder in amazement.

Here was a decided fix. Such a case was hardly in the books, and poor Zekiel was nearly at his wit's end.

"Look here, Cap'n," said he, at last, "what you going to do about it. I jest advise you as a friend to gin me that 'ere manifest about as quick as you can, and I won't say no more about it; I won't say anything about it to a soul. But if you don't—"

"Well, sir, what then?" roared the Captain, in a voice of thunder.

"Why, then," said Zekiel, stepping back to the bulwarks, "I shall have to report you to the Collector."

We should be sorry to soil our paper with the thundering anathemas levelled by the skipper at our friend's head; he was over the ship's side in one moment, and the next pulling for the shore with might and main. The moment his keel touched, he leaped on shore like a maniac, and locomoted for the Custom House.

"Here, Mr. Collector," he bawled out, "come right away along with me—you're wanted. Here's the very deuce to pay. Here's an outlandish craft in our harbor, and the Cap'n has been as saucy as a wool-sawyer's clerk on half pay to me—and been calling of me names—and won't give his manifest, consarn his ugly pictur!"

The Collector started off post-haste. Arrived at the wharf, Zekiel pointed out the object of his suspicion and alarm.

"Why, bless your soul, Mr. —," said the Collector, "that's the revenue cutter—it's sent here to watch you."

Zekiel sloped; the story got afloat, and in the diggings where it happened, there is not to this day a more fertile source of fun and amusement.

Poor Zekiel did not remain long in the service, and he is sure to turn all sorts of colors now whenever any one asks him, "how it was about his boarding the cutter."

The Man who Kissed the Three Girls.

A young man who boarded at a house in the country, where were three very coy damsels, who seemed to imagine that men were such terrible creatures it was a sin to look upon them, was one afternoon accosted by an acquaintance, and asked what he thought of the young ladies with whom he boarded. He replied that they were very shy and reserved.

"So they are," returned the other, "so much so that no gentleman can get near enough to them to see the color of their eyes."

"That may be," said the good-looking boarder, "but I'll bet a million I can kiss all three, without any trouble."

"That you nor no other man can do," cried his friend.

"The other was positive, and invited his friend to the house to witness the achievement."

They entered the parlor together, and the three maids were all at home, sitting beside their mother, all looking as prim and demure as old John Rogers at the stake.

Our hero assumed a very grave aspect almost to dejection, and looking fixedly at the clock, breathed a sigh as deep as algebra, and as long as a female dialogue at a street door. His singular deportment attracted the attention of the girls, who cast their slow opening eyes upon his countenance. Perceiving the impression he had made, he turned to his companion and said, in a solemn tone.

"It wants but three minutes of the time!"

"Do you speak of dinner?" said the old lady, laying down her sewing work.

"Dinner?" said he with a bewildered aspect, and pointing, as if unconsciously, with curled forefinger at the clock.

A silence ensued during which the female part of the house glared at the young man with irrepressible curiosity.

"You will see me decently interred," said he, again turning to his friend.

His friend was as much puzzled as any body present, and his embarrassment added to the intended effect; but the old lady being no longer able to contain herself, cried, "Mr. C—, pray what do you speak of?"

"Nothing," answered he, in a lugubrious tone, "but last night a spirit appeared unto me!" Here the girls rose to their feet and drew near. "And the spirit gave me warning that I should die exactly at twelve o'clock to-day, and you see it wants but half a minute of that time!"

The girls turned pale, and their hidden sympathies were at once awakened for the doomed. They stood chained to the spot, looking alternately at the clock and at the unfortunate youth. He then walked up to the eldest of the girls, and taking by the hand, bade her a very solemn farewell. He also imprinted a kiss upon her quivering lips, which she did not attempt to resist. He then bade the second and third farewell, in the same tender and affectionate manner.

His object was achieved, and that moment the clock struck twelve. Hereupon he looked around surprised, and ejaculated, "who would have believed that an apparition would tell such a lie! It was probably the ghost of Annanias or Sapphira."

It was some time before the sober maids understood the joke, and when they did they evinced no resentment. The first kiss broke the ice; and thanks to the ghost, they discovered there was some pleasure in a bearded cheek.

Ladies' Department.

Pencilings.

BY MRS. E. A. W.

"Long looked for come at last."

SACRAMENTO, March 12, 1855.

A most refreshing shower is being vouchsafed to this parched, dried and dusty region. It is raining like a second deluge, and every thing and every body are made happy by the fulfillment of the promise, "I will give you rain in due season; and the land shall yield her increase, and the trees of the field shall yield their fruit." The wind shrieked and howled last night, enough to fright the sleep of the poor, and make the rich draw the quilts closer about their comfortable bodies. Patter-patter came the big drops against the pane; kennels are flooded, and water-spouts discharge their contents, and foam and gurgles, like homeopathic Niagaras. The streets are crowded with the kolge-podge of soaked humanity, looking sappy and very like Shanghai, well drenched, for the most part convening under the insufficient shelter of dripping umbrellas, with here and there a noisy exception, who extremely wet externally, but awfully dry within, goes cruising around glorious as a lover, perfectly indifferent to the drenching torrents overhead.

Blue noses hurry past, "homeward bound," contemplating a cozy evening spent by the glowing grate. Little boys, a with positive cold and a prospective croup, plunge into the street, all unmindful of the outcries and telegraphic signals dispatched by anxious mamma's. And the poor beasts that roam through our thoroughfares, are getting to leeward of some dilapidated building, preferring a morsel of herbs, with the privilege of picking for themselves, than a stalled allotment at five dollars a bite. Albeit they sleep with one eye open to detect the approach of the pound master or one of his "imps."

The "Star Spangled Banner," which has for months past waved so proudly from the mast-head of our "Ship of State," adds not a little to the dangling dullness of the occasion. It waves solemnly to and fro, or flaps and shudders in the wind, dashing off the little pearly jets, as if it would clear its skirts of "dust and dirt," and snuff its fingers at the actors in the political farce going on below. It looks at it, it would much prefer a dry gut and less glory.

For your especial edification (your ear a little closer, Mr. Editor), I will rehearse a short episode. During an interval in the showers last evening, I found it necessary to cross our public square—the

journey was something novel and unique to me, I mean, for I am told the older residents are accustomed to such things—but being a novice in the science of navigation, and not being very well posted up in nautical gyrations, I propelled at the rate of half a mile an hour, through a succession of mud-holes, until attempting to beat against the tide of a small rivulet that ran meandering through this modern elysium, I lost my equilibrium and was landed sans ceremonie at the bottom.

I know not whether Grecian mythology contains any class of divinities presiding over mud-holes; but I do know that I might have stood for a personification of a mud nymph! Unfortunately I do not always possess an equanimity of temper, "like a river winding at its own sweet will," but thought it politic to assume a sort of "toots," like expression, as much as to say, "Oh! it's of no consequence!" as the bystanders regarded me, as though I was a mere earth worm, and had not the least aspirations after a soul!

We have been refreshed intellectually of late by several well timed lectures, clerics, professors, "first women," and temperance fanatics—appeal to the taste of a multitudinous public, of all ages and sexes, resident and transient. They are made very attractive, as indeed they must be in a country like this, otherwise people will seek less worthy or beneficial pastimes. Art, literature and science are made interesting by the learning and eloquence of the speaker. And it must be a very barren or corrupt nature which derives no instruction from a lecture, upon whatever subject, by a well instructed teacher.

I had the pleasure, a few evenings since, to listen for an hour and a half to the deep-toned eloquence of Mr. —, of your city. His manner is self-possessed, and that of a well-bred gentleman, addressing an enlightened audience, and such an one he had, if one may judge by the external appearance of the vast multitude present, who listened with unwearied attention to its close. No spake as one who had already achieved fame, and the prolonged and enthusiastic applause which succeeded its termination could not be otherwise than flattering. As his rich sonorous voice fell full on the ear, every krenth was suspended, and every thought held captive by his winning eloquence. He is very unlike one who who preceded him, who is so frightfully ineonic, and stretches up his sentences and embroilers them over with so many figures and fine words; but one whom you would like to know better, one whom you would like to draw your chair close beside, and talk about things past, present and to come. His voice is distinct and clear, his language pure saxon, simple and without being exaggerated. Much good may thus be sown, and many groveling minds be turned to higher pursuits, and informed how those pursuits can be followed out.

Lectures of this character are calculated to elevate and hallow the mind. One can never become contaminated by breathing an atmosphere so purely chaste, but will go away better prepared to combat with evil influences, and noble thoughts will cluster around the heart and fasten themselves, with a ten fold affection, upon the best feelings of our nature. We hope they may be many and oft.

Hints for a Household.

FAR the greater proportion of households, throughout our whole country, are managed without the aid of much hired help, by the females of each family. The maxim, "If you would be well served you must serve yourself," has considerable truth in it; at least those families who serve themselves, escape many vexations of spirit, because, if the work be not very well done, when we do it with our own hands, we are more apt to be satisfied. There are some sorts of domestic work, that of dairy work is one, which no hired help would be competent to discharge. This must be done by a wife or daughter, who feels a deep personal interest in the prosperity of her husband or father. Many of our farmers' wives are among the best house-keepers in the land, possessing that good sense, vigor of mind, native delicacy of taste or tact, and firm conscientiousness, which gift the character with power to attempt everything that duty demands. These are the "noble matrons" which our republic should honor. It is the sons of such mothers who have ever stood foremost to defend or serve their country.

One of the greatest defects in the present system of female education, is the almost total neglect of showing the young lady how to apply her learning so as to improve her domestic economy. It is true that necessity, especially in the case of the poor, obliges her to learn this science after she is married; but it would have saved her from many anxious hours and tears, and troubles, if she had learned how to make bread and butter, and cook a dinner before she left her father's house, and it would have been better still, if she had been instructed at school to regard this knowledge as an indispensable accomplishment in the education of a young lady.

STEAMERS.

California Steam Navigation Company,
ARRANGEMENT FOR
JANUARY, 1855.
Departure from Vallejo street wharf, at 4 o'clock, P. M.
For Sacramento.
VIA BENICIA.
Steamer NEW WORLD, Capt. Seymour;
Tuesdays, Thursdays and Saturdays
Steamer ANTELOFF, D. Van Pelt, master;
Mondays, Wednesdays and Fridays

**For Marysville,
VIA BENICIA.**
Daily, at 4 o'clock, P. M.
By the Sacramento Steamer, connecting with the Company's
LIGHT DRAUGHT STEAMERS at Sacramento.
 Through Tickets issued.

**For Stockton.
VIA MARTINEZ.**
Daily, at 4 o'clock P. M.
Steamer CORNELIA, E. Concklin, master;
Mondays, Wednesdays and Fridays.
Steamer URILDA, Clark, Master.
Tuesdays, Thursdays, and Saturdays.

Daily, at 4 o'clock, P. M.

By the Sacramento Steamer, connecting with the Company's
LIGHT DRAUGHT STEAMERS, which leave Sacramento
 Tuesdays, Thursdays and Saturdays, at 12 o'clock, M.

 Freight by the above boats must be paid for on delivery.
 For particulars apply at the office of the Company, Jackson
 street, between Battery and Front to,

R. CHENERY, President.

Freights to Sacramento, \$10 per Ton.
FREIGHTS by the QUEEN CITY, will be
 Ten Dollars per Ton, with further notice.

 R. CHAPMAN, Agent.

HOTELS.

Orleans Hotel

Orleans Hotel,
Second, between J and K streets, Sacramento.

 THE above Hotel, occupying a space of 85 by 150 feet, is the most central part of the city, built of brick and three stories high, offering inducements to travelers not surpassed by any establishment in the State.

The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.

The Table will be found at all times supplied with the choice of the market.

At the Reading Room can always be found the daily papers of the State and the latest dates from the Atlantic and Europe.

The Billiard Saloon is furnished with five excellent tables, superintended by a competent keeper.

The Bar will be supplied with the best Liquors and Wines.

The second and third stories of the building are set apart for Parlor, Family Rooms and Chambers, comfortably furnished.

We have also lewed the large brick building corner of E and Front streets (formerly known as Sackett's Hotel) set apart for Lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.

The "Orleans" is also the Depot and Office of the California Stage Co., from which place Stages leave daily for all parts of the State.

v32 **HARDENBURGH & CORSE, Proprietors.**

The Chief how measures 5 feet 3 inches in length—full size—the feet are 9 inches long. The body presents a natural appearance, and, as it lays in the canoe, surrounded by the materials deposited with chiefs, together with other bones and skulls found with the Mummy, it is indeed a most interesting specimen.

Captain Russell has expended much in bringing this specimen to the city and preparing it for the States, and it is now offered for exhibition in hopes that a sufficient sum can be raised to retain it here, as it is a record of the early history of California. The Mummy will be exhibited at the office of the CALIFORNIA FARMER, for a short time. Admission 50 cts.; Children half-price. The Press, Medical and Scientific men, and Clergymen, are invited Free, as the object is diffusion of knowledge.

v34 C. J. W. RUSSELL, Proprietor.

 any depth. We have also implements for boring through stone
 and all work done on the most reasonable terms.
 For the satisfaction of those wanting anything in the above
 list, we would refer to **Thomas Fallon, San Jose; Rufus S.
 Fells, of Humboldt; Fells, Al. A. Stillwa, New Custom House;
 Ficht & Co., 137 Jackson street, &c., &c.**
 We can do work cheaper than any other operators, for two
 reasons:
 1st. Because we are prepared to work on a most extensive
 scale.
 2d. Because we understand all branches connected with the
 above business, and are, therefore, able to work with certainty.
 All orders left at the **Went Clear House** will be promptly at-
 tended to.
SMITH & VAN DYKE, Contractors,
 118 Sanson street.
 N. B.—We also refer to **Warren & Son**, publishers of the
 "California Farmer," who have seen and known the character
 of the work done.

ticket which has been issued will be de-
 stroyed, and the first twenty drawing numbers will be Prize-
 numbers, and the fortunate holders of which will receive the Prize immedi-
 ately after the drawing, or they will be held in trust for those
 who are present at the drawing, and who will superintend the
 drawing, and fully represent all Ticket holders who may not be
 able to attend the drawing.
 Tickets Sold and Raffle for day and night up to the hour of
 drawing, at the principal office in Sacramento, can be re-
 ceived by application to the various Agents in all parts of the
 Northern and Southern mines, San Francisco, &c.
 Remember!—Saturday, 31st day of March next.
 Secure your Tickets without delay.

THIS TEXT MEANS, BE NOT UNREASON-
ably anxious or disturbed by future cares. It is an advice
supposed we are troubled with Coughs or Consumption, the
paper is soured, and that the dispositions of the soul languish
in mind excited; but obtain good from the use of Dr.
JAMES'S COMPOUND FITCH LOZENGES, and this mind
and soul rejoice that tranquil reliance on DIVINE PROVIDENCE
rich the text commends. Price 50 cents a box, or 3 for \$1.

PACIFIC EXPRESS COMPANY.

THE late employees of ADAMS & Co., in consequence of the disruption of that firm, have organized themselves into a stock company, under the above name and title, for the purpose of conducting a General Express and Forwarding business in all its branches, throughout California, Oregon and the Pacific Coast generally.

The business will be strictly and solely a forwarding one, with no connection with banks and bankers, and will be conducted on safe and economical principles.

The Expresses will leave the office at the north-west corner

Washington and Montgomery streets, daily, at regular hours, Sacramento until the Northern Mines, Stockton and the Northern Mines, San Jose, San Juan and Santa Cruz, Monterey, San Pedro and the Southern Coast generally, as well as the Northern Coast of California and Oregon. We will also run a regular Express for Freight, Small Packages and Letters to and from the Atlantic States by every steamer.

The parties who have organized this company are well known in the community as old and experienced express men, and have it well warranted that they will be able to

nesses thoroughly. They think they are not saying too much, when they attribute much of the success of the late firm of Ames & Co. in the express business to their exertions and personal energies.

As a conclusion they would solicit a fair share of the favors of public, pledging themselves to exert their best endeavors to transact such business as may be entrusted to them in a prompt business-like manner.

Collections of all kinds will be promptly attended to at any of the points mentioned above.

R. G. NOYES, President.
San Francisco, March 1st, 1855. v3-10.

To Printers.

 For sale by
BRYANT & CO., 68 Battery street.

BANKERS.

JAMES KING OF WM. & CO.

THE undersigned have this day associated themselves for the purpose of conducting a general financial agency in the name of JAMES KING OF WM. & CO. They invite the attention of their friends to their card annexed, and pledge their efforts in the prompt and faithful execution of every order left with them. Our charges are extremely small, and we hope by attention to business to receive a share of public patronage.
JAMES KING OF WM.,
HENRY DEED.

General Monetary Agency.

Southwest corner Montgomery and Washington streets.
 Deposits of money or other valuables, Deeds, Bills, Cash Boxes, &c., &c., received as per terms annexed.
 Loans negotiated, Notes collected, and all orders relating thereto attended to with dispatch, at very moderate charges.
 Exchange on New York for sale in sums to suit.

Special Deposits.—Money and valuable parcels received under seal, with name of owner thereon, for which receipts will be given, under a charge of 1/2 per cent. per month.
 Cash boxes properly labelled with name of the owner, can be stored in our vault, and received and delivered daily, at a charge of \$2 per month.

Deeds, Bills and other valuable papers, properly marked, received for safe keeping, at a charge of \$1 per month each.
General Deposits.—Persons desiring to make general deposits to be drawn for by check, can do so at the following charges:

For opening the account \$2.
 For continuing the same, 60 cents per thousand dollars, on the amount deposited.

As we make use of the funds received on general account, we cannot of course afford to receive and disburse the same without charge, and we trust the security we offer—namely, the identical coin deposited, and as nearly approachable as a special deposit in the nature of the case will admit—will be a sufficient inducement to pay us our very small commission.

A daily statement, under oath, of our affairs, open for inspection of Depositors, and as soon as we can contrive some plan by which the privacy of our customers' accounts can be guaranteed, we shall make monthly statements under inspection of one of the State courts. And this we shall continue from month to month, until some agent appointed by the Legislature shall appear for that duty.
JAMES KING OF WM. & CO.

A Card.—The above advertisement declares the nature of our present business, but, in addition thereto, we propose, when the proper time shall arrive, to open a Savings Department, to be conducted as follows:

Deposits to bear interest at the rate of 10 per cent. per annum, for which books or certificates will be issued, payable at different dates, but no deposit received for a shorter period than two months, nor will we bear any interest after maturity. All sums then due and uncalled for, will be transferred to the account of Special Deposits and charged accordingly. Monthly statements made at such the general deposits.

Our project is a new one. It has caused as much thought and reflection, and we believe it to be the only feasible plan of conducting this kind of business at this time. At present we do not expect any application in the savings department, but the plan is respectfully submitted for consideration. It is the best of the present condition, well. If not, we will not undertake it, and in the meantime our general business, we hope, will meet with favor.
JAMES KING OF WM.,
HENRY DEED.

THEODORE PAYNE **AUCTIONEER.**
MR. PAYNE, & CO. respectfully inform the public that they have established themselves as above, for the purpose of transacting the

Real Estate business, in all its branches. For the conducting of which they obtain themselves peculiarly qualified, by having given their special attention for over two years past, and made themselves familiar with all questions affecting title, &c., &c.

They will give their especial attention to the public sale of realty, by Administrators, Assignees, Receivers, Mortgagees, &c., carefully complying with the forms of law.
 A Register for Property, at either public or private sale, always open at their office. 20 6m

Ingham's Improved Slat Machines.
THESE Machines combine all the apparatus necessary to cleanse Grain, rendering it unnecessary to give any other machinery for that purpose to the mill. They are portable and occupy about four feet square on the floor, by eight and a half feet in height; and will clean the worst samples of Smutty Grain, also remove short straws, white caps, weeds and other foul substances in the most perfect manner. All of this vital worth is collected in a reservoir, while the stout and light dust is passed out of the mill, allowing the machine to be put on the same floor with the flour chutes or wherever most convenient, without being inclined. It is a California improvement and designed to meet the wants of this country; eastern machines having been found to be inadequate to that purpose. It has received the highest recommendation from all using them, among whom are Peir & Hudeknecht, Brighton Mills, Sacramento; Brooks & Hull, Happy Valley Mills, San Francisco; Van Sluyp, American Mills, San Francisco; Babbitt & Hild, Sierra Nevada Mills, San Francisco; H. S. Hill, Washington Mills, San Francisco.

Two or building Mills can save expense and room by using this machine, as they will avoid all the machinery ordinarily used for that purpose.
 Orders filled on short notice. SHOP on L street, between Front and Second, Sacramento. **H. B. INGHAM.**
 P. B.—All information given, and orders left at WARREN & SON, San Francisco, will be attended to.

The following certificate is among the number received others can be referred to in quantities:
 This is to certify that I have one of H. B. Ingham's Improved Slat Machines, and believe it to be superior to any other. I need no other fixture for cleansing grain, except the machine itself. It makes no dirt in the mill; occupies but little room; requires less power and does the work more perfectly than any other I have ever seen or used before.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!

Unrivalled for Vance's new Daguerrotype Gallery!
 Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE'S who makes the best arranged Gallery in the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has the largest light in the world, from which he can turn three distinct lights—day, day, and half day lights—that may enable him to overcome the great difficulty which every artist in this city has to contend with—namely, in order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in this city; therefore they can be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which whitens the clear, bold and living picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in this city, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.
 Prices as reasonably and work superior to any in the city.

Don't forget the place.
 New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. 17

SOUTHWICK & CO.'S

GRAND RAFFLE.

\$30,000 for one Dollar

THE FIRST GRAND PRIZE is, probably, the best paying property in Sacramento county, viz.

(For the California Farmer.)

Enigma.

I am composed of 29 letters.
My 7, 26, 7, is the Spanish name of a California wild animal.
My 13, 11, 19, 8, 4, 3, 28, 18, 29, is a kitchen garden fruit.
My 24, 17, 11, 28, 29, is the name of a Judge in this State.
My 26, 7, 8, 7, 18, 19, is a town in California.
My 21, 7, 9, 1, is much used by foundries and smiths.
My 15, 12, 23, 4, 5, 10, is a celebrated chemist.
My 24, 5, 13, 3, are animals made to annoy mankind.
My 22, 9, 24, 4, 14, 28, 6, is a favorite black grape.
My 21, 22, 2, 8, 3, 26, 23, is a branch of the human race.
My 24, 17, 20, 23, is a quadruped.
My 27, 22, 23, 11, 24, 7, 24, 3, 16, 23, 18, is a philosophical instrument.
My 20, 25, 24, 3, is slightly contained generally in all the water in this State.
My whole is a work which ought to be in the hands of every farmer.

COLFON.

HAD HIM THAT TIME.—The Boston Post tells the following: Rev. Mr. Foster, of Salem, was a facetious man, and usually ready at a joke and repartee. He had a parishioner, a carpenter by trade, pretty well stocked with ready wit, and, in truth, somewhat given to boasting. One day, while at work for his minister, having a stick of timber, the carpenter was boasting in his usual style of marvels that he could perform. The pastor, to put an extinguisher upon him, said, "Governor (his nickname), do you think you could make a devil?" "Make a devil!" responded the Governor, "why yes, oh yes!" (his broad ax moving a little more rapidly), "here, put up your foot—you want the least alteration of my man I ever saw!" It was rare that the minister came off second best in such encounters, but he did this time.

It is often made a subject of complaint that ministers of the Gospel participate in political matters. An anecdote of a Rev. Mr. Field, who lived in Vermont several years ago, contains a good reply. As the reverend gentleman went, at a time, to deposit his vote, the officer who received it being a friend and parishioner, but of opposite politics, remarked, "I am sorry, Mr. Field, to see you here." "Why?" asked Mr. F. "Because," said the officer, "Christ said that his kingdom was not of this world." "Has no one a right to vote," asked Mr. F., "unless he belongs to the kingdom of Satan?"

ANTI-LIQUOR DEMONSTRATION BY WOMEN. At Mount Pleasant, Cincinnati county, Ohio, about fifty women attacked a tavern and destroyed a large quantity of liquor belonging to the keeper. After demolishing the liquor casks, &c., they dragged the owner through the liquid, which stood six inches on the floor. Warrants were issued against about twenty of the parties, but the officers returned and reported their inability to serve the processes. They were to go back with re-inforcements.

A WEEDY BUSINESS.—Thurlock Weed, the editor of the Albany Evening Journal, in the midst of all the duty and turmoil of politics, has found leisure to enter into the cultivation of babies. He is now the father of eighteen children—his prolific helpmate having presented him with one every eleven months since their marriage. We should say that that Weed was rather a luxuriant kind of vegetation anyhow.

A BROAD HINT.—A spruce young man, gallanting his intended, conversing on the turnout, said "he wished he was able to maintain all the factory girls for six months. He would do it to prevent their returning to the mills." His fair one who has been a silent listener to his patriotic speech, replied with a sigh, "Ah, sir, I wish you were able to maintain one of them."

"As to the free-love doctorings," said Mrs. Partington, with a face as benevolent as a Thanksgiving dinner, "I don't know much about 'em; but it seems to me they needn't cause much fear where any love exists at all. Where hearts beat responsible to each other, and where they are mouldered together by early love and plenty of children, depend on it, no free-love doctorings can do 'em any harm."

"CAN you tell me," asked a pindit, "why a conundrum that nobody can guess, is like a ghost?" "Shall I tell you now, or next month?" "Now, if you please." "Well, sir, sooner or later, everybody must give it up."

At market a lady, laying her hand upon a joint of veal, said: "I think, Mr. Jones, this veal is not as white as usual." Put on your gloves, madam, and you'll think differently." The veal was ordered home.

Be always frank and true; spurn every sort of affectation and disguise. Have the courage to confess your ignorance and awkwardness. Confine your faults to but few.

If you are disquieted at anything, you consider with yourself, is the thing of that worth, that for it I should so disturb myself and lose my peace and tranquillity.

In Vermont, a couple were recently married whose names were Mr. Pumpkin and Miss Pie.

NURSERIES, &c.

Golden Gate Nursery,
Corner of Folsom and Fourth streets, San Francisco.
OFFICE—No. 170 WASHINGTON STREET.
THE attention of the public is requested in a large collection of the flowering plants, now for sale at this Establishment, embracing the most extensive assortment in the State; among which may be found—
Candelia japonica, in seventy varieties;
Perpetual blooming Roses, of all the classes;
Mass and climbing Roses, do do;
Fuschias, a choice collection; Heliotropes, in variety;
Rosa and Lemon Geraniums;
Lewycentennial Verbenas, Flowering do, Arbutus, Azaleas, Oleanders, Passifloras, Honeyuckles, Currantines, Dahlias, Bulbous Roots, &c., &c.; and a general collection of Green-house plants and ornamental shrubbery.
Catalogues for 1855 will be ready on the 1st of December, and will be forwarded on application.
Orders for any part of the State, will be promptly attended to, on application to D. Nelson, No. 170 Washington street—or to the proprietor. (7-3m) W. C. WALKER.

Smith's Pomological Gardens,
Banks of the American River, two and a half miles from Sacramento city.
THE proprietor of the Gardens would respectfully invite all who are engaged in "Nursery and Gardening" to visit his grounds. He will be happy to show to them, ready for sale, this fall, as fine a collection of
Fruit Trees, Ornamental Trees, Grape Vines, Shrubs, Flowering Plants, and Green House Plants, as can be found in all the great Sacramento Valley.
The proprietor would call particular attention to his collection of Peaches, believing that the specimens exhibited by him in Sacramento and San Francisco markets have been unsurpassed in size, quality, or flavor.
The collections of Pear Trees will equal any in the country; these, with all the new varieties, will be offered this autumn.
The undersigned believes his collection worthy a visit to his grounds of all who are interested in Gardening and Orcharding.
The subscriber will offer this autumn Five Tons Vegetable Garden Seeds, that have been raised upon his own grounds. These seeds have been grown with care and will be sold at wholesale for the present, at the Gardens.
Persons in want are invited to call upon us, and we will make reasonable terms.
Fruits, Bouquets, &c., will always be furnished at short notice at the Gardens.
The proprietor returns his thanks for the liberal patronage of the past, and hopes for a continuance of such favors.
A. P. SMITH, Proprietor.

San Jose Nursery.
WE are prepared to supply the trade with the best varieties of Fruit Trees, Grape Vines, Roses, Plants, &c., in all their varieties; and are disposed to sell at a low price, that we may suit the times. Our Trees are cultivated with great personal care. Those who desire to make Nurseries and Gardens will do well to visit and ascertain for themselves our ability to supply what you desire. Trees will be carefully labelled and packed for any season or distance.
The following Trees we offer this season:
Peach Trees, 44 varieties;
Pear do 44 do
Apple do 51 do
Plum do 15 do
Apricot 6 do
Almonds 2 do
Quinces do 2 do
Cherry do many do
Grapes, 12 do
Strawberries, 7 varieties;
Fig Trees;
Pomegranates;
Walnuts;
Chestnuts;
Locust Trees, very large
Rose Acacias, for hedges.
Orange Orange.

In addition to our Fruit and Ornamental Trees, we offer ten thousand *San Jose* roses, comprising more than one hundred varieties, all of the best known kinds. Our plants are too numerous to specify in an advertisement. Roping visitors will come and see us, we refer them to our agent in San Francisco, Mr. DR. LANGRISH, 191 Sansome street, where we shall have a collection of plants in the season as samples. The nursery is situated in the city of San Jose, immediately above the City Mills.
We are also permitted to refer to Warren & Son, who have examined our grounds, and who, as a testimony of the character of our nursery, and who will receive and forward orders to us.
Every order promptly and speedily attended to.
L. PREVOST & CO.

Public Nursery,
MISSION DOLORES AND ALAMOSA.
HAVE always on hand and for sale, the largest collection of choice ROSES to be found in the State. Also, Grape Vines, Fruit and Ornamental Trees in great variety; 500,000 Strawberry Plants, including thirteen varieties of all the best known kinds. For sale cheap, in lots to suit purchasers.
All orders left with us at the Mission Dolores, or at our Nursery at Alameda, or with Warren & Son, at the office of this paper, will be promptly attended to.
Prices guaranteed at the lowest market rates, and everything sold fully warranted to be correct.
H. A. SONNTAG & CO.

SOLIDIFIED MILK.
MANUFACTURED BY
SAMUEL T. BLATCHFORD.
FOR SALE BY
BINGHAM & REYNOLDS,
201 Sansome street.

THE PRESERVED MILK is made from PURE FRESH MILK, combined with crushed sugar, and when reduced to liquid, as used in the directions, can be used for all purposes for which Milk is used, as it is simply Pure Milk and Sugar. Two Tins will weigh one pound and is equal to five pints of pure milk. The proprietor recommends with confidence the article to all persons going to sea, its properties of self-preservation having been fully tested during the last eighteen months. To the WHOLESALE trade its value is incalculable, and to travellers by land or sea, (especially when accompanied by young children) it recommends itself by its portableness and its facility with which it may be used.

Certificates.
The proprietor would call the attention of the public to the following certificates:
New York, April 4, 1854.
Mr. S. T. Blatchford—
DEAR SIR: In answer to your inquiries relative to the preparation of Solidified or Preserved Milk, having used it on my last voyage to San Francisco, I can with the utmost confidence recommend it to sea-faring men as being the best article of the kind I have ever seen or used, retaining, as it does, the taste and flavor of fresh milk.
Yours, &c.,
O. R. MUNFORD,
Master of Clipper Ship "Torpedo."

Extract from a letter from a California, dated May 31, 1854.
"In regard to the Solidified Milk which you entrusted to me for the purpose of testing the merit of the preparation, I can with confidence say that it has proved entirely satisfactory. I have a portion of it left remaining in as good condition as when you gave it to me, and it will, I have no doubt, keep for years. The preparation will be a great luxury to the sailor, as it will enable him to enjoy an article of food that has hitherto been supposed could only be had on shore.
Very respectfully, yours, &c. EARL BARTLETT."

Extract of a letter from Rev. Mr. Williams, dated Valparaiso, Aug. 9, 1853.
"But the Tablets of Milk prepared by S. T. Blatchford & Co. were the climax of comfort. I would say, let no one go to sea without them. I have a few now left in my room as perfect as when first made."
April, 1853.
Mr. Samuel T. Blatchford—
DEAR SIR: Some twelve months since I heard of your preparation of Milk and procured a sample, a portion of which I tried at the time and found it good. When preparing for sea, last December, I tried the balance, which proving equally as good as months before, I procured several pounds, and during the voyage to and from Europe, have had the milk on the table every day, and have found it excellent.
I have used several preparations of milk, and have no hesitation in pronouncing yours the best. I consider it just the thing. In future voyages I shall endeavor to have a supply of it.
Yours, very respectfully, RICH. S. CORNING,
Master of Clipper Ship "Rapid."

Wholesale and Retail, by
C. MORRILL, Druggist,
And agent for the sale of the New Lebanon Shaker Seeds, Botanical Herbs and Extracts.
K street, cor. 7th, Sacramento.
Branch store, P. street, cor. Third.

New Invention!
BULKLEY'S STEAM DRY KILN.
THE undersigned takes this opportunity to offer to the citizens of California, Oregon and Washington Territory, the valuable invention hereby announced. One of the greatest wants of California and vicinity, for years, has been the means of preserving her products so as to have a continued supply during the late months. The vegetable products to an immense amount are annually lost at the approach of the rainy season, its long continuance, and the exposure that necessarily results to these products from the season; and the vast quantities that are exposed and accumulated in warehouses and elsewhere, have demanded some method of preserving these immense and valuable crops, that otherwise would be a loss to the producer and to the State. The loss of the Potato and Onion crop last year would amount almost a million of money, and the loss the present year will be heavy, without preserving them.
The undersigned, holding the "Patent Right of the Steam Dry Kiln," offers this invention with the confident assurance that it is the very thing needed—that it is the *ex nihilo ultra* for this very want. It has been thoroughly tried and approved, for these products, and for Grain also. It has been tried for Lumber, to which it has been more particularly applied to the States, for there the Vegetable products do not require so much care as here. To shippers of Grain this invention removes all the difficulty in storing Grain on long voyages, and under the drying process of this valuable invention our Grain growers can now send their Grain to New York with safety.
The proprietor needs only to append the following certificates. The name of Henry L. Bulkley, Esq., carries a weight that is convincing to intelligent men, and the other evidences should be satisfactory.
The model machine will soon be placed on exhibition at the office of Warren & Son, where all information can be had.
JOSHUA HUTTS, Proprietor of Patent.

A Diploma and Silver Medal
Was awarded to the inventor at the last New York State Agricultural Fair, held at Rochester, as a testimonial of its superior merits.
Letters from Hon. H. L. Ellsworth.
LAFAYETTE, January 7, 1853.
DEAR SIR: I congratulate you on the completion of your Dryer. I have for a long time regarded the importance of extracting the moisture from grain and flour before shipment, to prevent fermentation. Your plan will obviate the difficulties hitherto experienced. There can no longer be any doubt that 18 pounds of water can be taken from a barrel of meal, and 15 pounds from a barrel of flour without affecting the taste or appearance of the same. Experiments at Lafayette show this. Nor is it a less gratifying circumstance that when the flour or meal is cooked, it re-absorbs proportionately more water, thus saving freight and the purity of the article. If the moisture is extracted, it must be obvious this meal will keep for long voyages, passing through the hottest climates. To the Navy, your improvement is invaluable. The world has become somewhat skeptical on the subject of patent rights. The simplicity and compactness of your machinery enables you to exhibit a working model, to restore to a moment any doubts as to your ability to sustain your patent and prove its utility. One feature in your plan deserves particular notice; in fact, this constitutes your main claim, viz., not drying by common steam, or by fire heated pans, as has been done hitherto, but by using heated steam. Few persons are aware of the small expansion of steam, and how easily it can be heated to a high temperature with little confinement. You will be able to raise a stream to the point of ignition, any 600 or 700 degrees, though a far less heat will answer all your purposes. I will only say that European prejudice against Indian corn is fast dying away, and we may anticipate large shipments both for steam and meal. The great fertility of the West, and the reduction of freights both inland and on the ocean, justifies this anticipation. Wishing you success,
I remain, yours respectfully,
HENRY L. ELLSWORTH, Late Commissioner of Patents.
To Henry G. Bulkley, Esq., Kalamazoo, Michigan.

LAFAYETTE, March 20, 1853.
DEAR SIR—I am highly pleased with your Dryer for lumber by heated steam. It seems almost incredible how soon even green lumber can be prepared for use. Twenty-four hours is all that is required. Steam has hitherto been used to advantage, but heated steam has not been applied for this purpose before your improvements. Every manufacturer of lumber would find it profitable to erect a cheap dryer on your plan. Fall one-third of the weight of some kinds of lumber is removed by drying; the saving in cartage will more than repay the expenses of drying. When the difference between seasoned and unseasoned lumber is considered, no one who regards good work will regret the trifling expense of preparing the raw material.
Yours respectfully,
HENRY L. ELLSWORTH.
To H. G. Bulkley, Esq., Kalamazoo, Michigan.

HARRISBURG, Pa., July 12, 1853.
I hereby certify that I have had charge of one of W. O. Hickok's shops where the most of his wood work is done, that I put up and have used H. G. Bulkley's Patent Kiln, and heartily approve of everything W. O. Hickok has said about it, and am certain that no recommendation can be too strong in praise of said kiln.
W. H. SELLENBERGER.

WYMAN & CO.'S SUPERFINE CLOTHING!
WM. MANSFIELD & CO.,
151 Montgomery street,

STATE BOARD OF AGRICULTURE.

The Massachusetts State Board of Agriculture held a session at the State House on Wednesday, Thursday and Friday, the 3d, 4th and 5th of January. Every part of the State was represented, and the reports of the several committees discussed and referred. They show the improvements commenced, completed, and anticipated. Among those completed are, a building for the accommodation of the numerous small tools used by the boys, such as forks, rakes, hoes, shovels, &c.; a room for blacksmithing, one for depositing carts, sleds, and large farming utensils; one devoted to corn-crisps, and for shelling of a sufficient capacity to contain two thousand bushels; a carriage room, carpenter's shop, and a room for preserving and storing seeds. Another building has been completed sufficiently large to give one hundred swine ample yards, feeding and sleeping rooms; overhead is a large room for storing bedding or litter, and for keeping apples, pumpkins, small potatoes, or any of the early perishable articles which make up a considerable portion of the provender for swine in the autumnal months. This building is accommodated with capacious cisterns for receiving swill from the family of nearly six hundred at the Reform School, and for steaming vegetables or grain if thought desirable. In the front part of this building is a commodious slaughter-house, with a well and pump, and such conveniences as are necessary where slaughtering is required as often as once a week. The work is all done in a plain but substantial manner, and the building affords such facilities for swine-breeding and raising as have enabled the Board to find a profit of some \$200 in the course of nine months in this department of the farm. New and substantial stone walls have been erected, drains made, and various expedients devised for the increase and preservation of manures.

The amount of produce sold from the farm during the year amounts to four thousand seven hundred and seven dollars and thirty-eight cents, and the amount of labor done on the farm for permanent improvements and for labor done for Reform School amounts to one thousand eight hundred and thirty-six dollars.

The operations of the Board have been limited and impeded by the want of proper buildings to board the workmen, and suitable buildings must either be purchased or erected for this purpose. The farm now lies mostly on one side of the buildings, and the Board propose to ask the Legislature to purchase certain contiguous lands and buildings, all conveniently located, to obviate the present existing difficulties. If this request is granted, it will afford pasturage and mowing so as to double the number of cows now kept. During the last year, pastures have been hired, and large amounts of grass purchased and cured in order to increase the cows so as to furnish the supply of milk demanded at the school. But with this extraneous help this demand has not yet been supplied. More land and more buildings are needed before the business of the farm can be successfully prosecuted.

At the meeting of the Board of Agriculture on Thursday morning, Gov. Washburn was present, and presided until he was called away to attend to other duties at the Council Chamber. He said:

"Before leaving the Chair, as it was probably the last time he should have the honor to meet

with them in that capacity, he would say a few words at parting. He should be doing injustice to them individually, as well as to the cause in which they were engaged, if he forbore to express to them the high personal regard which his intercourse with them had so much strengthened, and the interest he felt in their efforts to promote the Agriculture of the Commonwealth.

It had been a source of profound satisfaction to him that he had been permitted to take an humble part with them in urging forward the work in which they were engaged. And he counted it by no means the least of the honors connected with the place which gave him the privilege of meeting and acting with them, that it had brought him into intimate relations with gentlemen constituting that Board, and to know, by personal observation, their devotion to the purposes, for which the Board was created.

He was happy to believe that the interests of Agriculture were assuming that importance in the public mind, that their extent and magnitude demanded. Its position among the other callings and pursuits of our citizens was becoming better understood and appreciated in the Commonwealth than it had hitherto been.

Not a little of this was owing to the character and influence of the members of this Board, and men like them, who had brought to it character, intelligence and practical experience. The need of some measure to elevate Agriculture and promote its success in the Commonwealth, had long been felt. How it could best be done has long been a desideratum in the policy of government. The plan which had now been adopted seemed to him, in the present state of science and of public sentiment, the best, or perhaps, the only one that could be devised.

It brought to the subject the combined knowledge and experience of gentlemen from different parts of the Commonwealth, who, by full conference with each other, were able to test theories, and elicit what the public want to know, the truth of these as determined by accurate experiment and sound observation. It provided, too, for a body of men whose interests were the same with those of every farmer in the Commonwealth, and whose judgment and accuracy could not be impeached by suspicion of improper bias or self-interest. He could not but congratulate the people of the Commonwealth in the promised results of this system. Nor could he, with less satisfaction, congratulate them that they had been made the honored instruments in carrying out so interesting and important an experiment. He doubted not that they would continue to pursue the objects for which they had been appointed, and would find their reward in a proper appreciation of their services by a generous and confiding community.

In taking leave of his associates at that Board, over whose deliberations he had been permitted to preside for a brief period, he again assured them of his sentiments of high personal respect, of his best wishes for their success in every pursuit of life, and for their long-continued happiness and prosperity.

He thereupon left the chair, which was resumed by the senior member present, and took leave of the Board.

EVILS AND REMEDIES.

There is crashing, and groaning, and distress all around us. A short-sighted philosopher would say we are fallen on evil times. But times are never more evil than men make them. If all our labor was well employed, there would be no evil times, nor hard times—nor panic nor distress. If there was money and confidence enough, all our labor would be well employed. Why isn't there money enough? Simply, because we have been buying abroad for years what we could and ought to have produced for ourselves at home, and now our money is gone to pay the shot—or if it isn't all gone, those who have the balance know its increased value and power too well not to hold it fast, or dole it out with "skinning measure."

Public confidence, which, by adding much credit to a little money, makes a great deal of capital for business and trade, has gone with our money. Speculation and extravagance, bringing forth their natural fruit of failure and fraud, have made men as suspicious of one another as though the community was a nest of pick-pockets and thieves. An extreme of recklessness and improvidence is followed by an extreme of caution and distress, just as day is followed by night. And we can't get out of this slough without a travail. We can neither pray nor curse ourselves out of it. We have taken on the pack of sin, and can be rid of it in only one way—by "lively" repentance and genuine reform. Even then, it will take time to recover the old prosperity.

The first thing to be done is to reinstate labor—give it universal employment. Give every

species of labor—agricultural, mechanic, manufacturing, artisan, &c.—ample employment, and trade, commerce and general enterprise will instantly revive. There is work enough for every species of American labor within the bounds of our own country. We require and consume enough as a people to properly exercise all our working hands and brains, and there would never have been any of the present forced idleness and consequent distress—if we had been united in a resolve to consume nothing of foreign production that might have been produced at home. If every American for five, or even for two years past, had established a personal tariff on the basis of his own patriotic determination, and said, "By virtue of an American's duty to himself and to his country, I prohibit myself from wearing or using any foreign manufactures that American industry can produce," there would have been no mass meetings in the Park—albeit, only foreigners, in the main, have thus met—to grumble at good soup, and threaten the rights of property. There would have been no complaints of thousands vainly seeking work. Every strong hand and willing heart would have found and kept employment, and prosperous, happy activity would now be the jubilant spirit of the land.

Well, it is never out of place to do a right thing, and it is better to remedy an evil than to regret it—or if we must regret, let us remedy first. No such tariff as we have suggested was established, and none is established now, but as it is plain that we can't go any farther with our patronage of foreign labor without deepening home distress, we think the American working man, at least, will yield to his necessity if not to his spirit of pride and independence, and join with us in instituting and vigorously enforcing a personal tariff—a tariff prohibitory of the wearing, using, or in any way consuming any foreign article which American labor is capable of producing. Let such a tariff—better than any statute restriction, because an evidence that the American can govern and protect himself—be declared by every American in the land, and kept up for five years, and American labor will nevermore seek foreign investment; and American trade and enterprise never more wreck on a commercial or money crisis. The National prosperity and independence will be so based, and hedged around; and insured, that no revulsion can reach them.—N. Y. Mirror.

THE PROSPEROUS FARMER.

What happy fellows the farmers must be now, hard times! Hard times! is the incessant cry of the merchant, manufacturer, and mechanic. Business is nearly prostrate, money at a premium of thirty per cent, and not to be had at that without first class collaterals—princely firms of half a century's standing are tottering, falling, and carrying distress and ruin to all around them—great manufactories suspending operations—workshops closing—fool of all kinds exorbitantly high—thousands of mechanics and laboring men, with tens of thousands of helpless ones dependent upon them, without employment, and with no immediate prospect of securing any, and to add to the chilling gloom of the picture, cold cheerless winter encircling us in his icy arms. When, before, have we fallen upon such evil times?

In the midst of all this desolation and distress, the farmer stands, the only man in the whole community upon whom prosperity and success deign to smile. While the merchant tosses uneasily upon his pillow, with visions of notes due, and nothing to meet them, hardhearted creditors, bankruptcy and ruin floating through his brain, the farmer with an untroubled heart scans his broad acres, and looks the future in the eye with an unblanched cheek. While the industrious mechanic, with a wife and children wholly dependent upon his exertions, turns with a sad heart from the workshop, where, a few months since, his skill and ingenuity had guaranteed him a comfortable support at least, and surveys the cheerless prospect before him, not knowing where the next dollar to purchase food and fuel for the helpless and loved ones at home is to come from, the farmer turns to his mother earth, as an infant to the maternal breast, knowing that in her simple bosom abundance may always be found.

Such contrasts are painful, but they are instructive. They serve to show how strong and steadfast is the man who in life is dependent, not upon the fluctuations of stocks, or the risks and perplexities of trade, but upon the soil, the grateful soil, which, like an honest employer, pays the full value for every hour's labor bestowed upon it. Think of these things, ye who are longing for the excitements of city life, with the hope of realizing fortunes in a day.

Hear Mr. Holcomb on this subject: "I will trust to my farm, I see it will at least support me and mine, I will even lend it the last dollar I can

spare! Yes, we may trust the land. The banks and the railroads, the stock and the scrip, may or may not pay us back, but this nursing mother will fulfill all her promises, honor all drafts. You may draw on her at six months for your oat crop, at nine months for your corn crop, and at twelve months for your wheat, and if from any great calamity, as the drought or the flood, she cannot always pay up on the day, she will make a handsome instalment, ask a little time, and then pay up to the last farthing, and if you have been generous to her, maybe she will make you a handsome present besides."—Progressive Farmer.

THE FARMER'S HOME.

What signify all the improvements in agricultural processes, which are constantly urged upon the acceptance of farmers, if the farmer's Home is what it ought not to be?

Deep cultivation, draining, drawing, ditching, mulching, composting, &c., are all important, as a means; but the proper end to be accomplished is not the multiplication of dollars and cents—not the laying up in store of "tinch goods," but that most desirable of all earthly ultimates, a pleasant, attractive, happy Home.

The farmer's Home should not be so much his castle, as his sanctuary. Over its threshold, disorders and discontents should never be allowed to step. Harmony, order, love and peace, as well as plenty, should reign within the farmer's abode, making it a paradise, as little marred by gross and corrupting desires as may be; where the intellect, the taste, and the affections may seek and find their appropriate and full gratification. What desolation, nay, what wants abound within those walls, where merely animal desires are cloyed with material profusion, to the exclusion of that higher food of the spiritual nature, which is, in fact, the "bread of life!" There, the physical man may grow, and fatten, and rejoice in its sense, and its indolence, with a sort of porcine satisfaction; while the inner life, the manhood, the God-spark, faints, faints, and dies.

The fields are the places where the head, aided by the strong arm, should triumph in material achievements. In the true Home, the heart, aided by the head, should exult in the industry of the bee, in storing its treasures, and like the treasury of the bee, those of the human Home should be of honeyed sweetness.

Wealth may build palaces to shelter gilded misery. Poverty, by making a true home in an unpretending cottage, hallows itself, and shames the power of gold.

It is astonishing with what facility the cultivated spirit changes even material objects into high spiritual individualities. A tree, a shrub, a flower, nay, a stone, may have its history—a history, the recital of which shall palpitate the listener's heart with joy, or blur his eyes with tears of sadness. Inanimate objects, (only so, perhaps, to our thinking eyes,) may speak a language, which the heart shall hear, and feel, and answer. Around the true home, sacred as were held the household duties of olden times, cluster these objects of man's æsthetic nature. They wake him better, happier and wiser; opening up to him, even here, a manifold life, and enable him to read sermons in stones, and to behold good in everything.

Verily, we are sorry to say it, but so it is verily, the farmer's Home needs improvement more than his plow-shares, his threshers, or his reapers. It needs more than improvement; it demands a new creation, fashioned on a plan of such beauty and harmony, that it may be a temple worthy to be tenanted by beings who have spirits as well as bodies. Then, what follows in the way of even unlimited improvement in modes of material production, will be of the utmost importance, for the farmer's Home will be what it ought to be.—Ohio Farmer.

A DONATION FOR THE ENCOURAGEMENT OF AGRICULTURAL INSTRUCTION.—Dr. Wm. Terrell, of Georgia, has given to the University of that State, \$20,000 for the endowment of an agricultural Professorship, the interest to be applied, as compensation, for a professor, whose duty, as defined in the terms of the gift, shall be to deliver in the College, a course of lectures during its terms, on "Agriculture as a science; the practice and improvements of different people; on Chemistry and Geology, so far as they may be useful in Agriculture; on Manures, Analysis of Soils and on Domestic Economy, particularly referring to the Southern States." The lectures are to be free.

A noble offering to a noble cause, from a noble heart.

WHEAT CROP OF MINNESOTA.—The wheat crop of this territory for the present season is estimated by an intelligent farmer friend, at the value of two hundred thousand dollars.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SAN FRANCISCO, THURSDAY, MARCH 29, 1855.

State Convention.

THE Annual Fair, which is to take place in the city of Sacramento, in the month of September next, requires of the citizens of the State some preparatory action in order to make it as useful and valuable to all the interest involved as is possible. It is not alone the Farmers, or Cultivators of the Soil, but all Stock Raisers, Wool Growers, Fruit Growers, and our Vine Growers, —and not only these but our Manufacturers, Machinists, Millwrights, Artisans, Mechanics of all and every class, and not these alone, but all who are interested in art or skill.

For the coming Fair measures should now be put in train to have an exhibition of all the Home Industry of the State—products in all and every department, not only its agricultural wealth, but its manufactures of every kind; specimens of the mechanical skill in every branch; works of art; the domestic manufactures of home, the immediate handiwork of those whose presence has built up the Homes of California.

The Exhibition of 1855 should be, for it can be, one of which the State may well be proud. To make this Exhibition all that it may be, there should be a public gathering of all who feel an interest in these things, and delegates from all sections of the State should be present and make known the resources of the several localities and their ability to aid, and in what department. Where County organizations exist, these matters should be immediately noted on, for to make the Annual Fair what it ought to be, there is no time to be lost. Early information should be spread over our whole State, and will not the Press extend the information and urge these matters?

We trust our legislators now assembled will take an interest in this subject, and now while they are assembled at the capital, before they adjourn, we would suggest that a Convention be called to meet at Sacramento, and let delegates be called from every section of the State; where it is not convenient for delegates in numbers to come, the Representatives and Senators should be their special delegates; but we would have the farmers and others come up, and joining their representatives, consult with them, act with them, and thus carry on the work strongly.

If a Convention could be assembled before the adjournment of the Legislature, great good must result from it. Delegates could come prepared with matters of interest relative to the products of their several sections, and lay these before the Convention, and thus the Representatives of the State would have an additional evidence of the value of measures needed to carry on this Exhibition, for it should be an Exhibition of the Industry of California, in all her varied resources.

Will not our County Societies now organized take immediate action upon this matter?

Will not the officers of the State Society, scattered over the State, move in this work?

Will not our many readers, in every section, take up the subject and see their neighbors, and let us hear from them immediately—we wish their opinions.

We trust our Senators and Representatives at the capital will feel that this is an important matter and one worthy their highest consideration, and that they will give it a portion of their thoughts—for surely, the development of the real wealth of California is connected directly and most positively with this subject.

Premiums for 1855.

THE Premiums for the Annual Fair of 1855 will soon be published in the FARMER, thus all will see the value of a ready co-operation on the part of all, in this important work. Those who desire to be fully acquainted with all the particulars relative to the Fair and the Premiums, and the steps necessary to take which will entitle competitors to them, should become subscribers to the FARMER, this paper publishing the list full and complete, with all rules and regulations, giving time, place, &c.

Farmers and all interested should consult together upon these matters, form Committees in their several districts and take an interest in bringing forward every leading product of the country. Many new and valuable seeds, trees and plants have been discovered in California, and many introduced from abroad; all such should be carefully grown for the Exhibition so that their merits shall be fully tested. We trust a due interest will be awakened in this matter in early season. The Fair will take place in September.

The Upper Sacramento.

A correspondent writes us, of March 5th, (which letter was delayed,) as follows: The Sacramento is over its banks in all low places; it only lacks about four inches of being as high as the great flood of 1852, which was higher than that of 1849. The most of the rain that caused this rise fell in the mountains, as there has not been much here. The farmers in this vicinity have called a meeting to consider the expediency of erecting a building for the storage of grain, as this would save the expense of the usual plan of storage. The design is, a building in common, as the property of the farmers themselves.

Whenever there is anything important I will let you know. Yours, &c., X.

We are always pleased to hear from our friends, and we like to be advised of all the measures adopted for the general good. We thank our friend, who is a constant reader of the CALIFORNIA FARMER, for the interest he evinces for our journal. We would suggest to our friends when they call a meeting for the warehouse, it would be an excellent time to form a "County Agricultural Society,"—it ought to be done,—and we would simply say, at all these meetings, we ask an interest in our CALIFORNIA FARMER, and surely the cultivators would see the importance of their co-operations.

What say you, friends at Colusa? May we expect a handsome list? The FARMER is now the organ of the State Society, and will publish all their doings, as also all the facts from every source that we hope may interest our readers.

French Loan.

It will be seen by the annexed "Loan of the French Nation," that the real wealth was found among the agricultural districts of the empire. And so it will always be when the nations give it "the same encouragement as has the French government; in their hour of need they will be found ready to aid. We copy from the U. S. Economist.

Last year, when the French Emperor despairing of a loan through those large banking houses which for so many years have held the purse strings of the European Governments, boldly opened the books to the whole public, placing the minimum subscription so low as to bring them within the reach of all, the great success of the measure surprised the public. More than the sum demanded was immediately subscribed, and in such small sums as to confound those who contended that the Government was unpopular. Since that time the war and the foreign policy of the Government has been such as to challenge popular opinion, and the Emperor once more comes forward for a loan of \$100,000,000 for war purposes. Its success is far beyond that which ever attended a like measure in any country.

The amount required was.....\$500,000,000
The amount subscribed was.....2,175,000,000

Excess subscription.....\$1,675,000,000
or \$314,602,500

Of these subscriptions \$836,000,000 were for \$500 of rente and under. The number of subscribers in the Departments was 126,000, and in Paris, 51,000. The English subscribed \$30,000,000, and made deposits of 10 per cent. with the houses of Rothschilds and Barings. As these were all excluded, the deposits were paid back. Other European countries, Germany, Belgium, &c., offered \$150,000,000, which was also excluded, the amount being taken entirely by the small capitalists of France.

The vast sums of money thus at the command of a popular Government is surprising; the more so when it is considered that these funds are drawn from the agricultural districts of France, where they have been hoarded during the threatened anarchy of Ledra Rollin, Kossuth & Co. This class of turbulent men uniformly asserted that the election of the President, and, subsequently, of the Emperor was a cheat, and that there was no free will exercised in the balloting; that the result was manufactured by Napoleon. When, however, the same people proffer their money in sums of hundreds of millions, there exists not only pretty conclusive proof of the popularity of the Government, but of the existence of great means among the people. The agriculturists of France have for several years had good prices, notwithstanding that the course of the Government in purchasing foreign food probably depressed them at the great centres of population below what they otherwise would have been. It is true, the quantity in France has been less than in ordinary years, but it is probably the case that the growers got more money in the metallic shape, and, prompted by political troubles, hoarded it to an extent which has absorbed a considerable portion of the new gold production. In this case it may prove to be the case that payments into the coffers of the "receiver's general" in gold, for account of these new loan subscriptions, may cause a great influx of the precious metal at the financial centre. The English subscription, reaching nearly \$30,000,000, had already produced an influence upon the Exchanges, but as they are now to go forward a reaction in that respect may take place. In every point of view the success of the loan at this juncture is a favorable feature for the financial world.

The Dairy Raffle.

WE have noticed that our contemporaries of the Pacific have taken up the subject of the Dairy Raffle, and seem to think that the FARMER departs from its legitimate calling, when the measure proposed by the said distribution is advertised or spoken of in our columns.

We are not disposed to controversy, nor have we ever attacked or interfered with any contemporary upon the matters they saw fit to discuss in their columns. We have pursued, with the best of our humble ability, our duties, and shall never waste time in matters of controversy that benefit no one. We have advertised the dairy prize of Mr. Southwick—it was a "farmer's theme"—one of the best dairies of the State, and the person is a fortunate one that gets it. We did speak of the matter editorially, and spoke what we believed to be true, and believe so now; for we know the parties well, and feel confident the business will be properly conducted.

Whatever merit there is in ordinary lotteries, in the distribution of this dairy and what is connected with it, we had never seen aught that was not reputable. Those who had seen fit to interest themselves were farmers, and those who really sought to become so. We never saw a loafer, an idler or an intemperate man take any interest in the subject: those we saw were farmers, dairy-men, and respectable. We therefore shall not feel called upon to extend our remarks upon the subject, other than to kindly thank our contemporaries for the interest they express to our journal. For this we are grateful and shall at all times reciprocate courtesies. There are so many themes upon which we can happily agree that we prefer them, and when we come to differ, we prefer to say to our brother, "if you take the right, we will go to the left. If you take the left, we will go to the right. For the world is wide enough for both me and thee."

Horticulture in the Highlands.

WE copy the following from the Shasta Courier, and we are as much rejoiced as any one can be at the advance making in our up-river country. Our friends, however high up, need have no fear of success. No matter how elevated, with deep cultivation, every tree, shrub and vine must succeed, and we have abundant testimony that such is the result in every section of the State. High cultivation, i. e. deep cultivation will produce better results without water, than shallow culture and all the irrigation that could be applied:

GARDENING.—Quite a number of gentlemen in this place have turned their attention to the conversion of their waste grounds into gardens. The result is that there are a number of very beautiful enclosures in various portions of the town, where, but a short time since, the eye was offended with unseemly gullies and moonish hillocks. Our old friend Donner, however, is entitled to the palm, for this kind of improvement. We had the pleasure of walking over his garden, one day this week, and were delighted with the many evidences of taste every where exhibited in his numerous improvements. He has several thousand peach, cherry, apple, pear, plum, apricot and quince trees—many of which are now in bloom. The upper portion of the garden, on a steep hillside, is made into terraces, upon which are planted rows of trees and grape-cuttings. In another year this will be the most charming portion of the garden. In the midst of these terraces, is laid off an elevated circular ground floor for an arbor, which, when covered with trellis-work and running vines and flowers, will be a most delightful place in which to woo the nudes or a young maiden. (What a pity our friend has not any woosable daughters?) Meantime, permit us to say, when peach time comes around, look out for another visit from this deponent.

Another garden that has attracted our attention by reason of its great beauty, is that attached to Westcott & Bartlett's Soda-Factory. Our imagination was especially excited with the view of a very large bed of healthy looking strawberry vines, which, if no unusual thing happens to them, will bear an abundant crop this season. We don't mention this fact with a view to make anybody's mouth water.

Mr. Harrill, also, has a very beautiful garden, tastefully laid off. In a few years more he will have to keep sundry big dogs to protect his peaches, apples, pears and other descriptions of fruits.

This matter of fruit trees is a thing that our citizens should at once attend to. Fruit trees are both useful and ornamental, and are raised with but little labor. They are also easily obtained, as Mr. Donner has a great number of them for sale, and of almost every variety.

SALT SPRING.—A salt spring which produces 2,800 gallons of salt water per day, has been discovered within six miles of Red Bluffs. There is about one pound of salt in five gallons of water. The spring is considered very valuable. Three tons of salt are sent through Red Bluffs daily for consumption in the northern part of the State.

Hon. Marshall P. Wilder.

UNDER the head of "Mercantile Biography," Hunt's Merchants' Magazine for January contains a rapid sketch of the life and various pursuits of the gentleman named above, together with a most life-like portrait. In the Courier we find a condensed notice from the article in the Magazine which we subjoin:

"Mr. Wilder has been a successful merchant in Boston, for thirty years, and is now of the respectable and well-known firm of Parker, Wilder & Co., 5 Pearl street. Mr. Wilder is a Director in the Hamilton Bank, the National Insurance Company, the New England Life Insurance Company, and other like institutions—in the first two of which he has held office for more than twenty years. Although trade has been his chief business, and to which he has made all other pursuits subordinate, yet by a rigid economy of time, and a strict adherence to system, he has been enabled to contribute extensively for the promotion of the agriculture and horticulture of our country. At the present time he holds the offices of President of the United States Agricultural Society, of the American Pomological Society, and of the Norfolk Agricultural Society. He is also a member of the State Board of Agriculture, and was eight years President of the Massachusetts Horticultural Society. He has filled other important offices, both civil and military; has been President of the Senate, and member of the Executive Council. Few men have done so much for the cause of rural improvement, and to elevate the profession of the farmer. Well does his biographer remark: His valuable services in the cause of agriculture and of horticulture have made him extensively known on both sides of the Atlantic, especially to the yeomanry of the United States. His virtues have a practical existence, benefiting and ennobling the whole community; and his name will fill a page in history that will suffer no detriment by the lapse of years, and which will have its interpreter on every hillside and in every valley where rural taste and refinement are found."

We know Col. Wilder well, and have long believed that few men "magnify their office" with more untiring fidelity, or with more practical benefit to the world. His labors, aside from his legitimate pursuits, as a horticulturist, and in fact, every kind of culture of the earth, have been constant and earnest, and have promoted the cause in many ways.

VINEYARDS.—This is to be one of the "great themes" of California. It is clearly evident that California is destined to become a wine producing and a wine exporting country. The vine grows spontaneously in almost every section of the State, thus indicating by the voice of nature the truth of what we now assert. Nature has done much—science can do more. We have the soil and climate peculiarly qualified for the grape, and it now only remains to apply scientific knowledge so as to ascertain the best varieties adapted to this soil and climate, as varieties for the table and for the manufacture of wine; and we are confident there is no country in the world that can excel California.

ANTHRACITE COAL ASHES.—As the merits of anthracite coal ashes have been discussed with pros and cons at different times in the Cultivator, will you permit me to state a case of my experience, which happened the past summer. I filled a wheel-barrow with the ashes, and while considering what use to put them to, a boy who wished to use the barrow, in his hurry emptied the entire load at the roots of two promising Bartlett pear trees, in the proportion of about three quarters to one and one quarter to the other, and the one with three quarters died, while the one with one quarter, made an uncommon vigorous growth; proving to my satisfaction, that a certain quantity is beneficial, while too much is destructive.—E. C. H. in Boston Cultivator.

A VALUABLE improvement in the process of working butter has been effected by Mr. Ezekiel Grove, of Vermont, consisting in the employment of an endless revolving sack or bag for containing and confining the butter, and conveying it to and between two fluted or working rollers, and through the water in the tub or box as fast as the rollers operate upon it. The butter is placed in the sack and the tub filled with water; the fluted rollers are caused to revolve, and set the sack in motion. The sack and butter are thus caused to pass between the fluted rollers under the salt hopper, and then through the water, until thoroughly worked, cleansed and seasoned.—Boston Post.

MARGARET FULLER somewhere beautifully says: "It is a marvel whence this perfect flower—the water-lily—derives its loveliness and perfume, springing as it does from the black mud over which the river sleeps, and where lurk the slimy eel and speckled frog, and the mud turtle, whom continual washing cannot cleanse. It is the very same black mud out of which the yellow lily sucks its obscene life and noisome odor. Thus we see, too, in the world, that some persons assimilate only what is ugly and evil from the same moral circumstances which supply good and beautiful results—the fragrance of celestial flowers—to the daily life of others."

Messrs. Murray & Co., Montgomery Block, will please accept our thanks for late papers received per Golden Age, yesterday.

Most Beautiful Sentiment.

"The setting of a great hope is like the setting of the sun. The brightness of our life is gone. Shadows of evening fall around us, and the world seems but a dull reflection—itsself a broader shade. We look forward into the coming lonely night. The soul withdraws into itself. The stars arise and the night is holy."

No words could more truthfully describe scenes that have often been verified in California life. "The setting of a great hope!" How like an avalanche has misfortune fallen upon the brightest prospects, blotting out every hope from the heart. How often amid the tenderest associations of life has the fell destroyer laid his relentless grasp upon the loveliest among the lovely, and left homes desolate and hearts stricken and paralyzed. How often too has the cup of bliss been raised almost to the lip, only to be dashed from the grasp, leaving a sting of bitterness so fearful that the heart shudders at the reality of the woe—"The setting of a great hope."

When the history of the Golden State shall have been truthfully written, when some "Washington Irving" shall have caught up those pictures of real life that have passed in the few years of this renowned State, then amid the "lights and shadows" that have so often arisen we shall see the full meaning of the sentiment—"The setting of a great hope!"—for the pursuit of gold, the love of it, has led to the severance of so many ties of home and kindred, and cost so much heart sorrow, without the realization of the anticipated reward, that the words quoted are full of meaning.

RESUMPTION OF PAGE, BACON & Co.—By the announcement of the daily papers, and from the very best authority—the fact verified—we announce this as the day when this able and distinguished house again resumes its business and again wields its influence in banking, far and wide. The news by the last steamer relative to the eastern house is most gratifying. They have resumed under the most favorable auspices, with every prospect of certain success. Indeed their position is higher and their influence wider, and the same result will be experienced here. The resumption of P. B. & Co., in this city, will be the beginning of a better confidence and a returning prosperity. It may be truly said, the many friends of this house wait with anxiety to pay their respects by a renewal of confidence and business, for all wish them success.

SEGONDO ART UNION—By the advertisement which appears in this issue, it will be noticed that Messrs. J. R. Cooper & Co., and Messrs. W. C. Allen & Co. have purchased "Duncan's Art Union," and that by their cards an assurance is now made that the drawing will positively take place on Monday next, the 2d of April, at the Metropolitan Theatre. The exhibition rooms are crowded every evening. The rooms are brilliantly lighted, a fine band of music is present, and with the paintings, statuary, and other rich goods and mures, an hour or two can be spent not only very pleasantly but very profitably; an hour spent in the study of Mrs. Pelby's wax figures will always be remembered. This collection is very large and interesting, and much credit is due to Mr. Duncan for the skill and taste displayed by this exhibition. That the present proprietors will most assuredly, for their own reputation, carry out the plan promptly, there can be no doubts.

FAVORS RECEIVED.—We are under still further obligations to Messrs. Wells, Fargo & Co., by their attentive messengers for prompt delivery of up-river papers.

To the Pacific Express Co., also, for like favors. To our delegation in Congress for valuable documents, and to Hon. C. Mason for parcels of Seeds for general distribution.

We acknowledge the kindness of Hon. C. W. Cook, of the Assembly, for Reports of Marine Hospital and other important matters before the Assembly.

Thanks to the proprietors of Noisy Carrier's Hall, 77 Long Wharf, for files of New York Tribune and Boston Journal.

HARVESTING IMPLEMENTS.—We call particular notice to the advertisements of the Messrs. Treadwell & Co., and Messrs. Paxson whose importations of the best implements are large and of the highest character. California farmers need none but the very best, and these can be found as named above.

DR. CIBBONS will deliver a temperance address next Sabbath, in the Sons of Temperance Hall. Commencing at half-past two o'clock P. M.

A Sublime Bridal—Two Oceans Wed.

Invitations are out for the most sublime and magnificent nuptials ever celebrated upon our planet—the wedding of the rough Atlantic to the fair Pacific Ocean. An iron necklace has been thrown across the Isthmus; the banners are already published; and the bridal party will leave this city on Monday next, February 5th, to perform the August ceremony. Some seven millions of dollars have been spent in achieving this union; but, as the fruits thereof will soon show, it has been money well invested. Across the bosom of the Isthmus, the golden products of our Pacific borders and the inestimable treasures of the distant Orient, are destined to flow in unrelenting streams.

The stupendous enterprise of uniting the two oceans which embrace the greater portion of the globe, we are proud to say, was conceived and executed by our own citizens, in the frowning face of obstacles that none but Americans could overcome. The swamps, the mountains, the miasmas of the Isthmus drove all the engineers of Europe home in despair who contemplated the gigantic undertaking, and the Herculean work was left to the hands and hearts of men in whose vocabulary "there is no such word as fail." The engineers of England and France pronounced the project utterly impracticable. To the late lamented John L. Sterens and his associates, Aspinwall, Chauncey, Colt, Whitworth, and others, the world is indebted for the completion of this GREAT BOND—this commercial linking of the hemispheres. An enterprise so full of poetic sublimity, and so fraught with interest co-extensive with the whole earth, may well command the admiration of the world; and deserves to be fitly inaugurated by such a bridal party as are now preparing to embark as a witness of the grand consummation. It is a theme for such an Epithalamium as was never sung in Greece, and an occasion for a world-ringing hurst of eloquence that makes one deplore afresh that the tongue of Webster is mute in death.—*New York Mirror.*

GREAT EFFECTS FROM LITTLE CAUSES.—The man who strikes an unresisting Chinaman on the street, or who insults him on a steamboat, thinks no more of it. Just so with the passengers on a steam vessel in the East several years ago. A Sandwich Islander was seen with a missionary. Those on board would have laughed had it been hinted that an important question in the history of the country would be in any wise influenced by their conduct. But so it was. An act of arrogance then prevented the annexation of the Sandwich Islands to our own country, and may place that valuable commercial group under the control of Great Britain. It is stated that when in the United States a few years since, the present King was not allowed to sit at the supper table with the other passengers on board of one of the Sound steamers, on her passage between New York and Boston, in consequence of his color. This incident, had such an unpleasant effect on the mind of the Prince that he refused to join the annexation policy of his uncle.—*Oriental.*

SAN FERNANDO MINES.—We have been assured by a gentleman, says the Town Talk, who has visited the newly discovered mines at San Fernando, that they are genuine, no humbug, there is gold there, and that it is paying handsomely all who have the industry to labor. He saw a number at work who were making two dollars to the pan, without rockers or toms. The gold seems to be indigenous to the place; no evidence of attrition by water is visible. It is neither round nor scale gold, but rather presents the appearance of crystals, being angular and prismatically shaped. It is of excellent quality and worth about sixteen and a half dollars to the ounce.

The same gentleman has also visited Kern river, and says the mines will bear a fair comparison with those in other portions of the State. The reason why more of it has not found its way to this market, arises from the scarcity of coin about Los Angeles, wherewith to purchase it, and as not more than fourteen dollars an ounce is offered, miners prefer retaining that in their possession until they can dispose of it to better advantage.

The Sonora Herald publishes a correspondence between the Miners' Committee and the Secretary of the Tuolumne Water Company, by which it appears that the Company have acceded to the demand of the miners, reducing the prices of a single sluice stream from six to four dollars per day. The Herald urges the completion of the new water ditch, however, and says: "Give us an abundance of water, and we promise greater prosperity to Sonora than she ever enjoyed in her palmiest days of the past."

The Columbia Gazette says that the new Water Company, (alluded to by the Herald,) is rapidly progressing, several hundred men being now engaged in excavating the new ditch, and more men are daily proceeding to the work.

FOSSIL REMAINS.—We are under many obligations to Capt. Clary, of Benicia, for a collection of fossils, found in the sand stone, twenty-five feet below the surface of the rock. These specimens are truly worthy the attention of the scientific, and we hope such will feel interested enough to call at our office and examine them.

The compensation of the salaried officers of San Francisco amounts to \$225,000 per annum. Besides this, the Treasurer, Tax Collector and several other officers are paid by fees.

FROM THE EAST.

The Nicaragua steamship Uncle Sam, arrived at this port on Friday night, bringing dates from New York to the 37th ult., and from Europe one month later. She had nearly 500 passengers.

On the 21st of February the House of Representatives passed Mr. Letcher's Tariff bill—126 to 82. This bill provides that articles now bearing duty of 100, 40 and 30 per cent, shall, after the 1st of July, pay 80, 32 and 24 per cent, reducing the present rates 20 per cent, the number of articles paying 25 per cent, reduced to about 20.

The Legislature of Michigan has passed a law which provides for the trial by jury to any slave claimed; prohibits the use of jails to retain fugitives, and requires that the prosecuting attorney of each county shall, upon request, give aid and counsel to any such fugitive slave.

The Prohibitory Liquor bill passed the Senate of New York on the 21st of February. On the same day a Prohibitory bill passed the lower branch of the Legislature of Delaware. On the 21st the Prohibitory bill was lost in the Senate of New Jersey.

It is rumored that a new banking house is to be established in New York by Cornelius Vanderbilt, Wm. H. Aspinwall, and C. K. Garrison, in connection with Page & Bacon, of St. Louis and California; the new House to have a capital of \$3,000,000.

The New York Tribune has lately published two columns of charges against Bennett, the editor of the New York Herald. The offences charged are of the vilest class for an editor. Bennett gives notice in the Herald that he will bring suit for damages at \$50,000. He says he will also sue the New York Express for republishing the same charges.

During 1854, 460,474 immigrants arrived at different ports of the United States. From September 30, 1843, to December 31, 1854, the entire number of immigrants arrived was 2,174,395.

The contest between the Northern and Southern sections of the Methodist Church, respecting the Book Concern property in Cincinnati, has at length been settled, by awarding to the Methodist Church \$180,000 and the Southern debts.

The clipper ship Great Republic cleared at New York on the 21st ult. for London.

THE CUBAN ENTERPRISE.—A dispatch to the N. Y. Tribune, dated Washington, Feb. 24, says some of the new Cuban bonds, issued by the Cuban Junta, have been received there from New Orleans. They do not differ materially from the old ones put forth by Lopez, but are signed by Gen. John A. Quitman, Commander-in-Chief; Gaspar Betancourt, President of the Junta at New Orleans; and John S. Thrasher, as Secretary. The bonds are of various denominations, from \$50 up. Gen. Quitman arrived in New Orleans on Friday, the 16th, for the purpose of taking command of the invading army, and it was expected would leave there within a week.

Private letters from Cuba assert that the men arrested in Havana have no connection with the Quitman expedition.

FROM EUROPE.

The most important intelligence relates to the formation of a new Cabinet, with Lord Palmerston at its head. Personally, Lord Palmerston is said to be not agreeable to the wishes of the Court, who would have preferred that the Earl of Derby (a conservative) should have been Premier. But Palmerston occupies at this time a similar position to that of Sir Robert Peel, when, some ten years ago, the latter entered upon office in spite of the Queen's wishes. The public voice then called for Peel, as the great instrument to break down the Corn Laws, as it now does upon Palmerston to conduct the Russian war gloriously, and conclude it, if possible, with honor and profit to the nation.

Most of the old, or Aberdeen Ministry retain office. The new cabinet remains therefore whig. Lord Palmerston leaves the Home Office, and becomes, in room of Lord Aberdeen, resigned, First Lord of the Treasury—and Premier. Lord Palmerston (the Fox Maule of former years) becomes Secretary of War, in room of the Duke of Newcastle, resigned. Lord Glenville becomes President of the Council, in room of Lord John Russell, resigned. Some changes ensued in the constitution of the cabinet by the promotions or shiftings of former members.

According to the accounts from the Crimea, the French soldiers are impatient for the assault upon Sebastopol, and Gen. Canrobert has been compelled to moderate their ardor. A dispatch from Vienna, dated Feb. 8th, announces that on the 23d ult. the Russians at Sebastopol made a sortie, which had caused the French very heavy losses. Snow had weakened some of the works before Sebastopol, but they were being repaired. In the trenches, the Third Division of the French had taken the place of the English, and were continuing the works. The number of British troops now before Sebastopol is stated to be 12,500. The hospitals are reported to be crowded. Further British reinforcements, accompanied by three Generals, had arrived at Constantinople, and were to proceed immediately to the Crimea. The French Minister of War has received a dispatch from Gen. Canrobert, dated the 28th ult., which states that the troops have supported their recent trials with admirable firmness, and the extreme severity of the season has not shaken their confidence one instant. There is reason to hope that the intensity of the winter has already disappeared in the Crimea. The works before the place were resumed with fresh activity.

Prince Menschikoff has received orders to attack Eupatoria and Balaklava. It is therefore proba-

ble that Gen. Osten-Sacken, supported by the Grand Dukes Michael and Nicholas, will shortly attack the Allies, and whilst the weather is propitious. Russian troops were ravaging the Dobrudscha, under the eyes of Gen. Conzini.

The English Missionaries to the Jews in Poland are ordered to leave the Russian territory. Their printing materials and bookbinder's, library and chapel have been taken possession of by the Russian authorities, and are offered for sale.

It is stated that the Russian expeditionary corps in the Dobrudscha, wishing to force the passage of a river, has been beaten with a heavy loss, after a combat of some hours, by the rear-guard of Yaya Pasha, and that it has already crossed the Danube at Tulcha and Ismail.

The Russians, in their sorties from Sebastopol, make use of the lasso to capture prisoners.

The British have commenced the railway at Balaklava.

ARRIVAL OF THE GOLDEN AGE.

The P. M. steamship Golden Age, Capt. Watkins, arrived from Panama yesterday afternoon, with mails and a large number of passengers. She brings seven days later news from the Eastern States and Europe. Money matters in New York continue easy. We notice among the passengers Judge Hoffman, Gen. Lane, Wm. H. Aspinwall, and Dr. Givins.

Both houses of Congress adjourned finally at ten minutes to twelve o'clock March 4th, after a sitting of over thirty-six hours. A large number of bills were rushed through as usual at the close of the session.

The bill providing for the abolition of four new Regiments to the army, passed.

The amendments proposed to the Tariff, were not adopted.

Congress has passed a bill to authorize the Post Master General to contract for a single monthly mail along the Pacific coast.

The Pacific Railroad bill did not pass the house.

The government contract with Collins's Line of Liverpool steamers has been renewed.

Mayor Wood has addressed a letter to Hon. John Wheeler, upon the inefficiency of existing laws to prevent the importation of foreign paupers and criminals, and calling upon Congress to legislate immediately to prevent a practice from which "our institutions receive their gravest shock, our morality the severest taints, and our local taxation its largest addition."

The prohibitory liquor bill of the Delaware Legislature became a law Wednesday. It goes into effect on the 1st of June. The Ordinance Assembly has affirmed the principle of prohibition by a vote of forty-five to twenty-five.

A terrible casualty occurred on the Mississippi river on Monday. The steaming Thomas McDaniell, while towing two vessels, exploded her six boilers, killing seven persons, and severely wounding several others. The vessels in tow were but slightly damaged. The tug was completely demolished by the explosion.

A serious fire took place in Brooklyn yesterday, 27th ult., in which two boys, named Short, brothers, were destroyed in the flames. Another brother was so dreadfully burned that his recovery is hardly expected.

The residence of Col. Benton, at Washington, was totally destroyed by fire on Tuesday, 27th ult. The furniture and other contents were however, rescued.

Our latest news from Texas is comprised mainly of accounts of the ravages of the Indians, committed in the most daring manner. Emigrants continued to arrive in large numbers, and there was plenty of employment for them.

The English Parliament re-assembled on the 16th Feb., when Lord Palmerston made the usual ministerial explanation on accepting office.

Advices from the Crimea up to the 8th of Feb. represent the positions of the belligerents as unchanged. Two-thirds of the Turkish force had landed at Eupatoria, and there were indications which led to the belief that the assault would soon take place. General Canrobert had been virtually superseded by the new organization of the French into two corps d'armee under Generals Pelessier and Bosquet. There was a report in Paris that Louis Napoleon was about to proceed to the Crimea to assume the command in chief; but this rumor can hardly have any serious foundation, as orders have been given for the formation of a camp at Metz, to which the Emperor is about to proceed. It was also stated that Lord Raglan and Levan were about to proceed to England. The weather had become more favorable for the operations of the allies.

MORE GOLD.—Gold has been lately found about thirty miles from San Diego, at a place called the Lagoon, and it is supposed that if the proper means to work the mines were put into operation, they would prove very lucrative. This is the first time that the glittering ore has ever been discovered in that region, and goes to prove that the resources of California in this particular have as yet only begun to be unfolded.

Another conflagration occurred on Tuesday morning at five o'clock, in the frame houses in Ohio street, on the east side, about fifty steps north of Pacific street. Both tenements were almost entirely destroyed. The loss was about \$2,000. The loss falls upon the heirs of Charles Dorente, who are wards of J. H. Davis, Esq., and the owners of the houses.

Horticultural Department.

Culture of the Pear.

For more than twenty years has the "pear fever," as it is called, been raging in this part of New England, and many and solemn have been the predictions that "the thing would be run into the ground," and the market so far glutted by over production, that pears would not pay for the cultivation. Nurseries have been established in almost every town—thousands of trees have been sold yearly at auction and at private sale—and yet, strange to say, the price of pears in the market is higher this year than it ever was before. A dollar a dozen for handsome dessert pears is an ordinary price. When it is borne in mind that the pear crop is less affected than any other fruit crop of this climate by the casualties of the seasons, the facts here stated are sufficient to show that there is no danger of over-production.

A widow lady who owns a small farm of fifty acres not fifty miles from Boston, has received more money the past season from the product of two pear trees, than from any one other product of her farm. When good fruit of this kind sells as high as \$15, and even \$20 per barrel, who can doubt its profitability over any and all other agricultural or horticultural pursuits? The mistaken idea that it takes half a life-time to bring pear trees into full bearing has deterred many from engaging in their cultivation; while others have gone into the business hap-hazard, without knowledge, or experience, or perseverance, and pronounced it a humbug, because it was with them, as a matter of course, a failure. To those, however, who have any taste for pomological pursuits, and have patience to learn something from their own observation and the experience of others, the pear culture promises a rich harvest. It takes some years, it is true, for pear trees or pear stocks to come into full bearing; in fact, the longer fruiting is protracted, the better is the evidence of the healthfulness of the tree, and of its ultimate productiveness. Some fruit-growers consider very early bearing as an evidence of disease in the tree; and it is often the case that the transplanting of a young tree will set it to fruiting for a year or two, when it will apparently recover its decimated roots, and take upon itself a vigorous growth for a number of years without bearing at all. Let no one discard such a tree. It is only preparing itself for a ten-fold better ultimate harvest.

There is an impression abroad that all the old varieties of pears are "running out" or becoming worthless. This is a mistake. It is true that the St. Michael or Doyenne, Crasanne, Chaudron-telle, and other favorite old pears, have deteriorated; but this is believed to be the result of a too high cultivation, rather than any intrinsic change in the nature of the tree. Certain it is that the Jargonelle (the "Espanagne" of Rosier, and the "Gross Quisse Madame" of most of the old French writers,) is the oldest pear extant, and is still not only a prolific bearer, but is the best of all the earlier dessert pears. It is believed to be identical with the *Pyram Tarentinum* of Cato, and the *Numidium Græcum* of Pliny, and has come down to us through more than two thousand years.

"Unsheltered by the frost of time,
Or changing circumstance of earth,"

in all its original delicacy and excellence. Some of our nurserymen, we are sorry to say, have substituted by mistake the Quisse Madame, a pear of English origin, for the Jargonelle—and we see quantities of the former sold under the latter name in the markets. The two very much resemble each other in shape, in the growth of the wood, and in the time of maturing the fruit, but the Quisse Madame is much inferior in size and quality. The true Jargonelle is almost invariably reddish next the sun.

There are other early or summer varieties worthy of cultivation, such as the Juliette, the Burlingame, the Bergamot, the Soere Verte, the Dearborn Seedling, the Sabine d'Ete, the Belle of Brussels, Souvenir d'Ete, &c. There is also Petit Muscat, the fruit of which grows in clusters, and ripens in July. It takes about a dozen of these pears to make a mouthful, and they are often sold by the pint or quart at the fruit stands. It is not a very profitable variety for the market.

For an autumn pear, the first to be named is the Bartlett, or, as it is called in England, Williams Bon Chretien. This fruit is generally believed to have originated in Berkshire, England, and was extensively cultivated by Mr. Williams, near London, whose name it bears there. It was first cultivated by Enoch Bartlett, Esq., of Dorchester, which accounts for its synonym here. Another account represents it as a pear of Flemish origin. In the various properties of vigorous growth, great productiveness, delicious flavor, and adaptedness to all soils, and almost all climates, no other pear can equal the Bartlett. It produces equally well in the north of Scotland and in the island of Malta.

The next best autumn pear, in all respects, according to the writer's experience, is the Flemish Beauty; and then come the Louise Bon de Jersey, Duchesse d'Angoulême, Maria Louise, Seckle, Napoleon, Heathcot, Dix, Chapinmont, Benne d'Amour, Bœre Bore, Fontaine, d'Automne, Belle et Bonne, Benne Spence, Cushing, Edgewood, Steven's Genesee, Harvard, Moccas, Urbaniste, Wintemburg, &c. All these are good varieties, and produce well on most soils. The Napoleon is apt to rot at the core, but is otherwise a superb pear and a prolific bearer.

Of winter pears, the best in all respects is the Beurre Diel. In some few cases it has proved a shy bearer, but it is usually prolific, and is remarkable for the healthy and vigorous growth of

its wood. The fruit is large, very heavy, very juicy, sweet and delicious. The Beurre Beurre somewhat resembles the Beurre Diel, and is also a most excellent variety. The Passe Colmar is a very delicious fruit, and the tree a great bearer. Then come the Beurre d'Arenberg, the Glout Morceau, Man Mons Leon le Clere, Winter Nelis, Souverain d'Hiver, Beurre Rance, Ne Plus Meuris, Bezi Vaet, &c. The Vicar of Winkfield, (otherwise known as "Monsieur le Cure," or "Clion,") is quite extensively cultivated in this region. It is not by any means a first rate dessert fruit, but it is handsome, sells well, and the tree is very prolific. The fruit-grower can therefore hardly afford to discard it.

There may be other varieties than those here named, which the experience of fruit-growers has proved equally worthy of cultivation; but here is variety enough in all conscience, and all these the writer believes may be safely trusted by those desirous of engaging in the culture of the pear.

Why is it that our farmers will wear out a lifetime in accumulating broad but sterile acres for their children, when they might with much less toil leave them a far richer dowry in full-bearing orchards, is not the present object of the writer to discuss. He purposes, however, at his earliest convenience, to give the readers of the New England Farmer (with the leave of its editors,) his views, drawn mostly from his own observation and experience, in regard to the proper culture of the pear, and of fruit trees generally. If anything he can say shall have the effect to inspire a better appreciation of the culture of fruit, he will feel himself amply rewarded.—*Cor. N. E. Farmer.*

Cranberries.

We have frequently, within the last two or three years, called attention to the importance and profit of cultivating the cranberry, and are glad to know that agitation of the subject through the columns of the press has resulted in the greatly increased production of this healthy and palatable fruit. Mr. John Carroll, whose farm is in the neighborhood of Long-a-Coming, Camden county, N. J., has planted out five acres of his upland with sets gathered in the wild state from the swamps, a portion of which are in full bearing. They are planted in squares, one and a half by two feet apart, and cultivated as corn and potatoes. The sets spread very fast, and would soon cover the entire ground, if they were not restrained by cultivation, which is necessary, in order to prevent the soil from being hard and baked. On marsh land, or on soil that retains moisture without cultivation, they may be allowed to run into a compact mass, as they soon will, completely covering the ground and forcing every thing else out of growth. Mr. Carroll's field is high, and of a dry, sandy soil, and notwithstanding the severe drought, and only part of his patch at perfection, he supposes he will gather this fall at least one hundred bushels of marketable berries—worth from \$300 to \$500. Cultivated cranberries are greatly superior in flavor and quality to those grown in a wild state, and, consequently, command better prices. There are few farm products that pay as well for the amount of labor required, as that of the culture of cranberries, and we are glad to chronicle the fact of gradually increasing attention to the business.—*Philadelphia Ledger.*

Subsoiling and Charcoal for Strawberries.

Mr. W. Saunders in a recent number of the Germantown Telegraph, in an excellent article on "Strawberry Culture," says: "This leads us again to the foundation of all permanent improvement—Subsoil Culture. Trench the soil at least eighteen inches in depth, incorporating a heavy dressing of well-decomposed manure, and if the soil is clayey, or adhesive in its nature, an application of charcoal dust will be highly beneficial. As a corrective for clayey soils, charcoal can not be too highly recommended. In a physical view, it renders the soil porous and permeable to gases, and chemically, its absorbing and disinfecting properties are equally valuable, the amount of ammonia and other gases which it is capable of absorbing giving it a value as a fertilizer. On a soil thus treated, there will be no danger of defective, half-ripened crops, or the plants burning out, as frequently happens on shallow soil, for although the strawberry is a plant of small structure, I have traced the roots in favorable soils a distance of three feet from the surface.

Gnaw for Insects.

A correspondent of the Horticulturist, says: "Some time last summer, while building some young Peaches, I found that ants had taken possession of some ten feet in one row. They very earnestly resisted my attempts to inoculate the trees, inflicting many unpleasant wounds on my hands and arms. In order to disperse the warlike little nation, I sprinkled near a pint of fine gnaw along the little ridges. This threw them into immediate consternation. I noticed little collections of winged ants huddled close together, and seeming to be quiet, while those without wings ran about in great agitation. The following day not a single insect could be found where the day previous they appeared to be innumerable."

To which we add the following from an unknown source—"We had a very fine melon patch which was well high destroyed by the striped bug. The vines had commenced running, and in two or three days, the bugs had stripped nearly every leaf. As a desperate remedy, we applied a handful of gnaw on the top of the hill as far as the vines had run, taking care that it did not fall on the leaf. In twenty-four hours not a bug was to be seen; the vines had assumed a healthy and vigorous growth, and are now loaded with fruit.

The experiment was not on one vine only, but hundreds."

HISTORY OF THE MELON.—The history of the watermelon, so much esteemed for its sweet, delicious, and cooling juice, as well as that of the muskmelon, or cantaloup, which is equally prized for its rich aromatic pulp, may be traced back to remote antiquity. The former, which is generally considered as the melon of the Jews, mentioned in various places in the Bible, is believed to have originated in Egypt, or Southern India, where it has been cultivated from time immemorial. It would appear that it was unknown to the ancient Greeks and Romans, as no definite information respecting it can be gleaned from their authors. The muskmelon, which is represented to have been a native of Asia, was known to the Greek and Roman physicians, and its properties and uses described by them at length.

The kind of muskmelon most esteemed among amateurs in various parts of Europe, and described, is the "Cantaloup," so called from a place about fourteen miles from Rome, the country seat of the Pope, where this fruit has long been cultivated. This variety is stated to have been brought thither from that part of Armenia which borders on Persia, where it grows in the greatest perfection and abundance. The flesh of this melon, when fully matured, is delicious, and may be eaten with safety, without injury to the digestive or those of the weakest stomachs. The form of cantaloups is generally roundish, with a rough, warty, or netted outer rind, or skin. The size of the plant is rather small, and the flesh for the most part of a yellowish color, though with some it is green.—*Patent Office Report.*

VALUE OF AMERICAN PRODUCE, CATTLE, &c.—The Louisville Journal says it was stated by Professor Mapes, at a recent meeting of the Farmers' Club at Louisville, that, "the value of live stock of the United States at this time is not less than \$600,000,000, and this will be increased by an increase of the grass and grain crops. More than 120,000,000 bushels of wheat are annually grown, 12,000,000 bushels of rye, 150,000,000 bushels of oats, 5,000,000 bushels of barley, 9,000,000 bushels of buckwheat; 320,000,000 pounds of butter are made, 105,000,000 pounds of cheese, and 14,000,000 tons of hay. These estimates do not include Indian corn, potatoes, beans, fruits, tobacco and various other products equaling in value those we have named.

TURKEYS TO KILL GRASSHOPPERS.—I would advise your correspondent from Kentucky who is annoyed with grasshoppers, to keep on his premises a flock of turkeys. I was surprised a few years ago, at seeing large flocks of turkeys in the meadows of a neighboring farmer, an enterprising, close calculating man. He told me that they had been annoyed with grasshoppers, and that by keeping turkeys a few years, he got rid of them. I have since kept a flock on my farm, and think they more than pay their way, especially where a farm is infested with grasshoppers.—*W. Coates in Country Gentleman.*

INCIDENTS ABOUT LAMARTINE.—The Paris correspondent of the N. Y. Courier and Enquirer gives the following: "Lamartine is now poor. He has been both extravagant and over generous. At Florence, at London, at Naples, he lived beyond his income. He had a vessel fitted up at his own expense for his journey to the East. The expense of his journey was not less than half a million of francs. His benevolence has completed his ruin. He was the acknowledged head of the republican party at Paris, and many a poor fellow lived upon his generosity. A well known man wrote to him the laconic letter: 'I am dying with hunger.' Lamartine responded: 'I have five hundred francs; here they are—pardon me for doing so little with all my heart.' A faithful and very intimate friend one day entered the modest house now occupied by M. and Mme. de Lamartine, and pleasantly demanded the keys. 'I will be the factotum,' he said, 'I will hold the purse.' The secretaire was locked and the friend went away with the key in his pocket. There soon entered a woman begging for the poor. Madame de Lamartine orders the lock to be broken, extracts eight hundred francs in bills, and gives them for the parish poor. Lamartine looks on, approving and smiling. The friend entered soon after, and found them without anything to dine upon.

"Lamartine is now dependent upon his pen for his daily bread—and his daily charity. He writes an incredible quantity, and receives for his writings incredible sums. He writes, too, with incredible swiftness. The editor of a journal went to him one day to obtain an extract from the Girondins. Nothing was ready, and he wrote enough to make a column, in half an hour, while talking with the editor. He improvises always, and his histories are chiefly valuable for the music in them."

ECLIPSES IN THE YEAR 1855.—There will be this year four eclipses, two of the sun and two of the moon:

The first—A total eclipse of the moon, May 1, at 10 o'clock 58 minutes, in the evening; visible.

The second—A partial eclipse of the sun, May 19, at 9 o'clock 9 minutes, in the evening; invisible here. Only visible toward the North Pole, Greenland and the North part of North America, latitude 60 and 61.

The third—A total eclipse of the moon, Oct. 25, at 2 o'clock 35 minutes, in the afternoon; invisible.

The fourth—A partial eclipse of the sun, Nov. 9, at 3 o'clock 39 minutes, in the afternoon; invisible here, and only visible at the South Pole,

The Muse.

A LESSON IN ITSELF SUBLIME.

A lesson in itself sublime,
A lesson worth enshrining,
Is this: "I take no heed of time,
Save when the sun is shining."
These motto words in dial bore,
And wisdom never teaches
To human hearts a better lore
Than this short sentence teaches.
As life is sometimes bright and fair,
And sometimes dark and lonely,
Let us forget its pain and care,
And note its bright hours only.

There is no grove on earth's broad chart
But has some bird to cheer it;
So hope sings on in every heart,
Although we may not hear it;
And if to-day the heavy wing
Of sorrow is oppressing,
Perchance to-morrow's sun will bring
The weary heart a blessing.
For life is sometimes bright and fair,
And sometimes dark and lonely,
Then let's forget its toil and care,
And note its bright hours only.

We bid the joyous moments haste,
And then forget their glitter—
We take the cup of life, and taste
No portion but the bitter;
But we should teach our hearts to deem
Its sweetest drops the strongest;
And pleasant hours should ever seem
To linger round us longest.
As life is sometimes bright and fair,
And sometimes dark and lonely,
Let us forget its toil and care,
And note its bright hours only.

The darkest shadows of the night
Are just before the morning;
Then let us wait the coming light,
All boding phantasms scoring;
And while we're passing on the tide
Of Time's fast ebbing river,
Let's pluck the blossoms by its side,
And bless the gracious Giver.

As life is sometimes bright and fair,
And sometimes dark and lonely,
We should forget its pain and care,
And note its bright hours only.

OTHER DAYS.

How dear are the scenes that once greeted my gaze,
Each friend who so oft and so kindly I've met,
Look forward, look backward, I still think of days,
Endeared to my mind—I ne'er can forget.
Nor the scenes which my earlier infancy knew,
Still farther from view and the place where I set,
Past, present and future all tell me quite true,
Recollecting them all—I ne'er shall forget.
Amid those fond groups my fancy still roams,
Gay spirits and happy, I once had adieu,
Undaunted, unfettered they beckon me home,
E'en back to the spot that my infancy knew.

One of the Secrets of Prosperity.

THERE cannot be a greater error than to be frequently changing one's business. If any man will look around and notice who have got rich and who have not, out of those he started in life with, he will find that the successful have generally stuck to some one pursuit. Two lawyers for example begin to practice at the same time. One devotes his whole mind to his profession, lays in slowly a stock of legal learning, and waits patiently, it may be for years, till he gains an opportunity to show his superiority. The other, tired of such slow work, dashes into politics. Generally, at then end of twenty years, the latter will not be worth a penny, while the former will have a handsome practice, and count his tens of thousands in bank stock or mortgages. Two clerks attain a majority simultaneously. One remains with his former employer, or at least in the same line of trade, at first on a small salary, then on a larger until finally, if he is meritorious he is taken into partnership. The other thinks it beneath him to fill a subordinate position, now that he has become a man, and accordingly starts in some other business on his own account, or undertakes a new firm in the old line of trade. Where does he end? Often in insolvency, rarely in riches. To this every merchant can testify. A young man is bred a mechanic. He acquires a distaste for his trade, however; thinks it a tedious way to get ahead, and sets out for the West or for California. But in most cases, the same restless, discontented, and speculative spirit which carried him away at first, renders continuous application at one place irksome to him; and so he goes wandering about the world, a sort of semi-civilized Arab, really a vagrant in character, and sure to die insolvent. Meantime his fellow apprentice, who has stayed at home, practising economy, and working steadily at his trade, has grown comfortable in his circumstances, and is even perhaps a citizen of mark. There are men of ability in every walk of life who are notorious for never getting along. Usually, it is because they never stick to any one business. Just when they have mastered one pursuit, and are on the point of making money, they change it for another, which they do not understand; and in a little while what little they are worth is lost forever. We know scores of such persons. Go where you will, you will generally find that the men who have failed in life are those who never stuck to one thing long.—*Philadelphia Ledger.*

A MAN'S true prosperity often begins when he is said to be ruined; and his ruin, when he is said to be prospering.

THE surest wheel of fortune is a wheel-barrow.

Miscellany.

Seth Woodsum's Wife.

As Mr. Seth Woodsum was mowing one morning in his lower haying field, and his eldest son, Obediah, a smart boy of thirteen, was opening the mown grass to the sun, Mr. Woodsum looked up towards the house, and beheld his little daughter Harriet, ten years of age, running towards him with her utmost speed. As she came up, he perceived she was greatly agitated; tears were running down her cheeks, and she had scarcely breath enough to speak.

"O, father," she faintly articulated, "mother is dreadful sick; she's on the bed, and says she shall die before you get there."

Mr. Woodsum was a man of a sober, sound mind, and calm nerves; but he had, what sometimes happens in this cold and loveless world of ours, a tender attachment for his wife, which made the message of the little girl fall upon his heart like a dagger. He dropped his scythe and ran with great haste to the house. Obediah, who was at the other end of the field, seeing this unusual movement of his father, dropped his fork and ran with all his might, and the two entered the house almost at the same time.

Mr. Woodsum hastened to the bedside, and took his wife's hand. "My dear Sally," said he, "what is the matter?"

"What is the matter?" echoed Mrs. Woodsum, with a plaintive groan. "I shouldn't think you would need to ask what is the matter, Mr. Woodsum. Don't you see I am dying?"

"Why, no, Sally, you don't look as if you were dying. What is the matter? how do you feel?"

"Oh, I shan't live till night," said Mrs. Woodsum, with a heavy sigh. "I am going fast."

Mr. Woodsum, without waiting to make further inquiries, told Obediah to run and jump on to the horse, and ride over after Doctor Fairfield, and get him to come over as quick as he can come. "Tell him I am afraid your mother is dying. If the doctor's horse is away off in the pasture, ask him to take our horse and come right away over, while you go and catch his."

Obediah, with tears in his eyes, and his heart in his mouth, flew as though he had wings added to his feet, and in three minutes time was mounted upon Old Grey, and galloping with full speed towards Dr. Fairfield's.

"My dear," said Mr. Woodsum, leaning his head upon the pillow, "how do you feel? What makes you think you are dying?" And he tenderly kissed her forehead as he spoke, and pressed her hand to his bosom.

"Oh, Samuel," for she generally called him by his Christian name, when under the influence of tender emotions; "Oh, Samuel, I feel dreadfully. I have pains darting through my head, and most all over me; and I feel dizzy, and can't hardly see; and my heart beats as though it would come through my side. And besides, I feel as though I was dying. I'm sure I can't live till night; and what will become of my poor children?" And she sobbed heavily and burst into a flood of tears.

Mr. Woodsum was affected. He could not bring himself to believe that his wife was in such immediate danger of dissolution as she seemed to apprehend. He thought she had no appearance of a dying person; but still her earnest and positive declaration, that she should not live through the day, sent a thrill through his veins, and a sinking to his heart that no language has power to describe. Mr. Woodsum was as ignorant of medicine as a child; he therefore did not attempt to do anything to relieve his wife, except to try to soothe her feelings by kind and encouraging words, till the doctor arrived. The half hour which elapsed from the time Obediah left till the doctor came, seemed to Mr. Woodsum almost an age. He repeatedly went from the bedside to the door, to look and see if the doctor was anywhere near, and as often returned to hear his wife groan and say that she was sinking fast, and could not stand it many minutes longer.

At length Doctor Fairfield rode up to the door, on Mr. Woodsum's Old Grey, and with saddlebags in hand, hastened into the house. A brief examination of the patient convinced him that it was a decided case of hypochondria, and he soon spoke encouraging words to her, and told her although she was considerably unwell, he did not doubt she would be better in a little while.

"Oh, Doctor, how can you say so?" said Mrs. Woodsum; "don't you see I am dying? I can't possibly live till night; I am sinking fast, Doctor, and I shall never see the sun rise again. My heart sometimes almost stops its beating now, and my feet and hands are growing cold. But I must see my dear children once more; do let 'em come in and bid me farewell." Here she was so overwhelmed with sobs and tears as to prevent her saying more.

The doctor having administered the drugs in such case made and provided, is followed out by Mr. Woodsum, all anxiety to learn the real danger of the case. He is assured that it is only an attack of hypochondria, and the good lady herself ere long recovers.

Again and again, however, is our friend Seth summoned from his plow and the doctor from his pills, to administer consolation and relief in her dying hour, and again and again does she recover. We give below the story of.

DEATH'S LAST ASSAULT.

At last, the sober, sad days of Autumn came on, Mr. Woodsum was in the midst of his "fall work," which had been several times interrupted by these periodical turns of despondency in his wife. One morning he went to his field early, for he had a heavy day's work to do, and had engaged one of his neighbors to come with two yoke of oxen and a plow to help him "break

up" an old mowing field. His neighbor could only help him that day, and he was very anxious to plow the whole field. He accordingly had left the children and nurse in the house, with strict charges to take good care of their mother. Mr. Woodsum was driving the team and his neighbor was holding the plow, and things went on to their mind till about ten o'clock in the forenoon, when little Harriet came running to the field, and told her father that her mother was "dreadful sick," and wanted him to come in as quick as he could, for she was certainly dying now. Mr. Woodsum, without saying a word, drove his team to the end of the furrow; but he looked thoughtful and perplexed. Although he felt persuaded that her danger was imaginary, as it had always proved to be before, still, the idea of the bare possibility that this sickness might be unto death, pressed upon him with such power, that he laid down his goat-stick, and telling his neighbor to let the cattle breathe awhile, walked deliberately towards the house. Before he had accomplished the whole distance, however, his own imagination had added such wings to his speed, that he found himself moving at a quick run. He entered the house, and found his wife as he had so often found her before, in her own estimation, almost ready to breathe her last. Her voice was faint and low, and her pillow was wet with tears. She had already taken her leave of her dear children, and waited only to exchange a few parting words with her beloved husband. Mr. Woodsum approached the bedside and took her hand tenderly, as he had ever been wont to do, but he could not perceive any symptoms of approaching dissolution, different from what he had witnessed on a dozen former occasions.

"Now, my dear," said Mrs. Woodsum faintly, "the time has come at last. I feel that I am on my death-bed, and have but a short time longer to stay with you. But I hope we shall feel resigned to the will of Heaven. I would go cheerfully, dear, if it was not for my anxiety about you and the children. Now, don't you think, my dear," she continued, with increasing tenderness, "don't you think it would be best for you to be married again to some kind, good woman, that would be a mother to our dear little ones, and make your home pleasant for all of you?"

She paused and looked earnestly in his face.

"Well, I've sometimes thought of late, it might be best," said Mr. Woodsum, with a very solemn air.

"Then you have been thinking about it," said Mrs. Woodsum, with a slight contraction of the muscles of the face.

"Why, yes," said Mr. Woodsum, "I have sometimes thought about it, since you have had spells of being so very sick. It makes me feel dreadfully to think of it, but I don't know but it might be my duty."

"Well, I do think it would," said Mrs. Woodman, "if you can only get the right sort of person. Everything depends upon that, my dear, and I hope you will be very particular about who you get, very."

"I certainly shall," said Mr. Woodman; "don't give yourself any uneasiness about that, my dear, for I assure you I shall be very particular. The person I shall probably have is one of the kindest, and best tempered women in the world."

"But have you been thinking of any one in particular, my dear?" said Mrs. Woodsum, with a manifest look of uneasiness.

"Why, yes," said Mr. Woodsum, "there is one, that I have thought for some time past, I should probably marry, if it should be the will of Providence to take you from us."

"And pray, Mr. Woodsum, who can it be?" said the wife, with an expression, more of earth than heaven returning to her eye. "Who is it, Mr. Woodsum? You haven't named it to her, have you?"

"Oh, by no means," said Mr. Woodsum; "but my dear, we had better drop the subject; it agitates you too much."

"But, Mr. Woodsum, you must tell me who it is, I never could die in peace till you do."

"It is a subject too painful to think about," said Mr. Woodsum, "and it don't appear to me it would be best to call names."

"But I insist upon it," said Mrs. Woodsum, who had by this time raised herself up with great earnestness and was leaning on her elbow, while her searching glance was reading every muscle in her husband's face. "Mr. Woodsum, I insist upon it?"

"Well, then," said Mr. Woodsum, with a sigh, "if you insist upon it, my dear—I have thought that if it should be the will of Providence to take you from us, to be here no more, I have thought I should marry for my second wife, Hannah Lovejoy."

An earthly fire once more flashed upon Mrs. Woodsum's eyes—she leaped from the bed like a cat; walked across the room, and seated herself in a chair.

"What!" she exclaimed, in a trembling voice almost choked with agitation—"what! marry that idle, sleepy slut of a Hannah Lovejoy! Mr. Woodsum, that is too much for flesh and blood to bear—I can't endure that, nor I won't. Hannah Lovejoy to be the mother of my children! No, that's what she never shall. So you may go to your plowing, Mr. Woodsum, and set your heart at rest. Susan," she continued, "make up more fire under that dinner pot."

Mr. Woodward went to the field, and pursued his work, and when he returned at noon, he found dinner well prepared, and his wife ready to do the honors of the table. Mrs. Woodsum's health from that day continued to improve, and she was never afterwards visited by the terrible affliction of hypochondria.—*Way Down East, by Jack Downing.*

Method.

DISPATCH is the soul of business, and nothing contributes more to dispatch than method. Lay down a method for everything, and stick to it inviolably, as far as unexpected incidents may allow. Fix one certain hour and day in the week for your accounts, and keep them in their proper order; by which means they will require a very little time, and you can never be much cheated.

Whatever letters and papers you keep, docket and tie them up in their respective classes, so that you may have instant recourse to any one.

Lay down a method also for your reading, for which you allot a certain share of your mornings; let it be in a consistent and consecutive course, and not in that desultory and immethodical manner in which many people read scraps of different authors, upon different subjects. Keep a useful and short commonplace book of what you read, to help your memory only, and for pedantic quotations. Never read history without having maps, and a chronological book or tables lying by you and constantly recur to; without which history is only a confused heap of facts.

One more I recommend to you, by which I have found great benefit, even in the most dissipated part of my life, that is, to rise early, and at the same hour every morning, how late soever you may have set up the night before. This secures you an hour or two, at least, of reading and reflection, before the interruptions of the morning begin; and it will save your constitution by forcing you to go to bed early at least one night in three.

ELOQUENCE.—Eloquence is not only the art of addressing men in public—it is the gift of strong feelings, accurate thought, extensive knowledge, splendor of imagination, force of expression, and the power of communicating, in written or spoken language, to other men, the idea, the feeling, the conviction of truth, the admiration for the beautiful, the disposition to uprightness, the enthusiasm for virtue, the devotion to duty, the heroic love of country, and the faith in immortality, which make men honorable—the feeling heart, the clear head, the sound judgment, the popular knowledge, the artistic imagination, the ardent patriotism, the manly courage, the attachment to liberty, the pious philosophy; and lastly, the religion consonant with the most exalted idea of the Divinity, which render the individual good, the people great, and the human race sacred. It supposes in us the possession and exercise of all the intellectual and moral faculties that are involved in speech—the power of the human word.—*Lamartine.*

FAITH does not consist in thinking that thy sins are comparatively little, and therefore may be forgiven; but in knowing that they are very great, and believing that though they are ever so many and great, past or present, Christ's blood is above them all.

Ladies' Department.

MY MOTHER.

BY ROBERT D. KNOWLES.

My heart oft turns to thee, my dear beloved mother;
Thy image dwells in me, and leaves room for none other.
Like some serene lakes, that duplicate the heaven,
My soul a glory takes, from thy example given.

When sorrow bathes in grief my heart, that trusted stranger,
Thy memory gives relief, and wards off all the dangers.
And when in evening beauty, vespers paint the gill of men,
I learn from thee my duty, and then am strong again!

Wheat Meal Mush and Whoaten Grits.

THERE are few at the present time who doubt that a little mingling of the bran with the flour now and then, promotes the health of the digestive organs and facilitates intestinal action—that living on fine flour, and articles consisting of little nutritious matter, is a diet too nutritive as a general thing. Beside, that part of the grain thrown aside by the process of bolting, is said to be the part needed, especially by the young, to form teeth, bones, &c.

One of the most agreeable forms of using the unbolted, or "Graham flour," as it was formerly called, is in the form of pudding or mush, made the same as hasty pudding—not very stiff, and eaten with milk, syrup, or cream and sugar.

The Wheaten Grits is a relishing dish, used in the same way,—boiled rather longer—about half an hour, over a moderate fire. Both these articles may be had with no more trouble or expense than fine flour—especially by those who take their own grist to mill, and should always be reckoned among the regular family supplies. Take good clean wheat, and have it ground carefully. We prefer the grits somewhat finer than that usually sold in papers at sixpence per pound, yet coarser than the "Graham flour."

A breakfast of one of the above dishes, occasionally varied with rye, corn or oat meal, nice baked potatoes and cold good bread, with a little butter and a glass of water, are breakfasts that may be eaten the year round with impunity—and instead of cloying or producing satiety, will be better liked in December than they were in January, and will bring health and light-heartedness instead of heaviness and headache.

True we like to prove our housewifery and delectate the gustatory nerves of our epicure friends, by getting up breakfasts of hot light rolls, melting waffles or puffy muffins, with juicy ham, and eggs just right, and clear coffee and rich cream. But we are sad to see them partake of the temptations before them with so much gusto, and wish we could prove our disinterested anxiety for their good, as having no thought of our own trouble in

the matter. Any one should be convinced of the desirableness of such a diet, when they see a family, where are ever so many little ones, who have no knowledge of doctors or medicine—where no anxious thoughts and sad tears are shed over the pains and sufferings of loved ones—where no nightly vigils by sick beds are ever kept—where no member of the family ever comes to the table with a poor appetite, but all are happy and hearty, full of life and joyous spirits the year round.—*Elsie in Country Gentleman.*

Unseasonable School Hours.

FANNY FERN contributes to the Philadelphia Saturday Evening Post, the following spirited and well-merited strictures on the unseasonable school hours, just now, not only fashionable in cities, but even beginning to invade the quiet precincts of our village academies and school-rooms:

"Just see those young school girls going into yonder building; sacrificed to the horrible custom here in Gotham of immuring children in a heated school-room from nine o'clock in the morning till three in the afternoon, to cram their brains with all sorts of 'isms and 'ologies. Oh, for the good old sensible times, when spines were of as much account as brains, when there was a forenoon and afternoon school; when children at twelve and one o'clock, exchanged Geography and Grammar for the needful roast beef and apple pudding. You should see the heavy-eyed—jaded, spiritless New York school children at 3 o'clock, dragging languidly home with their piles of books, stopping on the way, at some suicidal confectioner's shop, to satisfy their hunger cravings with villainous pastry or cake, till the fashionable 6 o'clock dinner shall arrive; when they devour voraciously—meat—and the cook only knows what, and go to bed to woo a night-mare, and rise the next morning with muddy brains and complexions. Teachers and physicians may like it, but I must say that the sight of those three o'clock groups of little sacrificed New-Yorkers, is a daily source of irritation to my temper.

Oh yes! I know about the 'recesses,' and I know about the little 'baskets of luncheons,' and how much they both amount to; and I know, too, that it is next door to impossible for an adult to keep the mind on the stretch profitably, for so many consecutive hours, and I would humbly ask the 'Spirit of Modern Improvement' how it can be expected of growing, active, mercurial, restless childhood?"

Valuable Recipe.

How to do up SAINT BOSOMS.—We often hear ladies expressing a wish to know by what process the gloss on new linens, shirt bosoms, &c., is produced, and in order to gratify them we subjoin the following recipe:

"Take two ounces of fine white gum arabic powder—put it in a pitcher, and pour on a pint or more of boiling water, according to the degree of strength you desire—and then having covered it, let it stand all night. In the morning pour it carefully from the dregs into a clean bottle, cork it and keep it for use. A table spoonful of gum-water stirred into a pint of starch made in the usual manner, will give lawn, either white or printed, a look of newness, when nothing else can restore them after they have been washed."

If our lady readers have a better way than the above from the Granite Farmer, please let us know what it is, for there is real comfort in a shirt bosom neatly done up.

How to SMILE OR PICKLE OYSTERS.—Drain the juice into a dish, and save the same. To one can of oysters put two quarts of water, made as salt as common brine. Then put as many oysters in the steppan as will cover the bottom, and let them scald until the fringe around the oyster begins to curl up. Repeat until all are done. Then put in the crock, first one layer of oysters, then of mace, and cloves. Then take the cold juice and add vinegar to suit your taste, and pour it upon the oysters. There should be an ounce of mace, an ounce of cloves, and a few grains of pepper to make the spice.

QUINCES.—Bake them, remove the skin, slice and serve with cream and sugar. Prepared in this manner, many prefer them to the peach. If you have never eaten them prepared in this way, try it, by all means, and you will thank us for the suggestion." So says the Farmer's Mirror.

The quince is an elegant fruit, and we hope to see it more common. Made into a sauce with sweet apples, in the proportion of three-fourths of the latter, with half a pound of sugar to the quinces, and none in the apples. A cheap article produced for the dinner or even tea table, which is not to be despised.—*Prairie Farmer.*

CURE FOR FELONS.—Boil up in any iron vessel of sufficient capacity (say four or six quarts,) enough yellow dock root to make a strong liquor, when sufficiently boiled, and while the liquor is as hot as can be borne by the hand, cover the kettle with a flannel cloth to keep in the heat and steam, and hold the hand or finger affected under the cloth and in the steam, and in five minutes the pains will cease. If it should return after a time, heat up the same liquor and do as before. In a cure performed in this way, the joints of the fingers will always be preserved.

PRESERVING MILK.—Place new milk in a clean pot, and evaporate it till nothing remains but a light dry powder. Put this in a bottle and seal it carefully from the air by corking and waxing, and when milk is wanted, dissolve a small quantity in pure soft water. The solution will be found to possess the qualities, as well as the peculiar taste and aroma of milk freshly drawn from the cow.

MEETING OF THE CREDITORS OF ADAMS & CO.
An adjourned meeting of the Creditors of Adams & Co., took place at Arrington's store, on Front street, last evening. After a most confused and desultory routine of performances, the meeting adjourned *sine die*, without arriving at any conclusion of the slightest consequence. The whole affair will, therefore, be submitted to the adjudication of the Courts.

DISAPPOINTMENT.—The Sierra Citizen states that a party, on the North Fork of the Yuba made extensive preparations to celebrate St. Patrick's Day. The company had assembled, an oration delivered, the dinner, which was being cooked in the open air, was about to be spread, when a drift underneath caved in, and chimney, crockery, fire, fireplace and dinner, disappeared in the direction of the antipodes, going down about thirty feet. By general consent dinner was postponed for that day.

MARRIED.

On the 24th March, in this city, by Rev. Father Taylor, Mr. Edward H. Cowley and Miss Mary Ann Parker, both of this city.
On the 24th March, in this city, by Judge Hockley, Solomon Hottel and Miss Nancy Chatham, all of Santa Ana.
On the 24th March, in this city, by Rev. Dr. Scott, Mr. J. C. Smith, of Holland, and Miss Maria E. Van Winkle, of Prusale.
On the 24th March, in Sacramento, by Rev. Mr. Smith, Mr. J. W. Seltzer and Miss Susan Richardson.
On the 15th March, in Yreka, by Rev. R. B. Stanton, Dr. F. G. Hearn and Miss Jeanie L. Stephenson, all of that city.
On the 29th March, in Marysville, by Rev. E. M. Hager, Mr. Stephen Whinn and Mrs. M. A. Hart, both of Marysville.
On the 18th March, in this city, by Rev. Mr. Bilely, Col. N. K. Lovell, of this city, and Miss Ann Paulick, of N. York city.

DIED.

On the 22d March, in this city, at the Agency Office of the Nicaragua Steamship Company, after a protracted illness, Captain Thomas H. Cropper, formerly a resident of Accoumeo, Cal., aged 44 years.
On the 23d March, in this city, Mr. Nasmith H. Pearsley, from New York city, in the 31st year of his age.
On the 24th March, in this city, Mr. Harison W. Annable, of Sacramento, formerly of Augusta, Me., of dropsy.
On the 24th March, in Natchez, Miss., of convulsions in childhood, Mary, wife of Wm. Byrnes, aged about 25 years.
On the 24th March, in Sacramento, Pommance Moore, aged 33 years, formerly of Albany, N. Y.
On the 23d March, in Sacramento, Mrs. Charlotte Orr, wife of Wm. Orr, aged 28 years.
On the 13th Feb., in Brooklyn, N. Y., of consumption, Mrs. S. R. Winchester, wife of General J. Winchester, late of Green Valley, aged 43 years.
On the 24th March, in this city, Anthony B. Fisher, late steward of the steamship Cortes.

SAN FRANCISCO MARINE LIST.

ARRIVALS.

March 21—Ship A. M. Simpson, Hanson, Tomales Bay, with produce.
March 22—Ship Mary W. Gould, Port Corder, 4 days; lumber, Sugar, Tobacco, Gamble, Yumala, 12 hours; produce.
March 23—Ship Steamship Uleto, San, Baldivia, San Juan del Sur, 11 days; passengers, etc.
Ship R. R. Whitting, Blair, Oregon, 12 days; lumber.
Ship Orinolo, Robinson, Loquelt, 2 days; produce.
March 21—Steamship America, Bailey, San Diego, 2 days; passengers, etc.
Ship Leonora, Sacramento, Hong Kong, 73 days; under, 172 passengers, ship U. H. Allen, Wail, Honolulu, 18 days; under.
Ship Emma Parker, Lathrop, Tahiti, 23 days; fruit.
March 25—Ship Taranto, Turner, Tahiti, 33 days; fruit.
Ship Sacramento, Winterburn, Pajaro, 3 days; produce.
Ship Kate Hill, Parker, Carmel Bay, 23 hours; produce.
Ship L. D. Bailey, Garcia, Santa Cruz, 2 days; fruit.
Ship Iowa, Grange, Pajaro, 2 days; produce.
Ship Francisco, Miller, Pajaro, 2 days; produce.
Ship Hunter, Illinois, Bodega, 24 hours; produce.
March 26—Ship Montpelier, Smith, Oregon, 9 days; produce.
Ship Queen of the West, Dime, Santa Cruz, 30 hours; fruit.
Ship Oliver, Thomas, Santa Cruz, 30 hours; fruit.
March 27—Ship Mary Melville, Derby, Stillacomb, 16 days; with timber.
U. S. revenue cutter W. L. Mearns, S. Corral, from a cruise.
U. S. cutter Argus, Lt. Hyde, from a cruise.
Ship Adeline, Boston, Bodega, 21 hours; produce.

CLEARANCES.

March 21—Ship Rival, Jenkins, for Valparaiso.
March 22—Ship Electric, Gatz, and Flynn, for San Francisco; bark Equinox, Smith, Mazatlan; bark James Franklin, McDonald, Sydney.
March 23—Ship steamship Cortes, Burns, for San Juan; ship Cleopatra, Thayer, Colico.
March 24—Ship bark Ida, Kellogg, Hongkong; brig Samuel Churchill, Ellis, Valparaiso.
March 26—Ship Wellington (Fr.), Larnello, Pauleberry; Smith G. Owens, Norton, Brazil.
March 27—Ship ship Don Juan, Mitchell, for Valparaiso; bark bark Honoluli, Packard, Robinson, Vancouver Island.

SPECIAL NOTICES.

To Purchasers of Implements for Harvesting Grain.—We shall keep ourselves always advised of the very best implements that are imported into this country, and those who wish to purchase, by writing or calling on us, can be assisted in their purchases intelligently. We can find orders to any extent for machinery, and will be happy to do so for a commission, and we know we can do so with great advantage to the purchaser. (v3-13) WARREN & SON.

Religious Notice.—There will be PUBLIC MEETINGS held at the Hall of the Sons of Temperance, on Washington street, between Sansone and Montgomery, every Sabbath day, viz.: a Prayer Meeting at ten o'clock, A. M., and a Temperance Lecture at half-past two, P. M. (v3-11) NATIEL THURSTON.

Southwick's Raffle.—A Splendid Dairy Prize.—Of all the Raffles proposed, no know of none that has a better or more valuable prize than Southwick's Dairy Prize. The prize is one hundred and twenty-five cows—this is prize No. 1. There are also many other valuable prizes. Mr. Southwick, the proprietor, is a gentleman of responsibility, well known throughout Sacramento Co., and there can be no doubt but the Raffle will be conducted in good faith and fairness. It will be drawn in a few weeks.
Good and responsible Agents wanted. Terms make known by application at the office of the CALIFORNIA FARMER.

California State Agricultural Society vs. Patent Office.—This society would publicly acknowledge the receipt of a large and valuable collection of new and valuable seeds from Hon. C. Mason, of the Patent Office, Washington, for distribution among the members of this society. Those members who desire to try these various kinds, can have samples by calling on the undersigned at the CALIFORNIA FARMER Office. JAMES L. L. WARREN, Corres. Sec. C. S. A. S. (v3-10) Montgomery street, San Francisco.

Shoofat Hens Wanted.
THOSE who have these Fowls for sale will please address us with particulars as to character of stock, and their price, or call on us at our office. WARREN & SON.

MISCELLANEOUS.

TO THE SHAREHOLDERS OF THE SECOND ART UNION!
WE PLEDGE OURSELVES THAT THE ART UNION SHALL BE DECIDED ON MONDAY, 2nd APRIL, 1855.
J. R. COOPER & Co.,
W. C. ALLEN & Co.,
Successors to J. C. DUNCAN.

A Card.
WE have this day purchased from J. C. DUNCAN his entire interest in the business conducted by him at the Chinese Saleroom, and also his interest in the Second Art Union, now before the public. This enterprise, which he has so successfully commenced, will be fully carried out by us, on the same plan, and in the same manner for which Mr. Duncan stands already pledged to the numerous shareholders.
Many new and beautiful articles will be added to the present stock, and the public may rest assured that nothing shall be wanting on our part, to continue the confidence and patronage enjoyed by the late firm.
J. R. COOPER & CO.,
W. C. ALLEN & CO.

San Francisco, March 22d, 1855.
To the Public.
I respectfully ask from my friends and the public a continuance to my successors in business of the many favors extended to me during the past four years. The large means of Messrs. Cooper and Allen, and their well known responsibility as the principals of two heavy importing houses in this city, (J. R. Cooper & Co. and W. C. Allen & Co.) enable me to leave in their hands my pledges to the public in regard to the Art Union, with a full guarantee that they will be strictly carried out. All Shareholders remain in the same position as though I was still in the firm. The greatly increased capital placed in the hands by Messrs. Cooper and Allen, will give them the facilities necessary for the large business in which I have been engaged, and also secure to them the full confidence of the public.
(Signed) J. C. DUNCAN.
San Francisco, March 22d, 1855. (v3-13)

WE desire to notify our friends and the public that we shall remove our business on THURSDAY, the 29th instant, to our new Banking House, corner of Clay and Battery streets, where we shall be happy to see all our old friends and customers. (v3-13) PAGE, BARON & CO.

Snuffak Pig Wanted.
THIS breed of Sire, pure, is wanted. Address us at our office, Masonic Hall Building, Montgomery street. (v3-13) WARREN & SON.

Artisan Well Boring.
WE would respectfully inform the public that we are fully prepared to take contracts in the above operations. In a manner to guarantee satisfaction or no charge will be made.
SMITH & VAN DYKE having associated themselves with an old and experienced operator from the East, who challenges the world to compete with him in all the branches connected with the above business, are fully confident to guarantee success in all contracts that we may undertake, and warrant the work for one year. We have also implements for boring through stone to any depth, and all work done on the most reasonable terms.
For the satisfaction of those waiting anything in the above line, we would refer to Thomas Fulton, San Jose; Rufus S. Ellis, of Harborth & Ellis; M. A. Sullivan, New Custom House; Wirth & Co., 137 Jackson street, &c., &c.
We can do work cheaper than any other operators, for two reasons:
1st. Because we are prepared to work on a most extensive scale.
2d. Because we understand all branches connected with the above business, and are, therefore, able to work with certainty.
All orders left at the What Cheer House will be promptly attended to.
SMITH & VAN DYKE, Contractors,
118 Sansome street.
N. B.—We also refer to Warren & Son, publishers of the "California Farmer," who have seen and known the character of the work done. (v3-13)

"Take no thought for the morrow."
